The feeding of wheat and other cereals fit for human consumption is prohibited in Great Britain. Poultrymen are compelled to rely upon waste food or damaged grains, and as a consequence they are hard pressed. A recent issue of the Poultry World of London quotes a ruling of the government food control board in regard to wheat screenings. This ruling set the price of screenings at $73 a ton. The mills must not charge more than this sum. The government is guarding the interest of the farmer or poultryman by setting a maximum price, and the maximum price for screenings is about what wheat sells for here at the present time. There is nothing the matter with feeding screenings. I have known a large poultry farmer to feed them almost entirely, but a great many of our poultrymen would take it as an affront to be asked to feed their poultry in this way. The war is certainly forcing many readjustments. The trouble is in making readjustments there will be an inevitable loss due to lack of knowledge as to the effect of substitute rations. Most poultrymen have one method of feeding, and if compelled to change they are very likely to make serious mistakes. J. D.

Good Plan to Mark Hens.

To the Editor: Could you please tell me where I can obtain leg bands or something suitable to mark my old chickens from the young ones?

MRS. J. F. J.

St. Anthony, Idaho.

The poultry supply houses in the cities keep for sale leg bands for fowls. It is an excellent plan to mark the hens so that it is possible to know the old hens from the pullets. Would suggest banding the pullets rather than the old hens this year, and next year it will not be necessary to band the pullets, and the old hens can be marketed.

J. D.

Information Bureau

It is our business as a farm paper to be of the greatest possible assistance to our readers. Any question of a practical nature that interests you or the answer to which will be of special value to you—send it in. There will be no charge for this service. All questions must be signed with your name and postoffice address and will be answered by personal letter. Replies of general interest may be published in The Farmer, your name being omitted if you so desire. Address Information Bureau, Washington Farmer, Spokane, Washington.

Selling Mortgaged Farm.

A subscriber asks: "After a man makes a loan from the U. S. farm loan bank, can he sell his farm without permission from the local land board?"

Answer.

The Farmer replied by personal letter as follows, in part:

He can not sell without permission from the association. The man to whom he sells must first apply to the local association for membership. As soon as he becomes a member the sale may be made. The seller will have to assign to the buyer the stock the former holds in the association, transfer to him his property and have him assume the mortgage which the seller originally gave to the bank to secure the loan. The buyer will have to carry the loan in exactly the same manner as would have the one who originally made it had the sale not taken place. He can pay out the entire loan any time after five years from its date if he so desire. A complete record of all the transactions will be made by the board of the local association and by the central office at Spokane.

A subscriber asks: "Will joining an association (farm loan) make one party responsible for the non-payment of another should that occur? Do you have to join in the county in which you live?"

Answer.

The Farmer replied as follows:

A member of a farm loan association is liable to the extent of the amount of stock he owns in the association and an additional equal amount of cash. A member is required to take stock in the association for an amount equal to five per cent of the loan he takes. Suppose his loan is $1000. He has to take stock to the amount of five per cent, or $50. Should the local association lose money or fail for any reason, such borrower would be liable for his $50 in stock and an additional $50, making $100 in all, but no more. If his loan were $2000 he would be liable for $200, and so on in case of still larger loans.

He does not have to join an association in the county in which he lives. The association, however, would have to extend its boundaries so as to include his farm.

YOUNG MEN! YOUNG WOMEN?

Your life opportunity is at hand—Decide now.

Stenography, Bookkeeping, Commercial Training

Give you a GOOD SALARY from the start; a BETTER INSIGHT into the methods and usages of business, and the BEST OPPORTUNITY to advance to competence and commanding influence in commercial life.

What school? Make no mistake.

THE TRUE TEST.

Most students, through a feeling of loyalty, will say a good word for their school, and if a school sends you to inquire of certain "business men" you may well suspect a "game"; therefore, make the true test of our standing, ask the best business men of Spokane and the towns of the Inland Empire about The Northwestern. We furnish bookkeepers and stenographers to business men, and these men are the best judges of the efficiency of our school—even better judges than the students themselves.

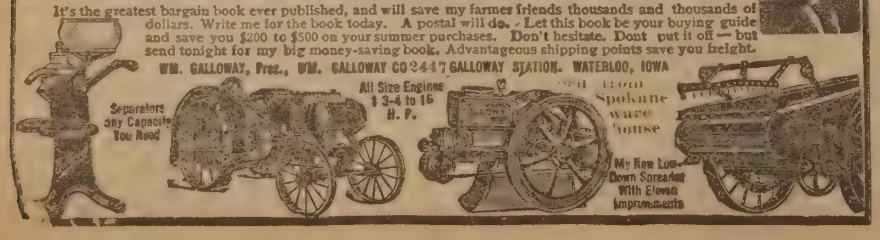
See the Northwestern and its equipment. Use your better judgment. Decide after inspection and inquiry. Enroll at

Northwestern Business College

8317 Howard St. M. M. HIGLEY, President. Spokane, Wash.

Get My New Patriotic Prices!

On Spreaders — Tractors — Engines — Separators



Find out and satisfy yourself how much you can save by getting your farm implements direct from Galloway—the maker. This direct dealing is actually buying at wholesale, and even less, and saves you 25% to 50% on everything you need on the farm —Spreaders, Tractors, Engines, Separators, Wagons, Implements, Vehicles. I'll tell you why you can save by direct buying in my big, free book. I'll also tell you where the extra money goes—the money you save by dealing direct with the manufacturer.

Write for My *Free* Book That Keeps the Prices Down

It's the greatest bargain book ever published, and will save my farmer friends thousands and thousands of dollars. Write me for the book today. A postal will do. Let this book be your buying guide and save you $200 to $500 on your summer purchases. Don't hesitate. Dont put it off — but send tonight for my big money-saving book. Advantageous shipping points save you freight.

What Do You Want ?

We are offering our readers some choice articles that we have selected as special prizes to be given ABSOLUTELY FREE for securing subscriptions to our paper.

Here is a list of a few of the items we picked out.

Mark an "X" in the square for the prize you wish and sign your name and address. We will tell you how easily you can get it.

- ☐ King Air Rifle
- ☐ Ladies' Auto Veil
- ☐ Birth Stone Ring
- ☐ Pocket Flash Light
- ☐ American Flag
- ☐ Ladies' Needle Case
- ☐ Premo Junior Kodak
- ☐ Boy Scout Knife
- ☐ Six-Piece Kitchen Set
- ☐ Unbreakable Doll
- ☐ Pocket Ben Watch
- ☐ Coaster Wagon
- ☐ Harmonica
- ☐ 36-Piece Dinner Set

If you don't find what you want in this list write it in the following space:

SPITZENBURG APPLE
For 100 Years Held First Place.

Twenty-five years ago the Spitzenburg was considered the best of all the apples grown in America. Thirteen years ago we sold Spitzenburgs for $2.50 per box, and for several years after made more money on Spitzenburgs than on any other variety. For 100 years the Spitzenburg held the first place among apples and at the expositions and fairs was the standard of excellence by which other varieties were judged. It is still a good apple and brings a good price; but for various reasons other varieties, some of them new productions, have superseded it.

Spitzenburg Facts.

In the first place, the tree is tender, susceptible to attacks of fungus diseases, bacterial diseases, and not very resistant to the extremes of heat and cold. There is no other variety, perhaps, that is so likely to be attacked with blight as this; and it lacks vigor and resisting power against the attacks of aphis, scale and other pests. It is a slow grower and a late bearer. At the age of eight years the Winesap, the Jonathan and a few other varieties would bear a fairly good crop under the climatic conditions of the Pacific northwest, but the Spitzenburgs would not at that age have come into profitable bearing. It has also been proven that it is not a long-lived tree and that when other varieties are in full vigor it is on the decline. As a money maker, covering a long period of years, it is not therefore considered the best.

For baking the Spitzenburg is very good, but the consensus of opinion as expressed by the hotels, restaurants and dining car service of the railroads of the northwest, is that the Rome Beauty, Yellow Newtown, Red Cheek Pippin and Twenty Ounce Pippin are a little better.

The Spitzenburg makes good pies; in fact it was once supposed to make the best pies; but now the Yellow Newtown, Winesap, Rhode Island Greening, Duchess and Gravenstein, are thought to be at least equal.

I like the flavor of a good crisp, ripe Spitzenburg, but ordinarily I prefer a Delicious. I made a test of what people prefer in the three leading varieties one winter, in the following manner. I kept Spitzenburgs, Yellow Newtowns, and Delicious in a large plate on the dining room table. The purpose was to see what would disappear first. Our own family and our visitors, almost invariably prefered a Delicious to either of the others, and we had to supply the dish with Delicious apples twice, before the others were gone. However, this was not quite fair to the Newtown, for it is a longer keeper than either the Spitzenburg or Delicious, and they were at their best when the Newtown was not quite so ripe. Next to the Delicious and the Winter Banana, I think the Spitzenburg will bring the best prices in the markets, with the Arkansas Black next; but the fact that it is a light bearer, a tender tree, susceptible to disease, and not long lived, will cause other varieties to be preferred in the plantings of the future.

I find a great many persons pulling out Spitzenburgs, and when I ask them why, they almost invariably assign the reasons I have given.

The following prices represent an average for three years received for certain varieties by the Hood River Apple Growers' union, by Richey and Gilbert of Toppenish, Wash., Wenatchee Fruit Growers' association and the Yakima Valley Fruit Growers' association. Winter Banana, $1.91; Spitzenburg, $1.52; Yellow Newtown, $1.47; Arkansas Black, $1.39; Winesap, $1.39; Stayman, $1.23; York Imperial, $1.18; Red Cheek Pippin, $1.17; Rome Beauty, $1.17; Black Twig, $1.13; White Winter Pearmain, $1.10; Missouri Pippin, $0.99; Gano, $0.97; Delaware Red, $0.95; Wagener, $0.91.

The Delicious was not included in this estimate, but today it ranks very high, ranging in price nearly as high as the Winter Banana, is a heavy bearer and good shipper.

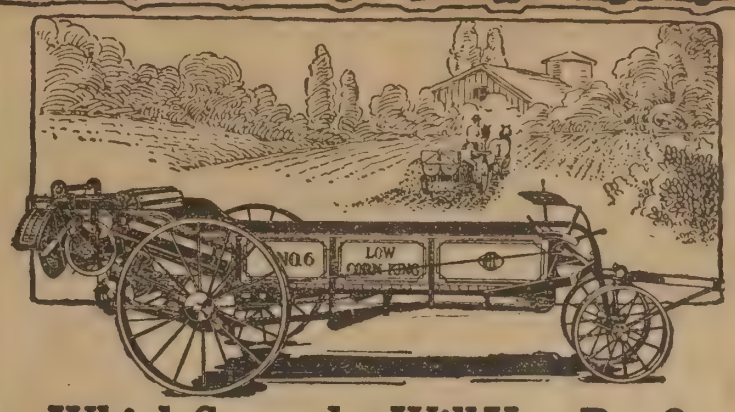
The Apple Show at Spokane.

The 19 leading varieties, according to the estimate at the apple shows held at Spokane for several years past, when arranged alphabetically, are as follows: Arkansas Black, Baldwin, Delicious, Gravenstein, Grimes Golden, Jonathan, McIntosh Red, Northern Spy, Rhode Island Greening, Rome Beauty, Spitzenburg, Stayman, Wagener, Wealthy, White Winter Pearmain, Winter Banana, Winesap, Yellow Belleflower, Yellow Newtown. It should be borne in mind that this arrangement is not according to merit, naming the best first, but that it is alphabetical.

The Arkansas Black is coming to be a great favorite for the fruit stands on account of its color. It is the most beautiful apple grown, but not the best.

The Arkansas Black.

The Arkansas Black, for eating, is not the best apple. Yet, that variety is gaining favor for the following reasons: It is the most beautiful apple grown. It is the best keeper and the best shipper. For evaporating it is likely to be preferred to all others, because, when dried, it is a clean white color, requiring no bleaching to make it look well. It contains also the solids in greater degree than most other varieties. Now that evaporation is a growing industry in the care of cull fruits, the Arkansas Black will become more popular.



Nothing endures; change is the law of life; and the apples of the future will be as much better than the best we have now, as the best we have now are better than those of the centuries past.

I am not following the example of those who are pulling out their Spitzenburgs. We have in our orchard 121 trees of that variety, and we let them stand, because, while the crop is often light, when the good prices they bring are considered, they make us good profits. We fertilize them, water them carefully and baby them generally; but it pays better than digging them out and planting new varieties. G. L.

Famous Pear Orchard

When I wrote the article on pears for the Encyclopedia of Horticulture I believed that at that time I was describing the oldest pear tree in the world, but I find now that I was mistaken. Near El Paso, Texas, is a pear orchard which is now being destroyed by the fruit inspectors because it is a breeding place for insect pests that affect the orchards adjacent to it. This old orchard is supposed to have been planted by the Franciscan Fathers, who accompanied the Spanish invaders who passed that way during the sixteenth century and is near the old Spanish mission. The trees now are probably 300 years old at least. They have little value except that which is based on sentiment.

They are seedlings and the fruit was not of good quality. Yet a few years ago one of them was grafted to Bartlett varieties of grafts brought from California and yielded a fine quality of fruit. These trees, without spraying or pruning or care of any kind, any more than would be given to shade trees or forest trees, have reached a height of about 75 feet and a top system of 60 to 75 feet broad. I talked with a man who seems in every way reliable and who did not believe the big stories told with reference to the size of the trees, and took his tape line and measured them and claims that the largest tree, which had been headed 18 inches from the ground, had two prongs, was measured between the prongs and the root and had a circumference of 14 feet eight inches. Now you mathematicians may tell, if you desire, what is the diameter of that tree, but the point I want to impress is that, pear trees planted in a soil where the root system will go down to the moist subsoil and where the soil is rich and there is no obstruction to development of the root, will live to be much older than we had formerly supposed. G. L.

Which Spreader Will You Buy?

THE popular call today is for a low down wide spread machine. Farmers who have had experience are all turning to the wide spread. Ask any of your neighbors who is using a **Low Cloverleaf, Low Corn King** or **Low 20th Century** spreader why he bought it. Does he find it more economical? Does it do better work? Are his crops heavier where he uses it? What is there about it that makes it worth having?

A Low Cloverleaf, Low Corn King or **Low 20th Century** spreader is worth more than any other kind. Spreaders like these cost less in the long run than any cheaper machine because they increase both crop yields and land values.

If you had rather read about the good features of these spreaders than ask your neighbors about them, drop us a line and we will send you complete information and tell you where you can see the spreaders.

UNDER THE BLACK CANOPY

By Paul E. Triem

SYNOPSIS.

Joseph Dudley, a strong young woodsman, is about to board the boat for one of Stevens' logging camps, where he has secured employment, when suddenly the gangplank gives way and he, with many others, is plunged into the deep, icy water. Forgetting his own peril, he does heroic work in rescuing the others, among whom is a young boy, who, he learns later, is the son of Jerry Stevens.

On his arrival in camp, Joe is forced, for the entertainment of the other men, to wrestle with Andy Dubois. Joe wins and by doing so makes an enemy of the big Frenchman.

CHAPTER III.

Mr. Stevens and his son rode away soon afterward, and Joe was greatly relieved by the fact that the man had said nothing about the incident on the waterfront except to thank him briefly. He had spoken of other things, chiefly the menace to the camps from the forest fires.

As Joe was going back toward the cook tent to get his bundle and the lantern which he had borrowed from Mr. Peterson, the huge figure of Steve McClosky, the camp foreman, loomed in front of him. Mr. McClosky had been among the spectators of the wrestling match, but he had disappeared before its conclusion. Now he stopped in front of Joe and stood looking gloomily down at him.

"I'm sorry you got into this business with Andy Dubois," he said gruffly. "I ought to have stopped the thing when I saw what was coming—but Andy is as touchy as a setting hen, and I didn't know what to do."

"I'm sorry for my share in it," Joe admitted. "I didn't suppose he would take it as he did."

"He's a queer fellow—proud as all get-out, and this is the first time he was ever thrown in camp. I'm afraid there'll be trouble; and this is no time for foolishness either," the foreman added, looking up to where the moon glimmered through a floating mist of smoke. "We need every available man right where he'll do the most good."

"Do you think the fires are going to make trouble?" Joe asked.

The logger shook his head noncommitally. "Can't say. They were pretty bad till a couple of days ago, when the rain checked 'em a bit. Now they're turning up again—and we've got to prepare for what they may do. I want to make a killing with the logs this week, and then if we have to shut down it won't make much difference. Get your things, and I'll show you where you're to bunk."

Joe secured his roll of blankets and followed Mr. McClosky to the bunk house, a long, board building with rough bunks along each side. There was plenty of clean straw to serve as a foundation, and upon this the new man built a superstructure of blankets which suited him admirably. He fell asleep wondering whether Andy Dubois was as sore and lame as he himself was as a result of the match.

It was very evident that Mr. McClosky intended to make good his desire to rush the work, and by 8 o'clock next morning Joe found himself part of a small and perfectly directed army of woodsmen whose aim it seemed to be to lay waste as much timber as possible. But it wasn't waste, after all. In the front ranks, scattered through paths which had previously been cleared by swampers, a dozen teams of fallers worked. Two men with an eight-foot saw comprised each team, and after undercutting a notch in the tree they were to fell they would attack it from their spring boards on the side opposite this notch. Soon there would be room for a wedge to be inserted back of the saw; and from this time until the top began to sway, a helper with a nine-pound maul would be kept busy driving the wedge farther in, so that the blade should have plenty of clearance. Presently a groan from the heart of the tree and a tremor, extending up the trunk and out to the farthest branches, would tell that the monarch was about to fall. A hoarse shout from the men, a swift and perfectly timed spring for safety by some who were in the path of the descending mass, and with a mighty rush of wind the fir would crash to the ground.

At this point Joe's work began. He was following Andy and his partner, and before the echo of the fall had died away he was at work "limbing" the trunk up to a point where it was too small to be used. Swiftly his axe rose and fell, each time with a twist at the end of the blow which sent the neatly severed limb up into the air and clear of the trunk. Before he reached the end of the tree, a pair of "buckers" with another long saw would be sawing the trunk up into saw logs.

His hands were soft, for he had not used an axe for nearly a year. Thanks to plenty of work in the college gymnasium, which had lasted up to a fortnight ago, his muscles were in good condition; and he could ignore the blisters which twelve o'clock brought to his tender palms. McClosky came past from an inspection of the logs stacked down upon the beach and stopped to watch Joe. He nodded and passed on, but the young man instinctively knew that he would have spoken readily enough if he had not been satisfied with the way the work was being done.

At times Joe paused to watch his antagonist of the previous night. Andy was a genius with a saw, and a sort of feverish impatience seemed to drive him on; he scowled at his partner and spoke angrily to him when the other man paused for an instant to rest.

His own long arms drove back and forth with the resistless momentum of a piston rod; and as the day passed he seemed to be gaining speed, as an engine might, running down hill. Joe could see that the man at the other end of the saw was too tired to work to any advantage, but still the Frenchman insisted on the furious pace.

"Andy's pride hurts him," an axeman near Joe commented in a low voice. "I was mighty glad to see you flop him last night—he's been aching for that kind of medicine for a long time."

"I'm sorry I did it," Joe replied. "He's not the kind to take defeat sensibly."

"Who, Andy? Well, I should say not. It's killing him. The only way he can get it out of his system is to punish Jensen there, by making him work twice as fast as any sensible man would think of working."

A breeze crept up toward evening, and the smoke, which had drifted into the valley until the air was thick and bitter with it, cleared gradually. Joe was too tired to waste any time loafing about camp after supper. He went to the bunkhouse and was soon asleep.

The day following passed without incident. Joe felt a little stiff and sore in his shoulders, but his hands lost their burning irritability and he was able to keep up with his work. From the corner of his eyes he watched the young Frenchman—Andy was quick to catch him at it if he paused in his work, and then his frenzy seemed to redouble and a sickly pallor spread over his dark face.

On the third day Joe arose with the comforting conviction that he had found a solution to the whole problem. He would watch for a chance to apologize to Dubois—he had done nothing of which he felt ashamed, but that made it all the easier for him to make the first move toward reconciliation. He tried to catch Andy's eye as they left the dining room, but failed.

"I'll wait," he decided. "I'm sure to get a chance later on."

Under the stimulus of this idea he kept track of the faller's movements, and managed to keep close to him. The Frenchman was working at his old feverish pace, and his partner stopped once to protest.

"Look a-here, Andy," Jensen said, "we've got all the time there is—it isn't goin' to be possible to clean up all the trees in this state for a week or so. You want to remember it took 'em a good many hundred years to grow, and we can't strip 'em off in a day. And, besides, you're taking too many chances. One of us is going to get knocked stiff if you don't watch your side better."

Andy rubbed his hands on his shirt front and gripped his saw handle without replying; and a moment later the long glistening blade was singing through a fresh cut. A feeling of depression had come over Joe, and he worked mechanically. Presently he realized that some one had come up behind him and was standing there, watching either Joe or the fallers. He turned and caught sight of Steve McClosky.

"Andy's going to work himself into the ground—or the hospital," the big logger commented gruffly. "I like to see a man take an interest in his work, but he oughtn't to go at it that way. It isn't human."

"I've been wondering," Joe replied softly, so as not to be overheard, "Whether it would help things any for me to apologize to him. He's still used up about that idiotic match we had the other night."

McClosky stood watching the fallers intently; apparently he had not heard the question. Suddenly he sprang forward with a warning shout.

"Jump, men! She's splitting out beside the cut—duck, Jensen—"

The warning trailed off into a groan, and as Joe whirled and stared down from his position on the saw

(Continued on page fourteen.)

Ups and Downs of a Bunch Grass Boy

(Each instalment of the "Ups and Downs of a Bunch Grass Boy" is complete in itself and will be found full of interest for the new readers of The Farmer.)

By JOE L. ASHLOCK

(Copyright, 1917, Joe L. Ashlock.)

CHAPTER XXIV.

One morning Miss Good, our teacher, came to school looking pale and tired. She got paler as the days went by, and finally she did not come at all, and a new teacher met us.

We were told that she had gone a long way off to have an operation. Then one morning the new teacher told us that Miss Good was dead.

All of us cried. The little girls cried out loud with their faces on their desks and their hair ribbons and pigtails bobbing up and down as they sobbed. The little boys tried to be gritty, but the big tears rolled down their dusty cheeks and were wiped away with a dusty sleeve or the back of a dusty hand.

By the afternoon recess the dust storm was at its height. We huddled together beside the school house. No one said anything about the red sun. But all of us were thinking the same thing. Pretty soon the little girls began to cry out loud and then the little boys chimed in unabashed. The big girls bit their underlips and clinched their hands; and the big boys looked at the red sun with faces that were set and hard.

One afternoon the wind roared past us and receded in the distance—and was gone. Fall was well advanced then; the next morning the air was still, clean, and cold; but everywhere were heaps of dust.

Not a breath of wind stirred after that; the dust lay still where the last rush of wind had laid it, and soon, in the mornings, it was as cold to your bare feet as ice water. In the night time bugs and worms and mice, large and small, scampered all over, and you saw their tracks in the dust in the morning. You could see the prints of the bug toes and the mouse toes; and you could also see a smooth line between the toe prints of the mice, where the mouse had dragged its tail.

Much fun we had tracking this big game to its lair. We found queer bugs, queer lizards, queer living things of all kinds.

Once in a while we saw a sinister looking trail winding smoothly through the dust—and when we saw such a trail, we stepped high with our bare feet, and with sharp eyes scanned every inch of the ground about us. That smooth, sinuous trail in the dust had been made by a rattlesnake. Fearful as we were, we always followed the rattlesnake, and if the venomous serpent had not passed that way too long before, we generally discovered and slew it.

Going to school one morning, I crossed a rattlesnake's trail and soon found the rattler—a big fellow numb from creeping through the cold dust, and as bad tempered as a cold snake can be. It was a law of the bunchgras that whoever found a rattlesnake must kill it before passing on. Though nervous, I was compelled by that law to give battle to the snake.

I had neither stick nor stone; so I seized handfuls of dust, and with the dust pelted the rattler. The serpent coiled and struck, and coiled and struck again, its black, forked tongue darting out angrily. Nothing enrages a rattler so much as pelting its eyes and mouth with dust. The snake was a bit sluggish from the night's cold, but it fought gamely, and finally, in a paroxysm of rage it bit its own spotted coils time and again. I watched it for a while, peppering it with dust occasionally so that it would do a thorough job in biting itself. The snake would coil and lash out in all directions blindly, but with whip-like quickness. One might as well try to dodge a bullet as the thrust of a rattler; so I gauged the distance of its reach, and kept my bare legs well beyond the fatal circle of its leap.

I caught the snake fairly in the mouth with a handful of dust as it lashed out in one of its lightning lunges; whereupon the spotted thing quivered from end to end with rage and ended by flinging its mouth wide open at its own tail a little above the rattles; and time and again it stabbed its quivering, spotted skin with its poisonous fangs.

A rattler's bite is as fatal to itself as to any other animal. That evening when I returned home, there lay the snake, dead in the dust; and you could see where it had bit and chewed itself from its tail to as close up on its neck as it could turn. I poked it about with a bit of sagebrush for a while to make sure it was dead; then I tried to bring it to life by peppering it with dust. But it was dead as dead could be. So I cut off its rattles with my pocket knife, though the knife was so dull that I couldn't make a clean cut through the serpent's tail. I scraped off every vestige of the serpent's flesh where the rattles join the body, and then scrubbed this end on a hard clod to make sure that all the snake's meat was off—for I judged that the meat might be contaminated with the venom with which the spotted creature had killed itself. These precautions attended to, I rubbed my knife blade in the soil for a long time, to be sure no venom was on it; and when satisfied, I stuck the rattles in my pocket, and made for home, with ane eye on the road—for other rattlers might be about. I wanted more rattles, for rattles in a boy's pocket stood for an enemy scalp hoisted on an Indian warrior's spear. The more rattles a boy had the more nearly was he chief among his fellows.

The new teacher had been troubled with headache. Wearing a rattlesnake's rattles in your hair cured headache, people said. So the next morning I laid my rattles on her desk within three inches of her hand, and advised her to stick them in her hair.

The new teacher snatched her hand away and screamed. She seemed inclined to jump upon a stool and gather her skirts about her. I told her the rattles couldn't bite—that the only possible danger would be from a bit of poison snake meat sticking to them, and I tried to show her how I had rubbed and polished all of this off with a hard clod. She screame again and told me to put those rattles down. I did so.

She drew from her hair a brand new pencil of the wonderful, three-cornered kind, and with this pencil she maneuvered the rattles onto the end of a new, flat ruler. Carrying the ruler at arm's length with the rattles balanced on the far end, she tiptoed to the stove, opened it, and threw brand new ruler, brand new pencil, and brand new rattles into the fire.

I forgave her because I knew that she was a tenderfoot and knew no better than to do a thing like that.

New York Bids Farewell to Horse Cars

Copyright by International.

On July 20 New York's last horse car made its last run. The photograph shows James Cussack, who drove the last car, shaking hands with Vice President Hedley of the Interborough Rapid Transit company.

New German Chancellor.

Latest photograph of Dr. George Michaelis, the German imperial chancellor, who recently replaced Dr. von Bethmann-Hollweg. A complete reorganization of the ministry followed his taking office. Michaelis formerly was Prussian under secretary of finance and food controller. Hollweg's resignation was precipitated by the crown prince's hostility toward him.

In a French Ammunition Factory

French Official Photo.

Workmen are shown in the picture above assembling 75-mm. gas bombs in an ammunition factory of France.

They're Doing a Double Bit

Convicts in the Eastern penitentiary at Philadelphia, are doing "their bit" for their country. The prisoners have been set at the task of rolling bandages for the Red Cross. They are placed in bags, 300 to each. The work is done under the most sanitary conditions and under the supervision of a trained Red Cross nurse.

Pershing Visits French Munition Factory

Copyright by International

General Pershing in this picture looks as pleased as though he were passing through a rose garden instead of the storeroom of a Paris munition factory. The glittering rows of projectiles look good to him for he is thinking of the time when he will be throwing them at the Germans.

ALICE W. BARLAND
Editorial Contributor

Is It a Small Thing?

Did you ever stop to think what it means to throw away a half cup of milk? Perhaps it is not much, but if each of the 20,000,000 homes in the United States does it, it amounts to 2,500,000 quarts a day, or 912,500,000 quarts yearly. It would take 400,000 cows to produce this amount.

A slice of bread is a small thing but—a good slice of bread weighs an ounce. If every household in the United States wastes this amount a day, the country is throwing away daily over 14,000,000 ounces of flour over 875,000 pounds a day, or flour enough for over 1,000,000 one-pound loaves per day. For a year it would be 319,000,000 pounds, or 1,500,000 barrels, or 365,000,000 loaves of bread. It takes 4 1-2 bushels of wheat to make a barrel of ordinary flour; this represents a waste of 7,000,000 bushels of wheat.

It would take 470,000 acres to produce fruit to equal this value of wasted flour. Think of the army of farmers, mill men, transportation employes to take care of this waste!

About Dress Materials

The one-piece dress is a great boon to busy mothers, being easy to make and to wash and iron. If the kimono sleeve is used, the dress will be cooler, but in some garments the set-in sleeve is less clumsy and wears better, says a bulletin from the United States children's bureau. Rompers, loose at the knee and low-necked and short-sleeved may be used for little girls and boys alike. Denim overalls are rather cumbersome for the hottest weather, but are adapted to cool days.

Starched, frilled, and fussy garments are all alike unsuitable for young children, whose clothing should be such as will make them perfectly comfortable and permit the freest play. No child should have to think of his garments during the play hours; he should, of course be subject to reasonable restrictions upon wilful or mischievous soiling or destruction of his clothing.

Cotton is the best material for outside garments, since a child of this age should have no clothes that can not be washed. Mothers disagree as to the comparative merits of white clothing and colored. White garments may be boiled, and thus the amount of rubbing necessary to get them clean is very greatly lessened. On the other hand, white dresses are soiled almost as soon as the child begins to play out of doors. It must be remembered that while white or light colors show the soil sooner, there may be just as much actual dirt on the darker ones. It must also be remembered that light colors like blue, green, lavender, or pink are almost certain to fade unless they are washed with special care. Striped and check ginghams fade less than plain materials, but often shrink badly in washing. Such materials should be shrunk before being made up. Seersucker and cotton crepe materials of many kinds have the great advantage of needing no ironing. These rough materials are not very cool and if used for summer wear should have short sleeves and round neck to avoid chafing of the skin of the arms and neck. Percale, galatea, madras and the better grades of gingham or dress linen are all good materials for children's clothes. For hot weather almost any of the thin materials may be used.

Be still, sad heart! and cease repining.
Behind the clouds is the sun still shining;
Thy fate is the common fate of all,
Into each life some rain must fall,
Some days must be dark and dreary.
—Henry Wadsworth Longfellow.

Only Way to Succeed

"There is a way to farm and a way not to farm," said H. Wonder, a German farmer who conducts a ranch near Independence, Ore. "It takes hard, continuous, intelligent work to succeed as a farmer anywhere. I believe that you should not try to handle more ground than you can find fertilizer for. Put all the manure that you can get on the land, use the straw from your grain and work it in. Land is seldom worked too much. It is mostly the other way. Sitting on the fence and complaining about the weather and hard times never brings a crop. Thorough cultivation and plenty of manure will produce more profit off 10 acres than the same amount of manure and work put on 40 acres."

Mr. Wonder owns a farm in northern Germany and was just about to consummate a sale of it when the war broke out. There is no more loyal American than Mr. Wonder. He does not hanker after hyphens. H. H. B.

Old English Initials to Embroider

By WINIFRED WORTH.

To transfer this design, put some soap in a pint of hot water, stir and remove excess moisture by partially drying design. Place material on a hard, flat surface and lay the design, face down, upon the material, cover with two folds of newspaper and, with a tablespoon, rub, pressing hard, until the design is entirely transferred.

White embroidery floss of linen quality, or the mercerized, is the best for making letters. Always soap the fabric with white soap under the initial before embroidering. It aids one in washing the color from the finished design.

In padding these old English initials, different methods may be used. Some use the twilled cotton for the purpose, others make the chain stitch, while others let a skein of floss out at full length and embroider a strip of it under the thick parts while forming the letter, clipping the skein when the initial is finished. This is a splendid method, quickly done, and is suggested, too, as a help in padding all large pieces in border or crescent outline.

Initials can be made by filling in the broad space with French knots. This is used largely on elaborate pieces, such as the laundry bag, table scarfs and ornate gifts.

Under the Black Canopy

(Continued from page twelve.)

log he understood. The tree, which had been sawed nearly through, was one of those perfectly balanced trunks which stand upright until they are toppled by the wedge. In this one a cleft had suddenly developed, running up from the cut in such a way as to leave a huge, upright sliver above the notch, and on this sliver, as a fulcrum, the trunk caught and hung for a moment, then swiftly shot back. This "kick back" is one of the things against which a woodsman must always be on the alert. But in this case neither of the fallers was looking for it. They had been working frantically, and Jensen seemed to be numbed with weariness, although it was still morning. The flying butt struck his shoulder and hurled him back as if he had been a suspended chip. He fell to the ground directly in line with the upraised trunk, which hung suspended for an instant, then swung down with increasing speed.

Joe, from his position on top of the trunk at one side, realized what was happening, and without stopping to consider he threw himself from the log to the ground. The instant that followed seem an eternity, for in it he hurled himself under the descending trunk, caught frantically at the figure lying there and floundered ahead. His foot caught and he and his burden went to the ground in a heap.

At the same instant there came the terrific crash of the giant fir, as it struck the ground, and he knew that he had won. He rolled away from the limp figure under him and climbed to his knees. A dozen pairs of strong hands dragged him to his feet, but he was looking at Jensen. Steve McClosky had dropped down beside the injured faller and was examining him with the skill of one who is used to emergencies; presently he looked up and nodded to the men who waited for his verdict.

"He's got a broken collar bone, but as near as I can figure he is all right aside from that; stunned him, of course. Here—four of you fellows get a plank long enough to hold him straight and carry him up to the kitchen. Neville can fix him up so's he can make the trip to town on tomorrow morning's boat."

The foreman stood silent while this order was being carried out. Then he turned suddenly and spoke to Andy Dubois, who was standing, almost as if he had been stunned, a few feet distant.

"My lad," the logger said with a sort of gruff kindliness, "I want you to go a little bit slow after this. We came near having a tragedy here, and next time we might not miss it even by the hair's breadth we did this time."

Andy turned white to the lips. Then his eyes began to smolder and he whirled upon Joe.

"Then make this fellow quit watching me and laughing at me, behind my back," he cried in a tremulous voice. "It was as much his fault as mine!"

For a moment the foreman regarded him curiously; then he turned to Joe and spoke, and his voice was as even as if he were asking for a match or the time of day.

"You're to take Jensen's place, Dudley," he commanded. "I'll send some one up to limb for you. Now go to work, and both of you remember that this is a logging camp and that we're working against time. Quit your foolishness."

Joe was so astounded by this unexpected event that he had hardly wits enough to pick up his end of the saw. The Frenchman's face twisted spasmodically, and his eyes still glowed with an angry light. He had accepted the verdict in silence, however, and was waiting with ill concealed impatience.

Joe Gripped the smooth, hardwood handle, and a moment later they were at work. He was beginning to realize what it meant—McClosky had determined to let them fight it out not only in a peaceable manner, but in such a fashion that no matter how strenuously each might try to get the best of the battle the camp would be he gainer. He realized that the time for an apology had passed or had not yet arrived; and, however much he might regard the events which had led up to this climax, he knew that he could not honestly surender.

By noon he was breathing hard and his arms were beginning to tingle as if they were going to sleep. He lay down for a few minutes after finishing the meal, but the whistle of a donkey engine soon notified him that it was time to go back to his end of the saw. He caught the men looking curiously at him, and the limber who had expressed his satisfaction at Joe's having conquered Andy in the wrestling match spoke to him again.

"Stay with him," he advised. "He's long geared, but he hasn't got the arms and shoulders you have. You can tucker him if you keep up your grit."

Joe didn't reply, for he felt a dislike for this vindictive person who seemed always anxious to stir up trouble. And still he knew that he must practically do as the other had pointed out. He couldn't quit.

The afternoon passed with all the confusing unreality of a nightmare. Joe's head ached and his arms felt like sticks; his clothing was drenched with perspiration—and still, he forced himself to drive his end of the saw back and forth with the swift strokes which best suited Dubois. Evening came at last, and the most welcome sound that Joe had ever listened to was the blast of the whistle proclaiming quitting time.

Some one touched his arm as he walked wearily along toward the tents, and he turned and saw at his elbow a youngster who, under the title of "Cookey" was supposed to be a sort of assistant to Mr. Neville. Joe had noticed him as he worked industriously, peeling huge heaps of potatoes or turning beefsteak as it fried on top of the kitchen range; but he had never spoken to him before.

"What is it?" he demanded.

"Come into the kitchen—come right now. Charley wants to see you."

Vaguely puzzled to know what the cook could want with him, especially at the all important hour of serving supper to a ravenous camp of loggers, Joe followed the boy around to the back door of the canvas dining tent and presently found himself standing before Mr. Neville. The latter paused in his occupation of dishing up baked beans, and crossed to a shelf which ran along one wall. From this shelf he took a pint bottle, filled with an amber colored fluid.

"Here," he said, putting the bottle into Joe's hand, "you rub your arms and shoulders and sides with this liniment before you cool off. And after supper you come in here and let me rub you down. I watched you working today—you've got to win, you know, and you can't do it if you tie your muscles up in knots. Hurry now—and come back after supper."

Joe expressed his gratitude rather awkwardly, for he was taken by surprise. He realized that Mr. Neville's advice was sound, however, and carried out his instructions in regard to rubbing some of the pungent liniment into his aching muscles. He hesitated about complying with the other command, for it seemed to him that it was an imposition to let the cook wait on him after finishing a strenuous day over the hot range.

There was no escaping Mr. Neville's authority, however, and after he had yielded himself to the other's deft manipulations, he was forced to admit that the amateur trainer knew what he was doing. He rubbed and kneaded Joe's arms and shoulders in a way that spoke of long practice, and the young man could feel the blood tingling through his muscles with a pleasant warmth.

"Now you go to bed just as quick as you can get there," Mr. Neville commanded. "Come here in the morning and I'll limber you up, and tomorrow night after you finish work we'll touch you up again. By that time you'll be catching your pace. Goodnight—and good luck!"

As Joe was on his way to the bunkhouse, he came upon Steve McClosky standing with his hands in his pockets, staring gloomily at the distant, smoke filled sky. The foreman nodded to Joe, and for a moment stood looking musingly down at him.

"I see you're still alive," he commented. "Well, I wish the rest of the men could work at the pace you two fellows struck up today—I'm thinking we have trouble ahead."

"On account of the fires?" Joe asked.

"Yes. This is just the kind of weather to stir 'em up—hot days, plenty of wind, and little chance of rain. It was just this way before 'Black Friday,' and, if you've lived in this country long you'll know what that means."

"I've heard of Black Friday," Joe admitted, vaguely disturbed by the foreman's gravity. "Well, the only thing to do is to hope for the best and prepare for the worst."

"That's right," McClosky agreed, "but I reckon you don't realize just what the worst would mean. And there isn't any very good way of preparing for it."

(To be continued in next issue.)

Patterns

1800-1756—Ladies' coat suit. Coat 1800 cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt 1756 cut in seven sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. It requires four and one-half yards of 44-inch material for the coat and three and five-eighths yards for the skirt for a medium size. The skirt measures a little over three and one-fourth yards at the foot. Two separate patterns, 10 cents for each pattern.

2018—Girls' one-piece dress. Cut in four sizes: 6, 8, 10 and 12 yards. It requires three and three-fourths yards of 36-inch material for an 8-year size. Price, 10 cents.

2188—Ladies' dress. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires five and three-eighths yards of 44-inch material for a 36-inch size. The skirt measures about two and one-half yards at the foot. Price, 10 cents.

1990—Ladies' apron and sleeve protector. Cut in four sizes: 34, 38, 42 and 46 inches bust measure. Size 38 requires five yards of 36-inch material for the apron and three-eighths yard for the sleeve protector. Price, 10 cents.

2176—Girls' dress. Cut in four sizes: 8, 10, 12 and 14 years. It requires one and three-fourths yards of 27-inch material for the guimpe and three and one-half yards for the dress, of 36-inch material, for a 10-year size. Price, 10 cents.

1944—Girls' one-piece dress. Cut in four sizes: 2, 4, 6 and 8 years. Size 8 will require two and three-fourths yards of 44-inch material. Price, 10 cents.

Do You Know That

Desire to win over somebody is all right if you are trying to do better yourself rather than hoping that he will do worse?

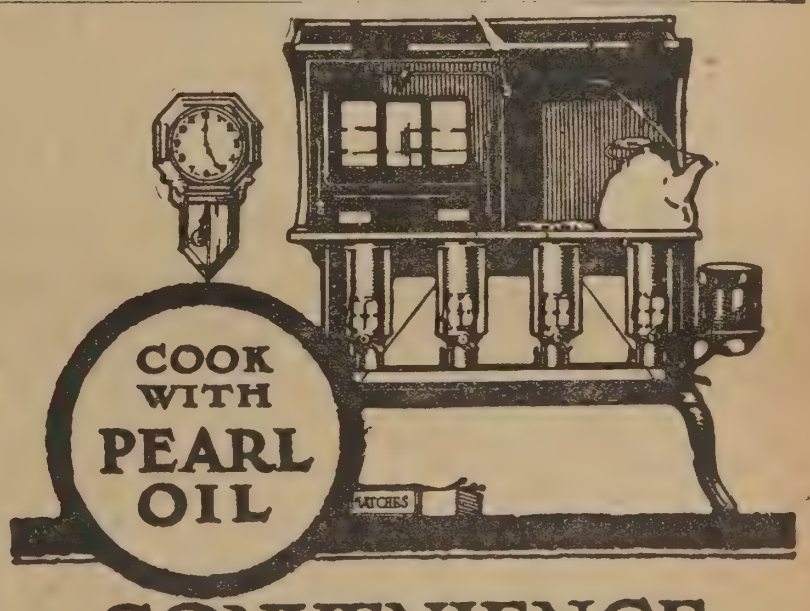
That every bit of meat and fish can be combined with cereals or vegetables for making meat cakes, meat or fish pies, and so on, and to add flavor and food value to made dishes?

Wasted Sugar.

Many people have the wasteful habit of putting two full spoons of sugar into a cup of coffee and never stirring it up; so that more than half of the amount remains at the bottom of the cup with the grounds to be washed into the sink. If they stirred their coffee after adding so much sugar most of them would find it too sweet. It is calculated that if everyone in America saved an ounce of sugar daily the total would amount to more than a million tons in the course of a year.—Milwaukee Evening Wisconsin.

Can Your Own Foods

ECONOMIZE!
SAVE YOUR SURPLUS



Let nothing go to waste—but put up your fruits, meats, vegetables and fish in sanitary tin cans. Turn them into money or enjoy them yourself.

Use the Burpee Home Can-Sealer. Adopted by canning clubs all over the country because of its simplicity and the fact that no solder nor acid are needed. Seals cans air-tight. CONVENIENCE

All the convenience of gas. No waiting for the fire to burn up. Meals in a jiffy, and a cool kitchen all the time.
Bakes, broils, roasts, toasts. Better cooking because of the steady, evenly-distributed heat. More convenient than a wood or coal stove for all the year 'round cooking—and more economical.
The long blue chimneys prevent all smoke and smell.

In 1, 2, 3 and 4 burner sizes, with or without ovens. Also cabinet models. Ask your dealer today.

NEW PERFECTION OIL COOK-STOVE

STANDARD OIL COMPANY
(California)

Dear Nieces and Nephews: I heard a fine talk the other night by a man who has gray hair. He said that we must look to the children and pay more attention to them, for grown-ups have done most of their work. And then he said that he hoped that the children now, who would be the men and women in a few years, would be better even than their fathers and mothers; and he said he thought the fathers and mothers wished and hoped for this thing more than anything else.

Does it you ever realize the responsibility that old folks have put on children? Responsibility is a big word. It means that they depend on us to do what they are doing now—be grown ups, farm, sew, cook, run automobiles, be the men and women, and do it better!

Is this not a fine thought for us? Let us make up our minds we will do it! Let us make our fathers and mothers proud of us, and make them feel that their pains and time and money were not wasted—that we have done just as well as we could. Your affectionate

AUNT NELLIE.

First Day of School Was Worst.

Dear Aunt Nellie: This is the second time I have written to the Corner. Last time I wrote about our farm so I won't write about it in this letter. I have planted a garden and it is coming up very well. Our potatoes are growing fine, too. I hope that all the cousins and you had a good time on the Fourth of July. I hope none of the cousins got hurt shooting firecrackers. My subject is "The Worst Day." My worst day was when I started to school. I didn't know any one at school so I cried nearly all day. I hope that I don't cry like that any more in school. My little brother is going to start to school next year. I will be 11 years old August 8. I enjoy all the letters that come. I have just finished reading the letters that came in the Corner today. I liked them all very much so I thought I would write again. I liked the story very much that Selena Elizabeth Dero wrote. I thought her story was very nice. I hope that some of the cousins will write to me. We have cleaned up the house today. We sell cream now because it is too warm to make butter. I earned 50 cents in cleaning the potato land. Our school let out June 7th, so I don't have to go to school until September. I passed into the fifth grade. My sister passed into the 3d.—Hilma Anderson, R. D. 3, Box 19, Olympia, Wash.

Wanted—A Name for a Kitten.

Dear Aunt Nellie: My father takes The Farmer and I enjoy reading the Children's Corner. This is the first time I have written to it. I live on a 60-acre farm five miles north of Lynden. We have a nice bungalow and a large barn. We have two work horses, Bob and Queen, two ponies, Fanny and Tony, and a colt named Prince. Tony took the first prize in the county fair year before last. I have a white dog and a white cat and a little grey kitten. The dog's name is Snowball. The cat's name is Juanito Snickerfritz Twilight. The kitten isn't named yet. If any of the cousins could suggest one I would be delighted. We have four cats besides these. I am 14 years of age and my birthday is April 25. I am in the eighth grade. Have I a twin? I would like to have some of the cousins write to me.—Jennie Van Wyke, Lynden, Wash.

A Swing Under the Big Pine Tree.

Dear Aunt Nellie: This is the first time I have written to the Corner. I hope to see my letter in print. Have I a twin I hope so. If I have please write. I am 10 years old and I have brown hair and brown eyes. There are lots of wild flowers around here. I have a flower garden and in it I have sweet peas, nasturtiums, pinks and pansies. I am 4 feet and 10 inches tall and I am in the fourth grade. We are a mile from the mail box and 13 miles from town. I have a swing under a big pine tree and I like to swing in it. I am reading a book by the name of Bound to Rise. I like it, too. It is about a poor boy.—Joyce Hatch, Goldendale, Wash.

Big Windstorm Makes a Bad Day.

Dear Aunt Nellie: This is a very good chance for me to write a letter. I will tell you about my worst day. It was the day that the wind blew so hard, that it was dark in the middle of the day and we lighted our lamp to eat dinner. I was very scared. Worst of all we had a playhouse out in the chicken yard. That is my sister Nellie and I had. It was in a header box. It had six rooms in it. It was propped up with poles and bad boards on all sides. We had sacks for walls. Papa used it for a place to put pig feed so we built a playhouse in it. We had my table and our toy dishes and after the wind, mama said we had better go and look at our dishes because the header-box was lifted right up off of the braces, but the dishes were all right. We have 14 horses and four colts. The colts' names are Ted, Pete, Martha and Eunice. There are two horses that we can ride, one named Fly, who weighs about 800 pounds. She is a sorrel. The other one's name is May. She has a colt named Ted. The books I have read are, "Alice in Wonderland," "Dorothy Dimple," "Strong and Steady," "The Rover Boys Out West" and "The King's Daughter." They are all good books. We have two dogs and one little pup. The dogs' names are Shep and Tabby. The pup's name is Lucy. She follows mama around all the time and barks at her.—Ora Jane Hayden, Mold, Wash.

Blacky and Patsy Are Ruby's Cats.

Dear Aunt Nellie: This is my first letter to the Corner. I live on a farm. I am 11 years old and in the sixth grade. We have five cows, 80 chickens, three pigs and three cats. Two of the cats are mine. One is all black and its name is Blacky, the other is black and white and its name is Patsy. I have one sister and no brothers. My sister's name is Agnes. We have many kinds of fruit. We have some cherries which are ripe now. I wish some girls of my age would write to me.—Ruby Johnson, Fir, Wash,, box 23.

Haven't Named Baby Sister Yet.

Dear Aunt Nellie: I enjoy reading the Corner very much. Many of my friends have written to the Corner. I live on a 480-acre farm. We have three cows and 24 horses. I have a pet horse. Her name is Bird. I ride her. I was in the fourth grade this year. I was promoted to the fifth. I have one sister and three brothers. Their names are Donald, Wendell, Ora and we have not named our sister yet. She was two months old last Tuesday.—Mildred Rees, aged 10, Hartline, Wash.

Buster and Tige Are Grace's Dogs.

Dear Aunt Nellie: I am 11 years old. My birthday is the eighth of December. Have I a twin? My sister and two brothers and I walk three miles to school. I like to go to school. I am in the fourth grade. We have 52 head of sheep. I have two dogs. Their names are Buster and Tige. I have a little colt. Its mother died and I have to feed it milk. Its name is Pearl. We have a car and I like to ride in it.—Grace Edna Milbrath, Schrag, Wash.

Helps With the Garden and Chickens.

Dear Aunt Nellie: I am 13 years old. My birthday was the 21st day of June. I am in the fifth grade. My teacher's name was Mr. Stram. I like him fine. We have three miles to go to school. We ride horseback to school. The name of our school is Pleasant Valley school. It was out the 31st of May. We are going to have a new schoolhouse with two rooms in it. There are 30 pupils in our school. We live on a farm of 880 acres. We have nine horses, 18 range cattle, four range calves, and four pet calves, three milch cows and one colt. The calves' names are Buttercup, Pansy, Betsy and Jumbo. The cows' names are Calice, Brownie and Boss. The colt's name is Bonnie. She is black. My papa takes The Washington Farmer. I like to read the Children's Corner. I have three sisters and two brothers. Their names are Elsie, Alice, Clara, Victor and Chester. Elsie is 15 years old, Victor is 14, Chester is 4 years old, Alice is 9 and Clara is 7. We help mama with her garden and help her feed the chickens. We have 130 little chickens and 25 old chickens. We have a dog and two cats. The dog's name is Bluch and the cats' names are Pussy and Snowball. We have a player piano and 60 pieces of music. My sister Elsie has taken a few music lessons.—Marie Ganguin, Goldendale, Wash.

A Good Time in Spokane.

Dear Aunt Nellie: It has been a long time since I have written to you, but I enjoy reading the letters better than to write them. I passed into the eighth grade and am very proud of it. I spent my celebration in Spokane this year and surely had a good time. I have five rows of potatoes this year and have also another small garden of my own. I would like to correspond with Violet Cronn.—Flora Lamm, Johnson, Wash.

Calls Her Little Calf Daisy.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 11 years old and my birthday is September 21. I will be in the sixth grade when school starts this fall. My sister Bessie will be in the tenth grade. We have five little calves. One is mine and I call it Daisy. We have about 200 little chickens. I would like for some of the girls to write to me.—Libbie Latimer, R. F. D. 1, Plaza, Wash.

Teddy and Taft Are Twins.

Dear Aunt Nellie: This is the first time I have ever written to the Childrens' Corner. I have been reading the letters. I thought I would write. I have two sisters and five brothers. Teddy and Taft are twins. They are 4 years old. Charles and Frank are twins, too. Their birthday is the same month. I have got one cow. I milk her. I am 10 years old. My birthday is in January.—Louise Blackburn, Pullman, Wash.

Lyda Has Found Some New Friends.

Dear Aunt Nellie: I have found some new friends. We are having bad luck with our little geese this year, but we have a number of little chickens that are doing fine. We have a big Reo car. It is a nice one. Viola runs it. My sister has the sweetest little baby. Our school is out. It was out the 25th of May. I hope some of the girls will write to me.—Lyda Augst, R. F. D. No. 1, box 30, Beebe, Wash.

Little Mother for a Day.

Dear Aunt Nellie: Here I am again. Our school was out the 27th of April. I passed to the fifth grade. I am 12 years old now. We have one cow now. Her name is Reddie. We have seven horses, two colts and two mules. Their names are Jack and Queen. Our horses' names are Topsy, Fanny, May, Jimbo, Nellie, Gladys and Jennie. Gladys and Jennie have colts. Their names are Carrie and George. Mamma and papa and the baby went to Centralia today. I am the mother today. Ralph, Ruby, Kenneth, Kathy and I went to the Cowlitz store this morning. We are going to pick strawberries today. Well, my letter is quite long so I will close, hoping to hear from some of the cousins. The first time I wrote, a boy named Adolf Johnson asked my Aunt Bessie Cantrell if I was a boy. I think he was mistaken, don't you?—Blanche Cantrell, Lacamas Stock Farm, R. F. D. 1, Box 115, Winlock, Wash.

Gets the Cows in Every Night.

Dear Aunt Nellie: I have a pony, Foxy, and a steer, Star, and a cat, Puss, and a little white rooster, Bandylegs. The rooster will try and fight us but he is so little that he can not hurt us. I get in the cows almost every night except when they are here. We milk two cows but have seven. Papa has 31 horses. We have three cats and two little puppies. I will be in the fifth grade next year. My teacher's name was Miss Florence Binkheimer. I liked her fine. I was 10 years old January 24, 1917. Have I a twin? If I have I wish she would correspond with me.—Adda Beckley, Box 83, Benge, Wash.

Call the Pet Pig Betsy.

Dear Aunt Nellie: I have been reading the letters in the Corner, and think them quite interesting. I am 10 years old and in the fourth grade. We live on a farm of 720 acres. We have a little pet pig. We call her Betsy. We live two miles from school, and when the weather is nice we walk. My techer's name is Miss Folsom, and I will have her next term of school, also. I have two sisters and two brothers.—Mary E. Walker, Malden, Wash.

A Red Calf Named Juliet.

Dear Aunt Nellie: This is my first letter to the Children's Corner. I like to read letters written by the other children. I live on a large farm. My papa keeps registered Holstein cows and I have a pet calf. Her name is Juliet. I want a Shetland pony so I can ride to school. I have 11 little bantams. I am eight years old and weight 56 pounds. I am in the third grade at school.—Eva Simmons, Ridgefield, Wash.

Irene Likes the Corner Fine.

Dear Aunt Nellie: I saw my letter in print so I thought I would write again. I am going to tell you about my schoolhouse. My teacher's name is Miss Gildez. There is two rooms in the schoolhouse. My sister's teacher's name is Miss Hendrickson. I read the Children's Corner and like it very much. I would like some of the girls my age to write to me. I am 7 years old.—Irene Mae Hett, Kelso, Wash.

Elsie Is Going to Write Again.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 12 years old. My birthday is the 24th of August. Have I a twin? I live on a 10-acre farm. We have four horses. We have two cows named Rona and Blackie. I have a dog whose name is Rover. I have one brother. His name is David. I will write to the Corner again.—Elsie E. Johnson, R. 2, boxx 116, Selah, Wash.

Have 11 Little Turkeys on Their Farm.

Dear Aunt Nellie: I like to read the Children's Corner. I am 9 years old and am in the fourth grade. We live on a 40-acre farm. We have three horses and 13 cows. I have two brothers. Their names are Albert and Jesse. Mama has 11 little turkeys and two big turkeys. Jesse has two rabbits. I can bake a cake and crochet.—Hazel Rose, R. R. 2, boxx 52, Enumclaw, Wash.

Hazel Is a Farmer Girl.

Dear Aunt Nellie: This is my second letter to the Corner. I saw my other letter in print and hope to see this one in print, too. I am 11 years old. My birthday was December 29, 1916. I will be in the sixth grade next term. I have a pony named Bonny. We have 20 colts. One is named Jack and one Daisy.—Hazel Saltmarsh, Coulee City, Wash.

The Youngest Girl in the Family.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 8 years old. My birthday is March the third. I am in the third grade. We have 36 little chickens and we have two cows and two calves. I am the youngest girl in the family. I have a sister 14 years old. She is in the seventh grade.—Fannie Blackburn, Pullman, Wash.

Belongs to the Sewing Club.

Dear Aunt Nellie: This is the first time I have written to the Corner. I am 12 years old and will be 13 October 12. I will be in the seventh grade next term. I belong to the sewing club at school. We have two cats and one dog named Penny. I have two sisters and two brothers. I am the oldest girl in the family.—Kathleen Jump, Peach, Wash.

Aunt Nellie is glad to announce the receipt of letters for the Children's Corner from the following: Rudolf Freeland, Edna A. Tueth, Velma Le Master, Gertrude Crawford, Lucile Turnley, Mae Turnley, Mollie Hergert, Emma Brune, Grace Jones, Ethel Cervin, Marie Haven, Catherine Borden, Avah Sharp, Ruby Gertrude Hicks, Margarette Ruth Williams, Violet Leachman, Leona Machlied, Elzina Rogers, Anna Straube, Rachel Olivene Webb, Elizabeth Fogelquist, Hilda Kuki, Augusta Victoria Chevalier, Marian Holmes, Mary King, Jane Adams, Beulah Shaw, Eunice Libbey, Alice Duncan, Esther Hergert and Mary Alice Bennett.

SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University).

Stomach Troubles Sometimes Actually Due to Ear Trouble

Sometimes your eyes may be "bigger than your stomach," for time and again the stomach has "the whip hand" and makes the eyes pop, dilate, contract and actually "see things."

Dr. Hirshberg.

Dr. Milton Goldsmith of Pittsburg has made a novel report about the effects upon the stomach of irritations and affections of the canal of the outer ear. It will perhaps come as a great surprise to many to learn that so distantly situated a structure as the ear may have a profound influence upon one of the main engines of the human motor car—the stomach.

A little girl, 12 years of age, was sent to Dr. Goldsmith because she vomited early and often. She had this trouble for two years, which was attributed to "nervousness," whatever that can mean.

Whenever this little girl ate, no matter what composed the diet, she promptly began to vomit. An examination of her ears revealed a small glass bead, imbedded in wax, in one ear. After the bead and the wax were removed there promptly occurred complete and permanent relief from the stomach disturbance.

Another Strange Case.

A waiter became "sick at the stomach" every morning before breakfast. The attempt to eat made him dizzy. He felt as if he were about to strangle. Unlike the little girl, who had a soreness or pain, he complained of a sensation of heaviness in the pit of the abdomen.

Half an hour after breakfast he would vomit. However, the discomfort would gradually wear away and he could successfully eat a hearty dinner.

A search of the waiter's ears showed two solid lumps of stonelike, impacted wax, and their removal was rewarded with full relief from the stomach symptoms.

Another example of these strange bedfellows, stomach and ears, is the case of a young school teacher who, the day after her teeth were filled, said that she tasted rubber and felt nauseated. On the fourth day she was cramped, had stomach ache and vomited once. This relieved her for a few hours, when the pain returned.

Proves Interdependence.

For five weeks thereafter, until she saw Dr. Goldsmith, the nausea and vomiting continued in just this manner. She lost her appetite and had slight "burning in the oesophagus," worse after meals. She also belched much.

When all other measures failed to relieve, her ears were examined, when lo! a lump of hard wax was discovered in the right ear. This was removed and the whole potpourri of "indigestion" and stomach trouble went by the board. She was cured and has had no return of the ailment.

These are only a few of many instances where wax, foreign objects and other annoyances of the ear were found guilty of a bad influence upon a structure as far removed as the stomach. It also helps to bring home the extraordinary and many-sided lines of intercommunication between the various parts of the human form divine.

Will Confer on Grain

(Continued from page three.)

lands that, with ordinary prices, could not yield profitable crops.

Incidentally, that would mean handsome prices for farmers owning choice wheat lands, but that fact should not blind us to the true consideration of national welfare. For it must be obvious that if the government fixed a price that would only net a moderate profit on crops grown on the most productive lands, millions of acres of less fertile soil could not be profitably cropped. The nation would lose the necessary increased production.

In this connection the following letter opens up points that should be given a hearing at the forthcoming Spokane conference:

The plan of the food control administration to fix a "reasonable" price on wheat comes to the farmer as a bolt of lightning out of a clear sky. If the price is set below $2 per bushel at primary markets it will mean ruin and bankruptcy for thousands of tenant farmers of the Palouse country.. The situation is so serious that the farmers should lose no time in bringing the matter to the attention of the government.

This is the situation here: Summer fallow was last fall seeded to wheat that was worth $1.50 a bushel. One and one-half bushels per acre were seeded, costing $2.25 an acre for seed last fall. This was winter killed. The ground was reseeded this spring to wheat costing $3 a bushel, and one bushel was used to the acre, making a total cost of $5.25 an acre for seed alone. The present drouth has damaged this wheat until it will make only 10 to 15 bushels an acre. Sacks are costing 15 cents each. Binding twine costs 18 cents a pound. Threshing has advanced to 12 1-2 cents a bushel, and harvest labor has increased $1 a day per man. Implements have advanced 50 per cent in price. Groceries the same, and shoes 100 per cent.

Farmers have been paying exorbitant prices on everything they have had to buy for the last year. On top of all this the tenant farmers must deliver one-third of all crops to the warehouse with all expenses paid. All this crop was seeded on feed worth, oats, $60 a ton and hay $25 to $40 a ton. It will have cost the farmer $20 an acre by the time his crop is in the warehouse, and if he is a tenant it will have cost him $30 an acre.

The situation is serious, not only to the farmer but to his creditors as well. Farmers who bought Liberty bonds on instalments will fail to meet the payments if wheat sells for less than $2 a bushel. A price less than $2 will paralyze the farming industry of the Palouse indefinitely.

E. C. HUNTON.

Steptoe, Wash.

Mr. Hunton is referring to the government price on the 1917 wheat crop, which is yet to be fixed by a commission headed by President Garfield of Williams college.

Second-hand, but good as new. What have you to sell? Let us give you an offer. What do you want? We have it. Martin, your professional photographer, Picture Corner, Spokane, Wash.

Grain and Produce Markets

Chicago Grain.

CHICAGO, Aug. 18.—Increasing likelihood of a bumper crop of corn did a good deal today to smash down prices of that cereal. The market closed heavy, 3 1-4 to 4 3-8 cents net lower. Wheat finished easy at $2.02 for September, an overnight advance of 1 cent. Oats lost 3-4c to 4 3-4c. In provisions the outcome was a rise varying from 10 to 35 cents.

The fine crop outlook in corn was a big factor in causing would-be purchasers of corn for immediate use to withhold action and in forcing a decline in cash values to a point where for the first time in a long while No. 2 guaranteed to be delivered in Chicago by September 30 was sold at $1.65, the settlement price which the board of trade directors recently fixed for the September future. Bulls were further handicapped by the general workings of the government food control measures, and in particular by announcement of the unloading of neutral vessels at Baltimore. The market closed semi-demoralized at about the lowest level of the day.

Trifling amounts of wheat changed hands to even up yet outstanding contracts in the September delivery, the only option traded in. It was said the government price-fixing committee was not likely to report until September 1. Oats tumbled with corn.

Hogs commanding as high as $19 a hundred weight led to new upturns in the provision market. Belief was general that large export transactions were under way.

SAN FRANCISCO, Aug. 18.—Barley—December, $2.01 1-2; May, $2.25 bid, $2.32 asked.

Minneapolis Grain.

MINNEAPOLIS, Aug. 18.—Wheat closed a fraction lower. Corn lower. Wheat receipts, 204 cars, compared with 246 cars a year ago.

September wheat opened $2.05; high, $2.05; low, $2.03 1-2; closed $2.04 1-2.

Cash No. 1 northern, $2.40@2.45; No. 2 northern, $2.35@2.40; No. 3 northern, $2.15@2.30; No. 4 northern, $2.05@2.20; No. 2 hard, Montana, $2.20@2.30; No. 2 durum, $1.90@2.

Corn—No. 3 yellow, $1.78@1.80.

Oats—No. 3 white, 52c@53c.

Flax—$3.40@3.45.

Barley—$1.10@1.34.

Flour—Unchanged; shipments, 43,879 barrels.

Rye—$1.68@1.70.

Bran—$31@31.50.

Car Receipts at Coast Points.

Receipts of grain and hay in car lots at Coast points for the fiscal year beginning July 1 up to Saturday night for 1917-18 and 1916-17 were as follows:

Seattle.	Wheat.	Oats.	Barley.	Hay.
1917-18	101	81	20	524
1916-17	554	191	24	506
Portland				
1917-18	141	94	18	174
1916-17	555	258	23	283
Total.				
1917-18	242	175	38	698
1916-17	1109	449	47	789

Live Stock Quotations.

At Chicago.

CHICAGO, Aug. 18.—Hogs—Receipts, 2000; strong, 25c above yesterday's average. Top, $19, a new high price record; bulk, $18.10@18.80; light, $17.40@18.90; mixed, $17.50@19; heavy, $17.30@18.90; rough, $17.30@17.55; pigs, $12.25@15.75.

Cattle—Receipts, 2000; weak. Native beef cattle, $8.15@14.90; western steers, $7@12.45; stockers and feeders, $6.10@9.25; cows and heifers, $4.50@12.60; calves, $10.50@15.

Sheep—Receipts, 5000; weak. Wethers, $7.75@11.10; lambs, $10.25@16.50.

At Omaha.

OMAHA, Aug. 18.—Hogs—Receipts, 3000; market 50@75c higher. Heavy, $18@19; mixed, $18.25@18.75; light, $18@18.75; pigs, $15.50@17.50; bulk of sales, $16@18.75.

Cattle—Receipts 200; market steady. Native steers, $9.25@14.25; cows and heifers, $6.75@9.75; western steers, $8.50@12.50; Texas steers, $7.50@10.25; cows and heifers, $6.50@9; canners, $5.25@6.50; stockers and feeders, $6@10.25; calves, $8.50@12.50; bulls, stags, $6@8.50.

Sheep—Receipts, 2400; steady. Yearlings, $10.50@11.25; wethers, $10@11; ewes, $9@10; lambs, $15.75@16.25.

At Portland.

PORTLAND, Ore., Aug. 18.—Cattle—Steady; receipts, 36 head; steers 25c higher. Best beef steers, $8.25@8.75; good beef steers, $7.25@8.25; best cows, $6@7; ordinary to good cows, $6; best heifers, $6.25@7.25; bulls, $4.50@6; calves, $8.50@9.50; stockers and feeder steers, $4.50@6.75.

Hogs—Steady; receipts, 160 head. Prime light, $16.65@16.75; prime heavy, $16.50@16.65; pigs, $15.50@16; bulk, $16.75.

Sheep—Steady; receipts, 86; lambs 25c higher. Western lambs, $12@12.75; valley lambs, $11.50@12; yearlings, $9.50@10.25; wethers, $9.25@10; ewes, $8@8.50.

Spokane Stockyards Saturday.

Hogs — Receipts, none; market strong. Prime light, $17@17.25; prime heavy, $16.75@17; pigs and skips, $15.75@16.25; stockers, $13.75@15.

Cattle — Receipts, none; market steady. Prime light steers, $8@8.25; prime heavy steers, $8.25@8.75; good steers, $7@7.80; ordinary to fair, $5.25@6; prime cows, $6@6.75; common cows, $4@5; best heifers, $6@7; bulls, $5@7; calves, $7.50@9.50; stockers and feeders, $5@7.

These quotations are made on cattle of the beef breeds, all dairy stuff to take a cut of $1 per cwt.

Sheep — Receipts, none; market steady. Prime lambs, $12@12.50; good lambs, $10.50@11.25; prime yearlings, $8.50@9; prime wethers, $8@8.50; best mutton ewes, $5@7.

Portland Market.

PORTLAND, Ore., Aug. 20.—The merchants' exchange has resumed regular sessions for the sale of oats, barley and millfeed, but wheat will not be handled. There was a fair trade in oats and feed at prices that show a declining tendency.

In the following list of quotations the grain, hay, millfeed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 1, $48 per ton.

Millstuffs—Bran, $37 per ton; shorts, $39.

Barley—No. 1 feed, $47; brewing, $48; rolled, $51.

Hay—Buying prices; Timothy, eastern Oregon, $28; alfalfa, $23; grain, $16.

Eggs—Oregon ranch, case counts, 35@36c per dozen; candled, 37 1-2@40c.

Poultry—Hens, 15@16 1-2c; ducks, 13@17 1-2c; turkeys, alive, 18@21c; geese, 8@9c.

Butter—City creamery, prints, 44@45c per pound; cubes, extras, 40@40 1-2c.

Cheese — Tillamook triplets, 23c; young Americas, 24c.

Dressed meats—Veal, 15@15 1-2c; pork, 20@20 1-2c.

Hops—1916, 22c; contracts, 35c.

Potatoes—New, 3@3 1-2c per pound.

Wool—Eastern Oregon, fine, 60c; coarse, 60c; valley, 60@65c.

Beans — California small white, 16 1-2; large white, 16c per pound.

Hides—Salted hides (25 lbs. and up), 19c; salted stags (50 lbs. and up), 16c; green and salted kip (15 lbs. to 25 lbs.), 20c; green and salted calfskins (up to 15 lbs.), 30c; green hides (25 lbs. and up), 17c; green stags (50 lbs. and up), 14c; dry hides, 35c; dry salt hides, 26c.

The Wool Market.

BOSTON, Aug. 17.—The commercial bulletin will say tomorrow:

"Offerings of the wool are being made to the government by sample to the extent of 50 per cent of the stock owned here and valuations by the various committees have already begun. The demand for wool during the week has been moderate at very firm prices.

"Employment at the mills is good, although the machinery occupation returns of the National Association of Wool Manufacturers show a slight decrease on August 1, compared with a month earlier. Only scattering sales are reported from the west."

Scoured basis: Texas fine, 12 months, $1.65@1.70; fine eight months, $1.45@1.50.

California northern, $1.70@1.75; middle county, $1.40@1.45; southern, $1.15@1.20

Oregon: Eastern No. 1 staple, $1.75@1.80; eastern clothing, $1.50@1.60; valley No. 1, $1.55@1.60.

Territory: Fine staple, $1.80; half-blood combing, $1.70@1.75; three-eighths blood combing, $1.40; fine clothing, $1.60@1.65; fine medium clothing, $1.45@1.55.

Pulled: Extra, $1.80@1.85; AA, $1.70@1.80; A supers, $1.45@1.50.

Butter and Eggs.

SAN FRANCISCO, Aug. 18.—Eggs—Fresh extras, 43c; fresh firsts, 42 1-2c. Cheese—New firsts, 20c.

PORTLAND, Aug. 18.—Butter steady. Two creameries paying 48c for No. 1 sour cream, 4 cents over market.

CHICAGO, Aug. 18.—Butter higher; creamery, 36 1-2@40 1-2c.

ELGIN, Ill., Aug. 18.—Fifty tubs butter sold at 40 cents.

Seattle Market.

SEATTLE, Aug. 18.—Orders through brokers here for 75 carloads of potatoes have been filled, and the market is expected to be easier next week. A large portion of these potatoes were shipped to eastern Washington, where growers have been unable to give time to digging because of the late crop and labor is scare. This order has been moving for two weeks.

The second carload of early Yakima potatoes was received today, but outside of Kennewicks at 2 1-2c no quotations have yet been offered from that section.

Jobbers are advised that peaches are being contracted f. o. b. eastern Washington at 50c, which will mean a 75@80-cent market here and slow selling for a time. The impression prevails here that the bulk of the Washington peach crop will be sold in Montana, Dakota and Nebraska this year.

The demand for apples has been brisk all week, with transparencies leading at $1.25. A good quality of duchess and astrachans will be due next week.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 40@43c per dozen.

Poultry—Live hens, fat, over 4 lbs., 18c per lb.; 2 lbs. and under, 14@16c; old roosters, 11c per lb.; squabs, large, $3.50 per dozen; geese, fat, live, 10c per lb.; broilers, live, 18c per lb.

Butterfat—47c per lb.; dairy butter, 31@32c.

Beef—Buying prices: Prime beef, steers, 7@8c per lb.; cows, fat, 7@8c; heifers, 6@8c per lb.

Hogs—Light, 15@17c per lb.; do heavy, 12@13c per lb.

Veal—Fancy light, 14@16c per lb.; do heavy, 9@13c per lb.

Hides—Salted, 20c per lb.; salt kip, 22c per lb.; salted calf, 30c per lb.; green hides, 16c per lb.; salted bulls, 16c per lb.; dry hides (short trim), 40c per lb.; bull and dry salts, 4c per lb. less; green bulls, 12 1-2c per lb.; dry butcher full wool sheep pelts, 36@38c per lb.; green calf, 30c.

Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer.

Potatoes—New local potatoes, $3 cwt; sweet potatoes, 5c lb.

Apples—New Washington apples, $1 20-lb box; $1.75@2 50-lb box.

Butter—Blanchard cartons, 44c lb; Medo-Maid, 44c lb; Cascade, 44c lb; Gold Leaf, 44c lb; Better Butter, 44c lb; Aftalia, 44c lb; Diadem, 44c lb; Hazelwood, 44c lb; Solid Pack, 42c lb.

Cheese—Wisconsin full cream, twins, 23c; triplets, 25c; Hazelwood full cream, triplets, 26c lb; Hazelwood Young America, 27c lb; Wisconsin limburger, 29@30c lb; brick cheese, 20c lb; domestic Swiss, 33c lb; Young Americas, 26c lb.

Eggs—Fresh local ranch eggs, $12@12.50.

Live Poultry—Hens, 19c lb; old roosters, 10c; ducks, 13@14c; geese, 11c; turkeys, 20@25c.

Dressed Poultry—Hens, 22c lb; old roosters, 13c; ducks, 17c; geese, 14c; turkeys, 28c.

Hide Quotations.

Green cows and steers—25 lbs and up, 17½c; salted cured, 20c; green bulls and stags, 13c; salted cured, 16c; kip, 15 lbs to 25 lbs, 23c; calf skins up to 15 lbs, 31c; dry flint hides, 34c; dry salted, 27c; dry calf skins, under 7 lbs, 42c; dry sheep pelts, full wooled, 22@26c; dry shearlings, 10@75c each; green horse hides, $3@5 each; dry horse hides, $1@2.50 each.

Hog Prices Soar.

PORTLAND, Ore., Aug. 18.—Sharply advancing hog markets in the eastern centers have had the effect of further strengthening values at the local yards. Wednesday top grade hogs were sold at North Portland at $16.75, an advance of fully half a dollar over the preceding day. This is the highest hog price ever known here. Other lines were also firm, but prices were not altered. Receipts, especially of hogs, were light.

There was a liberal run of 21 loads of stock at the yards Friday, mostly cattle and sheep, the latter coming direct. The market retained all its firm features of the preceding day. Hogs, of which only 270 head were received, were quoted at $16.75 as the top, though a few head brought in by wagon were sold at $17 without fill. Cattle quotations were not changed.

There was a small run of stock at the yards Thursday and the volume of trading was limited. Strength still characterizes the hog market here, as elsewhere, and $16.75 was again paid for local offerings. Firmness prevails in the cattle division. The sheep and lamb supply continues light.

Receipts were 28 cattle, 4 calves, 160 hogs and 45 sheep. Shippers were GeorgeD. Burdick, Halsey, 1 car cattle and calves; H. R. Nelson, Monitor, 1 car cattle, calves, hogs and sheep.

The week closed quietly at the stockyards with prices in all lines firm at the range established during the previous days of active trading.

Fruit Sales Recorded.

NORTH YAKIMA, Wash., Aug. 16.—Yakima's first car-lot of Bartlett pears sold today at $1.70 a box, f. o. b., the sale being made by Manager Fred Eberle of the horticultural union. Pears in mixed cars have been moving to market this week at $1.75 a box as the top price.

The pear movement will begin in volume next week when most orchardists will start harvest.

Peach picking for early varieties is in full swing in the lower valley. The first car-lot shipped by Lombard and Horsley from their Buena orchard sold for 60 cents a box.

The cannery is contracting early Crowfords and Carmans at $20 a ton.

Angus Cattle

The early maturing baby beef kind.

NEWS FOR BREEDERS

S. A. Riches of Silverton, Ore., recently sold three registered Jersey cows and one heifer to Dr. E. F. Hertz, whose farm is at Vancouver, Wash., and who is an instructor in the Northwest Dental college at Portland. This is Dr. Hertz's foundation for a Jersey herd. Two of them are granddaughters of Golden Glow's Chief and one is of Island breeding.

W. L. Sheard, the Dayton (Ore.) Duroc Jersey breeder, recently purchased a fine gilt from W. M. Putnam of Nebraska. She is very smooth, has a good back and feet and neat head. She is bred to King's Col., and cost Mr. Sheard $130, laid down. His Pathfinder boar is growing and showing more and more type of his sire. His spring pigs have met with some bad luck, but Mr. Sheard will have a creditable showing in the Duroc futurity at the state fair this fall.

Thomas Withycombe & Son of Gaston, Ore., recently purchased from Emery T. Smith of Oakland, Ore., the fine Jersey cow Salem's Jolly Buttercup. This was the only daughter of Golden Jolly that was procurable on the Island when Harry West imported her in 1912. She sold in Mr. West's sale for $350 and as she is a very typy Jersey she sold cheap. She has an official test of 17 pounds of butter in seven days, with a grain ration of only three pounds per day.

The Duroc Jersey futurity at the Oregon state fair this year is going to be "some show." J. E. Finnicum, who has been out of the hog business for the past few years will be a contestant. W. L. Sheard, who has some of the best Golden Rod blood; Doerfler Bros., who now own Golden Rod himself, and will show his offspring; Charles Hoover, who made almost a complete sweep at the Panama-Pacific International exposition, and other new breeders are preparing for the competition that they must meet. J. W. Fruit will not show in the futurity, but will have a few very strong entries in the senior pig class. The Messrs. Doerfler will show a full herd, probably Mr. Weismer will show, and it is probable E. M. Clark, a new breeder over in the Tillamook country, will make an exhibit. It promises to be a very high-class hog show.

F. J. Chalmers of Cornelius, Ore., who is breeding jacks and jennettes, says he finds a fair demand for jacks, and believes the use of mules in the Willamette valley will steadily increase. He considers them well adapted to this region. His jennettes are close up to Spanish breeding, and his service jack, one of those compact, good-bodied jacks from Swaggart's Eastern Oregon jack farm. Mr. Chalmers raises a few Duroc hogs, because he likes the breed. He will show jacks and jennettes, including some baby colts at the state fair this fall, if labor conditions are such that he can get his farm work out of the way and get them ready.

Will Be Seen at Oregon Fair.

Frank Laighary, one of the well-known Jersey breeders of Monmouth, Ore., has 12 cows now on test, all young and all daughters of Octavia's Duke. All his daughters test high, one of them averaging eight and two-tenths per cent for two months. Some good records are being made. Mr. Laughary will take a show herd to the state fair this fall and the Pacific Dairy show at Portland if labor conditions are so he can. The photo above shows one of the handsome young bulls in the herd.—H. A.

Won a Championship.

The photo above shows Chief Bender, a two-year-old Clydesdale stallion that was both junior and grand champion of his breed, at the Oregon State fair, as a yearling, in 1916. He was first in class at the Union, Ore., stock show in June, 1917. Chief Bender is a colt of good size and great quality. He is owned by Ledbetter & McKinnon, well-known horse raisers of the Grande Ronde valley, and will be shown at the state fair again this fall.—H. A.

Ships Out Tons of Big Four.

Two good sons of Big Four, grand champion boar of the 1915 Oregon state fair, were sent out recently by Winona ranch, Grants Pass, Ore. One went to J. J. Morris, Morris Heights, Bandon, Ore., and the other to H. B. Banks, Dockton, Wash. Both these herds already have a large amount of Winona blood either in daughters or grand-daughters of Laurel Champion. Mrs. L. F. Jones, Elma, Wash., has just secured a young son of Laurel Champion. R. C. Gruhlke, Dixon, Cal., has recently started a registered Berkshire herd with a foundation trio of one boar pig and two sows purchased from Winona ranch. The boar is a son of Berryton Belle 31st, sired by Laurel Champion. One sow is by Big Four out of a daughter of Laurel Champion, and one is by Ballamoor's Master.

M'MONIES' TRIP POSTPONED.

The 10-days' trip through Oregon of Mr. McMonies, publicity man for the American Jersey Cattle club, has been indefinitely postponed. While in Texas Mr. McMonies, who is quite a young man, received word he was drafted; hence had to return immediately to his home in New York. Mr. McMonies was to reach Oregon about the 25th of August and arrangements for speaking dates and visits to the leading herds of the State were well under way.

High Priced Hay and Beef Cattle Supply

By E. L. POTTER.

There are those who are advising the farmers to hold their hay for higher prices and not to be content with the $12@$15 that is now being offered them.

We wonder if they have any idea of the effect of this high priced hay on the supply of beef cattle. The best steers are now bringing in Portland around $8.00 to $8.50. On this basis an average bunch of range cattle will yield a gross return of about $15 to $17 a head per year. The customary allowance of hay is one ton per head per winter, and some feed even more, especially in hard winters. If the cattleman pays $15 for the one ton of hay it does not take an efficiency expert to see that by the time he pays his other expenses he is behind the game.

Under these circumstances there is but one thing for the cattleman to do, and that is, sell out as fast as he can. That is exactly what hundreds of cattlemen are planning to do within the next few weeks. At the beginning of the "preparedness" campaign we said repeatedly that the only hope of more beef was more feed. Feed prospects are, unfortunately, very poor and instead of having a good crop of hay, as we had hoped, we are having a very light one. The cattleman is up against it. He can not do without feed and he can not pay the big prices. The only thing he can do is to quit or, at least, sell off cattle to the point where he can feed them on his own hay. The farmer who holds up a stockman for $15 a ton for hay is killing the goose that laid the golden egg, since he simply is forcing his customer out of business.

The public has from some unknown source obtained the idea that ordinary beef cattle are high priced on account of the war. In the month of July, 1914, the Eastern Oregon experiment station sold good hay and grass fed steers in Portland for $8.00. In August, 1915, somewhat better cattle were shipped to Kansas City where they brought $8.80. In July, 1916, similar cattle were sold in Seattle for $8.00, after Portland buyers refused to bid over $7.50. This present July this same class of cattle are not worth in Portland over $8.50. A few days ago a prominent eastern Oregon cattleman sold his fat cows for 25 cents per hundred lass than he sold the same class of cows for, three years ago.

We have been asked again and again: "What are you doing to get the cattlemen to increase their herds?"

What we are trying to do is rustle more and cheaper feed. It would be an insult to ask a cattleman to raise more $8.00 beef on $15.00 hay. Whenever a cattleman can not buy a ton of hay for the price of 100 pounds of live beef, something is going to happen. In the present situation either beef must go to $15 a hundred or hay must come down to $7 and $8.

The situation is not entirely new. Along about 1909 and 1910 hay got so high that the cattlemen sold out and went to raising hay. Within two years hay, in many places, could not be sold at all, and there is nothing much more worthless than a stack of hay with nothing to feed it to.

We sincerely hope that this time cattle and hay prices may be adjusted without such serious damage to either the stockman or the hay producer, but an adjustment of some kind is inevitable.

Breeders' Department

HOLSTEIN CATTLE

Registered Holsteins

A FEW BRED A. R. O. YOUNG COWS and a fine lot of young bulls, some about ready for service. Herd sire an undefeated Grand Champion, backed by a wonderful array of world-renowned high-producing ancestry.
Write for pedigrees and terms.
H. R. BOOMER, New Plymouth, Ida.

WAYSIDE RANCH HOLSTEINS.
Am offering 13 heifers for sale, sired by my herd bull Buffalo Duke Doede, a half brother to the world's champion cow. An opportunity of a life time to the man wanting No. 1 stuff.
H. H. STIYER, Buhl, Idaho.

HOLSTEIN BULL CALVES.
One from 20-lb. cow, another from a 16-lb. jr. 2-yr.-old. Herd headed by Model Fobes of Idaho, whose four nearest dams average 27.25 lbs. butter 7 days.
EARL BEEBE, R. F. D. 2, Rupert, Idaho.

SHORTHORN CATTLE

Shorthorn Cattle

Registered bulls and heifers of breeding age for sale. Some from extra heavy milking dams.
A. D. DUNN, Wapato, Wash.

Hercules Shorthorns

For particulars write
DAY & ROTHROCK
Exchange Bank Bldg.
Spokane, Washington.

HEREFORD CATTLE

Highland Stock Farm

offes for sale 10 yearling bulls and eight two-year-old Polled heifers, sired by Polled Premier and bred to herd sires Majestic Fairfax 437657 by Corrector Fairfax and Western Fairfax 461126 by Fairfax 16th.
PLATT BROS., Props., Roy Jacobs, Herdsman, Genesee, Idaho.

AYRSHIRE CATTLE

AYRSHIRE BULL CALF

Vigorous, of splendid type, with exceptional production behind him. Snap shot and full particulars on application.
MEADOW BROOK FARM, Montesano, Wn.

JERSEY CATTLE

A 600-Pound Bull for $100

Dropped May 19, 1917. Dam Creole Bess, 684 lbs. butter, 12,363 lbs. milk in one year. Sire Dominus, who is out of an 817-lb. cow, and sired by a bull out of an 853-lb. cow. This calf is broken colored but will make a great producing sire.
J. B. STUMP & SON, Monmouth, Ore.

Waikiki Farm Jerseys

We offer several young bulls and heifers of exceptional breeding. Send for descriptions and breeding.
WAIKIKI FARM, R. 7, Spokane, Wash.

DUROC-JERSEY SWINE

Duroc Boars

Four extra fine large January boars, whose dam is a litter mate to the junior champion sow at the Interstate fair in 1916.
Her dam is a litter mate to the first prize and reserve grand champion at the San Francisco world's show.
The first check for only $35 each will get them. They are $50 pigs.
DAVID BROWN, R. F. D. 1, Spokane, Wn.

Hillcrest Duroc Jerseys

For immediate sale:
1 11-mo. gilt, bred to farrow Oct. 3d, $60.
1 10-mo. gilt, to farrow Nov. 8, $50.
3-month pigs, $25.
Extra fine stock, combining the blood of noted show winners.
R. P. Camp, Ione, Wash.

Choice Duroc Gilts

Sired by the great boar, Golden Rod.
DOERFLER BROS. Silverton, Ore.

Only $15 Each

Well grown, lately weaned Duroc spring pigs, from prize winning stock, with papers, $15 each.
MIDDLEDALE FARM, Goshen, Ore.

DUROCS.
Boars and open or bred gilts of excellent breeding.
E. E. PRICE, CABINET, IDAHO, OR
JAMES N. PRICE. Pullman, Wash.

POLAND CHINA SWINE

Fruitland Stock Farm

Poland China Hogs.

A few February and March lambs.
TWO YOUNG GUERNSEY BULLS.
B. F. Baughman, Redmond, Ore.

DOGS

Fox and Wolf Hounds

of the best English strains in America; forty years' experience in breeding these fine hounds for my own sport and protection of sheep, hogs and poultry. Send stamp for catalog.
T. B. HUDSPETH.
Sibley, Jackson County, Missouri.

Real Bargain in Five Jersey Heifers

Four sired by a grandson of Golden Glow's Chief (31 Register of Merit daughters), and double grandson of Rioter B. K. Helma (sire of 8). One a granddaughter and one a double granddaughter of Picabo (734.1 lbs. butter in a year.) All well bred. Ages sixteen months down to two. To feed my herd properly must dispose of part. $350 takes them.
C. A. SWARTS, Springfield, Ore.

FISK

(*World Standard*)

Tire Sundries

Have the Confidence of Motorists Everywhere

—a confidence bred by years of thorough acquaintance with Fisk quality and dependability.

In the purchase of such products bear in mind that dependable quality is absolutely essential. A patch that won't stick is worthless—a cement that doesn't hold is worse than none at all. To spend money for sundries just because they are cheap is like buying shoes with paper soles.

Every Fisk Sundry made is backed by the Fisk trademark of highest quality and economy, and the pride of the manufacturer in maintaining this high standard of value.

When you buy Fisk Sundries you pay a trifle more in *some* cases—but *you get what you pay for and you can bank upon the quality of what you buy.* That is the essence of true economy and sensible buying.

This New Cementless Patch Is an Evidence of Fisk Initiative in the Sundry Field

FISK MOLDED

—an aggressiveness that has been characteristic of the Fisk Company nearly twenty years. The Fisk Molded Patch is diamond shaped. It will cover a larger cut, but, because all waste rubber is eliminated, costs less. It has strength where strength is needed—built up heavy in the center. Can be applied easily and when you put it on your tube you know it will stick. Unquestionably the most efficient and best value cementless patch on the market.

6 for 25c—A New Patch—A New Package—A New Price—6 for 25c

Fisk Sundries include besides the above:

Emergency Patches	Tube Splices	Air Bags	Uncured Stocks
Pure Para Cement (*in tubes, large and small cans*)	Air Hose	Air Valves	Valve Pads
	Fabric Patches	Bead Mold Filler	Bead Strips
Repair Kits	Tire Tape	Flaps	Soapstone
	Fabrics	Vulcanizing Cement	Bead Cavity Filler

THE FISK RUBBER COMPANY

of N. Y.

General Offices: Chicopee Falls, Mass.

Fisk Branches in San Francisco, Oakland, Sacramento, San Jose, Fresno, Los Angeles, Riverside, San Diego, Hollywood, Pasadena, Reno, Portland, Tacoma, Seattle and Spokane.

VOL. XL. NO. 35. AUGUST 30, 1917. WEEKLY.

THE SPOKANE INTERSTATE FAIR

On Monday, September 3, the Spokane Interstate fair will open its doors for the 24th consecutive season. While the usual features, both of exhibits and entertainment, are promised without curtailment, special stress is being laid on practical education to assist the public to do its bit toward meeting the nation's present crisis.

"Some Men Try to Farm Too Much"

Good Farming Proves to Be Best Way to Overcome the Drouth; Small Farms Would Permit Better Cultivation

PROSSER, Benton County, Wash., Aug. 19.—The weather is hot and dry, but is good weather for harvesting, and most of the wheat is cut. Wheat is going from two to 20 bushels per acre. It makes all the difference in this part of the state when the ground was summerfallowed and time of year it is seeded. If the wheat farmer expects to get a good crop of wheat he must summerfallow his ground in the spring and thus keep the weeds out. Some men try to farm too much. Some farmers paid $3 per bushel for their seed wheat this spring and put it in late, and with no rain they got a poor crop. The farmers lost fully one-third of their wheat crop by drouth. The man that summerfallows his ground in the spring, keeps the weeds out and sows his wheat early, is the man that gets a good crop. Feed is going too high to feed to live stock. Hay is $15 and $16 in the stack. You can't feed young stock and get that amount out of it. G. W. WILGUS.

Fruit Indications Good.

ZILLAH, Yakima County, Wash., Aug. 21.—Owing to ours being an irrigated section, we are not, in any way, effected by the drouth, and but few crops were affected by the heat. Potatoes suffered the most. Corn, when it had a good start and water was available, has made a splendid growth.

With the fruit harvest at hand indications are, while prices may not be up to last year's level, they will be good Pears bring $1.50 f. o. b. Elberta peaches are being sold all the way from 50 to 60 cents. The prunes can not be expected to be as good as last year, owing to the heavy crop in competing sections. It is a question what encouragement prices will have on the live stock interests. In our particular section there has been considerable corn grown and the corn market was not good until later in the season last year. This season every one is raising a few hogs and it is a question how far the production of grain and hogs will be out of balance. In a section which produces heavy tonnage to the acre, the farmer should be equipped with a silo and utilize what is now wasted. J. F. M'CURDY.

Crops Are Good.

MALAGA, Chelan County, Wash., Aug. 16.—Crops are good here and prices better. Of course those who have raised wheat have lost some on account of the drouth, but the most of the hay here is alfalfa and timothy and some red top and that has had plenty of water, so will be a good crop. Alfalfa is $18 per ton, just loose hay. Early fruit, such as cherries and apricots, have sold for a better price here than ever before. Prospects for the apple look good now. There has been a bigger effort in this county to raise more of the food that is used in the homes than ever in the history of this country and I believe it has been fairly successful. Butter and cream bring a good price, and eggs have never been lower than 30 cents a dozen. Beef is a profitable item here, as there is such a vast range for spring and summer feed. Hogs are not raised to any extent, but they could be and in the next few years I think there will be more hogs raised.

MRS. O. ALLENBAUGH.

Favors City Poultry Lot.

COLFAX, Whitman County, Wash., Aug. 18.—The crop here will be about 50 per cent normal. Of the fall-sown wheat forty-fold stood the winter and drouth best. But little of it was sown, as red Russian was a more popular variety, being a heavier yielder if conditions are favorable. I think from now on the popularity of red Russian will wane and forty-fold and the white hybrids grow in favor. Red Russian winter killed badly and the drouth has shriveled what was left. I believe crop conditions and prices will tend to depress live stock growing. What is the matter with the backyard poultry farm? If farmers can feed high-priced feed profitably why can not city folk? City folk are supposed to be of a superior business capacity. They ought to make it a howling success—a crowing success at least. If this suggestion is offensive to the esthetic taste of city people they will have to satisfy their carnivorous taste on cereals and vegetables, as farmers are not much interested in meat production. Looking ahead one, two or three years into the live stock industry requires a more powerful telescope than I have been able to muster into service. With trade conditions so abnormal, the possibilities of civil strife, the uncertainty of the issue of the war or its duration, and fopsy turviness of conditions in general, I am not much disposed to look ahead with any degree of certainty. E. C. HUNTON.

Cowlitz County Is Safe.

CASTLE ROCK, Cowlitz County, Wash., Aug. 7.—Owing to the late spring and the difficulty in preparing the ground for the seeding, it has put the crop so backward that when the hot, dry weather came the young plants were not in a condition to withstand the change. However, there has not been as great a loss as would be expected. Potatoes are going to be less than normal despite the large acreage that was planted last spring; some have blighted enough to make them almost worthless; those planted on the sandy soil have started in to wilt and on the uplands the weeds have a good start on the land. Farmers are filling their silos and report a bumper crop. The dairy business in this county has steadily increased and has proved a very profitable thing as the Mutual Creamery company from Seattle has established cream stations in the principal towns in the county. The predictions are that two or three years hence, Cowlitz county will be one of the foremost dairy counties in the state. Already blooded bulls are coming in from the best herds in the west, making a healthy, vigorous stock, and with the interest that has been shown in the cow testing by the dairymen will have a tendency to weed out the boarders. Crops, as a rule, are better than usual; corn looks well; grain was harvested in good condition; the hay was better than last year, which was considered above the average. No demand for poultry in the local market. Seattle is getting most of the veals and pigs. Poultry buyers are scouring the country for fall delivery. Hay is selling for $12 per ton in the field, new potatoes for three and a half cents per pound and not many in the market at that. Eggs are 37 1-2 cents a dozen. The county is pretty well cleaned up of the old stock of hens. The canning clubs and boys' potato clubs are holding their meetings and seem to be getting considerable interest aroused in the work. Cherries are nearly all picked and the crop was better than common owing to the weather; no rain to crack them and sold to the canneries for five cents per pound. Blackberries are scarce. The prune crop will be good, but no large orchards. Road work, forest fires and work in the woods and mills have made help very scarce for the farm. In some cases the women are going out into the field and helping gather the grain and hay crop. C. C. BROWN.

Dry Land Alfalfa Good.

METHOW, Okanogan County, Wash., Aug. 20.—The injury from drouth and heat will be at least 50 per cent or half a crop. The crop which withstood the heat best is corn that was planted by the 15th of May. Corn planted after the first of June never came up or is a failure. Some fields succeeded better than others owing to the fields being manured and cultivated clean. Crop conditions will temporarily depress live stock conditions. Looking ahead one, two or three years, the special effort farmers ought to make along live stock lines is to put more land in alfalfa, dry land or irrigated. My dry land alfalfa is making excellent pasture for my beef steers as the range is burned as dry as the Sahara except the forest reserves. This is the reason of the flood of cattle on the markets. CHARLES GRANT.

Foothill Crops Are Good.

WALLA WALLA, Walla Walla County, Wash., Aug. 8.—All crops around here with the exception of the foothills will run 25 per cent short. Irrigated crops are about normal. The ground in the foothills is heavier and the nights are cooler. The evaporation is not as great as in the lower and hotter sections. The present price of grain and hay is not a very great stimulant in the live stock business. I would not wish to venture an assertion what might take place three, two or even one year from now owing to the unsettled labor and war conditions. One person's guess is as good as another. W. A. RITZ.

Sees Feed Possibilities.

COLVILLE, Stevens County, Wash., Aug. 19.—On account of the great variations of soils and climate it is a difficult problem to estimate the possible loss from drouth and heat. Taken as a whole this county will produce on a conservative estimate from 50 to 60 per cent of a normal crop. In some cases where the soil is sandy and in the valleys that were overflowed the land will yield from 10 to 70 per cent normal crop. Alfalfa and clover hays were damaged least, about 20 to 40 per cent; timothy about 40 to 50 per cent; wheat 20 to 60 per cent; oats 30 to 60 per cent. Some of the oats in the valley was severely frosted and is being cut for hay. Some land this season would not have produced a fair crop under any system of dry land farming. But one thing is noticeable this season. Where good tillage and manuring are prtcticed one can plainly see the difference in favor of this practice. With the amount of hay that this county can produce it is plainly evident that more dependence must be placed on live stock for the farm income. In some sections where the range is limited and the farms are small, dairying will be the main line. Beef production will be found in sections removed from the railroads where the range is plentiful. Where it is possible to grow corn, cereals and alfalfa hogs do well and are profitable. Many farmers will be forced to sell some live stock due to the feed shortage and here attention shoud be paid to weeding out the unprofitable animals. If the feed shortage accomplishes this it will be a benefit in disguise. A. R. HAHNER.

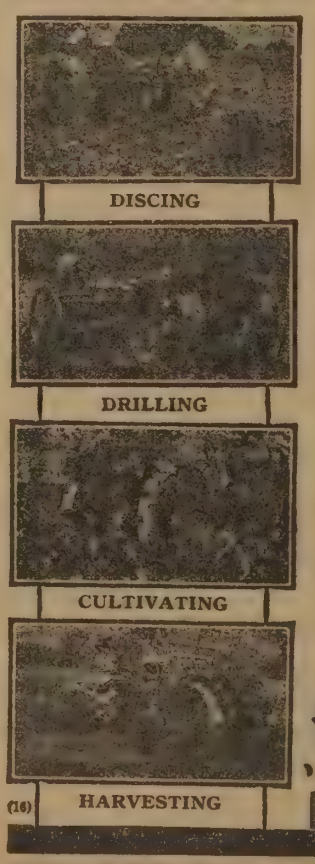
Quality Good; Yield Poor.

OTHELLO, Adams County, Wash., Aug. 16.—The prospect for a crop of at least an average of 15 or 16 bushels per acre in June was cut to a possible average of eight or nine bushels for this immediate vicinity. Many fields that the farmer expected 12 to 15 bushels are yielding about nine or ten. The quality is generally fair, averaging 57 to 58 pounds. Some fields that were the best were the earliest seeded and the shallowest cultivation; they ripened more rapidly than the deeper tillage, hence were ahead of the two weeks of 104 degree weather in July. Crop and price conditions will have a tendency to cause every man to put on the market any beef or hog that is marketable. Looking ahead all farmers, even at a sacrifice, should keep all breeding stock so as to increase rather than decrease the output. We believe that the people will generally realize that we are at war before 12 months pass by.

A. O. LEE.

Half a Wheat Crop.

OMAK, Okanogan County, Wash., Aug. 18.—There will be about a half crop of wheat in the county, owing to drouth and heat. Spare hay is being bought up and will be scarce in winter. There will be a great increase in potatoes and beans. There is considerable interest being taken to increase the number of milch cows, while horses are being sold for army purposes. Everything that can be used for stock food should be carefully saved. There will be an increase of about 25 per cent of the apple crop.



J. O. WOODS.

THE ORIGINAL
2-WHEEL TRACTOR
That Does All Farm Work
WITHOUT HORSES

WHEN you begin to consider the purchase of a tractor, whether for a farm of 80 acres or more, there are a number of questions you will need to ask yourself before you buy. Here are some of them:

—Will it CULTIVATE as well as plow? Will it do ALL my farm work without horses? Will it work on plowed ground without packing the soil? Will it do the work quicker; easier; and save on hired help? Is it really a ONE-MAN tractor? Will it handle as easily as a team of horses, rather than be too heavy, clumsy and inconvenient? Do I ride on the tool where I can see the work I am doing, or will I have to have someone run the tractor while I am operating the farm implement?

Here is the tractor that answers these and all other farm power problems of the average farm most practically and profitably. A tractor that is heavy enough to do all farm work that horses will do, yet light enough to be handy and work on plowed ground without packing your soil.

MOLINE ORIGINAL 2 WHEEL

UNIVERSAL TRACTOR

This is the original Two-Wheel Farm Tractor. It pulls two 14-in. plows; will disc, harrow, plant, CULTIVATE all hill and row crops, pull mower, binder, manure spreader, fill your silo—and do all belt work on the average farm. In fact, it will do anything you can do with horses; do it quicker, easier; and with less hired help. It weighs only 2800 lbs., but all its weight being on its two wheels —*all its weight is traction weight.* The tool you hitch it to forms the rear wheels and you do not have to pull around a ton of needless weight. It will back up with tools attached easier than a team will back. You can turn around in a small space; get close to the rows and the fences.

Write for Catalog Folder and read how farmers everywhere are solving the power and hired help problems on their farms.

MOLINE PLOW CO. Dept. 51 Moline, Illinois

The Moline Line includes: Corn Planters, Cotton Planters, Cultivators, Corn Binders, Grain Binders, Grain Drills, Harrows, Hay Loaders, Hay Rakes, Lime Spreaders, Mowers, Manure Spreaders, Plows, (Chilled and Steel), Scales, Seeders, Stalk Cutters, Farm Trucks, Vehicles, Wagons.

Also STEPHENS SIX Automobiles

FOR GOOD FARMING, ATTRACTIVE COUNTRY HOMES AND HAPPY COUNTRY PEOPLE

Interstate Fair Program Is Ready

Entries Indicate Good Displays; Educational Features Predominate

Everything is in readiness for the opening of the gates of the Spokane Interstate fair next Monday, September 3, and the management is enthusiastic over the prospects. Display room is taxed, and arrangements have had to be made for additional facilities, according to W. L. Tennant, secretary.

The premiums offered this year total approximately $16,000, and will be distributed over the entire northwest, as entries are booked from many sections.

The keynote of the exposition this season will be education. The fair management has made special effort to place before its patrons exhibits and demonstrations designed to assist the individual in solving his or her own personal problem in doing his or her respective "bit" in this, the nation's crisis.

Finances Are Sound.

For the first time in many years, says the management, the fair is beginning the season without the necessity of making a preliminary loan to finance the exposition. It is declared to owe no bills and to have a balance of cash in the bank. This statement is issued to indicate the ability of the association to omit no item that would contribute to this season's success.

Granges Will Exhibit.

It is stated that the granges have reserved already a fourth more space than any previous year. Among the granges that have already made their reservations and will have their exhibits ready when the gates open are the following:

Chattaroy grange, Everett I. Janney, master, Buckeye, Wash.; Manito grange, R. Bernet, master, Rockford, Wash.; Freeman grange, Ed Olson, master, Freeman, Wash.; Mt. Spokane grange, Ed. C. Mitchell in charge, Colbert, Wash.; Half Moon grange, F. W. Thurber, master, Buckeye, Wash.; Glenrose grange, E. J. Peterson, master, Glenrose station; Green Bluff, C. E. Atkinson, master, Mead, Wash.; Foothills grange, A. A. Johnson, in charge, Millwood, Wash.; Elk Farmers' union, Elk, Wash.; East Spokane grange, Mrs. F. A. Noteware, master, Spokane, Wash.; Valley prairie, W. W. Fisher, Colbert, Wash.

The reservations of space for individual exhibits in the agricultural hall are not made ordinarily until just before the opening. Among those that have entered early, however, are: Wenatchee Chamber of Commerce, Wenatchee, Wash.; Mansfield Commercial club, Mansfield, Wash.; J. R. Orrock, Sharon, Wash.; J. N. Grieve, Canadian government agent, Spokane, Wash.; F. C. Sudnoff; Arcadia Orchards company, Deer Park, Wash.; Colville Commercial club, Colville, Wash.; Nespelem Indian reservation, Nespelem.

Food Conservation.

It is the plan of the fair association to make the exposition a special force in the campaign for greater food production and conservation. Features designed to be of great practical assistance in the movement will be offered. Demonstrations by experts will be made. Literature will be distributed by many booths.

Live Stock Show.

The live stock show promises to be unusually attractive, declares Secretary Tennant. In the last five years the association has paid out in premiums to live stock exhibitors more than $28,000, an average of more than $5600 annually. This does not include the prizes offered by the various breeders' associations.

During the five years there have been a total of 5117 head of live stock shown at the fair, or an average of more than 1000 each year. These figures indicate what can be expected this year if the promises of early entries materialize, as there is reason to believe they will.

Of special interest to the live stock industry is the auction sale of pure-bred stock. This sale is scheduled for Friday, September 7, and the interest taken in it will be something of an indication of the actual sentiment prevailing throughout the northwest regarding the advisability of continuing the live stock business at this time.

The following are the entries for the show, compiled a few days before the closing date. Others will be added to

(Continued on page sixteen.)

Nation Takes Up Meat Problem

Big Committee of Stock Men Will Handle the Situation

For the purpose of preventing the further disintegration of the meat-producing industry in this country, and of laying the foundation for greater increased production in the years immediately ahead, the United States department of agriculture and the national food administration have joined in the appointment of a committee of about 100 leading live stock men and dealers to struggle with the problem. This action has grown out of the unprecedented demand for meats from this country owing to the depletion of the supplies in war-stricken Europe.

Frank M. Rothrock, who has been appointed a member of the national live stock committee.

Since the war started there has been a total decrease of 115,005,000 in the world's supply of meat-producing animals. Cattle increased 7,090,000 in the United States, while the total world decrease was 28,080,000. Sheep decreased 3,000,000 in this country while the world supply was diminished by 54,500,000. Hogs increased 6,275,000 in America, but the general supply decreased 32,425,000. The capital stock of animals in the countries of Europe now at war with Germany, has decreased 33,000,000 head.

In a statement issued by the food administration the situation is summed up in this wording:

"The problem facing America is not only of supplying the immediate demand of the allies, but one which is more far-reaching in significance. As the war goes on there will be a constant lessening of the capital stock of the world's food animals. Among our western allies the demand outruns further every day the decreasing production, and as shipping becomes further shortened by submarine destruction, further destruction of herds must ensue."

Announcement has been made of the appointment of an executive committee of the large committee to be headed by Gifford Pinchot of the food administration. The other members of the executive committee are G. H. Rommel of the department of agriculture and E. C. Lassater, a Texas stock man.

Among the members of the big committee is Frank M. Rothrock, one of the proprietors of the Hercules stock farm of eastern Washington, and one of the best known stock men of the northwest.

Announcement is made that the first meeting of the committee will be held in Washington, D. C., September 5, and all members are urgently requested to attend. They are giving their services voluntarily and paying their own expenses, indicating the patriotic sentiment of the movement.

I. W. W. Strike Fails

Industry Continues Undisturbed

"Let our answer be a general strike of all men employed in the harvest fields and the fruit orchards in these states. Let the harvest go to waste and let the fruit rot on the ground. If the laws of the country are set aside and the constitution overruled in the interests of a gang of profit-hungry pirates, then we will have recourse to the court of the working class."—Excerpt from the recent strike orders issued by James Rowan, district secretary, I. W. W.

The audacious threat of the I. W. W. organization, to call a general strike in the harvest fields, the orchards, and the stock camps of the Pacific northwest, on Monday, August 20, proved a complete failure.

The man who issued the threat and its accompanying disloyal demand on the governors of Montana, Idaho, Washington and Oregon to release all I. W. W. prisoners in the four states, was placed under military arrest in the county jail at Spokane by United States soldiers. With him were more than a score of his unpatriotic associates—all dragged in when the military authorities, at the request of Governor Lister, took the menacing situation in hand.

Harvest Continued.

Reports from all parts of the Pacific northwest say there was almost no response whatever to the strike call. Only here and there an occasional harvest worker quit, and the hum of threshing activity went unbrokenly on.

The reason is apparent. All patriotic workers saw through the gauzy scheme to cripple the American government and aid the kaiser and his Prussian generals. They realized that we are at war with an oppressive and autocratic government that is opposed to liberty and progress, and that to win this war we must save the produce of our farms, ranges and orchards.

It is plain that any interference at this critical hour with the work of saving the harvest would injure our country and help Germany.

So the strike is a failure and the conspirators who tried to intimidate the governors of four states and Uncle Sam find that they can not be bulldozed.

Of the 27 men arrested by the military authorities in connection with the threatened I. W. W. strike 13 have been released, authorities not feeling them "dangerous." James Rowan, the leading spirit, together with 10 other members of the organization, are still in the county jail. Two German aliens and an alleged slacker have been turned over to the department of justice. The men held are detained as military prisoners. The army officers and United States District Attorney Garrecht are considering courtmartial for some of the military prisoners.

S. W. Stevens County Fair.

Liberal prizes for exhibits of grains, grasses, fruits, vegetables, poultry, horses, cattle, hogs, women's work, school work, etc., are offered by the management of the southwestern Stevens county fair, which will be held at Hunters Sept 20 to 22, inclusive. Saturday, September 22, will be live stock day. The noticeable feature will be the exhibit of pigs by members of the boys and girls' pig club. Horse racing and sports are not overlooked.

Potato Storage Demands Attention

Makes Possible Longer Marketing Period and Insures Minimum Loss

Potatoes are one of the most important food crops in the United States and storage has necessarily been utilized to a very considerable extent to hold over supplies for both seed and food purposes from one season to another.

When potatoes were plentiful and relatively cheap, little attention was given to such wastage and loss as usually occur in storage; in fact, a considerable loss was considered inevitable. With high prices and scarcity of supply the need of conserving the entire production for seed and food purposes is of the utmost importance, says Farmers' Bulletin 847 of the U. S. department of agriculture.

Potato storage serves two purposes, the first of which is to make possible a longer marketing period for the crop, and the second to insure the minimum amount of loss from moisture and decay.

The successful storage of potatoes is dependent on a number of factors; as, for example, the quality of the tubers stored, the temperature at which they are held, the moisture content of the air, the size of the storage pile, and the exclusion of light. The proper storage temperature for potatoes is supposed to range from 34 to 38 degrees F.

Careful investigations during several seasons have clearly demonstrated that losses in storage can be largely prevented by the proper construction and intelligent management of storage houses.

Storage is employed generally for the purpose of prolonging the season of food products.

The best storage temperature for table or seed potatoes is one that will keep the tubers in a dormant condition and preserve their edible quality and their vigor for seed purposes with minimum decay and moisture losses.

The humidity content of the air of the storage cellar plays an important role in conserving moisture losses. The moisture content of the air should not be so high as to deposit a moisture film on the surface of the tuber, or so low as to cause an unnecessary loss of moisture through transpiration.

Thorough aeration of the stored tubers is an essential for the best preservation of seed stock and the reduction of storage losses.

The exclusion of light from the storage house is an essential feature in the storage of table stock.

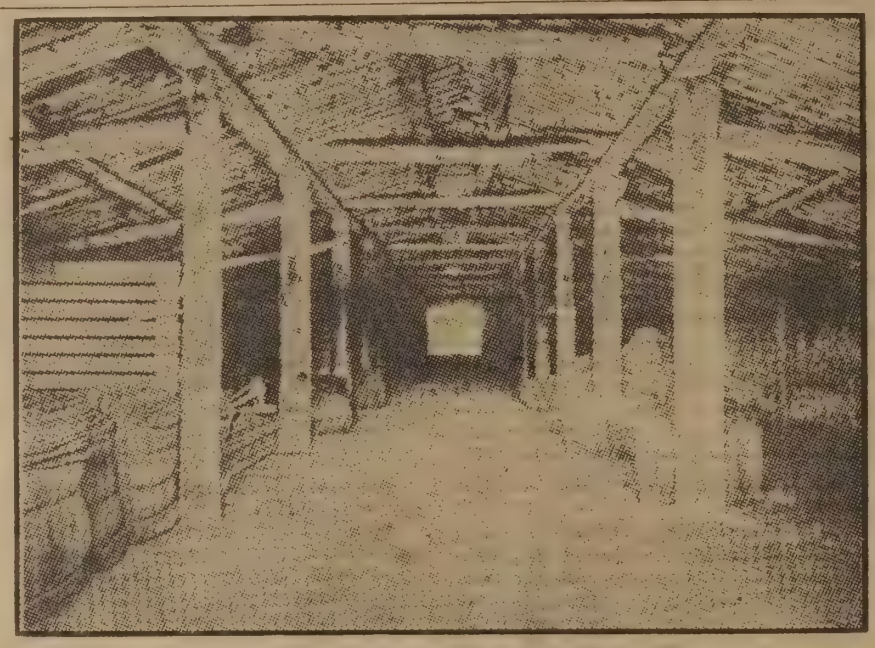
Good storage is a vital factor in maintaining the vigor of seed stock. Its value is not yet fully recognized by the grower.

The simplest form of potato storage is the pit.

The next simplest form is the dugout pit or storage cellar.

Potatoes may be successfully stored in pits if provided with good drainage and given sufficient covering to insulate them against external heat and cold. The first consideration is a well-drained site, or one which can easily be provided with good drainage.

The depth of the excavation may vary from practically nothing to two feet or more. It is usually not advisable to excavate more than six inches. The shape of the pit should be long and narrow rather than square.



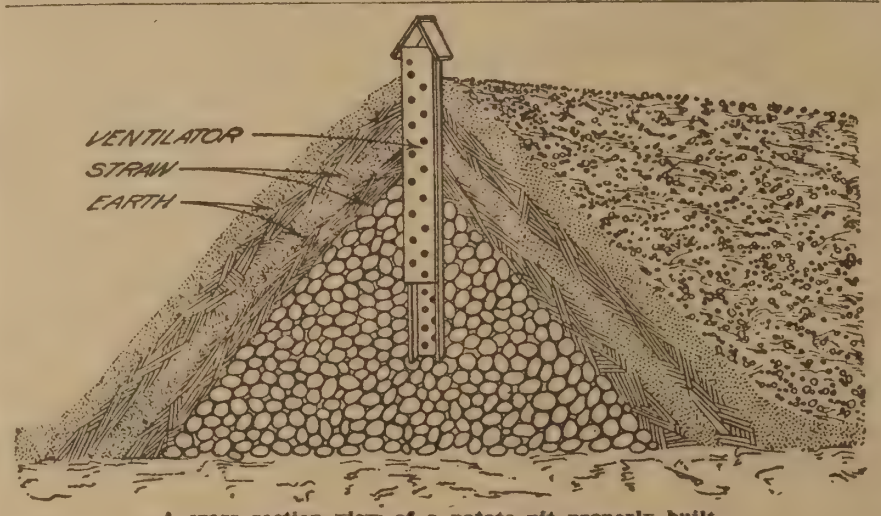
The size is dependent to a certain extent on the quantity to be stored. It is not advisable to store too large a quantity in one pit, just as it is inadvisable to store too large a quantity in a bin or house.

In preparing the pit for the reception of the potatoes it is desirable to place a light layer of straw on the floor to protect the tubers from direct contact with the soil. The tubers should be piled in a ridge of inverted V-shape. When piled in this way a great area of the pile is exposed to the air, and at the same time when covered it sheds rain much better. Before covering the pile, or, in fact, before the potatoes are piled, it is desirable to make some provisions for ventilation to take care of the moisture given off in respiration.

The potatoes are best insulated against cold and heat by covering with alternate layers of straw or hay and soil. The first layer should consist of straw, adding only sufficient soil to prevent injury to the tubers from exposure to light or frost. The object is to cool off the tubers, and as soon as possible get rid of the moisture resulting from the sweating process. As the weather grows colder more straw should be added and then a layer of soil. With the approach of winter another heavy layer of straw should be put on and an additional layer of soil. The two layers of straw and the soil are usually a sufficient protection, but in sections where the winter temperatures drop to 20 degree F. or more below zero an extra layer of each will be necessary. Each layer of straw when compacted may be 6 to 8 inches deep, depending upon the amount of rain and snow likely to fall during the storage period.

Ventilation may be provided by means of a wooden flue, the lower end of which extends almost to the bottom of the pit, while the upper end projects well above the covering. The ventilating flue should be provided with a wooden cap to prevent the entrance of rain or snow, but at the same time it should be so constructed that it can be closed entirely during extremely cold weather. If the required attention be given to the preparation and protection of a pit of this sort one can be reasonably certain that the tubers will keep in almost perfect condition until spring. The objection to the pit is that the potatoes stored therein are not always accessible during the winter.

The dugout pit or potato cellar in some of its various forms of construction is probably more widely used than any other type of storage space. In the central and western portions of the United States it is practically the only kind of storage employed. It is found in its most primitive state in the arid and semi-arid regions of the west, where the low rainfall makes a water-tight roof unnecessary. As a rule the excavation for the cheaper structure of the dugout pit or cellar type when erected on level or nearly level land does not exceed three feet. The soil removed from such an excavation, particularly if the dugout is of any considerable size, is ample for banking the side and end walls and also for the roof. The cost of construction may be greatly modified, according to the character of the location.



Interior view of potato storage cellar.

In the cheaper dugouts, where the soil is of such a nature as to remain intact, it is allowed to form the side and end walls, the roof being supported on plates resting on the soil and held together by boards or joists. This form of construction involves a deeper excavation and a constant element of risk from a vacein. A better type of construction is that in which rough posts are set at intervals along the side walls and to these the plate is fastened. These posts may be recessed into the wall of earth so as to present an even face, or they may be set out far enough to allow covering them with wire, planking or poles and a heavy layer of straw.

Occasionally, where the land is level and there is danger from irrigation seepage, the storage house is built entirely above ground. In this case, while the construction of the side and end walls and roof is practically the same as the preceding, the cost is usually increased on account of the greater quantity of soil required to cover the roof and the side and end walls.

Where a tough sod is available, such as that formed by flags or other wiry-rooted plants, the side and end walls above ground may be constructed entirely of blocks of sod two feet or more in thickness. One of the most unusual storage houses seen in the course of these studies was built entirely above ground, with the side and end walls constructed of baled alfalfa hay.

A ventilator should be so constructed that the opening at the top is protected by a cap, which may be rigid or hinged. It should extend through the roof into the cellar far enough to permit a swivel damper to be inserted and operated by a spring or lever, or else a slide damper which can be opened or closed at will.

A cross section view of a potato pit properly built.

Dairymen Hurl Defy at Condenseries

Significant Move Taken by a Western Washington County

As a significant step in the movement of the dairymen of the northwest for improved conditions of the industry through increased prices for milk, the Skagit county (Washington) Dairymen's association has voted unanimously to raise $200,000 with which to build a condensery or otherwise control the milk market. Representatives of three other county associations were present and took part in the meeting, expressing approval of the move.

For many months the dairymen of the northwest have been contending for increased returns from their business. President O. P. Brown of the Whatcom county (Washington) association told the 400 dairymen at the recent meeting in Skagit county that at the present time the farms producing the milk were capitalized at 30 times as much as were the condenseries that handled the milk, but that the latter made by far the greater profit.

Under the scheme as outlined at the massmeeting, it is hoped that each of the dairy counties will build a cooperative condensery, with all of them under one central board of directors to coordinate the entire dairy industry of western Washington.

The turn affairs have taken in western Washington is but typical of the situation in other dairy districts of the northwest. Dairymen everywhere will watch with interest the success of the movement.

Potato Growers

Deserve Protection by Government

The United States department of agriculture forecasts a potato crop this year of 467,000,000 bushels. That is 182,000,000 bushels more than the United States produced last year, and 107,000,000 bushels greater than the crop of 1915.

Unless the government takes control and stabilizes prices, there is danger that in many sections of the Union, particularly in the Pacific northwest, potato prices will drop so low that it will not pay producers to dig them and haul them to market. That condition would mean not only severe losses to the growers, but a food loss to the nation.

Quick action is demanded of the national food administrator, for government control is the only saving solution. As The Farmer pointed out last week, the new food control law authorizes the president to "purchase, to store, to provide storage facilities for, and to sell for cash at reasonable prices, wheat, flour, meal, beans and potatoes."

Under this law the president has clear authority to fix a price for potatoes that will insure the harvesting of the entire crop in every part of the country, and to distribute the crop to the best advantage of the public and our allies.

When we have done our utmost it is doubtful if we can fully supply the wheat needs of Great Britain, France, Italy and other allies, But as the department of agriculture points out, next to breadstuffs potatoes are the most important food crop of the European countries. They are all the more important now that the world's wheat supply is short, as they furnish starch, the principal food element contributed by bread, and so may be substituted in part for bread.

This matter should be brought to the urgent attention of congressmen and senators. Discussion should be held in the grange, the farmers' union and at all other community gatherings.

Not Killing Dairy Cows

Reports are persistent that large numbers of excellent dairy cows are being sent to the butcher and disposed of for beef through the stock yards. Inquiry was made recently of L. R. McGee, secretary of the Portland Union stock yards.

Mr. McGee says that while some dairy cows are coming into the yards, he does not think the proportion is abnormal. Most of them are culls from the dairy herds and are not to be classed as first class dairy cows by any means.

"Some fair dairy cows have been received at various times," said he, "but I do not believe a single good dairy animal has been killed for beef. Instead, they have been sold again and have gone out to some other dairy farm. As far as the Portland Union stock yards is concerned, I am safe in saying that this territory has lost no cows.

Milk Producers Will Cooperate

String of County Condenseries Is Aim; Skagit Starts Big Movement

By PAUL E. TRIEM

Approximately 400 members of the Skagit County Dairymen's association, assembled in Burlington August 18, and voted to raise $200,000 to be used by the directors of the association, without restrictions of any kind, in solving the milk marketing problem. This action was taken at the close of an all-day session, remarkable for its unanimity of opinion on all questions touching the welfare of the organization.

The meeting was called to order by John Kill, president, who spoke vigorously of the need of continuous progressive action. By way of text to his speech, President Kill displayed a cartoon vividly setting forth the relations now existing between producer, condenser, and the consuming public. The condensery interests were represented in the drawing by a hog of vast proportions.

"There he is, gentlemen!" cried Mr. Kill. "You can see for yourselves that he has got too big for any one man to handle—we've got to get together and stick together unless we want him to continue to be our boss!"

Burlintgon Will Help.

Mayor Kirkpatrick of Burlington welcomed the dairymen on behalf of the city of Burlington. Evidently referring to rumors which have been in the air for some time, the mayor stated that if the association should contemplate building a condensery or plant of any sort at this time, the active cooperation of Burlington business men could be counted upon.

President O. P. Brown of the Whatcom association, brought to bear upon the problems confronting the association his training as a business man. After explaining the difficulty of obtaining direct figures on the operating expenses of the condenseries, President Brown showed how the directors of the allied associations had been able to estimate with considerable probable accuracy these operating expenses, and that after allowing a wide margin in favor of the condenseries for possible error, the profit to the manufacturer was out of all proportion to the profit secured by the milk producer.

Business on Business Basis.

"At such a time as this," continued Mr. Brown, "it is not simply our right, it is our duty to put the farmer's business on a business basis. We must substitute collective contracting for individual servitude, in dealing with the condenseries. Our present system of giving our profits to a grasping corporation which furnishes one dollar of capital to our $30, is unfair to the public, as well as to ourselves.'

Mr. Brown concluded his address by pointing out that the sort of technical skill needed for managing a condensery could always be hired, according to the custom of the present corporations, and that foresight and circumspection in dealing with the problem, a willingness to act carefully and with full knowledge of the facts, was all that was necessary to insure success.

State Senator Brown, also of Whatcom county, told of trying to hire a young man to help him milk his dairy herd.

"What will you take to help me with those cows?" the senator inquired.

"Six months in the penitentiary!" was the prompt reply.

This indication of the impossibility of obtaining help on dairy farms was fully appreciated by the auditors. Senator Brown went on to tell of his efforts to get through some sort of legislation dealing with the manufacture of milk in which vegetable oils are substituted for butter fat, and of the need of a good man in the house to insure the passage of legislation affecting the dairy interests.

A unanimous vote of thanks was tendered the speaker for his work in behalf of the milk farmers, at the conclusion of his address.

Snohomish Association Strong.

President John Lee of the Snohomish association told of the success Snohomish organizers have had in siguing up more than 4000 cows, even with the handicap of the rush season of midsummer in farm work to contend against. Mr. Lee stated that the dairymen in his county were being mulcted by a three-point drop in their test, and that on this three-point loss basis they were contributing $30,000 in added profits to the "earnings" of the condenseries.

"Organization will put a stop to this source of loss at once," he declared.

The real fireworks of the meeting appeared with the opening of the afternoon session. Organization in the four West Side dairy counties has now proceeded to a point where definite action is logical in dealing with those problems which have been handed down from one generation of dairymen to another. The present movement differs from many others which have gone before it in the close and efficient organization effected, in the reasonableness of the men at the head of the county associations, and finally in the unswerving determination of all involved to see the thing through to a finish. All of this was crystallized by the addresses of the afternoon.

Directors Ask Orders.

"Having told you all that we have done up to this point, we, the directors of your association now come to you for further orders," declared President Kill in opening the afternoon meeting. "What do you want us to do? Shall we allow the condensery to dictate to us in the future as we have in the past? You know their old bluff—'If you don't like our methods, we'll move our plant away from here!' Recently I have said, in answer to such remarks, 'Gentlemen, when you first wanted to come here we did everything we could to help you, for we thought you would be a benefit to the community. Now we are inclined to think you are a nuisance, and if you want to move, perhaps we can take up a collection and move you!'"

Great applause followed President Kill's charge that when the condenseries raise the price of milk, they lower the test.

"Some people tell us that it is useless for us to talk of building and running our own condensery," Mr. Kill continued. "They say we would have to pay $10,000 a year for a manager. Well, we are now paying much more than that in the interest we lose on our milk accounts. What security have we for the $200,000 the condensery owes us most of the time? None. It seems to me it is time we stopped trusting these other people quite so much, and began to trust each other more."

Declaring himself wholly in favor of building a condensery, if that proved to be the most satisfactory solution of the marketing problem, Mr. Kill declared that the directors were willing to give to the association the time needed for organizing the enterprise.

"It will take a good deal of money," he commented, "but as far as our time goes, that is worth nothing! Having given it to the condensery so many years, we are willing to give it to you for a year or two."

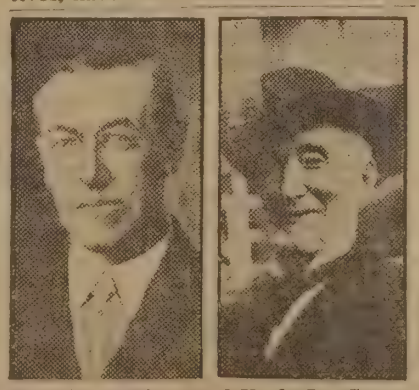
The Business End of It.

President Brown of Whatcom took up some of the practical details of building and running a condensery. He called attention to the example set by the California Fruit Growers' association, and pointed out that by owning their own manufacturing plant and selling organization, the producers would be in the unique and strategic position of controlling their milk from the milk pail to the consumer.

"There are just two essentials to success in this matter," he concluded. "We must get at this in a business-like way, and we must furnish the necessary capital. We can do all of this, without doubt or difficulty, if only we don't try to be in a hurry!"

Various members of the association took the floor to support the idea of building. An idea of considerable importance uppermost in the vast majority of these speeches was put into direct and vigorous form by Secretary Joe Hall.

"The plan, as we have finally worked it out," said Mr. Hall, "if for a condensery in each county, with some sort of centralized council or selling agency to insure our all working together. In this way the product of each county can be handled as the county directors determine, just so that this does not conflict with the interests of the other counties.



"And now, gentlemen," the speaker continued earnestly, "let me say just one thing more: If you are going to vote funds for this work, do it in a way that will not tie the hands of the directors! We have always trusted the other fellow with our money. Surely at a time like this we can trust ourselves. And that is the only way we can hope to do anything—we must have our hands free to do business according to the circumstances that arise. If you vote an appropriation and hedge it in with ifs and provisos, the condensery people will say, 'See there—they don't trust each other! They voted the money, but tied a string to it!' And so I am going to ask you in this matter either to trust us entirely and give us a chance to work with free hands, or don't trust us at all!"

A motion substantially along the lines suggested by Mr. Hall and other speakers was unanimously adopted. It calls for the raising of a fund of $200,000 in Skagit county, this money to be at the disposal of the directors in buying or building a condensery, or in otherwise solving the marketing problem. This vote, as has been said, was passed without a dissenting voice; and it was passed by a body of farmers representing an investment in farm land and equipment of from two to three or four million dollars. In comparison with this latest move of the West Side dairymen, all that has gone before is but the signing up of recruits for a probable conflict. This is the first gun—and there appears to be lots of powder and lead available.

Wilson and Uncle Joe Buy Bonds

Soundness of Farm Bank Bonds Indicated by Purchases

President Woodrow Wilson and Joseph G. Cannon, commonly known as "Uncle Joe," and for many years speakers of the national house of representatives, have attested to their faith in the federal farm loan bank and in the farms of the northwest by investing some of their money in bonds of the Spokane district bank, which serves the states of Oregon. Washington, Montana and Idah

President Wilson and Uncle Joe Cannon

President Wilson Purchased a $10,000 block of the bonds, and Uncle Joe invested $30,000 of his cash in them.

There is nothing safer as an investment than the farm bank bonds, says President D. G. O'Shea of the Spokane branch. These bonds are secured first by the mortgages on the land on which loans are made. Secondly, the indorsement of the national farm loan association stands back of them. Thirdly, the district bank stands back of them, and finally the entire farm loan system stands back of them, all 12 of the district banks being mutually responsible for the bonds of each.

Another feature that makes the bonds good investment is that they are totally free from taxation. Not even the income tax or the war tax can be levied on them. In addition, they are virtually legal tender in doing business with the government. They are acceptable for all manner of government deposits. The bonds bear 4 1-2 per cent interest. The farm loans draw interest of 5 per cent, leaving a half per cent as the margin of profit to pay the operating expenses of the bank.

Food Regulation

What Does the Expression Mean?

Under the new food control law the government is empowered either to fix prices for, or to buy and sell, the following necessaries, whenever in the judgment of the president, the public welfare calls for that action:

Wheat, flour, meal, beans and potatoes.

Coal and coke.

Nitrates for soil fertilization.

The law further gives the government power to regulate, but not to buy or sell, these additional commodities:

All foods and foodstuffs; all fuel, including fuel oil and natural gas; fertilizers and fertilizer ingredients; tools, utensils, implements, machinery and equipment required for the actual production of foods, feeds and fuel.

Regulation is defined in section 5, as follows:

"That from time to time, whenever the president shall find it essential to license the importation, manufacture, storage, mining or distribution of any necessaries, in order to carry into effect any of the purposes of this act, and shall publicly so announce, no person shall, after a date fixed in the announcement, engage in or carry on any such business, . . . unless he shall secure and hold a license issued pursuant to this section. . .

"Whenever the president shall find that any storage charge, commission, profit or practice of any license is unjust, or unreasonable, or discriminatory and unfair, or wasteful, and shall order such licensee within a reasonable time fixed in the order to discontinue the same, unless such order, which shall recite the facts found, is revoked or suspended, such licensee shall, within the time prescribed in the order, discontinue such unjust, unreasonable, discriminatory and unfair storage charge, commission, profit or practice. The president may, in lieu of any such unjust, unreasonable, discriminatory and unfair storage charge, commission, profit or practice, find what is a just, reasonable, non-discriminatory and fair storage charge, commission, profit or practice, and in any proceeding brought in any court such order of the president shall be prima facie evidence."

The penalty for refusal to discontinue the acts prohibited by the president, or to carry on business after a license is suspended, is a fine not exceeding $5000, or imprisonment for not more than two years, or both.

Does Not Apply to Farmers.

This section does not apply to "any farmer, gardener, cooperative associations of farmers or gardeners, including live stock farmers, or other persons with respect to the products of any farm, garden or other land owned, leased or cultivated by him, nor to any retailer with respect to the retail business actually conducted by him, nor to any common carrier."

The distinction is this: The government may regulate business in all of the necessaries named in the law.

Or it may go further and buy and sell the following commodities only: Wheat, flour, meal, beans and potatoes; coal and coke, and nitrate fertilizer.

But it can not buy and sell other foodstuffs, nor firewood, fuel oil and natural gas; nor fertilizers other than nitrate; nor tools, utensils, implements and machinery.

They Should Head the List.

We now have an embargo on everything useful to Germany except La Follette's speeches.—Brooklyn Eagle.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Peace, But Only Upon Firm Ground

In colonial days Patrick Henry, in his immortal oration in favor of vigorous action by the colonists against oppression, said, "Gentlemen may cry peace; but there is no peace."

His words may well be reechoed today. The American people are lovers of peace, and many of the extremely pacifist type are crying peace when there is no peace. From across the waters comes a plea from that great center of influence, the Vatican, but the world is not ready for the kind of peace that could now be obtained. It will never be ready for that kind. It will never be ready for any brand of peace that leaves autocracy enthroned, biding its time to spring again upon helpless people. The snake must be not merely scotched, but killed, never again to sink the venomous fangs of despotism into the body of democratic civilization.

America and her allies are anxious for peace. The European enemies of Prussianism have paid an awful price for their stand against inhumanity and for the rights of human liberty. America may yet be called upon to pay with the lives of thousands of her sons, but she must not and will not shrink from the responsibility. Without material gain to herself she would gladly make peace today, but the conditions of that peace must be the complete abdication or banishment of militarism and the divine right of kings and kaisers, and the enthronement in their stead of government guaranteeing to the world the inalienable right to life, liberty and the pursuit of happiness.

The Call of Higher Education

There is no longer the sentiment abroad in the land that there is no need for the farmer to be educated, as once there was. Just as the people of our own country outgrew the idea that education was for men, but not for women, so have we outgrown the ridiculous idea that high school and college education was for lawyers and doctors and preachers, but not for the man and woman on the farm.

The school year is soon to open, and it should find many hundreds of boys and girls from the farms of the northwest entering high school or college. No class of young people better deserve the best that education can give them, and nowhere is a broad education of more genuine value than on the farm. Education does not mean ability to read Latin or poetry, to solve problems in intricate mathematics, or to run a gas engine. It means a training of the mind to comprehend the things of life in their relation to each other, to judge properly of the comparative values of all those features that go together to make up human life. It means in addition the disciplining of the mind and the heart of man, that he may acquire and maintain a broad view of the activities of the world in which he lives, and adjust himself to the fundamental principles and truths of life so that he may better fit in and harmonize with the great scheme of the universe. Algebra, Latin, history and English are but means to this great end.

There will be great temptations this year for the young man or the young woman who has finished the lower school to stay out of high school or college. There is an unusual demand for farm labor to meet the requirements of the national food administration. But only in the most extreme cases should this condition be permitted to interfere. The education of the boy or girl is a matter of a certain period. It can not safely be postponed. This year, this very month, will decide the futures of many young men and young women in the northwest. In every case where possible the decision should be in favor of going to school.

Go to the Fair to Get Something

The season for fairs is now open in the northwest, and with its opening there comes a real opportunity to the person who attends and grasps it.

The fair is too often looked upon as about 90 per cent entertainment and 10 per cent educational. This year the educational features are going to take precedence, though the purely pleasurable features will not be dispensed with. For the man, the woman, the boy or the girl there will be wholesome entertainment and genuine fun. But for each one of them also there will be education of a very real nature.

There Is a Reason.

Exhibits are for a purpose other than to please the eye. Where there are extra fine fruits or vegetables or grains or grasses on display, there are persons about who are ready and willing to tell what made them extra fine.

Where there are prize-winning live stock there are owners or caretakers or judges who are ready and willing to tell why they are prize-winners, and how they were developed and prepared.

Where there are inventions and improvements in farm machinery, fencing, household equipment, farm buildings and the like, there are always persons whose business it is to explain them.

Exhibitors of dairy stock or dairy products are anxious to tell what experience has taught them to any one who will listen with a view to learning. Breeders of hogs and sheep and horses and cattle and poultry are on the ground with their exhibits to compete for honors and secure advertising, and they know that the best kind of advertising they can get is conversation with some one who wants to know something of the different breeds and the methods of caring for them.

Go Through Systematically.

Therefore, when you enter the fair grounds, be they of the state fair or a live stock show, or the county fair, begin with the first exhibit at your right. There will be something about it that you ought to know that you don't. Ask the exhibitor. Put the points learned down in your notebook, even though you do not see any particular application to your own problems at the present time. Pass on to exhibit No. 2. Ask the man in charge. Put a fact or two down in the notebook. Pass on to the next exhibit, and on and on, questioning somebody at every stop and putting down a fact or two each time. Occasionally you will come onto a demonstration, or a moving picture of educational purpose or entertainment, or a government or college exhibit with lectures on modern discoveries or improvements. Take them in. Sit down and rest a few moments. Move on to the next exhibit, patronize the water fountain or the soda fountain, according to your choice. Attend the auction sale of live stock, watch the tractors and threshers and milking machines and washing machines and churns and lighting plants and wire stretchers and pumps and engines and incubators and fly traps, and all the other things work. Find out how they work and put it down in your notebook.

It Is Sure to Pay.

Somewhere along the line you will discover something that will be worth real dollars to you. Everywhere you will find something that it is worth while to know. And when the day is over, or fair week is ended, you will have seen maybe a hundred, maybe five hundred displays and learned maybe two hundred and maybe a thousand facts.

Go to the fair to be entertained, to have fun, to hear the band play and watch the horses race and the high divers dive. But go to learn, and go through systematically, from first to last, just like you went through the little red or white schoolhouse.

Washington Gleanings

King county farmers, more than 500 strong, visited the experiment station at Puyallup recently.

John Strohm, a rancher near Colfax, recently bought from P. H. Lich and wife a half section near Rockford for $20,800.

The chief cause of the forest fires recently reported, according to State Fire Marshal Fred E. Pape, is the fires built by berry pickers.

Shipments of wheat by water from Puget Sound ports during July were the heaviest for many years, amounting to 600,560 bushels.

Stevens county farmers have borrowed $41.835 in the last two months through the federal farm loan bank, according to the records kept by the county auditor at Colville.

A prize of $50 has been offered by the management of the southwest Washington fair for the best grange exhibit at the 1917 fair, which opens August 28 at Centralia.

Fred C. Morgan, former superintendent of the Flathead Indian reservation in Montana, has relieved J. N. Johnson as superintendent of the Colville Indian reservation at Nespelem.

Rothrock & Day have purchased the E. W. Wells farm, lying east of Sprague. The property consists of 960 acres, of which 300 acres is fine meadow land. The consideration is reported around $50,000.

A. N. Saxton of Walla Walla disposed of 5000 bushels of club wheat at $2.25, and Stewart Brothers sold 8000 sacks of barley at $41.25. Adrian Magallon, also of Walla Walla, sold a small lot of club wheat at $2.15.

The Walla Walla Live Stock company recently sold to Joseph Davin about 8000 acres about 10 miles southeast of Ritzville for $100,000, and Bridget M. Dunigan sold to Joseph Charrier about 800 acres for $13,500.

Farm crop specialists and investigators from experiment stations and agricultural colleges of 11 western states met in Pullman recently for the discussion of problems affecting farm production in the western part of the United States.

Douglas county is now included in a group of 10 counties given financial support from the state to maintain a club leader for boys' and girls' agricultural and canning work. There are about 400 boys and girls engaged in gardening and canning this summer. Douglas county expects to be represented at the state fair in the boys' and girls' contests.

What Others Say

Rye made into whisky means riot; plowed into the soil as humus it means richness.—The Rural New Yorker.

Every farmer is his own detective when he weighs the milk from his own cows and tests it.—The Dakota Farmer.

For each farmer to plant none but the seed matured on his own farm is not sound husbandry.—Breeders' Gazette.

Even in spite of the high prices for feed and labor, prospects were never so bright for a prosperous future for the dairyman who will breed, milk and care for good cows properly and raise well his best heifer calves. — Kimball's Dairy Farmer.

Greater efficiency on the farm is just as vital a need now as in the factory, on the railroad or in the army. The decision of students in one state college each to return this fall with at least one new student needs to be made a national policy.—The Country Gentleman.

PROOF that Blasting the soil pays fruit growers

EVIDENCE

"In preparing the ground for the planting of trees the *Rural Press* recommends the use of powder." PACIFIC RURAL PRESS, San Francisco.

"We advocate the use of explosives for loosening up compact soils and hardpan in tree planting, knowing the value of such work."
FANCHER CREEK NURSERIES, Fresno, Cal.

"The use of a good explosive is of great benefit in planting an orchard, as the ground should be loose enough to allow roots to go to their natural depth easily."
BENEDICT NURSERY CO., Portland, Ore.

"We favor blasting holes for trees where the soil is heavy. Powder will loosen the soil, giving it a better chance to become aerated, as well as making it more retentive of moisture."
OREGON NURSERY CO., Orenco, Ore.

"My orchard has made excellent growth, due to the fact that I used dynamite, breaking up the soil and making excellent beds for the roots. If I were to set another orchard I would not think of doing so without blasting each tree hole."
T. A. JOHNSON, Boise, Idaho.

"We have used explosives in digging tree holes in the hard caliche subsurface layers which occur here. We find this cheaper than the use of pick and crowbar, and more satisfactory in that the soil is shattered deeper than the hole could be dug."
GEORGE T. FREEMAN,
Arizona Agricultural Experiment Station, Tucson.

"The use of Farm Powders in the orchard industry is rapidly being learned and appreciated. The worst looking orchard I ever saw, suffering from a lack of drainage, was blasted two or three years ago, and now it looks as fine as any other well kept orchard in this valley."
E. H. SHEPARD, Publisher "Better Fruit," Hood River, Ore.

"We have observed many cases in which powder has been used for blasting beds for fruit trees, invariably with great success. The use of explosives is of material benefit when the soil is inclined to be rather shallow and underlaid with a hard subsoil. There are few soils in which blasting cannot be done profitably."
THE FRUIT GROWER, St. Joseph, Mo.

"I have done a great deal of orchard planting and use powder for making the holes. At first it was used chiefly on heavy hardpan or other soils that were difficult to prepare with the spade, but is now used on all classes of soil. If I were planting trees even in light soil, easily handled, I should prepare all the holes with powder. Trees so planted make extraordinary growth."
FRANK FEMMONS, Oakhurst, Cal.

"Generally speaking the growth of plants depends upon the condition of the soil into which the roots penetrate. If the depth of loose soil is too limited or the surface water is permitted to stand too long, the growth is impaired. Explosives properly used in such instances have invariably relieved the condition and resulted in excellent growth. The yield is often three times as great on blasted soil as from those untreated in the same vicinity."
ROSECROFT NURSERY & FRUIT FARM, Sumner, Wash.

"The O'Connor prune orchard near Los Gatos in the Santa Clara Valley, California, was blasted in 1913. During the previous six years the largest crop was 3,900 pounds. In 1914 after the blasting, the crop was 8,000 pounds, more than double. It was a dry year, too. Where there were from 30 to 40 per cent. of drops in the orchards on both sides, the O'Connor place lost only about 5 per cent. Prunes from the blasted orchard averaged much larger and the trees made a better growth and retained their foliage a month longer than the orchards on either side."
JOHN A. GALPIN, Los Angeles, Cal.

"My orchard was planted three years ago and all trees were of even age and size. I intended to blast the whole orchard but ran out of powder and finished the small balance without it. This enabled me to compare the growth of the trees and satisfy myself that the expense was justified. The trees that were planted in blasted ground show a growth of 75 to 100 per cent. over the trees that were planted in ground not blasted. They also appear healthier and more satisfactory in every way. I have just bought 1100 more prune trees and would not think of planting them without preparing the ground with powder."
HERMAN H. SMIDT, R. 3, Oregon City, Ore.

2

is given by many fruit growers in the accompanying page from the Giant book, "Better Orchard Tillage." These men say that blasting

- enables the trees to root deeper;
- adds moisture storage capacity;
- saves labor and money;
- improves orchards that are not doing their best;
- is always profitable when properly done;
- places the soil in the ideal condition that permits newly planted trees to make extraordinary growth;
- increases the yield of fruit.

Scores of the most successful fruit growers in the Pacific Coast States plant all of their trees in beds blasted with one of the

GIANT FARM POWDERS
STUMPING — AGRICULTURAL

—Eureka Stumping Powder or Giant Stumping—both of which are made especially for this and other agricultural work. They have found these Giant Powders particularly well adapted to subsoiling and for blasting tree beds.

Some kinds and grades of explosives tend to shatter and pulverize anything they come in contact with. They act too quickly. These ordinary dynamites do not do the work well and cost more. Eureka Stumping Powder exerts its strength slowly, comparatively speaking. It tends to disrupt, crack, split and heave the soil and it extends its influence over a wide area. It loosens and pulverizes the soil instead of packing it and throwing it high in the air. This is the action that is wanted in soil work and this action the "high percentage" dynamites will not give.

Warning Giant Powder is the trade name of explosives manufactured by the Giant Powder Co., Con. Because Giant Powders are best known everywhere, many have assumed that all high explosives are Giant Powders. Insist upon having the genuine, made only by The Giant Powder Co., Con. If your dealer has only ordinary dynamites, write us and we will see that you are supplied with *real* Giant Powders.

Try ONE BOX

Perhaps you have never planted trees in blasted beds. To make it easy for you to prove the value of blasting the soil, we print a trial order form in the coupon to the right. Fill it out and we will have our nearest distributor supply you—at the lowest market price—with a 25- or 50-lb. case of either of the Giant Farm Powders. Blast beds for all of your trees. Plant one in a spade-dug hole, the ordinary way. Note the difference in growth.

If you *are* using explosives for tree-planting, test a case of Giant alongside of the brand you have been using. After blasting with each, take a spade and see how much more thoroughly Giant does the work.

Remember that you can blast whenever the soil is dry, from a day to a year before planting time. Many growers keep Giant Farm Powders always on hand.

Have You Had the Book "Better Orchard Tillage"?

Prepared especially to tell the facts about blasting soils for orchards and in orchards of the West. It tells how to secure the proper sub-irrigation conditions by blasting. It explains how blasting promotes drainage and increases both moisture-storage capacity and fertility. It gives detailed directions for preparing the soil for tree planting or for deep cultivation of established trees. We will send a copy free on request. Tell us about your problems and mark and mail the coupon. Other books on Ditch Blasting, Boulder Blasting, Subsoil Blasting for all farm crops, and Stump Blasting will also be sent on request. Ask for the books that interest you.

Honor List Grows

The honor list of the Gresham Columbia Slough Cow Testing association in Oregon has grown to such an extent that it is necessary to raise our standard to 45 pounds in the place of 40 pounds, says Dana S. Frame, the official tester.

John Farr's herd, at Warren, Oregon, consisting of 11 cows in milk heads the list with an average of 957.6 pounds of milk and 38.49 pounds of butterfat per cow. Mr. Farr also has the high cow of the association for this month, producing 64.25 pounds of butterfat.

Empress Ladd's Bessie No. 380112, a registered Jersey belonging to C. H. Johanson, made 61.07 pounds of butterfat in her 10th month of lactation. She was the high cow in the association the past year and has over 550 pounds butterfat to her credit in her present lactation period.

Pasture is practically gone and many of the dairymen are feeding from their winter hay. Grain prices are practically prohibitive and consequently little grain is fed. Prices for butterfat vary from 45 cents sour cream to 50 cents for sweet cream.

Raise More Heifer Calves.

The report of the Walla Walla Valley Cow Testing association for the month of July, 1917, shows that 19 more cows were sold for beef on the strength of the association records, making a total of 83 cows since November 1, 1916, and a total of 209 cows in the past 21 months.

A large increase has taken place in the number of heifer calves being raised. 132 of those born since November 1, 1916, being saved from the best cows.

The average milk production per cow of the 476 cows tested since November 1, 1916, is 620 pounds greater than for the nine months of the preceding year.

Fourteen pure bred cows, ten Holsteins and four Jerseys, were purchased by two association members last month.

St. Mawes Susy Heads List.

Of the 50 cows on the register of merit test in the Yamhill County Cow-Testing association, 17 were on the honor roll, according to a recent report submitted by M. S. Shrock, county agriculturist. This honor roll includes the cows that produced 50 pounds or more of fat per month. St. Mawes Susy, belonging to Ed Cary, heads the list with a record of 79.39 pounds of butterfat.

Success in Farming

To the Editor: In your issue of July 12 you say that because the American farmer produces more per head this places him on a higher plane of success than the English farmer. This I do not understand, as when I see thousands of acres round me being cropped year after year with wheat and producing less every year it seems to me like comparing a man who from seven acres produces 100 bushels to a man producing 230 from 27 acres. One is keeping his land up; the other is impoverishing it; to a workman who from one pound of raw material produces $14 and a man who from one pound produces $8.50, the one having all his material left and the other wasting a quantity of his.

Loomis, Wash. W. P. B.

When the American farmer, on the average, is producing two and three times as much as the European farmer, enabling him to have a better home, better farm implements, better conveniences in his home, more privileges for his children, then we still believe he is "on a higher plane of success than the European farmer." The fact that he may be "mining the land" in some cases in order to get this increased income is almost a necessary result of a new country with cheap land. It will give place and is giving place more and more to greater attention to the questions of soil fertility. As stated in a previous article in The Farmer, "when you can show the American farmer that he can increase his income by increasing his acre yield he will increase his acre yield." The American farmer, like every other class of American citizen, can improve on his calling, goes without the saying, but the article in The Farmer was written with the aim of combating the more or less prevalent notion that the European farmer is a better farmer when measured by the results of his farming.

Ever since the American farmer started on his westward migrations from New England he has left the land poorer than he found it. Now the tide is turning and many a man and many a farmer is returning to those "worn out" lands and believe there is a more permanent farming success by the most approved methods of soil building.

When necessity grips him the American farmer will continue to remain on the high plane of success even if he has to pay a big price for his land, together with the added cost of soil maintenance. American efficiency is illustrated by the following item in connection with the war preparations of the American people: "The German imperial government was nearly 50 years in perfecting its military efficiency. In less than four months the American republic has made such strides as to indicate that in less than two years' time the boasted superiority of German efficiency will have been discredited. There is such a thing as American efficiency, and time will prove that German efficiency can not withstand it, fighting as it is for liberty, justice and humanity."

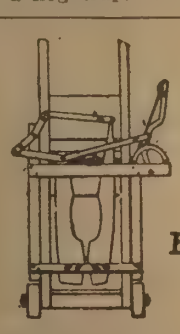
Lamb Boycott a Mistake

By E. L. POTTER.



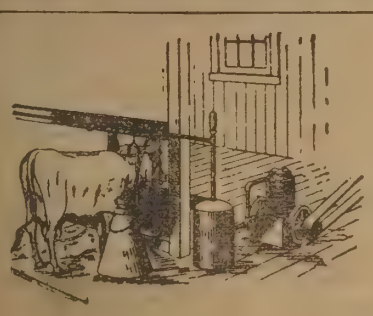
Anything in the nature of a boycott on lambs is a sad mistake. We who are in agricultural educational work feel it especially since we have for years been advocating less mature mutton and more lambs and this because all our experiments showed that a pound of lamb can be produced on less feed than mature mutton and the meat is of better quality. Nowadays practically all the mature mutton we get is from ewes that have served their time for breeding purposes. None of the farmers and but very few of the range men can raise a wether to maturity, that is to an age of 18 months or more, and do it at a profit even with present high prices. The fact is that a yearling or older wether is worth just about the same for mutton as a lamb. The only return the grower gets for holding him over the additional year is the wool, and there are very few men so favorably located that they can run a sheep a year just for the wool. The move is a mistake from all standpoints for both consumer and producer.

Inventions

By C. J. LYNDE, Macdonald College, Quebec.

Hog Trap.

We show here a system of levers used to operate the neck engaging bars of a hog trap. These bars hold a hog

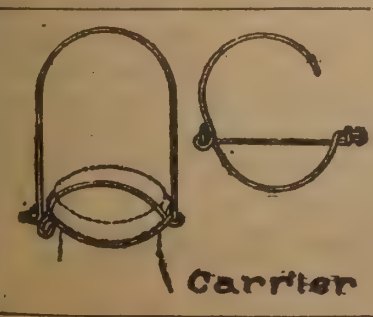


Hog Trap.

during the operation of ringing and can be adjusted to hogs of different sizes.

Milking Machine.

The new feature of this machine is that it works partly by compressed air. The gasoline engine drives a compressor which forces air into the



Milking Machine

tank and pipes, and this compressed air works a vacuum pump placed on the milk pail. The advantage claimed is that animal matter is not drawn into the stationary pipes and tanks.

Bottle Carrier.

This carrier is made of stout wire bent as shown and is quickly attached

Carrier

or detached. Get a piece of wire and try your hand at making one.

Breeds for Prolificacy.

A. D. Erb of Hubbard, Ore., has a big type Poland China sow, purchased in Michigan, out of a litter of 13. She had 11 pigs her first litter and Mr. Erb this spring purchased from J. R. Cole of Molalla, Ore., a young boar out of a litter of 14. The young boar is sired by Mr. Cole's grand champion boar at the Oregon State Fair, a Poland China of true big type. Mr. Erb believes in breeding for prolificacy and likes the big type Poland Chinas for this as well as other traits.

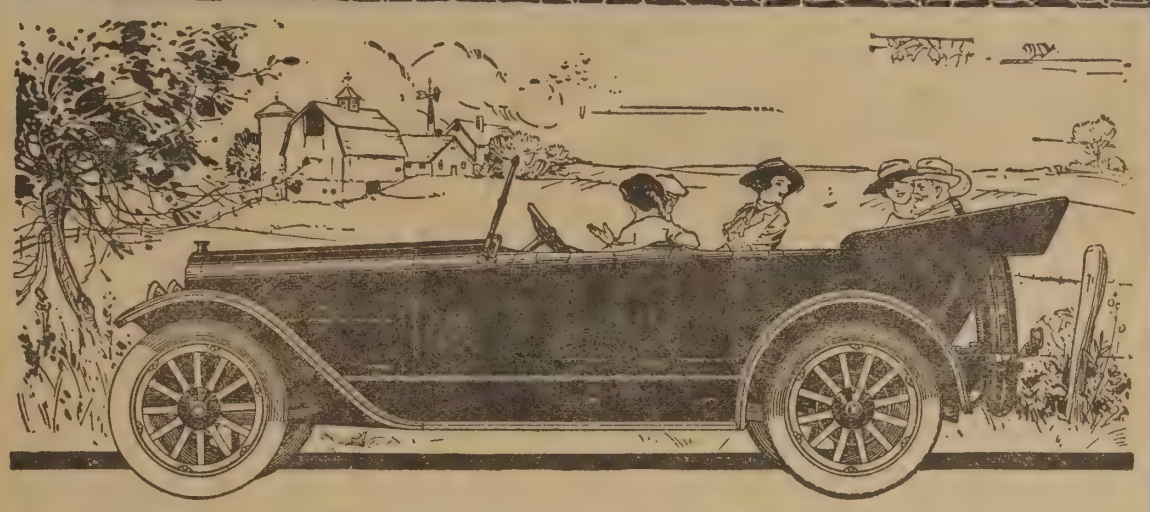
Stillaguamish Cow Testing.

During July 573 cows from the Stillaguamish (Wash.) Cow Testing association were tested. The average production for the association was 730.2 pounds of milk, and 31.85 pounds of butterfat. Average cost of feed was $3.45. Five herds averaged 37 pounds of butterfat. The highest herd average was that of Zenas Farrington, 10 cows averaging 39.1 pounds butterfat. Eighty-one cows produced 40 pounds of butterfat, 23 produced over 50 pounds and one Jersey, owned by W. G. Grimm, on register of merit test, produced 62.4 pounds butterfat.

Veterinary

Dr. S. B. Nelson

Kidney Trouble.—We have a 5-year-old stallion that has kidney trouble.—F. J. S., Valley, Idaho.



Answer.—Give your stallion a small handful of Buchu leaves on his feed morning and night. At noon give him one teaspoonful of tincture iodine in his drinking water.

Mare Is Too Fleshy—I have a working mare that is too fleshy. I am trying to reduce her by leaving out grain. She usually gets two quarts of oats and all the alfalfa hay she wants. She is too fleshy to stand the heat. Which would you advise cutting down, the hay or the oats?—A. S., Corfu, Wash.

Answer—Cut down both the hay and grain. Do not feed her any hay in the morning or at noon, but feed her what hay she should have during the 24 hours at night, and feed her hay at night and let her eat hay for an hour before you give her her evening feed of grain. You do not say how heavy the mare is but you can figure that a pound to a pound and one-half of hay and a pound to a pound and one-quarter of grain for a working horse per hundred pounds is about right in proportion.

Holds Back Milk—I have trouble in getting my cow to give down her milk. Have tried feeding while milking, but it does no good.—H. H. W., Yachats, Ore.

Answer—Sometimes the following treatment will cause a cow to give down her milk. The reason that she does not give down her milk is that she nervously keeps control of the secretion. You overcome this through the nerves and the best way to soothe the cow and get her to forget her nervousness is to wash the udder with medium warm water for a few minutes. Then rub the udder nearly dry with a cloth following this, massage the udder gently, rubbing the teats, and the teats will swell, the cow becomes quiet and you can then begin to milk her, milk gently and the milk flow will follow. This process has been used in many cases of where the cow nervously held up the milk.

On Country Roads

We Claim a Car Needs 100% Over-Strength

Up to three years ago our margins of safety were 50 per cent in the Mitchell. And that was considered excessive. The chief trend then was toward exceeding lightness.

But we had watched 70,000 Mitchells under all road conditions. They showed wonderful endurance. Still we saw that some conditions called for stronger cars.

So we started to double our margins of safety. We adopted the standard of 100 per cent over-strength. And we still maintain it, despite advancing steel costs.

Our safety parts are vastly oversize. Over 440 parts are made of toughened steel. And we use much Chrome-Vanadium.

Some Sample Results

Two Mitchell cars have been run over 200,000 miles each. That is 40 years of ordinary service. So we know that Mitchells as now built can give lifetime service.

Not one Mitchell rear spring has broken since this standard was adopted. That is an amazing record.

The demand for Mitchells has multiplied, especially in hard-road sections. The export demand has grown enormously, to countries like South America. And scores of America's leading engineers have chosen Mitchells for their personal cars.

Many Other Extras

In the latest Mitchells you will find 31 features which nearly all cars omit. You will find vast added luxury—about 25 per cent. You will find a heat-fixed finish which stays new.

You will find at least 20 per cent extra value as compared with other cars in this class. All paid for by factory economies due to Bate efficiency methods.

See these superlative cars. If you don't know our nearest dealer, ask us for his name.

POULTRY

Write to the Editor

JAMES DRYDEN
Editorial Contributor

Poultry Conference at Corvallis.

A conference of the leaders in poultry husbandry of the entire northwest was held recently at Corvallis, Ore. Professor James Dryden served as chairman of the meeting. Men and women who represent the poultry interests of British Columbia, Washington, Oregon, Idaho, California, Utah and New Mexico were present, discussing conditions and consulting as to the future.

The consensus of opinion appeared to be that the war demanded of the poultry interests in particular economical increase in production. English and French consumption of American eggs is increasing greatly. Hospital demands are greater than ever. Patriotism and self-protection combine to urge the poultryman to study how to get better returns from less of an investment.

The conference recommended a careful culling of flocks, reducing the non-producers, giving more room for the better hens and the feeding of more succulent feeds. Green feeds are healthful and to a limited degree at least take the place of the high-priced concentrates.

May Be Tuberculosis.

To the Editor: Several of my hens are sick. They first get lame and then droop and get thin, mope around until they can hardly walk and then finally die. I feed dampened bran mash with a little salt in the morning and wheat mixed with barley in the evening. They at all times have access to grit, shell, charcoal and "Lilly's Egg Mash" dry. Is bran as good a food as shorts for chickens and does it make any difference if fed dry or dampened.

G. R. BRAUN.

May View, Wash.

The symptoms described point rather strongly to tuberculosis as the trouble. Tubercular hens very often get lame, and usually get thin and mope around quite a while before they die. Sometimes heavy fat hens die of it. Would suggest that one of the sick fowls be sent to the state college experiment station for examination. In making a postmortem examination the liver is usually covered with yellowish spots and the intestines are very often affected. The surest way to determine the trouble is to have an examination made at the experiment station.

Bran is a good food for poultry, in fact most poultrymen wouldn't know how to get along without it. It is better to mix the shorts with the bran.

FARM BOARD ORGANIZED.
Many Associations Will Cooperate

Formation of the federal board of farm organizations marks the culmination of several days' meetings held in Washington of agricultural leaders from 24 states. In this board are represented associations having a total membership of more than a million and a half farmers, for whom for the first time come true long-held dreams of a national federation of farm bodies.

Active in organizing this board are the Farmers' Educational and Cooperative Union of America, Farmers' National congress, Pennsylvania Rural Progress association, National Dairy union, National Agricultural Organization society, National Conference on Marketing and Farm Credits, and the National Council of Farmers' Cooperative associations. Representatives of several other large farm organizations were present at the meeting and will report to their respective bodies on the work of the board.

Objects of the federal board, which came into existence as a result of the present national emergency, are to coordinate the work of the farmer with that of the nation and to give the farmer greater influence and recognition in national affairs.

The board will keep constantly in touch with national legislative matters, passing on to the farmers what they wish to know concerning congress and keeping the legislators informed of the wishes of the people on the farms. Permanent headquarters will be maintained in Washington, D. C., with a general secretary in charge. Following the organization of the board the executive committee elected Charles W. Holman of Madison, Wis., to this position. Mr. Holman has already made arrangements for the immediate opening of national headquarters in Washington.

Upon a three-fourths vote of the general board any organization of actual farmers may affiliate with the federal board. Each of the separate organizations contributes to the support of the board.

The first regular meeting of the organization will occur in Washington in January, 1918, at which time permanent organization will take place.

As to Pit Silos.

Inasmuch as it is impracticable and even dangerous to dig a pit silo in a great many soils, the farmer should know the character of his soil before attempting to construct a silo of this type, says Farmers' bulletin 825 of the United States department of agriculture. The soil must be well drained, so that water will not stand in the bottom of the silo, and of such nature that it will not readily cave in. Soils which contain boulders or rocks, are hardly satisfactory for pit silos, as the walls of the silo can hardly escape being materially defaced and weakened when the rocks are removed. Any firm, well-drained, and comparatively dry soil, free from seeps, rocks, and sand strata should prove satisfactory. Where pit silos have not been tried, the farmer should study the soil and the depth of the water table by observing any nearby well. If this is not possible, it would be advisable to bore a two-inch hole as deep as the silo is to be, and in this way to learn the character of the soil. The maximum height of any ground water which may appear at any time in this test well will indicate the lowest point to which a pit silo should be dug in that place.

Parade in Form of Cross.

The outstanding feature of Red Cross week at West Chester, Pa., was the Red Cross parade. The Sharples Separator company furnished the largest unit of the whole parade, nearly 400 employes stepping into the marching line. Eight of the girls headed the unit, bearing a large American flag, and they were followed by half a hundred girls, all in Red Cross uniforms, who marched in the form of a cross and sang patriotic songs. The Sharples folks subscribed nearly $20,000 worth of Liberty bonds and the West Chester organization gave over $2000 to the Red Cross.

In Danger.

Friend (to professor, whose lecture, "How to Stop the War," has just been concluded) — Congratulate you, old man — went splendidly. At one time during the afternoon I was rather anxious for you.

Professor — Thanks. But I don't know why you should have been so concerned on my behalf.

Friend—Well, a rumor did go round the room that the war would be over before your lecture.—London Punch.

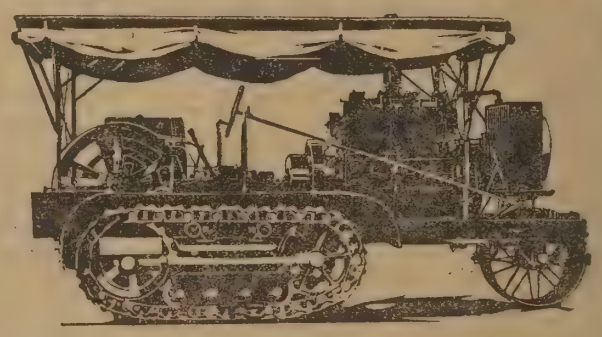
All Previous 12 and 24 Hour Speed Records Broken by a CHALMERS

The secretary of the contest board, American Automobile Association, sent the following telegram to the Chalmers Company on August 14th, 1917:

"Please be advised contest board has allowed and accepted following times as official records for stock chassis with piston displacement of 161 to 230 cubic inches.

1 mile—44.37 seconds.	15 miles—10 minutes 58.55 seconds.
2 miles—1 minute 27.44 seconds.	20 miles—14 minutes 30.30 seconds.
3 miles—2 minutes 11.80 seconds.	25 miles—18 minutes 15.67 seconds.
4 miles—2 minutes 54.61 seconds.	50 miles—36 minutes 12.93 seconds.
5 miles—3 minutes 37.83 seconds.	75 miles—54 minutes 32.45 seconds.
10 miles—7 minutes 16.80 seconds.	100 miles—1 hour 12 min. 10.17 sec.

And the following hour records in same class:



1 hour, 83 miles; 12 hours, 957 miles; 24 hours, 1898 miles. Car, Chalmers record speedster, stock chassis. Driver, Joe Dawson. Place, Sheepshead Bay speedway, July 28, August 1st and 2nd.

The records broken by the Chalmers car were established by a car with a motor 28 per cent larger than that of the Chalmers.

The Chalmers in various models will be on exhibition at the Interstate fair. There is no better car made. Come and see for yourself.

The Tractor for Service

The Caterpillar is built to give service, and it is backed by service, of which our annual Caterpillar School, free to owners and operators, is only one of the big features. That the Caterpillar gives exceptional service—day after day, year after year—is testified to by thousands of satisfied Caterpillar owners.

CATERPILLAR
Reg. U.S. Pat. Off.

The Caterpillar won't slip, won't mire, won't pack the soil. It does all the work that other tractors do, and does it better. Besides, it works in places and under conditions where no other form of tractive power can be used successfully. Caterpillars are at work in Alaska, at 40 degrees below Zero; in the Sierras, hauling ore over rough and rocky roads; in swamp lands, where even horses cannot work without bog shoes.

Holt design and Holt construction have put into the Caterpillar endurance, long life with low upkeep, the sort of dependability that makes the work run smoothly without annoying and costly delays.

Write for further information about the Caterpillar—the leading tractor in the United States today. The Caterpillar is built in several sizes—a size for every sort of tractive work.

DUCKS AND GEESE

Do No Damage to the Orchards.

Recently I have observed several orchards where ducks and geese are being kept and it raises the question of their adaptability to orchard conditions, and whether they can be made profitable. I am familiar with the habits of those fowls, for we grew them on the farm where I grew up as a boy.

As compared with sheep, they are preferable because they do not eat the tender twigs, nor bark the young trees.

As compared with hogs they are preferable, because they do not root or disarrange the soil for irrigation.

As compared with chickens they are preferable, because they do not scratch and fill up the irrigation ditches.

They simply paddle in the water, but do not in any appreciable degree interfere with the work of irrigation. No stock should be permitted in the orchard that damages the trees.

Since ducks and geese do not damage an orchard, the only question is will they pay? I have not gone carefully into the cost of growing under orchard conditions, nor the profits in meat eggs and feathers they produce; but I am strongly of the impression they can be made profitable and at little cost of trouble or expense. If any one has practical experience, may we not have it? G. L.

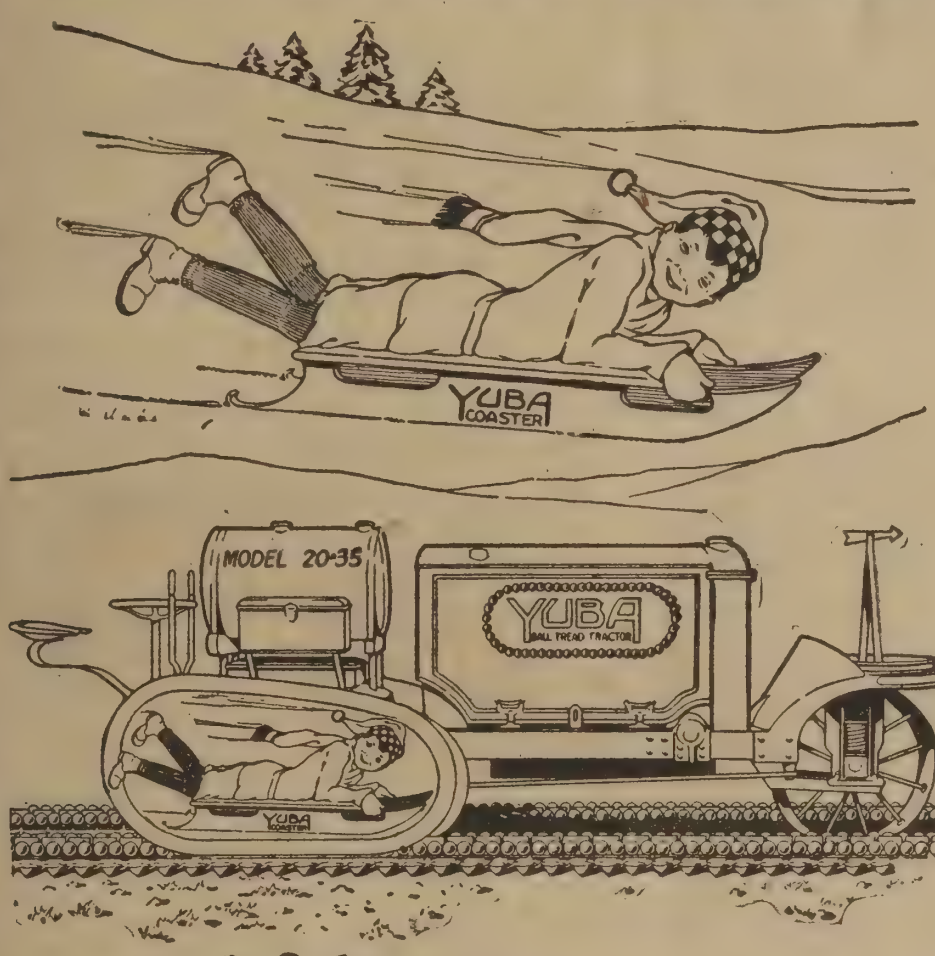
Mutilating Spitzenburgs

A letter from Mrs. Mollie Maas and the answer, I think would be interesting to many growers of fruit. The letter reads in part as follows: "My Spitzenburg apples, 10 years old, do not bear a full crop. The ground was plowed this spring, and was in clover. On a few limbs I cut a ring four inches wide; is that a detriment to the tree? Would summer pruning set fruit for next year?"

My Answer.

The Spitzenburg is a light bearer and has its so-called "off years"; years when it is storing vigor for another crop. Generally it bears a fairly heavy crop every second year, but is not like the Winesap and Rome Beauty, a heavy annual bearer.

Summer pruning causes the setting of fruit spurs, but should be done not later than the first week in August. The last of July is better.



Never cut the bark of a tree to make fruit spurs. It is done sometimes, and I have known some good orchardists to recommend it, but my objections are, first, that in cutting the bark you wound the tree and check its growth, thereby lowering its vitality and its vigor. It is a little like bleeding a person for fever. Second, into these wounds bacteria enter and flies, bees, aphids and other insects carry blight and other disease germs that get into the sap, circulate through the cambium, just as bacteria would get into the human flesh and cause ferment if the skin were broken and the air not excluded.

Such a practice is especially bad on Spitzenburgs that are a tender variety, susceptible to disease and need all the vitality they can conserve to prolong their lives. It is true that such a practice will check wood growth, make fruit spurs, and temporarily produce more fruit; but it will be at the expense of the longevity of the tree. Summer pruning is much better.

Now I will add to what I said in my letter of reply, and say that ever since I have been in the Pacific northwest I have watched the results of "stripping the bark," which means beginning generally near the root, cutting the bark into diamond-shaped wounds, leaving strips of half or one-third the bark for the circulation of sap; "ringing the tree," which means that the bark is cut all around for a width of two to six inches. When I first came to this country an orchard near North Yakima was being treater in that manner. The orchard was then about 6 years old, trees healthy, growing vigorously, but were not bearing to suit the owner. The next year there was an unusually heavy crop for trees of that age; but the trees lacked vigor, and the fruit was small. The trees have seemed to recover, but they have had all the diseases orchards in this country are subject to.

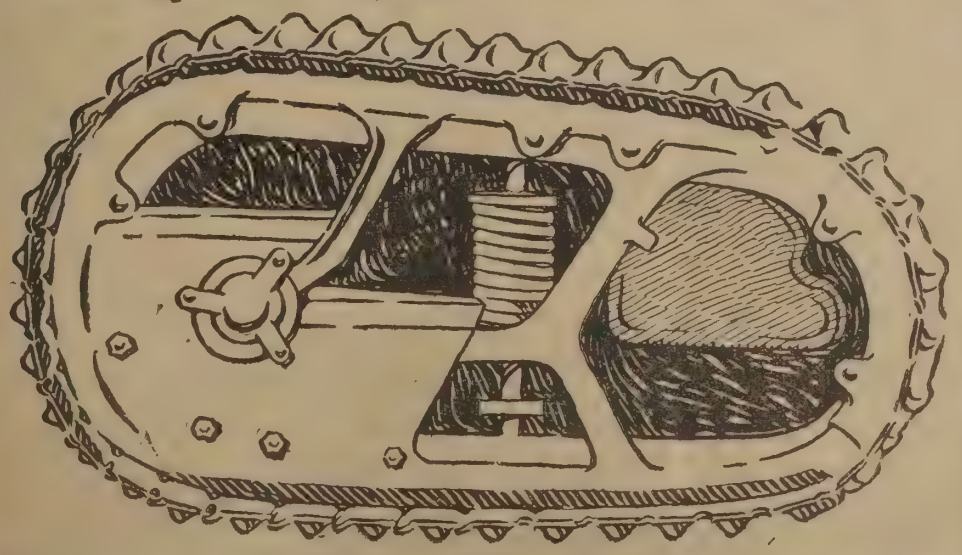
A few varities are especially vigorous growers and develop limbs and few fruit spurs; but the better way to manage that is to give the trees less water, less manure, prune but little in the dormant period and prune heavily in summer. G. L.

as the sled slides over snow

so the Yuba moves over the ground.

The steel ball race castings are the runners of the tractor. They slide over the freely rolling balls of the Ball Tread as the steel shod sled over snow.

The upward pull of the sprocket on the manganese chain furnishes the impetus for the Yuba.



The Yuba has a rigid track. Most other "track" machines lay a so-called "track" of flexible links and roll over it on flanged pulleys or wheels.

Such a track is no better than the ground on which it is laid—often it is more of a corduroy road than a track.

The rigid track of the Yuba does not kink nor cramp to minor irregularities of the ground. It follows the general contour smoothly and easily. The shock of meeting any obstruction is evenly distributed.

The Yuba slides over a ridge just as the sled takes a "Thank-ye-marm."

Like the sled the Yuba will coast of its own weight on a 3% grade!

American Tractors a Match for Krupp Guns

Foreign Officials Also at Great Show of New Things in Agricultural Power Machinery

By CLARENCE LUCAS, Fremont, Neb.

The fifth annual tractor demonstration held at Fremont, Neb., proved an event of international importance from every standpoint. It received general recognition in the world of agricultural machinery—through the attention of farm publications and by the attendance of manufacturers or their accredited representatives.

A tractor manufacturers' committee headed by J. C. Bartholomew of Peoria, Ill., and the Fremont Commercial club, led by George F. Wolz, stood sponsors for the undertaking and A. E. Hildebrand of Omaha, Neb., who has served in similar capacity for all the big tractor shows that have been held, officiated as superintendent.

The show was scheduled for the period August 6 to 10, but a sudden windstorm on the Sunday preceding the opening razed the tent city that had risen in a night, and accompanying rain soaked the fields to such an extent that the actual plowing demonstration did not begin till August 8.

The tractor grounds lie just north west of Fremont on a particularly level stretch, along which runs the famous transcontinental route, the Lincoln highway. Two other automobile routes, the Cornhusker route and the B line, have juncture here. Three thousand acres mostly in the fertile valley where the Elkhorn and Platte rivers join, comprised the demonstration field. Having one corner of the great plat extend upon the slope of the bluffs was a new undertaking this year, for the purpose of proving that tractors will perform in satisfactory manner on the slopes.

Fifty-two tractor comupanies participated in the demonstrations or made exhibits on the grounds; and in addition there were 36 accessory companies represented with accredited shows.

There were in the neighborhood of 350 tractors, representing some half hundred different patterns, brought to Fremont for the show, and nearly 150 of these took part in the great demonstration. The first concert plowing was done on Wednesday, August 8, with 123 tractors in line. It was roughly estimated that farm machinery exhibited in or near the tractor city, possessed a value of a rough million dollars.

People came from nearly every state in the union and from a dozen foreign lands to view this great show of the new things in agricultural power machinery. By far the greater portion of the crowds, naturally, represented Nebraska and the close-by agricultural states of Iowa, Kansas, South Dakota and Colorado. Probably two-thirds of them came in automobiles and the almost inconceivable number of these conveyances packing the roads for a mile or more in every direction and filling the parking spaces at the sides and in adjoining fields, furnished a sight that in itself was a wonder. Facilities had been provided in the tented city for accommodating just such a rush as this, but it is doubtful whether all could have been handled, but for the foresight of the visitors themselves who in large part, brought their own lunches and sometimes their camping outfits with them. At the busiest period of the show the valley was dotted with tents of tractor show visitors.

Fremont itself had its hands full caring for 1400 or 1500 salesmen, demonstrators and others connected with the exhibiting companies. It had, in addition to rushing to completion a new $300,000 hotel in time for the show, thrown open hundreds of the homes of its best citizens, as temporary boarding and lodging houses.

The presidents of nine well known automobile manufacturing concerns arrived in special cars from New York city on Tuesday of show week and with them came officials of their own and of a dozen other automobile factories. At the head of this party was Howard E. Coffin, chairman of the national defense council, and included were Roy D. Chapin, president of the Hudson Motor Car company, Detroit; Harry W. Ford, president of the Saxon Motor company, Detroit; H. B. Jewett, president of the Paige Motor company, Detroit; Walter Chrysler, president of the Buick Motor company, Flint; G. J. Heaslet, former president of the Studebaker corporation, South Bend; Otis F. Friend, president of the Mitchell Motors company, Racine; John W. Bates, general manager and chief engineer of the Mitchell Motor company, Racine; Charles W. Nash, president of the Nash Motor company, Kenosha; H. W. Griffith, general manager of the Remey Electric company, Detroit; Clair Barnes, president of the Barnes Foundry company; Henry Ewald, president of the Campbell-Ewald company, Detroit, and J. G. Weiss, works manager of the Hyatt Roller Bearing company.

These men were guests at the banquet of automobile engineers, held at the Pathfinder hotel on Wednesday evening, when Howard E. Coffin was the principal speaker.

A predominating theme in connection with the tractor exhibition was the part that farm power machinery will play in winning the world's war. American tractors, it was contended, would be the final factor that would triumph over the guns of Krupp. The ability of modernized agricultural machinery to increase the food production of the world while needed laborers were fighting at the front, would enable the entente allies to win. In this connection, the Nebraska state council for defense gave official recognition to the demonstration, maintaining headquarters on the grounds in a large tent where lectures on food production and food conservation were given daily at the noon hour.

Among the foreign visitors who lent their presence were Lieutenant Paul Mittaine, head of the auto and public works department of the French purchasing commission; General Baldin of the technical department of Russian government engineers; J. L. Kennedy of Mexico City, Mexico; Blake Ozias, manager for F. S. Bennett, Ltd., London, England; D. J. Johnston, Toronto, Canada, and Lieutenant Stefana Avonzo of Rome, Italy.

Direct sales of tractors on the grounds were not as large as they were at the demonstration a year ago, but this was due, in all probability, to the fact that power farming has been given general recognition and the every day run of business with the sales departments has multiplied. This condition led to expressions from many of the demonstrators, that tractor farming had reached a stage where future shows would prove unnecessary and that this one might be the last. However, sentiment in this respect is divided and it will remain for the tractor manufacturers' committee, which took over the subject of national demonstrations two years ago, to determine. This year's attendance was estimated at 125,000 against 150,000 a year ago, but the difference might easily have been made up had weather conditions during the 1917 demonstration been more favorable.

Sizing up the possibilities of the tractor.

OFFICIAL LIST OF TRACTOR COMPANIES

Here is the official list of tractor companies participating in the demonstration at Fremont, Neb.:

Advance Rumely Thresher company, LaPorte, Ind.
Albert Lea Tractor company, Albert Lea, Minn.
Allis-Chalmers Manufacturing company, Milwaukee.
Aultman-Taylor Machinery company, Mansfield, O.
Avery Company, Peoria, Ill.
Bull Tractor company, Minneapolis.
Bullock Tractor company, Chicago.
J. I. Case Plow Works, Racine, Wis.
J. I. Case Threshing Machine company, Racine, Wis.
Cleveland Tractor company, Cleveland, O.
C. O. D. Tractor company.
Dauch Manufacturing company, Sandusky, O.
Deere & Co., Moline, Ill.
Electric Wheel company, Quincy, Ill.
Elgin Tractor corporation, Elgin, Ill.
Emerson-Brantingham company, Rockford, Ill.
Four Drive Tractor company, Big Rapids, Mich.
Fargol Tractor company.
Gray Tractor Manufacturing company, Minneapolis.
Grand Detour Plow company, Dixon, Ill.
Gile Tractor company.
Hart-Parr company, Charles City, Iowa.
Holt Manufacturing company, Peoria, Ill.
Huber Manufacturing company, Marion, O.
Huron Tractor company, Chicago.
International Harvester company, Chicago.
Joliet Oil Tractor company, Joliet, Ill.
Kardell Tractor company, St. Louis.
LaCrosse Plow company, LaCrosse, Wis.
John Lauson Manufacturing company, New Holstein, Wis.
Lyons-Atlas company, Indianapolis.
McIntyre Manufacturing company, Columbus, O.
Minneapolis Steel and Machinery company, Minneapolis.
Moline Plow company, Moline, Ill.
Nilson Tractor company, Minneapolis.
New Age Tractor company.
Oliver Chilled Plow Works, South Bend, Ind.
Parlin & Orendorff Co., Canton, Ill.
Parrett Tractor company, Chicago.
Pioneer Tractor Manufacturing company, Winona, Minn.
Roderick Lean Manufacturing company, Mansfield, O.
Rock Island Plow company, Rock Island, Ill.
Russell & Co., Massillon, O.
Square Turn Tractor company.
Stinson Tractor company.
Velie Motors corporation, Moline, Ill.
Vulcan Plow company, Evansville, Ind.
Waterloo Gas Engine company, Waterloo, Iowa.
Wolverine Tractor company.

May Be Girl Has It.

Because the recruiting officers could not find where his heart is, Harry Lewis was rejected in an army examination in Bellaire, Ohio. Except that his heart action was so weak the doctors could not locate the organ in his chest, Lewis was found physically perfect.

A million dollars' worth of machinery was on exhibit at the demonstration of farm power inventions at Freemont, Neb. This is a panoramic view of a portion of the tractor city that rose in a night.

Prices Being Fixed

President Exercises Vital Powers

Never before in the history of the United States has the government been called upon to exercise so many functions of a paternalistic nature as at the present time. Price-fixing and regulation of the distribution of foodstuffs and feeds and fuels are taking up much of the time of many of the leading minds of the country.

The 1918 wheat crop will sell at not less than $2 a bushel because the government has placed that minimum on it. The 1917 crop price is soon to be fixed by a special committee working upon it at the present time. The price of coal at the mines has been fixed recently under the authority vested by congress in the president. A practical survey of foods and foodstuffs was authorized under a measure enacted by congress, and within a short time the actual stores of such articles in the homes and warehouses of the country are to be enumerated.

The coal prices in the northwest have been fixed by President Wilson as follows, the figures being for the run of the mine on board the cars at the mine: Washington, $3.25 a ton; Wyoming, $2.50 a ton; Utah, $2.60 a ton; Montana, $2.70 a ton. Prices in other states range as low as $1.90 a ton, that of Washington being the highest in the United States. This is claimed to be due to unusual mining conditions in Washington. Most of the Washington coal is used for railroads and factories, however, and the Wyoming and Utah prices will more nearly regulate the price to the average consumer.

Wheat Deficit Large.

The United States and its allies face a wheat deficit of 400,000,000 bushels unless new economies are introduced, declares Herbert Hoover in appealing again to the American people to eliminate waste and to conserve wheat by substituting other cereals. A saving of one pound of wheat flour a week for every person, he declared, would go far toward solving entirely the food question.

"The allies," said Mr. Hoover in a formal statement, "are isolated from those markets, other than Canada and the United States on which they were accustomed to rely before the war.

"The deficit of 400,000,000 bushels can be at least partially overcome if we can increase exports from 88,000,000 to 220,000,000. This can be accomplished if we will substitute one pound of other cereals for one pound of wheat flour weekly per person; that is, if we reduce our consumption of wheat flour from five pounds per week to four pounds per week per person.

"It will be no privation to us and will reduce the privations of our allies."

France, Italy, the United Kingdom and Belgium, Mr. Hoover estimated, must import during the next 12 months 577,000,000 bushels of wheat and 674,000,000 bushels of other cereals to meet normal consumption requirements.

Against this is balanced an estimated wheat surplus of 88,000,000 bushels in the United States and 120,000,000 bushels in Canada and a surplus of other cereals of 829,000,000 bushels in the United States and 119,000,000 in Canada.

These figures alone represent a wheat deficit of 369,000,000 bushels, but in addition it is pointed out that the United States must reserve a part of her supply for neutrals furnishing the country vital supplies and must also protect its reserve stocks, bringing the total deficit up to about 400,000,000 bushels.

"While this situation is one of great dificulty and concern," said the food administrator, "it must be met and met by elimination of waste and reduction in wheat consumption and proper substitution on the part of the allied people and ourselves; in one word, by an effective administration o the available supply."

Predicts Dollar Eggs.

As a result of high prices of feed we have $20 hogs, and predictions are heard that the country will soon see dollar eggs. Secretary Wheeler of the Massachusetts board of agriculture tells Boston folks to be prepared for that shock, as high prices of feed are causing wholesale killing of poultry.

Milk prices are also likely to mount upward from the same influence. A committee of the Chicago city council has returned from a tour of the dairy regions, convinced that consumers in that city will have to pay 12 or 13 cents a quart for milk this fall. Farmers in northern Illinois and southern Wisconsin told the committee that high prices of grains and feeds resulted in a loss on all milk sold to the distributors at the present rate of 5 cents a quart. They are demanding a 50 per cent increase and say they will have to slaughter their dairy herds if they do not get the higher price and if the city places further restrictions on the quality of milk.

Dairymen in northeastern Ohio are throwing away milk because of a disagreement with the distributors over prices. Governor Cox has been asked to suggest some means of preventing this waste, and the Ohio war defense council has taken up the matter.

SEATTLE — SPOKANE

Early History of the Red Hog

In the introduction to volume 51 of the National Duroc-Jersey Record association, Secretary J. R. Pfander takes up the origin and early history of the Duroc-Jersey breed of swine. He says:

"It seems to be well authenticated that the exact origin or early history of the red hog, now recorded as Duroc-Jersey, is not positively known. Many are of the opinion that they are strictly American-bred, while we have gathered much information pointing toward stock that was imported at an early date. It is now conceded by all who are interested in this popular breed of swine that there were two families of them in earlier years, one known as Jersey Reds and the other as Durocs. The name Jersey Red was probably given to this family by Joseph B. Lyman, who at that time resided in New Jersey and was the agricultural editor of the New York Tribune. Previous to this the breed had been called Red hogs.

"Mr. Lippencott of New Jersey was the first person to advertise these hogs as Jersey Reds. We find in Clark Pettit's History of Jersey Reds, that in the year 1832 there was a pair of red pigs shipped from England to Salem, N. J., and he says: 'Their unique color rendered them objects of special interest in a locality long noted for successful swinebreeders and feeders, among whom had long existed a great spirit of rivalry as to whom should annually win the honor of raising the best lot of hogs, making the greatest average weight at different ages, for which prominent Philadelphia butchers paid advanced prices.' The Duroc family of Red hogs were so called by Isaac Frink, a farmer living in the town of Milton, Saratoga county, N. Y. In the spring of 1832 Mr. Frink took a mare to a noted stallion, Duroc, then owned by Harry Kelsey, in the town of Florida, N. Y., about 25 miles away, and he saw a litter of 10 red pigs, the production of a pair of red pigs brought here by Mr. Kelsey from Oyster Bay, N. Y., or imported by him from England. He moved from Oyster Bay to Florida. In regard to the importance of the pigs, the history is not authentic, although Mr. Kelsey told Mr. Frink that they were imported, but the term imported may have been improperly used, as is often the case, even at this late date. The production of these pigs was much sought after and assumed the name of Mr. Kelsey's famous stallion, and spread all through the New England states, becoming very popular on account of their great qualities. In 1830 William Ensign of Wilbur's Basin, in the town of Stillwater, brought a pair of Red hogs from Connecticut, and in the next year he got a few more from the same place. He bred and sold them far and near. The Frink and Ensign families of Red hogs were crossed and bred to advantage, and have been bred ever since with more or less effort toward keeping them thoroughbred, but no model or type was followed except individual ones. These hogs, according to what information we can get, possessed more of the character of the Jersey Red family, except that they were not so large and were rather finer boned. Thomas Bennett of Rossville, Ill., through correspondence with Cassius M. Clay of White Hall, Ky., the honorable gentleman says: 'That the Spanish hogs were imported by J. B. Clay from Spain or Portugal, when minister to Lisbon, under Zachary Taylor, in 1850. He gave me a pair, the progeny of which I widely distributed.' About the year 1882 the first association was organized to perpetuate the records of the Duroc, while in 1891 the national association was organized and incorporated with J. M. Stonebraker as president and J. W. Phillippo as secretary. On April 10 1893, the resignation of Mr. Phillippo as secretary was accepted and Robert J. Evans was elected secretary, remaining such until June 8, 1906, when H. C. Sheldon was elected, and remained secretary until December 2, 1909, when the preesnt secretary was elected."

Good Fair Promised at Elma.

The Grays Harbor county fair at Elma, Wash., Sept. 5-9, is expecting the best live stock exhibit in its history, as several breeders from outside the county will exhibit. This will include the fine herd of Shorthorns owned by George Bertrand of Olequa, Wash. A fine lot of outside poultry is also promised and a good racing card is assured. Crops in the Chehalis valley are better than in most of the northwest and so good an agricultural and horticultural exhibit is expected that plans are already matured to take it to the state fair, as was done last year.

Fair Dates.

Pendleton, Roundup—Sept. 20-22.

A Portable Lawn.

An Englishman is said to have worked out a scheme for growing grass in a sort of frame, so that a lawn can be handled in sections, somewhat like rugs or a carpet.

Vaughan's Portable Drag Saw

WILL CUT 15 TO 20 CORDS OF WOOD IN 10 HOURS

Can be operated by one man. Two men can carry complete machine. 3½ H. P. gasoline motor mounted on frame. One gallon gasoline required to cut 8 to 12 cords of wood. Engine can be used for other work without removing from frame. No gears, cogs, belts or pulleys. Friction clutch prevents breakage if saw pinches. Saw makes about 125 strokes per minute. Will cut any size log up to 6 feet. Sprockets and cranks, etc., made of cast steel. All working parts guaranteed against defects in material and workmanship.

Net cash price for complete machine as shown in cut, $140 f. o. b. Spokane and common points. FOR SALE BY

Washington Machinery & Supply Company

DISTRIBUTORS
Spokane, Wash.

GENERAL SPECIFICATIONS

MOTOR. 4 cylinder—Water Cooled. "L" head.
CARBURETOR. Automatic.—Non-adjustable.
IGNITION. Waterproof high-tension magneto.
RADIATOR. Vertical seamless tube, helical cooling fin. Cast tanks, Atterbury special shock absorbing suspension. (Ask to see Manufacturers' Special Guarantee.)
CLUTCH. Dry plate. Multiple disc completely enclosed. Operates without oil. This clutch is unaffected by atmospheric conditions.
TRANSMISSION. Selective sliding gear type, casing bolted to motor crank case, forming a unit power plant. Extra large nickel steel gears with stub tooth formation, 4 speeds forward and reverse. Timken Bearings throughout.
DRIVE. From transmission to rear axle by tubular shaft and two large oil-tight universal joints.
REAR AXLE. Full floating, worm gear construction. Timken Bearings throughout.
FRONT AXLE. Drop-forged "I" beam. Tie rod in front of axle. Timken Bearings throughout.

GENERAL SPECIFICATIONS

SPRINGS. Chrome manganese steel, heat-treated special.
FRAME. Hydraulic pressed steel.
CONTROL. Steering gear on right hand side with control levers on right hand side.
GASOLINE TANK. Mounted under seat. Capacity, 30 gallons.
EQUIPMENT. Two locomotive type dash and one tail oil lamps. Mechanical hand horn, heavy jack, complete set of tools and instruction books. Cab or plain seat, optional.
STANDARD FINISH. Two coats of lead on chassis and seat, black enameled hood, radiator, fenders, dash and lamps. Quotations for painting other than standard finish upon request.

TERMS. All trucks f. o. b. Buffalo, N. Y., and are at owner's risk after delivery, in good order to transportation company. All orders are accepted subject to strikes, fires or other causes beyond our control.

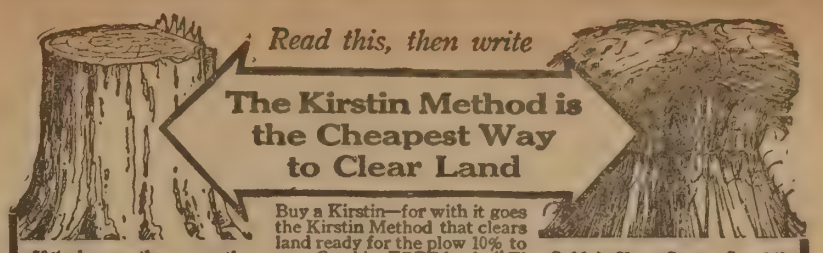
Potato Loans

Reserve Bank Provides for Them

After a conference between officials of the food administration and the federal reserve board, a plan was agreed upon for classifying potatoes among the nonperishable staples, under the regulations for rediscounts under section 13 of the federal reserve act, in order that loans upon warehouse receipts for potatoes may now be rediscounted at the federal reserve banks and thus become negotiable paper throughout the country at the federal reserve rate, which is now in most states 3 1-2 per cent.

The objective sought by the food administration is to stimulate the proper storage of potatoes by growers and others, and to thus enable the carrying over of the large autumn potato crop; also by enabling the growers and local dealers to finance their potatoes they will be freed in a large measure from dependence upon speculators and profiteers in control of the potato market.

In accepting the proposal of the food administration that the federal reserve board classify potatoes as a nonperishable staple, a unique step has been taken in the financing of American vegetable products, and one that brings American banking practice into line with practice in Europe, which has been so material to the preservation of potatoes throughout the year and the stabilization of their prices.

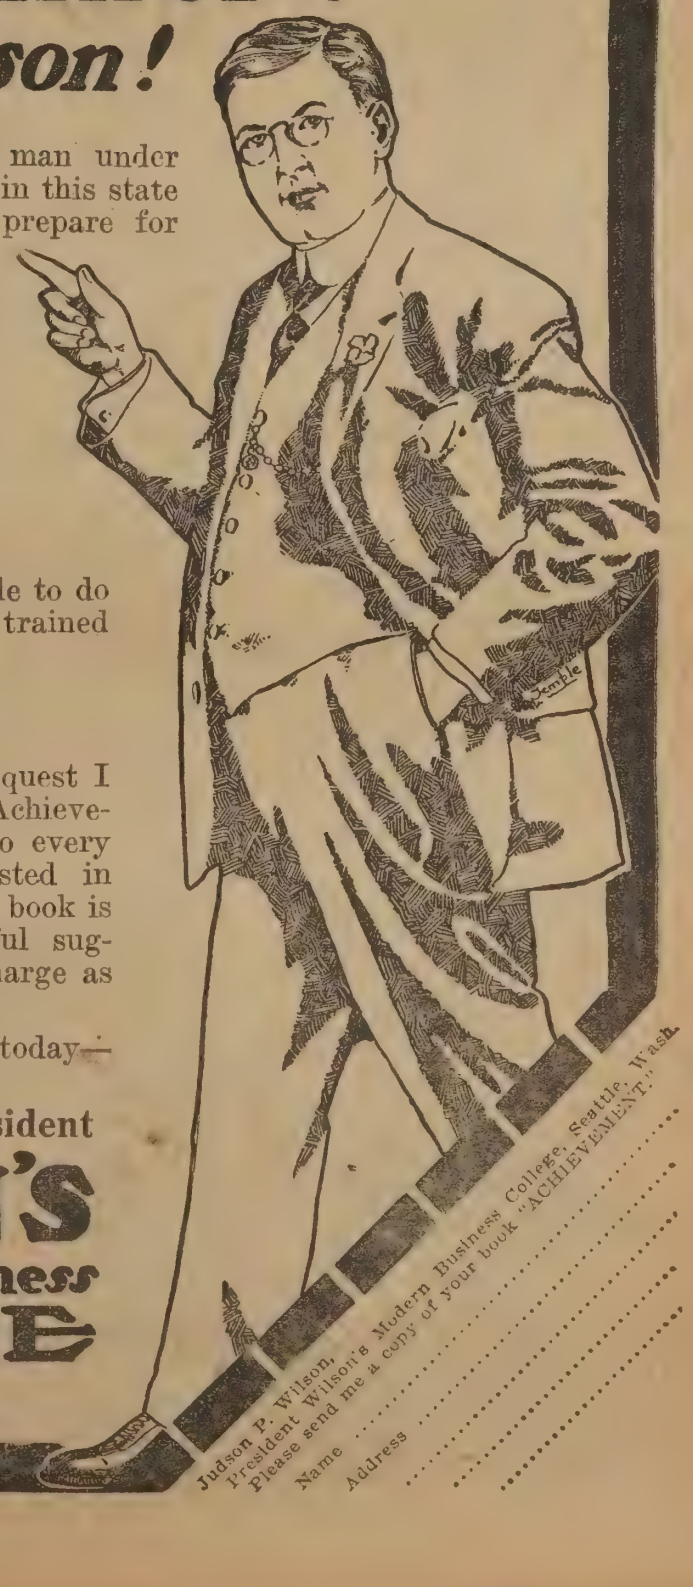


Governor Harding of the federal reserve board in a letter to Mr. Hoover makes the following statement:

"Potatoes, properly graded and packed, and stored in weather-proof and responsible warehouse, as evidenced by its receipt, would undoubtedly constitute a readily marketable, nonperishable staple, within the meaning of the regulation. The member bank making loans against warehouse receipts for potatoes, properly insured, would, of course, have to satisfy itself as to the margin of its security and the conditions of warehousing, but after having done so, and making the loan, it could rediscount such paper with the federal reserve bank, for periods not longer than 90 days."

It is considered by the food administration that this step taken by the federal reserve board is the most important financial aid that has yet come to growers and consumers of potatoes. Moreover, it will greatly assist local and state organizations and authorities in providing and stimulating increased and properly regulated storage. In order to make acceptable warehouse receipts, it will be necessary for potatoes to be sorted and graded, properly sacked and deposited in acceptable storage warehouses; thus the preservation of potatoes and the quality to the consumer will have been materially improved.

Substitutes for Wheat.



The Farmer has received from the secretary of the flour committee of the New York Produce Exchange the suggestions that so far as it is possible there should be a substitution on all tables—of both the rich and the poor—in all public dining rooms of hotels and restaurants and in the homes of the people of the food products of corn, oats, rye, barley and rice, in place of the products of wheat. This might conveniently take the form of the elimination of wheat bread from the breakfast table until the end of the war, its place being taken by corn bread or other corn products and oatmeal. It is declared that if there should be a country-wde adoption of this idea it would mean the diversion of 300,000,000 bushels of corn from stock feeding to direct food of the people.

What have you Planned for this Winter?

asks Pres. Wilson!

Uncle Sam wants every young man under draft age and every young woman in this state to utilize this coming winter to prepare for stenography, bookkeeping and office work. By doing so you will help carry on the work of the great industries of the country which may possibly be hindered because of the scarcity of young people to fill the many thousands of vacancies made by the calling out of so many for the national army.

Uncle Sam is urging young people to do this because of the great need for trained experts in all departments.

Business Must Go On

In keeping with Uncle Sam's request I have written a book called "Achievement," and I want to send one to every ambitious person who is interested in utilizing his time this winter. The book is brim full of inspiration and helpful suggestions. I will send it free of charge as long as the supply lasts.

them before the fair opens. The figures indicate the number of entries made by the respective exhibitors:

Horses.

Colfax Blue Ribbon Stud, M. A. Metz, prop., Colfax: Clydesdale 24, Shire 8, Percheron 5.

Otto Sykes, Spokane: Percheron 1.

Richard Allman, Coulee City: Thoroughbred 2.

C. D. Boswell, Spokane: Standard Bred 1.

J. K. Ralph, Spokane: Percheron 1.

Fisk Farm, Spring Valley, Wash.: Farm and General Purpose 10.

Cattle.

Congdon & Battles, North Yakima: Aberdeen Angus 36.

Waikiki Farm, Spokane: Ayreshires 12, Jerseys 34, Dual Purpose 1.

Floyd Polmeteer, Spokane: Jerseys 2, Grade 1.

A. V. Braderick & Son, Palouse: Shorthorn 7, Dual Purpose 7.

Day & Rothrock, Spokane: Shorthorn 13.

James M. McCroskey, Sprague: Shorthorn 20.

B. E. Smead, Opportunity: Jersey 2.

Bellwood Farms, Valleyford: Holstein 1.

W. S. C., Pullman: Shorthorn 4. Aberdeen-Angus 2.

Sheep.

W. S. C., Pullman: Shropshires 1, Merinos 1.

W. H. Hastings, Thornton: Oxford 7.

Fisk Farm, Spring Valley: Oxford 21.

Frank Donison, Lyons, Ore.: Shropshires 2.

Vaughan & Fox, Lyons, Ore.; Shropshires 2.

Felzer Bros., Tangent, Ore.; Shropshire 10.

Ed. Schoel, Tangent, Ore.; Hampshire 9, Merinos 7.

Hogs.

B. E. Smead, Opportunity, Duroc Jersey 21.

Bellwood Farms, Valleyford, Duroc Jersey 15.

Robt. Nelson, North Yakima, Duroc Jersey 35.

Wood Lower, Colbert, Chester White 9.

C. M. Payne, Spokane, Berkshire 11.

Willis M. Fisher, Colbert, Duroc Jersey 4.

Lester Daily, Palouse, Duroc Jersey 1.

Ray J. Fox, Lyons, Ore., Poland China 36.

Frank Donison, Lyons, Ore.; Poland China 4.

C. M. Meenach, Kiesling; Chester White 16.

Ed. Schoel, Tangent, Ore.; Chester White 26.

Boys and Girls' Pig Club.

Clarence MacDonald, Colbert; 5.
Wallace T. MacDonald, Colbert; 1.
Edward Fisher, Colbert; 2.

Boys and Girls' Sheep Club.

H. W. Hastings, Thornton, Wash.; 3.

Alex Petyus, Chatteroy, Wash.; 1.
Steve Petyus, Chatteroy, Wash.; 1.
Thomas Zeimantz, Colbert, Wash.; 3.

WILL SEE 1000 BIRDS.
Good Poultry Show Is Promised.

J. G. Dickson, superintendent of the poultry division of the Spokane Interstaet fair, promises a show of 1000 birds, and announces a premium list totaling $1500. The birds that will be displayed and will compete for honors are coming from all parts of the northwest, it is stated.

James H. Tucker of Royal Oak, Mich., will place the ribbons.

AUTOS AND MACHINES.
Many Concerns Will Show Goods.

The list of automobile, tractor and machinery concerns, who will display and demonstrate their products at the Interstate fair is already a long one. Here are a few of them:

In Automobile Hall.

John Doran company, Floyd J. Logan, Mitchell, Lewis & Staver, Chalmers Auto company, Fancher-Larsen company, Northwest Buick company, Pyrene company, Culton-Moylan & Reilly, Brewer Motor Car company, Traders Motor & Supply company; Ross Traders Motor & Supply company, Rossler Auto company, T. G. Young, Scripps-Booth Distributing company, Spokane Auto company, J. Mann Motors company, Oldsmobile company of Washington, Snyder Motor Car company, Hodgins Motor company, Highhouse & Sandusky, Inland Motorcycle company, Farnham Brothers, Seven-Seven company, Donart Flower company, Falls City Cycle company, Eastman Motor Car company.

In Industrial Building.

Singer Sewing Machine company, Christian Science church, Fairmont Creamery company, Tru-Blu Biscuit company, Sherman-Clay & Co., Carstens Packing company, Hazelwood company, Gray Manufacturing company, Spokane Flour Mills company, Commercial Creamery company, Armour & Co., Closet & Devers, Albers Brothers Milling company, the Crescent, Eureka Vacuum Cleaner exchange, Washington Cracker company, Spokane Expert School of Business; Palace Store company, W. P. Fuller & Co., Humane Stock Remedies company, Northwest Fruit Products company, Ahrens & Ahrens, Toledo Computing Scales company.

Outside Space.

Northwest Buick company, Brewer Motor Car company, Western Electric company, Oldsmobile Company of Washington, Hold Manufacturing company, Rhodes Harvester company, Yuba Construction company, Sieler Machinery company, Oregon-Moline Plow company, Hodson-Feenaughty company, Spokane Corrugated Culvert and Tank company, Gallagher & Co., De-Laval Separator company, Witherspoon Brokerage company, Thos. C. Bush company, Northwest Kaustine company, Modern Appliance company, Consolidated Land company, McNeff Brothers, Nilson Tractor Sales company, Ticknor & Co., M. Grieve, Nixon-Kimmel, J. Ira Hawley, LaCrosse Tractor company, J. J. Goebel.

Quotes Apple Prices.

The first 1917 apple prices announced in the northwest have been published by Spokane Fruit Growers' company. They represent an average increase of 10 per cent over the opening prices of 1916.

The quotations apply on tonnage shipped from the Yakima, Wenatchee, Idaho and Spokane districts.

The opening prices on all varieties handled by the company are as follows:

Variety.	Extra fancy.	Fancy.	C. grade.
Jonathans	$1.35	$1.20	$0.90
Winesaps	1.50	1.30	.95
Spitzenburgs (Esopus)	1.75	1.50	1.10
Baldwins	1.25	1.10	.85
King David	1.25	1.05	.85
Black Ben Davis	1.25	1.05	.85
Arkansas Black	1.85	1.60	1.25
Ganos	1.25	1.05	.85
Ben Davis	1.10	.90	.75
Black Twigs	1.25	1.10	.85
Delicious	1.85	1.60	1.25
Staymen Winesaps	1.30	1.10	.90
Missouri Pippins	1.25	1.00	.85
Rome Beauty	1.35	1.10	.90
"Miss Spokane" Wageners	1.25	1.05	.85
York Imperials	1.30	1.10	.85
Northern Spy	1.25	1.10	.85
Winter Banana	2.00	1.60	1.25
Red Cheek Pippin	1.25	1.00	.85
Grimes Golden	1.35	1.20	.90
White Winter Pearmain	1.65	1.40	.90
Yellow Newtown Pippin	1.65	1.40	.95
Aiken Red	1.25	1.00	.85
McIntohs Red	1.25	1.00	.85
Kaighn Spitzenburgs	1.25	1.05	.85
Hubbardston Nonsuch	1.40	1.20	1.00
Snow	1.40	1.20	.90
Wealthy	1.25	1.00	.85
Jeffries	1.20	1.00	.85
King of Tompkins Co.	1.25	1.00	.85
Rhode Island Greenings	1.25	1.00	.85
Yellow Bellefleurs	1.20	1.00	.90

WANTED—AGENTS

for 1918 cars with all the up-to-the-minute improvements. Apply
CROW-ELKHART MOTOR CO.
Interstate Fair Exhibit (Automobile Hall) or 8126 Walnut, Spokane.

WANTED
Cascara Bark

We buy cascara bark, Oregon grape root and Oregon balsam of fir at the prevailing market. Submit samples and quantity you have for sale.
BLUMAUER-FRANK DRUG CO.
357 Everett. Portland, Oregon.

EYE EXAMINATION
RECOGNIZED METHODS.
RESULTS ASSURED.

Over Murgittroyd's.

Hides, Fur, Wool, Horse Hair, Metal and Rubber. We are the largest dealers in the Inland Empire. Highest markets paid. Prompt returns. Deal with a home firm.
Write for price list and shipping tags. Address Dept. L.
PACIFIC HIDE & FUR DEPOT.
Joseph Thiebes and C. T. Symmes.
1101-09 Railroad Ave., Spokane, Wash.

Here Is a Tractor That Creates its Traction by PULL, not Weigth

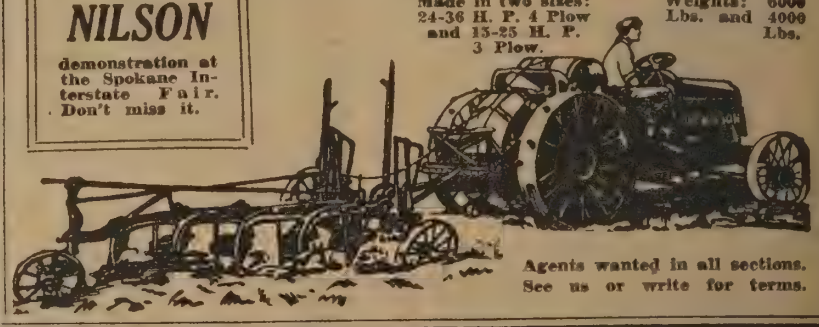
THE NILSON

has solved the problem of light weight combined with HEAVY PULL by means of its patented lever hitch that makes the drive wheels GRIP the ground harder when more traction is needed. The NILSON—the lightest tractor made in proportion to its power—carries no dead weight, and being light it works at an extremely low cost of fuel and upkeep.

Many NILSONS Are Working on Farms of the West

This Picture Shows You at a Glance How
THE NILSON TRACTOR

Creates Its Traction by PULL, Not WEIGHT



To illustrate this principle, tie a rope to a stump, hitch a team to the other end, pass the rope over your shoulder, and then make your horses pull. You'll find you have plenty of TRACTION under your feet, and the harder your horses pull, the harder your feet will GRIP the ground. That's the principle of the NILSON patented hitch—the harder the pull against its load, the harder the drive wheels GRIP the ground.

WRITE US TODAY.

SEE THE NILSON
demonstration at the Spokane Interstate Fair. Don't miss it.

Nilson Tractor Sales Co.
155 Union Ave., Portland, Ore. Distributors for Oregon and Washington.

Made in two sizes: 24-36 H. P. 4 Plow and 15-25 H. P. 3 Plow.
Weights: 6000 Lbs. and 4000 Lbs.

Agents wanted in all sections. See us or write for terms.

An Invitation From Mack Trucks

Of course, you're coming to the Spokane Interstate Fair, and MACK TRUCKS want you to make your headquarters at the double booth set apart for the MACK TRUCK line. Come in and inspect these money-earners for the farm. See how well built they are; then you'll understand why they "stand up" under all kinds of usage. We can show you just the type of MACK TRUCK for you—they range from 1 to 7 1-2 tons.

"Performance Counts."

Ups and Downs of a Bunch Grass Boy

(Each instalment of the "Ups and Downs of a Bunch Grass Boy" is complete in itself and will be found full of interest for the new readers of The Farmer.)

CHAPTER XXV.

I wanted to raise chickens when I was a youngster. I also wanted to learn how to play a fiddle. Also I wanted to learn how to dance. Triple-headed ambition struck me thus when I was 14 and our pioneer farm was a dot

I suppose I wanted to fiddle because

I suppose I wnted to fiddle because this was about the only music I had heard—barring the "juice harp," as we called the "harmonica." Fiddlers were few and far between in that country, but the tunes they played were all alike, barring different "frills" which different fiddlers chose to add to such melodies as "The Devil's Dream," "Pop! Goes the Weasel," "The Fisherman's Hornpipe," "The Arkansaw Traveler" and so on.

And among all of these tunes "The Arkansaw Traveler" was the classic. It seemed to give greater leeway to the individuality of different fiddlers. Each fiddler played it different from the others and was sure he was the only one that was right. The public liked or disliked a fiddler according to the way he rendered "The Arkansaw Traveler."

My first aim, therefore, was at "The Arkansaw Traveler" and I aimed so persistently that one day mother chased me from inside the house to the shady north side, and in a little while from the shady side to the barn.

The barn suited me and the rest of the family better. When I was through fiddling I could hang my fiddle on a 20-penny spike I had driven in a rafter so high up that I had to stand on a nail keg to reach the nail.

Some one saw my fiddle hanging there one day and made fun of it. I was deeply offended, and to protect my fiddle from sacriligious comment thereafter I took a gunnysack, whacked it on the side of the barn till the dust was shaken out and used this to wrap my fiddle in after my music lessons.

The fiddle consisted of a cigar box strung up with a handle and three strings. The lid of the cigar box was on the back side and underneath the lid was the most beautiful picture of a girl I have ever seen. The beauty of the girl whose likeness was pasted to the lid of my fiddle I was sure had a geat deal to do with the exquisite tones of the instrument. I supposed that some day I would own a "real fiddle." But, in my heart, I knew that no fiddle would be real to me unless the picture of that girl were taken from the cigar box and pasted in the back of the fiddle.

Holes were cut near the bridge of my cigar-box fiddle, and sometimes when I had played a long time and the tones were especially sweet, I would pause and peep through one of these holes at the beautiful picture nestling down there in the mysterious fiddle-interior whence came the music that charmed me by the hour, but which I think failed to exert much of a charm upon anybody else. Maybe it was because I would never let the uncouth and unappreciative public into the secret of the beautiful picture.

She had wonderful eyes, wonderful hair, wonderful jewels in her hair, and a wonderful necklace on her neck—and the necklace was all! It never occurred to me that this was not the picture of a sure-enough person whom some day I would meet. I supposed that she was a great singer. I reasoned that she likely left her neck and shoulders devoid of any covering but the nacklace so as to give her lungs more room when she sang.

The lady in the cigar box was the secret of my liking for our new school teacher, one fall. The new school teacher combed her hair like the cigar box lady, and like her, had dark eyes and a brunette complexion. I must say that the resemblance ended there, though, especially in the matter of jewels and style of waist. I remarked to mother one day that I thought Miss So and So would look better if she dressed differently. Mother wished me to be explicit. I endeavored to do so, but was not very successful; so, to make my notion clear, I made a fatal mistake: I let mother in on the secret of the cigar box lady. I gave her the fiddle. I told her to peep through one of the "music holes" as I called them, and look at the lady. That was how the teacher ought to dress—she had the hair, the eyes, the complexion!

By JOE L. ASHLOCK

(Copyright, 1917, Joe L. Ashlock.)

But her stuffy collar spoiled the picture.

Mother laughed till tears were in her eyes. Then she scolded me, and laughed again. A few days later, the new teacher was at our place for supper. Mother had the nerve to go out to the barn, take my fiddle down from the 20-penny nail, pull it out of the gunny sack, and invite the teacher also to take a peep into one of the music holes to see how I thought she should dress. Then the teacher laughed. I heard them laughing where I was hiding up in the hay loft; and in the hay I stayed till the teacher had gone. They came out to hunt for me, but I burrowed down into the hay like a badger, and hid.

The Arkansaw Traveler was too much for me and my fiddle and the cigar box lady. It had too many "notes" for my strings, of which there were three, tuned one note apart. I had not caught onto the fact that one uses his fingers in playing a violin. It was strange that I made this mistake; but I think when I heard a fiddle played, I was so entranced with the music that I never noticed how the trick was done.

Eventually I learned that the strings of a fiddle are tuned four notes apart; that is, you play the open string; then put down your forefinger; then the second and third finger, going up on the fingerboard all the while. Your little finger should make the same note that the next string makes when played open.

This to me was a stunning discovery and I had to forget all I knew and start in all over again after my musical education was fairly well completed. With my strings tuned one note apart, I could bounce my bow from string to string and play "Mary Had a Little Lamb" or "Go Tell Aunt Rhoda That Her Old Gray Goose Is Dead" in a way that I was sure pleased the cigar box lady. But when I began to play these melodies on one string by using two fingers and the open note, I had a strong suspicion that the lady in the box wanted to climb through one of the music holes from which no music was issuing and run away with a more nimble-fingered suitor. It was to me a most discouraging experience. Up in the hay I toiled for days. My fingers were about as supple as corn cobs, and always got on the wrong string, or hit the right string in the wrong place. Finally, after many weeks, I acquired sufficient expertness to play "Mary Had a Little Lamb" without giving offence to the cigar box lady.

All the while my cigar lid angel was teaching me to fiddle I was also trying to raise chickens. I had about 20 setting hens in midspring, and many of them I was compelled to set twice. My hens, myself and my cigar box lady together hatched about 300 chickens. But neither my wisdom, my energy or the inspiration I got from the cigar box could save my chicks. Most of them died.

I got on swimmingly for a while—that is, while the grass was green and bugs plenty, and the spring hatching of young coyotes had not become self-supporting at the expense of my henyard. Then the green grass died in the hot sun, the ground crusted over and dried; the worms and bugs either died of disappeared into the cooler, moister depths of the soil; and the coyotes sneaked up in the bunchgrass adjoining my henyard and grabbed my chickens, both large an small. Also, there were hawks, with only scant vegetation to offer hiding for my chicks. All told, my battles began at dawn when my chicks and their loudly clucking mothers issued in hungry, reckless, clamorous hordes from the numerous boxes and coops I had scattered all over the place. It ended only when the last clucking hen and peeping chick had returned to the same boxes and coops of miscellaneous shapes, sizes and colors. And the final act of the day was my examination of the casualty lists for the day. The coyotes and hawks were less active in the afternoon; and it was during these hours that I retired to the hay loft and communed with the cigar box lady, only to be recalled from this blissful retreat by the loud squawking of hens and the shrill shrieks of young chicks; and in haste I would return to the firing line. Sometimes it would be a feathered marauder from the sky; again, a furry thief from the bunchgrass. Occasionally it was both.

One of our bachelor neighbors who was going to the harvest fields to earn a winter's grub stake left me his 22-caliber rifle and a lot of ammunition. This was when my fight with coyotes and hawks was at its worst. I learned to shoot with deadly aim at any standing target in a marvelously short time—the inspiration of dire necessity, I suppose. I do not think I shall ever forget the savage satisfaction with which I pumped lead into the coyotes that stole up through the grass to get at my chickens. I cleaned them out in a week. The hawks were more troublesome. It takes a good shot to hit a hawk on the wing, though I did it twice, dropping them stone dead, straight down as a plummet into my wildly stampeding flock of chickens. To help out in the hawk business I set poles all about in just the places a hawk would like to sit while he looked over my flock. Two or three times a day hawks would fly down and light on these roosts. They ended their mortal career right there. I cut off the head and wings of each hawk and nailed them up on the side of the henhouse, spreading out the wings in the posture of flying, with the head between them. Whenever I got a coyote I cut off his tail and flew it as a banner from one of the poles I had standing about for the hawks to light upon while I shot them.

I got the better of the hawks and coyotes; but by this time spring had gone, and with spring had passed the moisture, the green vegetation and the bugs which had kept my chicks in health. They began to die in flocks. Some one told me to give them blue vitriol in their drinking water. This I did, but as I recall they died faster than before.

As I look back over my experience with 300 chicks during that long, dry, hot summer in the Big Bend years ago I can understand how greatly a youngster can love the small, growing things in his charge and how greatly he feels such responsibility when it is put upon him.

Why my chicks died I had not the slightest idea. Up in the haymow I held communion with my lady of the cigar-box lid, but she could give no no hint to help me and seemed just as sad and discouraged as I. I tried all kinds of schemes. I constructed shades for the chickens by setting up stakes supporting cross-pieces overlaid with a gerat depth of grass and soil. I built these shading structures all over the place, with prodigious labor in a hot, dry sun. But the chicks died just the same, and one day a heavy whirlwind knocked one of the shades down on a lot of chickens and killed or hopelessly injured a dozen. It was a sad day for us both, and when up in the haymow I played "Mary Had a Little Lamb" it came out in funereal tones, as if the cigar lady inside were weeping for the dead and maimed chickens, as was I.

If I had only known of one simple little trick I could have saved most of them. I should have dug a soil trench six inches deep, a foot wide and as long as desirable, spreading the flat bottom of the trench with an inch layer of freshly soaked oats; and, covering these with soil which was kept moist by an occasional bucket of water drawn from our well. Treated thus, the inch layer of soaked oats, covered with moist soil in the trench, would have sprouted in solid, clinging masses of white, which was the very thing my chicks needed—for they were dying for want of green stuff.

I had the soil, the water and the oats—but not the knowledge of how to put these things together in the right combination. So of my 300 chicks the cigar lady and I reared 50 or less, many of them weak.

SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University).

Teeth and Tonsils Gateways for Germs of St. Vitus' Dance

Except that St. Vitus' dance is not a dance or a saintly maneuver of one sort or another, this name is as good as chorea or any other nom-du-malade! A disease by and other name is just as bitter.

Dr. Hirshberg.

St. iVtus' dance has been usually called "a nervous disease." Yet it is nothing of the sort. It was so called from a superficial view of its symptoms, for conspicuous among its signs and symptoms are a restless, fidgety twisting and jerking of the hands, head, eyeballs and legs.

The victim, more often a child than a grown-up, fumbles and foozles. Jerks and awkward movements are common, for firmness and the finer movements of precision seem to be lost to the child at the height of the attack.

St. iVtus' dance, nevertheless, in spite of these erroneously called "irritable" and "nervous" movements, is an infectious disease caused by bacteria, which invade the tonsils, teeth or adenoids of the victim.

The Commoner Symptoms.

The poisons or toxins of these germs lodge in the muscles, joints, skin and other fleshy parts, and there set up changes which interfere with precision and control of the muscles.

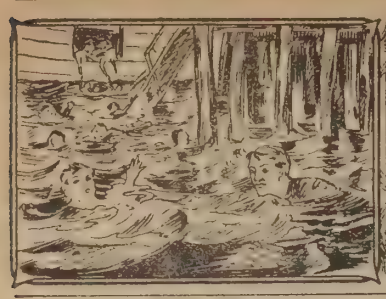
Over and above the eternal presence of bacteria, choera is also accompanied by fever and other evidences of an infection. Pallor, anemia, weakness and often swollen, painful joints or sore throat are among the symptoms.

St. Vitus' dance does not begin without an apparent cause. Neither fright, mimicry nor sudden shocks are responsible for it.

Occasionally a child that is subject to joint fevers, arthritis, acute inflammatory joint infections, endocarditis or inflamed heart valves, tonsilitis, is also a victim of chorea. All of these bacteria infections seem to be closely related.

Rest and Quiet Aid.

Since a child may in a manner acquire bad habits of facial or other involuntary movements by imitation, all other children should be kept away from those with St. iVtus' dance.



The very presence of fever and germs in the blood of the sick child means that he should be kept in bed from one to six weeks or for the entire duration of the fever. The fever is seldom high. It may not reach 100 degrees, nevertheless, the rest in bed is particularly necessary to prevent exhaustion, to keep the effects of the St. Vitus' dance poisons at a minimum and to allow the over-stirred human tissues time to do nothing else but fight the malady.

Rest, quiet and ice bags applied to the head, a simple and nourishing diet of whites of eggs, milk, ices, ice cream, fruits, cereals, meat juice and juices of vegetables with frequent and copious draughts of a good drinking water make up a large measure of the treatment.

If the source of this abomination is traced, as it sometimes is, to the tonsils or teeth these michief-makers must be given short shift. The sooner they are removed the sooner will the focus and abiding place of the bacterial marauders be ousted from their lair.

Good Manners.

If a child lives among people whose language is correct and agreeable, whose manners are pleasant, who show always a thoughtful consideration for others and whose behavior is gentle and kindly, he unconsciously acquires similar ways, says a bulletin from the United States Children's Bureau. The habit of courtesy comes not alone nor chiefly from direct instruction, but from imitation. If a child sees that his elders are habitually courteous in their association with each other, if kindliness and consideration for each other are the habits of the home, these qualities will inevitably stamp themselves upon the child. Good manners are an invaluable asset to every person, but good manners have their root and foundation in fine qualities of mind and heart, and only the constant daily exercise of them will help give the children that charm of manner which is such a delight in persons of every age.

UNDER THE BLACK CANOPY

By Paul E. Triem

SYNOPSIS.

Joseph Dudley, a strong young woodsman, is about to board the boat for one of Stevens' logging camps, where he has secured employment, when suddenly the gangplank gives way and he, with many others, is plunged into the deep, icy water. Forgetting his own peril, he does heroic work in rescuing the others, among whom is a young boy, who, he learns later, is the son of Jerry Stevens.

On his arrival in camp, Joe is forced, for the entertainment of the other men, to wrestle with Andy Dubois. Joe wins and by doing so makes an enemy of the big Frenchman.

The next few days Andy works frantically and Jensen, his partner, numbed with weariness, is hurled in the road of the tree they are felling. Joe tears Jensen away just in time to save his life, but Jensen suffers a broken collar bone. Joe is ordered to take Jensen's place and Andy purposes to outdo Joe. Their first day proves a hard one for Joe.

CHAPTER IV.

Joe fell into a heavy sleep as soon as his head touched the pillow, and did not awaken till the whistle blew next morning. In spite of Mr. Neville's liniment and rubdown, the young man was conscious of such an insistent pain in his shoulders and sides when he moved that at first he felt he would be unable to get up. Then he set his teeth and dressed himself painfully, and was among the last of the long procession which entered the dining room.

He had not forgotten the cook's command that he should come in for another rubdown before going to work, but he was unwilling to let Mr. Neville, who was sure to have a big day's work ahead of him, go to this trouble. The little man in the white uniform was not to be put off so easily, however; as Joe was finishing breakfast he saw the master of the kitchen standing in the narrow doorway, beckoning him, and there was nothing for him to do but obey the summons.

Mr. Neville went at him energetically. "If you'd gone to work without coming here first," he explained, "it would have taken you a good hour and a half to get limbered up. And Andy would be making things mighty disagreeable during that time. I know him—he is a countryman of mine, and I've worked in the same camp with him before. It's for his good as much as yours that I'm doing this—I don't know that it will help him any to have to eat humble pie, but I'm sure nothing else can reach him. You've got to beat him, my friend."

"I'm going to win if I can do it squarely," Joe replied. "I don't like this business at all, but I didn't get into it voluntarily, and there's only one honest way for me to get out. I wish Anly wasn't such a tinder box."

He left, after promising Charley Neville to return at the close of the day's work. He walked along the narrow-guage railroad which led into the forest, stepping aside at one time to make way for a diminutive engine and an odd-looking car, upon which a sort of crane was mounted. This was the "jammer," which was used for carrying logs from the skidways down to the huge piles on the beach. It did away with much of the team work which made the oldtime camp a graveyard for horses and oxen.

Andy Dubois appeared at the place where the day's work was to begin a moment after Joe, and silently the two young men took up the saw. The Frenchman's face was drawn and tense, just as the face of a bank teller might be during a panic. His eyes glowed when they rested for a moment on Joe's, but neither spoke. They began to work silently, at the same swift pace which they had kept up all the previous day.

Although Joe did not realize it at the time, this second day of his contest with Andy Dubois was the crisis, in so far as he was concerned. The morning dragged through and by afternoon he was beginning to feel like a sleepwalker. The pain had gone out of his shoulders and sides, and in its place had come a gradually increasing numbness which crept through his body until it seemed impossible that he should longer hold his end of the saw. When he looked toward his partner, the Frenchman seemed to be enveloped in a sort of hazy cloud and to have grown enormously, so that he towered into the air like a figure in a mirage. And still, through it all, one idea stood out clear and unwavering in Joe's mind—in justice to himself he could not quit while he had one additional ounce of strength to put into the battle.

Toward the close of the afternoon he noticed a curious circumstance—the numbness of mind and body was leaving him, and instead of growing more weary—which, indeed, was impossible—he seemed to be slowly gaining strength. He threw back his shoulders and sucked in deep breaths of the smoke-tinged air. Yes, undoubtedly he was coming into possession of a sort of belated "second wind."

By the time he reached Charley Neville's quarters, after supper, he knew that he was not mistaken, and he told the cook of the experience. Mr. Neville drew a breath of relief, but kept on pounding and rubbing the young man's muscles.

"There were just two things that could happen," he commented, "and I didn't know which of 'em it would be: you might have gone out of commission—'collapse,' they call it; barring that, you were bound to pick up as soon as your system got used to the extra work. You are in good shape, and you caught your pace in a hurry. It's your race from now on."

So it seemed. Joe woke up in the morning half an hour before the first whistle blew, and was instantly conscious of a feeling of exhilaration, as if he were saturated with a new power. He realized that this was one of the rewards of having conquered himself, of having stayed in the battle when it was going against him; but he was chiefly glad because it made it possible for him t try to do something for Andy. He could not have surrendered to his own weakness; but now that he no longer had this to fear, he believed he might find a way of saving the young Frenchman the humiliation of defeat. At any rate, he was determined to try.

As he was going to work after breakfast he saw a man on horseback talking with Steve McClosky. He recognized the tall, erect figure of Mr. Stevens, but was passing some distance away, inent on getting to work, when the latter called to him. Joe turned back, and a moment later was shaking hands with the owner of the camp.

"I'm glad t see they haven't killed you off," Mr. Stevens said, in the slow, gentle voice which was habitual with him, and which filled Joe with a sense of vast reserve power and grave kindliness. "Mr. McClosky tells me that he is putting the work through on an emergency schedule."

"Joe and his partner are doing more work than any two of the other teams," the foreman commented, looking curiously down at the faller. "I don't know how long they can keep it up."

"I believe I could keep it up all summer, now that I've got toughened to it," Joe replied, "but Andy is fretting himself sick. I'm agraid he can't stand much more of it—although he'd be a better man with a saw than I, if he wasn't so high strung."

Mr. Stevens shook his head. "Better go slow," said he. "I'm leaving for the city on this morning's boat—that boy of mine wanted me to bring him over to see you, but I've been too busy. Perhaps I can manage it next week. He stays on at the hotel."

Joe excused himself a minute later and trotted up the track, for he did not want to chafe his partner unnecessarily by keeping him waiting. The Frenchman was already at his post, and Joe read in his eyes a bitter sense of impending failure. For a moment he hesitated, on the point of speaking. Something of impatience in Andy's manner, however, advised him to wait for a better time, and he picked up his end of the saw and started to work.

It was easy for him today. His muscles had caught the rythm of the saw and he felt a positive joy in his work. Sometimes he glanced at Andy. He could feel the other's tense and desperate will, driving his body on hour after hour, through what must have been a veritable nightmare; and finally, when the afternoon was half gone, Joe could stand it no longer. They had just started on a tree—a big, rough barked veteran which looked like a green-feather arrow dropped from a giant's quiver. Joe looked around and saw that there was no one within earshot. He let his end of the blade sag.

"See here, Dubois," he said quietly, "you and I have carried this thing far enough. We aren't children, and it's silly for us to act like a couple of miffed 5-year-olds. We've both made a good showing—better than any other two men in the camp could, I believe. Let's call things quits. I'm willing to apologize."

He held out his hand, but the Frenchman jumped back as if he had received a blow on the cheek.

"You think I'm a quitter?" he cried, hoaresly. "Me—Andy Dubois—but I will never accept your pity! Come, we are wasting time."

Joe could see that he was holding himself by a superhuman exercise of will, and silently he picked up his handle. Much as he pitied his companion, he saw that he could do absolutely nothing for him—yet. He would not give up hope for the future.

Andy, as if to purge himself of the insult which he considered had been offered him, threw himself into the work with increasing energy. His lower lip was thrust between his teeth and his face was white and glistening His motions had become spasmodic—Joe could feel the blade jerk and quiver.

The end came unexpectedly. It was within half an hour of quitting time and Joe himself was feeling the effects of the long day's struggle. He had forgotten his companion and was occupied in trying to keep the blade straight, for Andy was running his end so erratically that it clung in the cut. Suddenly there came a sharp, silvery snap, and the saw, relieved of a sudden weight, responded so readily to Joe's pull that he was nearly thrown from the springboard. From the corner of his eye he saw his partner whirl and leap wildly to the ground. Next moment Andy was running across the trail, staggering as he ran; and before Joe could speak he had disappeared into the brush.

Joe waited a few minutes for him to come back, then extracted the broken saw and started slowly toward camp. In the road he met Steve McClosky, to whom he told of the Frenchman's sudden departure. The foreman nodded.

"It was bound to come," he said. "Andy is a good boy, but he's too high headed. Well, he probably won't show up here agaian—and it's just as well." For a moment he stood pondering; then he turned to Joe. "You don't know anything about running a donkey engine, do you?" he demanded.

"I handled an engine all through last summer's vacation," Joe told him.

"All right, You'll take the engine at the head of the skidway tomorrow morning—there's a lot of dry slashing about, and the fellow who has been working there likes to show how brave he is by taking all sorts of chances."

Joe slept poorly that night, for a man who had been working hard in the open air. A dozen times he woke up to find himself going over and over the last scene with Andy Dubois. He was glad to crawl out of his bunk when the first yellow rays of sunlight gilded the floor and to hurry into his clothes.

After breakfast the foreman took him up to the top of a long, wooden slide and showed him about handling the donkey engine which was used for drawing logs from a valley beyond.

"Be sure to keep your spark cage down and the firebox door shut," McClosky cautioned him. "It may not make much difference in the end—I'm afraid we're going to be smoked out anyhow. But we've got to do what we can for ourselves."

He paused to stare gloomily away over the hazy valleys and ridges; then he turned and was gone, and Joe was left to himself.

The work was child's play, after the strenuous days he had put in at the big saw; and when the whistle blew, down in the valley, he hardly felt that he had earned his dinner. He adjusted his engine and clambered down in the wake of his helper, however, for this consideration had not modified his appetite.

The men at the table were talking about Dubois; and as Joe entered, one of them turned to him and spoke dubiously.

'I reckon it isn't no more than fair to warn you to look out for trouble," he explained, evidently acting as spokesman for the rest. "We've all of us knowed Andy quite a while, and it's as certain as death and taxes that he won't quit until he's done something to wipe out his disgrace. It ain't Andy's fault, you know—he was raised that way. Fair play looks different to some folks than it does to us."

"I know it," Joe agreed. "Well, I'll be careful—I don't want him to make any trouble, for his own sake as much as for mine."

He was half way through dinner when "Cookey" touched him on the shoulder and whispered into his ear.

"The boss wants to see you right away," he said, and there was a hint of fear in his voice.

Joe arose and went quickly outside, where he found McClosky waiting for him. Without speaking, the foreman pointed up to the summit of the ridge, where Joe's engine was located. The young man followed the direction of his outstretched hand. Then he cried out:

"The slashing has caught!" he exclaimed. "How——"

"The sleeve was off your stack," Steve McClosky remarked quietly. "It caught from a spark."

"But I left the spark cage in place," Joe protested helplessly. "I looked to it the last thing before coming down to dinner—although it hasn't been off all morning."

For an instant the foreman eyed him narrowly. "I believe you," he commented. "I was up there just now—couldn't get close to the engine, but I saw that the cage was gone."

"Who——" Joe began; then his lips closed tight, as if to keep in an unwelcome thought.

"Yes," McClosky said, gravely. "Andy has been up to mischief, I'm afraid. He must have been hidden somewhere in the brush, watching you all morning. Well, it won't make much difference, anyhow. We might have saved the engine, but the chances are that the camp is going to be wiped off the map. The wind is coming pretty stiff from the south, and I can make out a bad fire in some burned-over timber a few miles away. As soon as the men finish eating, we'll get at it and move as much as we can down on to the beach. It may be neecssary to float some of the logs—the ones that are nearest the edge of the timber."

The little engine and its string of cars were put into commission, and the men were divided into groups, some of which were set to work in the camp itself, loading up such of the equipment as could most easily be moved.

Is It a Good Time to Go Into Cattle?

By E. L. POTTER.

H. J. K. writes: "I have an opportunity to rent a good ranch at what seems to be a reasonable figure. Is now a good time to go into the cattle business?"

If our correspondent can rent a ranch that has plenty of feed for next winter he should find this a splendid time to go into the cattle business. Cattle prices are off right now and the indications are that they may be sold within the next few months at reasonable prices and again that next spring they will be much higher. This looks like an easy thing, but the difficulty is to winter the cattle. Feed will probably be very hard to buy, and if bought at all will be at such prices as to make the cost of wintering a cow $10 to $15 above normal. Therefore if one has the feed, cattle are a mighty good proposition, but without feed it is a good time to be careful. It would certainly be foolish to buy a bunch of cattle without knowing where the feed was coming from.

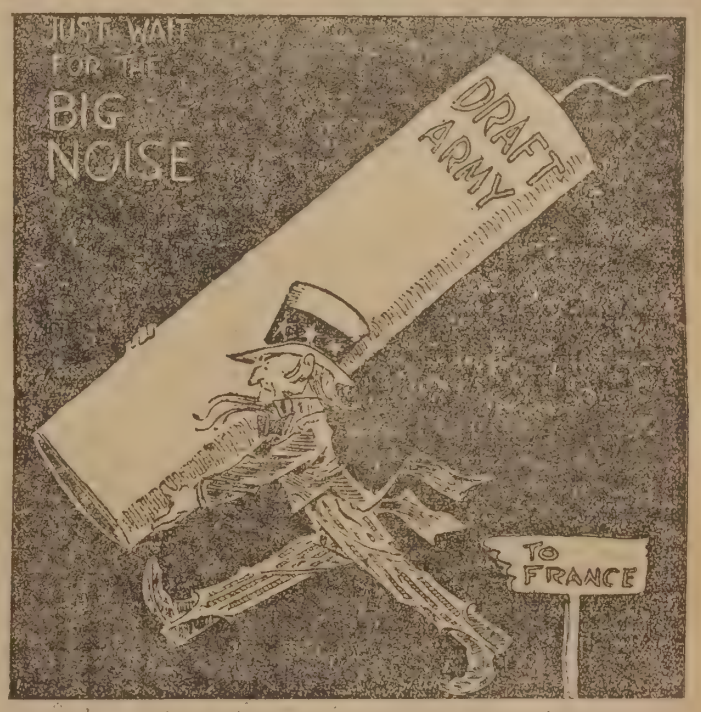
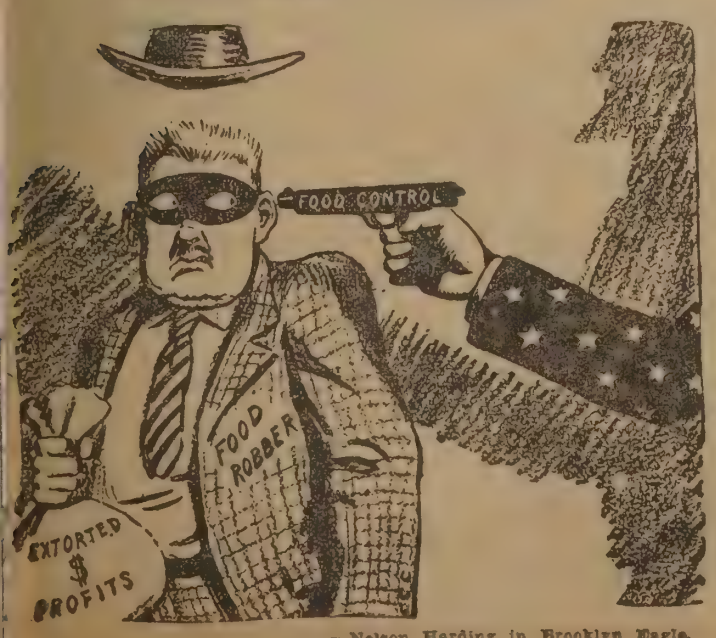
Florida's Woman Mayor.

Mrs. George Horwitz, mayor of Moorehaven, Fla. An efficient business administration is looked for in the light of her success as a farmer. Her estate has produced 50 carloads of potatoes this year and 30,000 bushels of corn will soon be ready for harvest.



Takes Picture of Torpedo

Copyright by International.



Here is a photograph showing a German U-boat in the act of submerging after having fired a torpedo at a merchant vessel. The photographer, undaunted by the fact that it was about to explode against the side of the vessel on which he was traveling, focused his camera on the disappearing sumbarine and pressed the button. The torpedo, for some reason, failed to explode.

Haven't Begun to Make a Racket Yet

Barge of Cheering American Troops

Copyright by International.

The picture shown above is that of a transport bearing a contingent of American troops bound for "somewhere" just after it had passed under one of the bridges that span one of the rivers in the vicinity of New York city. As the men passed under the bridge they cheered and waved their hats and seemed glad that they were bound for "somewhere" whether it was to some camp in America for further training, or to some seaport where they were to embark for the trenches "somewhere in France." Complying with the strict military rules, this photograph was censored by official "J. C. G." and passed by the committee on public information.

Fresh Vegetables

Plans to Have Them All Year

To the Editor: There are many ways in which we housewives may help to conserve the food supply of the nation, but my pet economy is by the glass-jar method. Of course, we all can fruit in season, and most of us string beans or perhaps sweet corn, but not all of us who have an abundant garden realize that by a little planning we might just as well have fresh vegetables of all kinds all the year round.

Bushels of fruit go to waste every year in almost every farm orchard. How many of us can apples when the fall apples are plentiful? They make a variety of apple sauce superior to the winter kinds, are delicious for pies and puddings and many of them—would otherwise go to waste.

Few people can greens, and yet, where they are liked, nothing is more acceptable in the late winter and early spring than a dish of spinach, beet tops, dandelions or whatever your favorite may be, tasting as if just freshly gathered. They are not difficult to can, and retain their flavor better than many other vegetables. They should be boiled in an open kettle for 15 miutes in order to shrink them, then packed in sterilized jars and boiled for three hours.

Another candidate for early spring canning is rhubarb. This may be canned with very little work and trouble by the cold-water method. Simply wash and cut the stalks into one-inch pieces, pack in sterilized jars, and fill to overflowing with cold water. Continue pouring on water for several minutes, until all air seems to be out of the jar, then screw down covers and your work is done. This is fine for winter pies.

Young carrots, beets and turnips, etc., can easily be kept by the canning process and are far better flavored than when put away in the cellar after they are full grown. It is useless, of course, to try to preserve foods that your family does not like, but choose their favorites and you will find the glass jar a great aid in keeping on your table a healthful variety of foods at small expense. MRS. IVER LONGETEIG.

Vollmer, Idaho.

Trials of a Vice President.

Another bad thing about being vice president of the United States is having to look patient while Senator Nuisance of Wisconsin or Senator Piffle of Missouri is addressing the senate.—Dallas News.

Thrift Thought.

What are you going to do with that half bottle of left-over milk in your refrigerator, Madam Housewife?

The cream has been taken off, but there is good food value in what is left.

Here is one possibility, says the United States Department of Agriculture, for a nourishing dish for either luncheon or supper:

Enough for family of two adults and three children. Reduce proportions if for smaller number.

1 pint skim milk,
½ cup flour,
2 level teaspoons butter or cooking fat.
½ teaspoon salt.

Melt butter or other fat in saucepan. Add flour and salt mixed. Blend. Add milk gradually. Heat, stirring constantly until thick.

Flavor, if desired, with any left-over minced meat or fish which may be on hand, or minced ham or a slice of broiled bacon, crumbled.

Serve on boiled hominy, samp, rice, potatoes, macaroni, or slices of corn or other bread, or toast.

So nigh is grandeur to our dust,
So near is God to man,
When Duty whispers low, Thou must,
The youth replies, I can.
—Ralph Waldo Emerson.

To Dry Corn on Cob

To the Editor: I receive so much good from your paper that I thought I ought to send you my way of drying green corn so as to help some one else. Select good ears, then prepare for cooking on the cob until the milk is set or until just right to eat. Then dry on the cob. Drive nails in boards far enough apart so the ears won't touch. Then stick the ears on. They dry faster this way. When there are a few ears left over from a meal they can be put to dry in this way.

When ready to use put them in cold water and let boil a few minutes. Eat with salt and butter as when fresh. I also cut it off the cob after it is cooked and dry it that way. One can save every ear that is left from a meal. I dry tender, green beans. Just select them when they have no beans in them and break in small pieces and dry. They are fine and one can save a small lot at a time.

MRS. A. FULLER.

Pateros, Wash.

Old English Enitials to Embroider

By WINIFRED WORTH.

To transfer this design, put some soap in a pint of hot water, stir and remove excess moisture by partially drying design. Place material on a hard, flat surface and lay the design, face down, upon the material, cover with two folds of newspaper and, with a tablespoon, rub, pressing hard, until the design is entirely transferred.

White embroidery floss of linen quality, or the mercerized, is the best for making letters. Always soap the fabric with white soap under the initial before embroidering. It aids one in washing the color from the finished design.

In padding these old English initials, different methods may be used. Some use the twilled cotton for the purpose; others make the chain stitch, while others let a skein of floss out at full length and embroider a strip of it under the thick parts while forming the letter, clipping the skein when the initial is finished. This is a splendid method, quickly done, and is suggested, too, as a help in padding all large pieces in border or crescent outline.

Initials can be made by filling in the broad space with French knots. This is used largely on elaborate pieces, such as the laundry bag, table scarfs, and ornate gifts.

LESS WORK

No coal, wood or ashes to lug. No waiting for the fire to burn up.
Meals in a jiffy and a cool kitchen all the time.
Bakes, broils, roasts, toasts. Better cooking because of the steady, evenly-distributed heat.
More convenient than a wood or coal stove for all the year 'round cooking, and more economical.
The long blue chimneys prevent all smoke and smell.

In 1, 2, 3 and 4 burner sizes, with or without ovens. Also cabinet models. Ask your dealer today.

Swat Speculation in England.

Lord Rhondda, the British food controller, is equipping himself with additional powers of control in regard to food prices with a view to dealing drastically with speculation and profiting wherever it is established that they exist. In an official announcement he is now empowered to requisition the whole or part of the output of any factory and to pay a price based on the cost of production with the addition of a reasonable pre-war rate of profit without regard to the price ruling in the open market.

According to the London News it is becoming clear that if action can be taken without endangering the wheat reserves of the country some amendment of the bread regulations is desirable. Among the complaints made against the present war bread are that it quickly palls on the palate, that it is rough to the tongue, that it does not appear to be digestible, that it often tastes musty, and that it soon becomes stale and mouldy.

The national war savings committee states that its campaign to eat less bread is surpassing expectations, a total decrease of ten per cent being recorded for the three months of March, April and May.

Cheese Toast.

Sprinkle grated over freshly made dry toast; heat in a moderate oven until cheese is just melted, not brown. Serve hot.

Didn't Like the Sound!

YOUNG MEN! YOUNG WOMEN?

Your life opportunity is at hand—Decide now.

Stenography, Bookkeeping, Commercial Training

Give you a GOOD SALARY from the start; a BETTER INSIGHT into the methods and usages of business, and the BEST OPPORTUNITY to advance to competence and commanding influence in commercial life.

What school? Make no mistake.

THE TRUE TEST.

Most students, through a feeling of loyalty, will say a good word for their school, and if a school sends you to inquire of certain "business men" you may well suspect a "game"; therefore, make the true test of our standing, ask the best business men of Spokane and the towns of the Inland Empire about The Northwestern. We furnish bookkeepers and stenographers to business men, and these men are the best judges of the efficiency of our school—even better judges than the students themselves.

See the Northwestern and its equipment. Use your better judgment. Decide after inspection and inquiry. Enroll at

Northwestern Business College

8317 Howard St. M. M. HIGLEY, President. Spokane, Wash.

Dear Children: For a long time I have been watching for a perfect letter—not exactly perfect, but one which is written plainly and neatly, with no misspelled words, with the punctuation done aright, written in ink without blot or error, and on but one side of the paper, in your own writing and all your own composition or wording. When such a letter comes—a letter which is bright and clever and original, signed properly and with the age of the writer—I expect to have a picture made of it and put it in the paper, just so grown folks can see how nicely their children can do.

Now, there is hardly a letter that comes to the Children's Corner but what has some of these good points; some of them have nearly all of them; I haven't found one that has them all. But I'm hoping. Yours lovingly,

AUNT NELLIE.

Glad to Hear From Jane Adams.

Dear Aunt Nellie: This is the first time I have written to the Corner. I am 7 years old. My birthday is the third of September. I go to the Maple Grove school. I will be in the third grade next year. We have six cows and three horses and some calves. I have a canary bird and am keeping one for a neighbor who is sick. We have a brown and white rabbit.—Jane Adams, Sunnyside, Wash.

Wants the Cousins to Write to Her.

Dear Aunt Nellie: This is the first time I have written to the Children's Correr.. I am 12 years old the sitxh of September.. Have I a twin? If I have I would like to hear from her. I live on a 40-acre farm. I am trying to get two subscriptions for The Washington Farmer for the camera. I hope some of the cousins will write to me. If my letter is in print I will write again.—Mary King, Menlo, Wash.

See the Big Boats Pass By.

Dear Aunt Nellie: I have been reading all of the letters of the little girls and boys in The Washington Farmer. I like them very much. I live on a farm on an island. We are close to the boundary line between the United States and British Columbia. We see lots of big boats pass by. I have two brothers. One is 12 and one is 8. We also have four cows and two horses. I have seven little ducks. There is no school now. School will start again the first of October. I like school very much. I am 10 years old and in the fourth grade.—Augusta Victoria Chevalier, Prevost, Wash.

Brown Betty Is a Banty Hen.

Dear Aunt Nellie: This is the first time I have ever written to the Children's Corner. I am 9 years old and I am in the fourth grade. I have two sisters and two brothers and my sisters' names are Mabel and Marie. My brothers' names are Robert and Orval. I have two pets. One is a banty hen. Her name is Brown Betty. I have a little dog. His name is Tip. My father has two pigs, one cow named Spot, two horses named Flora May and Dolly and a little colt named Dixie Queen. I hope I will see my letter in print.—Beulah Shaw, Grandview, Wash.

Rachel Has Found Three Twins.

Dear Aunt Nellie: I enjoy reading the Children's Corner very much and thought I would like to write a letter. I am a member of the Chronicle Juniors' Corner and I have written two stories and answered the puzzle. They only put one of my stories in print, but they sent me a Chronicle Junior's button. I am 11 years of age and my birthday is the 12th of September. I have found three twins. Their names are as follows: Hilda Hilstrom, Kathryn Tattler and Ruby E. Werz. I am in the seventh grade.—Rachel Olivene Webb, R. F. D. 1, Lind, Wash.

Come Again Soon, Elizabeth.

Dear Aunt Nellie: This is my first letter to the Children's Corner and I hope to see it in print. I live on a 10-acre farm. We have two horses whose names are Prince and Della. We have two cows. Their names are Molly and Daisy. Our school let out the eighth of June. We had a picnic the last day. I am 13 years old and in the eighth grade. My birthday is the seventh of December I have three brothers and one sister. My sister's name is Judith and my brothers' names are Friedolph, Floyd and Donald. I would like to correspond with some of the cousins of my age. Have I a twin?—Elizabtth Fogelquist, R. F. D. 2, Selah, Wash.

Mary Has Two Big Brothers.

Dear Aunt Nellie: This is the first time I have ever written to you. I live on a 52-acre farm. We live 10 miles from Olympia. My father is one of the county commissioners. We have an auto. We have two horses, one colt, four calves, four cows, 52 geese, three cats and one dog. I have two brothers but no sisters. Gorden is 17 and Arthur is 19. I am washing dishes and sweeping and making beds. I am 10 years old and in the sixth grade. My birthday is the 19th of February.—Mary Alice Bennett, Puget, Wash.

Hilda's First Corner Letter.

Dear Aunt Nellie: My two sisters and I are visiting our neighbors and they take The Washington Farmer. I was reading the Children's Corner today and thought I would like to write a letter, too. I will be 11 years old the 14th of November. When school starts again I will be in the sixth grade. I live on a 20-acre farm. We have six cows and three yearlings and two calves and two horses. We have about 28 hens and 30 little chicks and the most interesting of all are two pigs about two and one-half months old. This is my first letter to the Children's Corner and I hope to see it in print. I may write again some other time.—Hilda Kuki, Route No. 1, Buckley, Wash.

So Much Fun With Waterwings.

Dear Aunt Nellie: This is the second time I have written to the Children's Corner so I thought I would write again. This time I am going to tell about my waterwings. My two brothers, Paul and Roudolf, and I have a pair and go swimming in the river and we can't drown. We go swimming every day and my friends go in with me and we have lots of fun, too. I can almost swim now. I would not exchange with any city girl. I wish some of the girls of the Children's Corner would write to me. I would surely be glad to anser.—Anna Straube, Pampa, Wash.

Elzina Hopes She Has a Twin.

Dear Aunt Nellie: Ths is the first time I have written to the Children's Corner, and I hope it will not be the last time. I am going to visit my sister in Stanwood the week after next. She is the oldest in the family. I am 10 years old. My birthday is April 4. My sisters' names are Meredes, the one I am going to visit; Lauredo, who lives in Oregon; Vicenza, Irene and my little sister, Mae. I have three brothers living. Their names are Louis, Lambert and the 15-months-old boy of ours. His name is Stanley. I hope I have a twin. —Elzina Rogers, R. F. D. 2, Box 12, Arlington, Wash.

Little Benjamin Bunny Ran Away.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I probably would have written before, only mama just started to take The Farmer a few days ago. We have 150 chickens and one turkey. We did have 10, but five died and a skunk got four. We caught the skunk afterward and shot it. I have an Angora rabbit named Peggy. I am 11 years old and will be in the seventh grade next year. We have a Scotch collie puppy named Lady. I have one sister and three brothers. Their names are Hilma, Everett, William and Marvin. I live on a 10-acre farm, two miles east of Olympia, Wash.—Marian Holmes, R. F. D. 2, box 164 A, Olympia, Wash.

Proud of His Big School.

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I enjoy reading the letters very much and I am anxious when it is Thursday, for that is usually the day when we receive The Washington Farmer in which we have the Children's Corner. I am 13 years old. My birthday is February the first. Have I a twin? My subject is our schoolhouse. It is located on a tract of 20 acres, somewhat out of town and a really beautiful building. It contains about 24 rooms and is constructed of bricks and I feel proud of it. My room has many beautiful pictures such as the signing of the Declaration of Independence and one of President Wilson. My favorite studies are history and arithmetic. The windows in my room are located on the side which faces the grain fields. Sometimes I look out of the windows upon the beautiful hills and I see many pictures. The baseball grounds are also located on the school tract. The town folks plowed up some of the ground and planted potatoes and various other vegetables on it because of the food shortage in the United States. I also planted a little vegetable garden for myself. I would like to correspond with any member of the Children's Corner.—Alexander Laurence Weitz, box 51, Endicott, Wash.

About Edith's Week in Spokane.

Dear Aunt Nellie: I am going to write about a week in Spokane. I live in the country and like it much better than the city. I went to Spokane Sunday, and got home yesterday, which was Tuesday. I stayed with grandmother most of the time, but I will start at the beginning of my trip. The

You can afford a JONES LIGHTING PLANT in your home

THE Jones System is an all-on-one-base plant—always ready to run. Starts itself, stops itself, runs itself, oils itself. **Runs 30 electric lights of 24 candlepower each**—can be operated by a child. Just connect your house wires and the JONES is ready for work. When your turn on the first light it starts itself and runs until the last light is turned off—then it stops.

Send for booklet that gives full details.

Meet the JONES Demonstrator *at the Spokane Interstate Fair,* Opposite the Dairy Building

first night I stayed with my Aunt Mae. The second night I stayed with grandmother. Then I stayed with by Aunt Mae for two or three nights, then I stayed at my cousin, Catherine's, then with grandmother again and there I stayed until yesterday. I had much fun with my cousins, but I believe I had more fun with grandma, for she taught me how to crochet. Monday, grandma and I washed and I was having a fine time. But anyway you may be sure I was very glad when papa came after me and you may be sure I was very glad to get home. I have dark eyes and wark hair and weigh 90 pounds and am 10 years old. I should be very glad to correspond with any girl my age. I have a little brother named Si. He fell down and cut his lip clear through. I have a dog named Fritz and four chickens. We have eight head of cattle. Their names are Bib Babe, Little Babe, Big Roney, Little Roney, Hallie, Sleepy, Belle and Snowball.—Edith Annetta Parmeter, Reardan, Wash.

What Graham Is Doing.

Dear Aunt Nellie: My subject is What I am Doing. I am taking care of Rood's cows. I get milk for herding them. That helps. I saw my last letter I wrote in the paper and was very glad. I had a nice time the Fourth of July. I am 9 years old and will be 10 June 16, 1918.—Graham Potter, R. R. 10, Hillyard, Wash.

Write to Us Again, Eunice.

Dear Aunt Nellie: I enjoy reading the letters in The Farmer. I am 9 years old and in the fourth grade at school. I have a brother and his name is George. We have a Chevrolet car. Have I a twin? If I have I would like to hear from her. I live on a farm. We have three horses, six cows, one dog, four cats, two kittens and 16 pigs. Papa takes the Farmer. We have 75 chickens.—Eunice Libbey, Box 9, San de Fuca, Wash.

Call Their Mule Colt, Nifty.

Dear Aunt Nellie: This is the second time I have written to the Corner and I enjoy reading the letters of the cousins. I live on a 160-acre farm and we have 12 horses. We have two cows and two calves. The cows' names are Bossie and the calves' names are Tuts and Dot. We also have one colt and one mule colt whose name is Nifty, because he is so nifty. The colt's name is Prince. I have seven brothers, whose names are John, Alex, Henry, Conrad, Daniel, Edward and Thient. I have two sisters, and their names are Pearl and Lillian. Have I a twin? I am 14 years old and my birthday is the 23d of March.—Leona Machlied, LaCrosse, Wash.

A Little Kitten Named Pinknose.

Dear Aunt Nellie: I have been reading the Children's Corner. I like it fine. I am 9 years old and in the fifth grade now since I passed. My birthday is on September 11. Have I a twin? I have two sisters and three brothers. Their names are Everett, Robert, Earl, Lena and Hazel. I have a little kitten named Pinknose. We have a black kitten, too Its name is Sweetheart. The mother is pretty nice. She is gray like Pinknose.—Alice Duncan, Benge, Wash.

Will Write Sooner Next Time.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. My father takes The Washington Farmer and I enjoy reading them. I have light hair and blue eyes. I am a little girl 9 years old. My birthday is January 12. Have I a twin? I have gone five years to school and I'm in the fifth grade. I have one brother and four sisters. I will write sooner next time.—Esther Hergert.

The First, but Not the Last.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner, but it isn't going to be the last time. I like summer because it is warm and we can go car riding. I am 13 years old and in the eighth grade. Have I a twin? I live on a farm 10 miles from Pullman. I have four sisters and three brothers. My oldest brother is married and has two children, a boy and a girl. Their names are Lorence and Lorena. We all like them very much. I hope my letter will not be thrown in the waste basket.—Iva Brannan, Pullman, Wash.

Beulah Never Wrote Before.

Dear Aunt Nellie: I have read the Children's Corner for a number of weeks, but this is the first time I have written to it. We get from 25 to 28 eggs a day. We have 54 hens and a number of little chicks. We have four horses. Their names are Mabel, Charles, Beulah and Bonnie. I am in the eighth grade. I am 13 years of age. I am four feet, six inches in height. My weight is 75 pounds. I live on a farm of 10 acres. I have three brothers and five sisters. The youngest is 3 in July. I have enjoyed the children's letters very much.—Beulah Tuttle, Prosser, Wash.

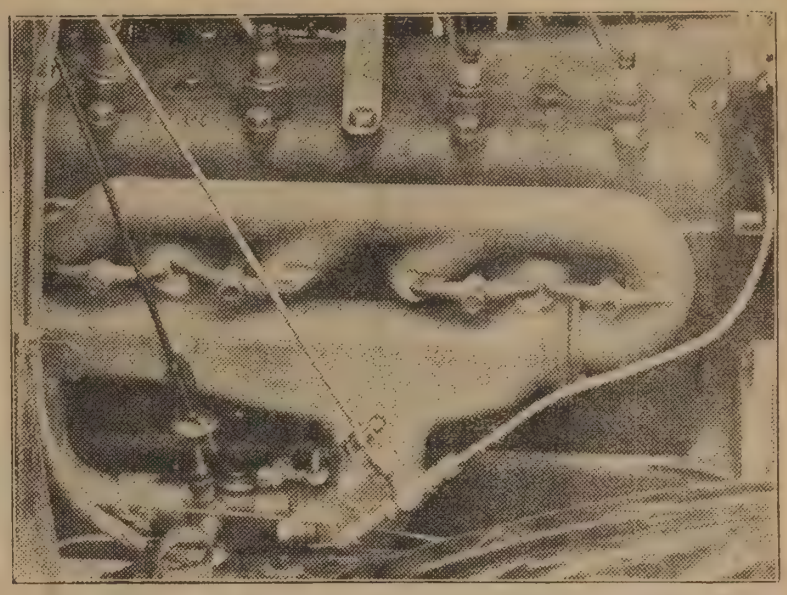
Do Something for Our Soldier Boys.

Dear Aunt Nellie: I have often wondered how many girls who have written to you would like to be a Red Cross nurse. I have often wished I was old enough to train to be one. I think it would be nice for girls not old enough to make things and send them to the boys who have gone to fight for us. I have three cousins who have gone to fight for Uncle Sam. I think those boys are brave and will fight as well as they can. I think all the boys who have gone are brave and I think all who are interested in the Children's Corner will quite agree with me. I send love to all the cousins and also to Aunt Nellie.—Violet Leachman, Pomeroy, Wash.

Wonders if She Has a Twin.

Dear Aunt Nellie: This is the first time I have written to the Corner. Papa takes the paper and I think it is nice to read the letters. I live on a farm eight miles from town. I am 11 years old and in the fifth grade. I have three sisters and two brothers. My oldest sister goes to high school. We have three little calves. Spot will fight. Spot has a white ball face and is red and is pretty. Daisy is red and white. Rose is all red. They are all pretty. For pets I have a little yellow cat and a calf. I wonder if I have a twin. If any of the cousins want to write to me I would like to hear from them. I would like to hear from some one whose name is Thelma.—Thelma Hendrickson, Palouse, Wash.

Loves to Play With Her Dolls.



Dear Aunt Nellie: I was overjoyed when I saw my letter in print and also wish to see this one in print. The Fourth of July was a great day with my little girl friend and I. We went horseback riding and took our lunch with us and ate under a big cherry tree and then we went home. I like to ride horseback. We have four horses, two mares and one colt. I have three more dolls since I wrote to you last. Their names are Bessie, Rosebud and Dorothy. I love to play with dolls. That is the reason I have so many. I like to read books awfully well. I would like to read all the time. I am reading the "Ups and Downs of a Bunchgrass Boy." I am going to try to get my chum to write. I like to play outdoors. I like to wade in a creek, climb trees, play with my dolls, ride horseback and gather the eggs. Those are the things I like to do. I am glad the Children's Corner is growing. I will help it out as much as I can.—Avah Sharp, Alameda, Wash.

Aunt Nellie is glad to announce the receipt of letters for the Children's Corner from the following during the last week: Julia Newmeier, Kathryn Smith, Alexander Weitz, Pearl Franz, Bella Harturg, Esther Carlsin, Bertha Ellison, Barnetta Bartholomew, Beatrice Freddie Giles, Cecelia Viola Jones,

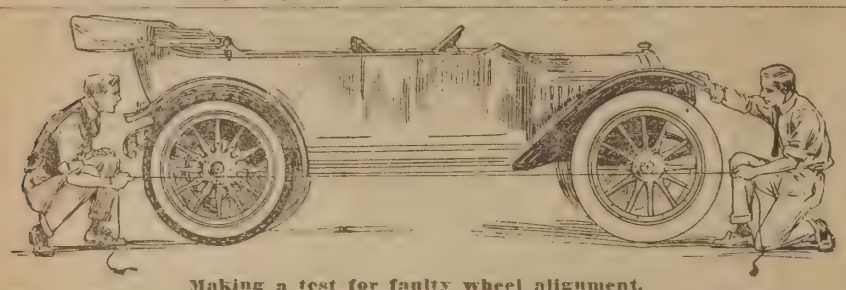
The Motor Car
On the Farm

Faulty Alignment.

A common tire injury is shown in the illustration at the left. This effect is due to faulty alignment of the front wheels. A bent axle or steering knuckle may be responsible or possibly the demountable rim was not properly applied.



Accidents are not always responsible for the front wheels being out of alignment, but frequently this is the case. All cars, through no fault in manufacture, are subject to this condition and the first indication will be given when you notice the tread of one or both tires wearing as though a rough file had been used on them. If the tread becomes worn through, and the fabric affected, then the tire is beyond repair. Correct trouble quickly to avoid necessity of this. There is but one remedy and that is care. Test your front wheels frequently and be sure that they are in proper alignment. See the two-column illustration at right above.

MAKE FEED SURVEY.
Problem Presents Serious Aspect.

Announcement has been made by the Spokane Chamber of Commerce that it is undertaking a wide survey of the hay and feed situation in the northwest with a view to better determining the actual needs and helping devise means of meeting the situation if it proves bad.

Inquiries are being sent out to practically every district in the northwestern states. It is hoped that through the effort it will be determined how nearly adequate the supply of hay and other feed is, and where the greatest need and the greatest supply are. It is hoped that a scientific distribution of the supply over the northwest will enable farmers and stockmen to carry over their breeding stock until the pasture comes on in the spring.

Making a test for faulty wheel alignment.

Under the Black Canopy

(Continued from page eighteen.)

while others took the other end of the track and unloaded the cars as fast as they were switched on to the beach. Joe was among the latter. Even if he had been the laziest man in camp, he must have worked furiously this afternoon, for the contagion of excitement was in the air. The hours passed swiftly. Smoke drifted in black clouds over the little army, and the sun had disappeared. Joe's last impression of it was of a glimmering spot which looked like the bottom of a greased pie tin, suspended midway in the sky.

By 6 o'clock most of the moving had been done, and huge piles of goods were stacked on the beach. Charley Neville was cooking supper on the camp range which had been set up without roof or walls about it, on the sand; the men were wandering about like ants which have been driven out of their nest.

Joe had washed himself and was standing looking out over the sound when Steve McClosky joined him. The foreman's face was black with dust and smoke, and his eyes seemed to be peering out from behind a mask. There was something in his expression which caught Joe's attention at once.

"Well, you made it in time," he commented. "I suppose the men will go into town till the fires are over, won't they?"

McClosky nodded absently. "I suppose so," he said. Suddenly he turned to Joe and spoke vehemently. "Do you know, I don't feel easy about the people at Crystal Springs? There's that youngster of Mr. Stevens, and no telling how many women and other children. And there's a fire of some kind over in that direction—if it should get between the hotel and the beach, it might hem in the whole outfit."

"How far is the hotel from the waterfront?" Joe demanded.

"About three miles. The hotel stage meets the boats, and the managers should have had plenty of time to get every one down to the wharf, where they would be safe."

"But you don't think they've done it?" Joe asked, prompted by something in his companion's manner.

"I'm afraid not. The hotel people are city folks, and they don't know the ways of a forest fire. They would hate to scare visitors away for the season——"

Joe settled his hat upon the back of his head and turned toward the beach. "I can follow the edge of tidewater along till I come to the wharf, can't I?" he demanded.

"Yes, but——"

"Then I'm going. It won't do any harm to go over and see if they're all right. I'll be back by morning if I can make it."

"Wait," Mr. McClosky commanded. "Instead of going on to the wharf, you can save time by taking a short cut along an old skid road you'll pass about three miles from here. You'll have to keep a close watch for it. The fire seems to be running down along the beach, and it will strike the regular road from the wharf to the hotel first, so you'll serve two purposes by striking into this old road, if you find it. You'll take a lantern?"

"Yes. Mr. Neville will lend me one."

"Goodby, my friend. It takes a brave man to do a thing like this. I wish I could go with you."

"Your place is here," Joe called back.

He secured a lantern from the cook, and presently was skirting a group of loggers who were sitting forlornly on the sand. Then the smoke closed in behind him, and he was alone—as much alone as he could have been in a new world.

(To be continued in the next issue.)

Popular Government in Germany.

Just paste it in your hat that the German people will be running Germany when its legislature fairly represents the workers of Germany, when the reichstag has, also, the power to make or break the chancellor, and when the chancellor has control of the army. Until then the kaiser's mailed fist is the seat and source of German government.—Collier's.

Feed the Fighters! Win the War!
Harvest the Crops! Save the Yields!

On the battlefields of France and Flanders the United States boys and the Canadian boys are fighting side by side to win for the World the freedom that Prussianism would destroy.

While doing this they must be fed and every ounce of muscle that can be requisitioned must go into use to save this year's crop. A short harvest period requires the combined forces of the two countries in team work, such as the soldier boys in France and Flanders are demonstrating.

THE COMBINED FIGHTERS IN FRANCE AND FLANDERS AND THE COMBINED HARVESTERS IN AMERICA WILL BRING THE ALLIED VICTORY NEARER.

A reciprocal arrangement for the use of farm workers has been perfected between the Department of the Interior of Canada and the Departments of Labor and Agriculture of the United States, under which it is proposed to permit the harvesters that are now engaged in the wheat fields of Oklahoma, Kansas, Iowa, North Dakota, South Dakota, Nebraska, Minnesota and Wisconsin to move over into Canada, with the privilege of later returning to the United States when the crops in the United States have been conserved, and help to save the enormous crops in Canada which by that time will be ready for harvesting.

HELP YOUR CANADIAN NEIGHBORS WHEN YOUR OWN CROP IS HARVESTED.
Canada wants 40,000 Harvest Hands to take care of its
13 Million Acre Wheat Field.

One cent a mile railway fare from the International Boundary line to destination and the same rate returning to the International Boundary. High wages, good board, comfortable lodgings.

An Identification Card issued at the boundary by a Canadian Immigration Officer will guarantee no trouble in returning to the United States.

AS SOON AS YOUR OWN HARVEST IS SAVED, move northward and assist your Canadian neighbor in harvesting his; in this way do your bit in helping "Win the War."

For particulars as to routes, identification cards and place where employment may be had, apply to Superintendent of Immigration, Ottawa, Canada, or to

J. N. GRIEVE, Cor. First and Post Sts., Spokane, Wash.

We are under state supervision, and the law does not permit us to guarantee our rate, but for over 16 years we have never paid less than

News for Breeders

Will Be at Oregon State Fair.

Golden Minority, the 2-year-old Shorthorn bull shown above, is the junior herd sire in the purebred herd of J. B. Cornett, Shedd, Ore. He is by Minority's Welcome, dam Golden Lass by Goods. Golden Lass was out of Chief's Lady and by Roan Marland, all noted show and breeding Shorthorns. Golden Minority won first prize in his class at the Oregon state fair last fall and was made grand champion at the Willamette valley exposition. He has grown and thickened and rounded out a great deal since then and will be a hot contender for honors again this fall.

Mr. Cornett is one of the few men in the Willamette valley who has bred beef cattle for years, and he is a Shorthorn enthusiast. He recently bought the herd of O. B. Labaree, at Klamath Falls, Ore., because Mr. Labaree was going out of the business, and then resold them so they remained in Klamath county. The 22 head, all registered and all well bred, were sold to J. H. McCormack & Son of Klamath Falls. They have been in the cattle business for years, but these are their first purebred Shorthorns. Eugene, the son, is a student at the Oregon Agricultural college and will graduate this year. He takes great interest in fine stock, and on him, to a great extent, will devolve the care and breeding up of the registered herd. H. A.

COLORADO PIG HEADS HERD.

George Swales, who was well known as a breeder and exhibitor of Duroc swine while at Salem, Ore., and who returned to his boyhood state of Washington last fall and is now on a 360-acre farm at Johnson station, nine miles from Pullman, writes that he has recently purchased a boar to head his herd from Mr. Burke of Colorado, owner of the great hog "Burke's Good Enough." The pig is sired by Western Cherry King, grand champion of Colorado, and of Burke's grand champion sow. Mr. Swales describes him as extra large, heavy boned, smooth, pretty head, deep and the largest hammed hog he ever saw. All of which indicates that Mr. Swales is continuing to improve his good Duroc herd.

GUERNSEY MEN ELECT.

Will Buy a Community Shipment.

The Guernsey breeders of Clackamas county, Ore., have shown their wisdom by organizing a county Guernsey breeders' association. In a beautiful grove on Redwing farm of A. I. and J. Hughes, August 18, a picnic was held, a most enjoyable repast partaken of, a number of interesting addresses listened to and a stock judging contest for boys and girls was held, before organization was effected. Quite a number of breeders in the county and a few just over the border were enrolled and the following officers elected: President, John A. Riches; secretary, Mrs. A. I. Hughes; directors, John T. Whalley, H. T. Buckman and F. W. Hutchins.

Another meeting will be held in Oregon City in a short time, at which plans will be perfected for the buying of a carload of Guernseys in the east. The Bank of Commerce at Oregon City has offered to advance the money and the meeting will be held at the bank. The cattle purchased will be distributed by auction.

The judging contest was won by Roy Smith, with Walter Funk second and Kenneth Hughes third.

The principal address was delivered by Judge Grant B. Dimmick of Oregon City. He frankly said that many men would never make good dairymen and that an opportunity was being overlooked that would make Clackamas one of the greatest counties in the northwest. He then gave figures of actual profits in sheep and goats, called attention to the immense amount of land going to waste that could be made available for sheep and goat pasture, and said even for the dairy business there was much land that ought to have the underbrush cleared off and mixed grass seed sown, making the finest of pasture. He closed with a tribute to the dairymen that have worked hard and made good and said the breeders of purebred dairy cattle were making the most out of the business, hence the wisdom of the organization of the Guernsey Breeders' club.

John T. Whalley presided and other speakers were Professor Fowler, superintendent of Foothills farm, who urged the value of organization; Octav Voget, manager of the Hubbard creamery, who told why he likes the Guernseys; Professor Westover of the O. A. C., who spoke on "Community Breeding," and Horace Addis of The Oregon Farmer, who spoke on "Community Advertising." H. A.

Promises Good Record.

Nutwood Figgis, a senior 2-year-old Jersey, owned by Frank Doerfler of Silverton, Ore., stood at the head of the list of Jerseys of her class in the United States for fat production for the month of April. Oregon Jerseys have a habit of standing at or near the head of the list, and Mr. Doerfler, who is a comparatively new breeder, feels proud of the place his heifer held. Nutwood Figgis first freshened as a senior yearling and made an official record of 400 pounds of fat or 470.5 pounds of butter in a year, or rather in 10 months, as she was bred early and was dried off to prepare her for the next calving. She will be run the full year this time and promises to make a great record.

WELL KNOWN BULL SELLS.

The Guernsey bull Katonah's Sequel Masher has recently been purchased by Foothills Farm of Carlton, Ore., from A. I. & J. Hughes, proprietors of Red Wing Farm, Oregon City, Ore., for a price reputed to be close to four figures. Katonah's Sequel Masher was grand champion of the Oregon state fair in both 1915 and 1916 and is a wonderful show animal, with great size, fine style, good Guernsey type, a mellow hide, long hips and much capacity. He is a son of imported Sequel's Monogram, that has 20 daughters in the Advanced Register. Foothills Farm is perhaps best known for its milking Shorthorns, but it has a very fine little herd of Guernseys, mostly of the imported foundations and Katonah's Sequel Masher ought to prove a sire of both show and production stock. Whether they will be shown this fall has not been definitely announced. H. A.

SKAMOKAWA MAN GETS JERSEY.

Theodore Anderson of Skamokawa, Wash., has purchased the A. J. C. C. Jersey bull, Tootsie's Major 144196 from Henry Stewart of Green Meadows farm, near Albany, Ore. This is the second bull Mr. Anderson has purchased from Mr. Stewart, the former having been used a number of seasons and sold to a neighbor dairyman. There is record of excellent milk and butter production back of Tootsie's Major, his dam having a record of 756 pounds of butter in a year.

Breeders' Department

Auction Sale

160 Registered HOLSTEINS

At Carnation Sales Pavilion.

October 3 and 4 . . . . Kent, Washington

About 85 Registered Holsteins, females and males. Selected from the U. S. inspected and healthy herd of

Real Bargain in Five Jersey Heifers

Four sired by a grandson of Golden Glow's Chief (31 Register of Merit daughters), and double grandson of Rioter B. K. Helma (sire of 3). One a granddaughter and one a double granddaughter of Picabo (734.1 lbs. butter in a year.) All well bred. Ages sixteen months down to two. To feed my herd properly must dispose of part. $350 takes them.

C. A. SWARTS, Springfield, Ore.

Grain and Produce Markets

Chicago Grain.

CHICAGO, Aug. 25.—Trading in wheat for future delivery ceased today on the board of trade until after the war. September, the sole remaining option, made a dignified exit from the market at $2.11 1-2, which was 1-2c below final figures yesterday. Corn was subjected to selling pressure throughout the session and closed weak 2 3-8c to 2 7-8c net lower, with December at $1.07 3-4 to $1.07 7-8, and May at $1.05 3-8 to $1.05 1-2. Oats lost 3-4c to 1c, and provisions had weak support and finished from 50c to $1.10 lower.

Cash Quotations.

CHICAGO, Aug. 25.—Wheat—Red, No. 2, $2.20@2.23; No. 3 red, $2.18@2.20; No. 2 hard, $2.20; No. 3 hard, nominal.
Corn—No. 2 yellow, No. 3 yellow and No. 4 yellow, nominal.
Oats—No. 3 white, 54@54¾c; standard, 54¼@55¼c.
Rye—No. 2, $1.77.
Barley—$1.05@1.28.
Timothy—$4@7.75.
Clover—$14@18.50.

Minneapolis Grain.

MINNEAPOLIS, Aug. 25.—September wheat prices sagged and closed 4 1-2 cents down today. Corn higher.
Wheat—Receipts, 255 cars, compared with 239 a year ago. September opened, $2.18; high, $2.19; low, $2.14 1-2; closed, $2.14 1-2.
Cash—No. 1 northern, $2.60@2.65; No. 2 northern, $2.55@2.60; No. 3 northern, $2.50@2.55; No. 4 northern, $2.45@2.55; No. 2 hard Montana, $2.50; No. 2 durum, $2@2.10.
Corn—No. 3 yellow, $1.82@1.84.
Oats—No. 3 white, 51 3-4@52 1-4c.
Flax—$3.71@3.76.
Flour—Unchanged. Shipments, 48,896 barrels.
Rye—$1.77@1.78.
Barley—97c@$1.23.
Bran—$25.50@26.

Pacific Northwest Grain.

PORTLAND, Ore., Aug. 25.—Cash quotations: August delivery bids—Oats—No. 2 white, feed, $51; barley, standard feed, $48; barley, standard brewing, $49; bran, $38; shorts, $37.50.
SEATTLE, Aug. 25.—Wheat—Bluestem, $2.16; turkey red, $2.16; fortyfold, $2.13; club, $2.12; fife, $2.12; red Russian, $2.11.
Barley—$47 per ton.
TACOMA, Aug. 25.—Wheat—Bluestem, $2.18; fortyfold, $2.14; club and red fife, $2.13; red Russian, $2.12.

Portland Market.

PORTLAND, Ore., Aug. 26.—Four car loads of wheat were received today, but there is no market. There was nothing doing in other grains.
Hide dealers expect to resume buying Monday at 3 cents under this week's quotations, all around. There has been very little selling during the week.
Walla Walla is still supplying this market with onions, which are firm at $1.50. Thehe is none from other localities.
Butter made a record market today at 55 cents a pound and $1 a brick retail. The wholesale quotation is 47 cents, a rise of 3 cents. Butter fat is 46 to 48 cents. Dairy butter is dragging at 33 cents.
The hay market is firm, with a very good local demand. Alfalfa is quoted at $24.
In the following list of quotations the grain, hay, mill feed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.
Oats—No. 1, $48 per ton.
Mill stuffs—Bran, $37 per ton; shorts $39.
Barley—No. 1 feed, $47; brewing, $48; rolled, $51.
Hay—Buying prices; Timothy, eastern Oregon, $26; alfalfa, $24; grain, $18.50.
Eggs—Oregon ranch, case counts, 35 1-2@36c per dozen; candled, 37@38c.
Poultry—Hens, 14 1-2@16c; ducks, 12@13c; turkeys, live, 20@22c; geese, 7@8c.
Butter—City creamery, prints, 47c per pound; cubes, extras, 41 1-2c.
Cheese—Tillamook triplets, 22c; young Americas, 24c.
Dressed meats—Veal, 15@15 1-2c; pork, 20@20 1-2c.
Hops—1916, 20c; contracts, 30c.

Sheep—Receipts, 3; steady. Western lambs, $12@13; valley lambs, $11.75@12.75; yearlings, $10@10.50; wethers, $9.75@10.25; ewes, $8@8.50.

At Seattle.

SEATTLE, Aug. 25.—Receipts, 91 hogs, 30 cattle. Cattle and sheep steady.
Hogs—Lower. Prime light, $17.40@17.50; medium to choice, $17.25@17.35; smooth heavies, $16.75@17; rough heavies, $16.25@16.50; pigs, $16.25@16.50.
Cattle—Prime steers, $9.25@9.60; medium to choice steers, $8.50@8.75; common to good steers, $6@7; best cows and heifers, $4@4.50; best bulls, $6.50@7; common to good bulls, $3.60@6.05; calves, $6.50@9.50.

Spokane Stock Yards Saturday.

Hogs—Receipts 75, market steady. Prime light, $17.25@17.50; prime heavy, $16.75@17.25; pigs and skips, $16.25@16.50; stockers and feeders, $13.75@15.75.
Cattle—Receipts 69, market steady. Prime light steers, $8@8.25; prime heavy steers, $8.25@8.75; good steers, $7@7.80; ordinary to fair, $5.25@6; prime cows, $4@5; best heifers, $6@7; bulls, $5@7; calves, $7.50@9.50; stockers and feeders, $5@7.
Sheep—Receipts none, market steady. Prime lambs, $12@12.50; good lambs, $10.50@11.25; prime yearlings, $8.50@9; prime wethers, $8@8.50; best mutton ewes, $5@7.

Seattle Market.

SEATTLE, Wash., Aug. 25.—Optimism as regards potato prices, backed by a bearish government crop review and report, finds little place among Seattle dealers. The east has no bumper crop, local production is far below estimates, and in view of abnormal costs of beef, flour and dairy products consumers will be forced, it is believed to greater use of spuds.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.
The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:
Eggs—Local, 42@43c per dozen.
Poultry—Live hens, fat, over 4 lbs., 18c per lb.; 2 lbs. and under, 14@16c; old roosters, 11c per lb.; squabs, large, $3.50 per dozen; geese, fat, live, 10c per lb.; broilers, live, 18c per lb.
Butterfat—49c per lb.; dairy butter, 33c.
Beef—Buying prices: Prime beef, steers, 7@8c per lb.; cows, fat, 7@8c; heifers, 6@8c per lb.
Hogs—Light, 15@17c per lb.; do heavy, 12@13c per lb.
Veal—Fancy light, 14@16c per lb.; do heavy, 9@13c per lb.
Hides—Salted, 20c per lb.; salt kip, 22c per lb.; salted calf, 30c per lb.; green hides, 16c per lb.; salted bulls, 16c per lb.; dry hides (short trim), 40c per lb.; bull and dry salts, 4c per lb. less; green bulls, 12 1-2c per lb.; dry butcher full woo sheep pelts, 36@38c per lb.; green calf, 30c.

The Wool Market.

BOSTON, Aug. 24.—The Commercial Bulletin will say tomorrow:
Demand for wool was comparatively light during the last week, although prices were firm. Doubtless the fact that the government has reached the purchasing point has been a quieting effect, although it probably is true that the mills generally are well covered against current needs.
The mills report a fair business on light-weight initial orders and this business has been reflected more or less in the yarn and tops markets. Buying in the west has been both scattered and limited.
Oregon—Eastern, No. 1 staple, $1.75@1.80; eastern clothing, $1.50@1.60; valley No. 1, $1.55@1.60.

San Francisco Produce Market.

SAN FRANCISCO, Aug. 25.—Butter, prime firsts, 41c.
Eggs—Fresh extras, 43c.

Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer.
Potatoes—New local potatoes, $2.50 cwt; sweet potatoes, 5c lb.
Apples—New Washington apples, $1 20-lb box; $1.75 50-lb box.
Butter—Blanchard cartons, 44c lb; Medo-Maid, 44c lb; Cascade, 44c lb; Gold Leaf, 44c lb; Better Butter, 44c lb; Attalia, 44c lb; Diadem, 44c lb; Hazelwood, 44c lb; Solid Pack, 42c lb.
Cheese—Wisconsin full cream, twins, 28c; triplets, 25c; Hazelwood full cream, triplets, 25@26c lb; Hazelwood Young America, 27c lb; Wisconsin limburger, 29@30c lb; brick cheese, 29c lb; domestic Swiss, 33c lb; Young Americas, 26c lb.
Eggs—Fresh local ranch eggs, $12.
Live Poultry—Hens, 19c lb; old roosters, 10c; ducks, 13@14c; geese, 11c; turkeys, 20@25c.
Dressed Poultry—Hens, 22c lb; old roosters, 13c; ducks, 17c; geese, 14c; turkeys, 28c.

Hide Quotations.

Green cows and steers—25 lbs and up, 17½c; salted cured, 20c; green bulls and stags, 13c; salted cured, 16c; kip, 15 lbs to 25 lbs, 23c; calf skins up to 15 lbs, 31c; dry flint hides, 34c; dry salted, 27c; dry calf skins, under 7 lbs, 42c; dry sheep pelts, full wooled, 22@26c; dry shearlings, 10@75c each; green horse hides, $3@5 each; dry horse hides, $1@2.50 each.

Butter and Eggs.

PORTLAND, Aug. 25.—Butter at record. Three cents higher. City creamery prints, parchment wrapped, 47c; cartons, 48c; butterfat, 46@48c. Cube extras, 41 1-2c; prime firsts, 39 1-2c; firsts, 36 1-2c; dairy, 33c. At retail, print butter is 55c a pound, $1.05 brick.
CHICAGO, Aug. 25.—Butter higher; creamery, 37 1-2@41 1-2c.
Eggs unchanged; receipts, 7766 cases.
ELGIN, Ill., Aug. 25.—Forty-one cents was bid for 100 tubs of butter on the Elgin Board of Trade today. There were no sales. This is an increase of 1 cent over last week's price.
SAN FRANCISCO, Aug. 25.—Butter—Prime firsts, 41c. Eggs—Fresh extras, 43c.

VOL. XL. NO. 36. SEPTEMBER 6, 1917. * * WEEKLY.

Fix $2.20 Wheat Price for 1917 Crop

Rank Discrimination of 35 to 40 Cents Against the Farmers of the Pacific Northwest

A price of $2.20 a bushel has been fixed for the 1917 crop of wheat by President Wilson on the recommendation of the wheat price committee headed by Dr. H. A. Garfield. The basis will be No. 1 Northern spring wheat delivered at Chicago.

Representatives of the producers began by voting for a price of $2.50 and labors' representatives for $1.84. The two extremes eventually narrowed down until the last vote was unanimous. Besides Dr. Garfield, the chairman, the other members of the committee were: Charles J. Barrett of Georgia, president of the farmers' union; Eugene E. Funk of Illinois, president of the Corn Growers' association; Edward F. Ladd, president of the North Dakota Agricultural college; J. W. Shorthill of Nebraska, secretary of the National Council of Farmers' Cooperative associations; L. J. Taber, master of the Ohio State grange; Henry J. Waters, president of the Kansas Agricultural college; W. N. Doak of Roanoke, Va., vice president of the Brotherhood of Railway Trainmen; James W. Sullivan of New York of the American Federation of Labor; F. W. Taussig, chairman of the tariff commission, and Theodore N. Vail, president of the American Telephone and Telegraph company.

Work Out Differentials.

The price differentials worked out by the food administration are: No. 1 hard winter, $2.24; hard winter basic, $2.20; red winter basic, $2.20; yellow hard winter, $2.16; soft red winter, $2.18; dark northern spring, $2.24; red spring, $2.18; humpback, $2.10; amber durum, $2.24; durum basic, $2.20; red durum, $2.13; red walla, $2.13; hard white basic, $2.20; soft white, $2.18; white club, $2.18; No. 2 of each grade is 3 cents less; No. 3, 6 cents less; No. 4, 10 cents less.

Relative market basis: Chicago, Galveston, New Orleans, basic; Duluth and Minneapolis, 3 cents less; St. Louis, 2 cents less; New York, 10 cents more than basic; Baltimore and Philadelphia, 9 cents more; Buffalo, 5 cents more; Omaha and Kansas City, 5 cents less than basic.

Although the prices are fixed on government purchases only, the food administration, through its wheat corporation, expects to control the market without difficulty. The corporation will make all government and allied purchases and has under consideration to buy for millers. In its service as broker between the terminal and the flour mills the corporation will become purchaser of virtually all the country's wheat crop.

In its statement to the president the committee recites the factors considered in its decision. Chief among them was the mounting cost of living. The condition of world markets was given careful thought as was the probable effect of an early termination of the war, which would loose great stores of wheat in other countries now tied up because of lack of shipping.

The cost of production came in for considerable attention. The experts of the department of agriculture were asked for production cost figures and the committee studied data supplied by growers' organizations. It was realized that some growers will be forced to sell their wheat at a loss, while many others will make a high profit.

Prices at Primary Markets.

The price basis which the administration expects to maintain in accordance with the recommendation of the president for the period of this crop year will be at the various seaboard and interior primary markets as follows:

For No. 1 northern, No. 1 red winter, No. 1 hard winter, No. 1 durum and No. 1 hard white.

New York	$2.30
Philadelphia	2.29
Baltimore	2.29
Buffalo	2.25
Galveston	2.20
New Orleans	2.20
Chicago	2.20
St. Louis	2.18
Duluth	2.17
Minneapolis	2.17
Omaha	2.15
Kansas City	2.15

The No. 2 of each of these grades, 3 cents a bushel less.

The No. 3 of each of these grades, 6 cents less.

The No. 4 of each of these grades, 10 cents less.

Mixed wheat, 4 cents less than the price of the predominating grade.

Premium Over Basic Grade.

Dark hard winter, dark northern spring and amber durum, 4 cents a bushel premium over the basic grades.

Soft red winter, red spring and soft white, 2 cents discount under basic grade.

Yellow hard winter and white club wheat, 4 cents discount under basic grade.

Red durum and red walla, 7 cents under basic grade.

Humpback, 10 cents under basic grade.

Lower grades will be purchased by sample on basis of relative values.

Purchases all will be on the basis of government's standards of grades of grain.

Grain bought for export will be paid for after being unloaded and warehouse receipt issued in a public elevator, or in private elevator where receipts are issued under safeguards provided by state governments.

Continued on page thirteen

Growers Wire Protest

Wheat growers of the Big Bend, Palouse and other districts declared that the Pacific northwest must have a primary market as accessible to them as Chicago is to the middle west or they will suffer discrimination of 35 to 40 cents. This discrimination will be sufficient to cause growers to hold their 1917 crop off the market until the $2 guarantee of the food control bill goes into effect next year, and will tend to discourage wheat producers and cause a decrease in acreage.

One of the first protests, if not the first, was a telegram to Senators Poindexter and Jones and Congressman La Follette, signed by President J. L. Paine of the Spokane Chamber of Commerce and R. Insinger, chairman of the agricultural committee of that organization, which said:

"Government wheat price as published makes no provision for the country west of the Rockies formerly shipping to Pacific terminals. Under the published schedules the bulk of our crop would sell at a basic price of $2.17, less 30 cents rail freight, less about 5 cents interior warehouse charges and government brokerages, and less 5 cents loss on 10-cent bags if shipped east, or $1.77 to the grower.

"Also, if shipped to New Orleans, we lose, besides, extra freight of 6 cents. All figures are per bushel. All points except the Pacific coast have been allowed some equalization of freight rates.

"We urge specific prices for north Pacific terminals and shipping facilities supplied through the government to equalize Chicago basic prices for our growers."

Hauling 3 Tons to Market

Here are two farms side by side.

Each farmer has three tons of produce to haul to the same market. They start at the same time.

One owns a Garford three ton motor truck.

The other uses horses.

The Garford owner gets to market with his load in one hour—uses one man.

The horse owner drives for three hours to cover the same distance. He requires two wagons, two teams and two drivers.

The Garford owner is home again before the horse owner reaches the market.

And when it comes to figuring the upkeep of these two hauling systems the motor truck has the horse badly beaten.

There in no comparison between the two methods.

Progressive farmers everywhere are using motor trucks—in many cases Garfords.

The horse is going to the discard. He can't stand the pace. He can't beat his iron and steel competition in power, endurance, economy or efficiency.

Which one of these two farmers are you?

Garford Motor Trucks

Garford Motor Trucks are built in sizes and styles to fit the hauling requirements of any farmer.

We have an interesting booklet entitled "Roads—Their Influence on Social and Economic Conditions." We'll send it to you free upon request.

Garford Motor Truck Co., Inc.
1701 Broadway Seattle, Washington

Motor Sales Corporation
344 Burnside St. Portland, Oregon

The Garford Motor Truck Company, Lima, Ohio
Manufacturers of Motor Trucks of 1, 1½, 2, 3½, 5 and 6 ton capacity
4½, 7 and 10 ton Tractors

THE WASHINGTON FARMER

SUCCESSOR TO

Vol. 40. No. 36 THE RANCH PACIFIC DAIRYMAN HORN AND HOOF September 6, 1917

Southwest Washington Fair

Better Than Ever With Larger Attendance at Gate and Grandstand

By HORACE ADDIS

Midway of the five miles between the towns of Centralia and Chehalis is the Southwest Washington fair grounds. This fair each fall opens the North Pacific circuit and, with the untiring efforts of the secretary, George Walker, the cooperation of President B. F. Hubbard and the board of directors, and the loyal support of the two towns and the surrounding country, the fair is always a success. This year of dry weather, short crops, war and unsettled business conditions it was again an unqualified success. The first four days each showed a greater paid attendance at gate and grandstand than last year and Saturday appeared to hold out the same promise. The foundation reason is not far to seek. The fair was a little better than any of its predecessors, and this was true of almost every department.

If the Chehalis valley was affected by the dry summer the agricultural and horticultural exhibits did not reflect it. Not only was the exhibit of grains and grasses, which has made this fair famous, even better than its previous high standard, but there was a large display of fruits and vegetables of good quality.

Superintendent F. A. Degley admitted that it took more work than usual to find and arrange the displays; but this is work in which he delights and the splendid arrangement as well as high quality of all entries reflected his efforts.

Competition Among Granges.

For the first time granges competed and very creditable exhibits were made. Bawfaw grange, Boistfort, Wash., Miss Florence Foster in charge, won first prize, largely on the arrangement and completeness of the display. This grange will hold a grange fair in October. Adna grange, O. C. Weisner, Chehalis, Wash., in charge, won second; Ford's Prairie, F. A. Ipe, Centralia, in charge, third; and Mossy Rock, nearly 30 miles away, with Mr. Belcher in charge, fourth. Mossy Rock showed a sheaf of oats from a crop that threshed 91 bushels to the acre, and Adna had on exhibit a loaf of bread from the farm of M. C. Raschke, the wheat for which was raised and ground this year and the bread baked on the farm.

School Exhibits.

The educational features of this fair were strongly emphasized. The school exhibits, in charge of Professor A. C. Canterbury, occupied over twice as much space as a year ago and an educational building for next year is practically assured. On Tuesday, children's day, an auto parade of schools, that seemed to stretch for miles, was made through both towns. Besides this, 2500 children took part in a patriotic drill parade in the infield of the race track.

A cooking contest was a part of the educational work, resulting in three girls winning a trip to the state fair. These are Marjory Merrell and Beth Dodge of Chehalis and Myrtle Kibbe of Centralia.

Young Folks Stock Judges.

Perhaps in the educational department should be included the stock judging contest, though that was in charge of County Agent Nystrom, N. B. Coffman, president of the Coffman-Dobson bank, Chehalis, had offered beautiful silver cups in each class to the boys and girls under 15, or rather to the school from which the boy or girl came, who made the best score, the cup to be permanently owned when won three times by the same school. Much interest was manifested, over 20 youngsters participating in the dairy cow contest. The winners were: Dairy cattle, Daryl Leonard, first; Ewald Richardt, second, both of Chehalis. Hogs, Cleo Pier, first; Elmo Taylor, second, both of Forest. Beef cattle, Edison Smith, Toledo, first.

The ladies' art room was filled with articles of both use and ornament. The flower department was magnificent, and every exhibit was from a home garden.

In the babies' department over 100 babies were scored, and one perfect baby was found, the daughter of Mr. and Mrs. James R. Grover, farmers, living a few miles from Chehalis, and aged 42 and 24, respectively.

Large Poultry Exhibit.

The poultry department had the largest number of entries this fair has ever seen. Over 1000 birds were shown. The display of bantams of various kinds was said to be the greatest ever seen in the northwest, and the large number of breeds indicated a returning interest in poultry. The Barred Rocks had perhaps the largest number of birds, and all the utility breeds were well represented.

The merchants' and manufacturers' pavilion was crowded with creditable exhibits, and the showing of auto tractors and farm machines was large.

Live Stock Chief Feature.

Yet, when all is said, the chief interest in this fair, as in almost all fairs everywhere, was in the live stock. Holstein cattle made the strongest showing, two great herds coming from a distance, those of the Carnation stock farm, near Seattle, and J. H. Hulbert of Mt. Vernon, Wash. Besides these, five local exhibitors showed from one to eight head. These were H. W. A. Tram, W. A. Hamilton and Sons, F. M. Svinth, J. C. Busch and Adam Wackerbarth. Their entries had not the fitting or finish of the two herds, but they had excellent individuals. Senior and grand championship on both bull and female and junior champion heifer went to Carnation stock farm, while Hulbert won Junior Champion honors on bull. The very fine herd of Clifford F. Reid's Jerseys in very fine show condition from Portland, Ore., was the only one shown, although Grant Gleason of Chehalis showed two animals, winning first on each. The heifers were in strong competition.

George Bertrand of Olequa, Washington, had the only herd of Shorthorns, but they made a worthy representation of the breed. Half a dozen brown Swiss completed the cattle show.

The stock judges were John L. Smith, Holsteins, Shorthorns and Brown Swiss; Professor W. A. Linklater, Jerseys and swine; Professor C. F. Monroe, horses and sheep. The following is a complete list of the awards:

LIVE STOCK AWARDS.

Holsteins.

Bull, thee years and over, Carnation stock farm on Matador Segis Walker; 2, J. H. Hulburt, Mt. Vernon, Wash., on Segis Pontiac Acme, Two-year-old—1, Carnation stock farm on Carnation Mutual Lad Tritomia 2d; 2, J. C. Busch, Chehalis, Wash., on Palmyra of Shady Grove. Junior yearling—1, J. H. Hulburt on La Connor Pontiac Houwtje; 2, Carnation stock farm on Matador Segis Walker Delma. Senior bull calf—1, J. H. Hurlburt on La Connor Pontiac King; 2, Carnation stock farm on Korndyke Segis Klaver. Junior bull calf—1, Carnation stock farm, on Matador Segis Walker 6. Cow, three years and over—1 and 2, Carnation stock farm on Nena Kahn Selah and Nena Newman Cornucopia. Two-year-old—1, Carnation stock farm, on Matador Mechthilde Vara; 2, H. W. A. Fram, on Linden Clara Pasma. Senior yearling heifer—1, Carnation stock farm, on Lady Parthenia Segis; 2, J. H. Hulburt on Beatrice La Connor Pontiac. Junior yearling—1, Carnation stock farm on Carnation Segis Queen; 2, J. H. Hulburt on La Connor Pontiac Bess. Senior heifer calf—1, J. H. Hurlburt on La Connor Pontiac Netherland Girl; 2, Carnation stock farm on Maud Walker Pietertje Jr. Junior calf—1 and 2, Carnation stock farm on Queen Tsussie Segis and Abbekirk Segis Pauline. Exhibitor's herd—1, Carnation stock farm; 2, J. H. Hulburt. Breeders' young herd—1, J. H. Hulburt; 2, Carnation stock farm. Get of sire—1, Carnation stock farm; 2, J. H. Hulburt. Produce of cow—1, W. A. Hamilton and Sons. Senior and grand champion bull—Carnation stock farm on Matador Segis Walker. Junior champion bull—J. H. Hulburt on La Connor Pontiac Houwtje. Senior and grand champion cow—Carnation stock farm on Nena Kahn Selah. Junior champion heifer—Carnation stock farm on Carnation Segis Queen.

Jerseys.

Bull, three years and over—1 and 2, C. F. Reid, Portland, Ore., Anota's Cotillon Boy and Violet's Noble Fern. Two-year-old—1, Grant Gleason, Chehalis, Wash., on Aribma's Golden Pogis. Junior yearling—1 and 2, C. F. Reid on Fussy Fern's Noble Boy and Fussy Fern's Noble 9th. Senior bull calf—1 and 2, C. F. Reid on Cotillon Boy's Premier and Noble Cotillon of Reid Farm. Junior calf, C. F. Reid on Fern's Carnation Fern.

Cow, three years and over—1 and 2, C. F. Reid on Lady Lecq and Cowslip's Golden Begonia. Two year old—1, C. F. Reid on Eminent's Wardress. Senior yearling heifer—1 and 2, C. F. Reid on Fussy Fern's Cowslip and Fussy Fern's Roseleaf. Junior yearling—1, Grant Gleason on Virginia Sunshine Lass; 2, C. F. Reid on Fussy Fern's Lucy. Senior heifer calf—1, C. F. Reid on Goldie's Cotillon Beauty. Junior calf—1 and 2, C. F. Reid on Goldie's Princess and Goldie's Onota.

C. F. Reid also won first and second on exhibitor's herd, young herd, calf herd and get of sire. His bull, Onota's Cotillon Boy, was made grand champion and his cow, Lady Lecq, grand champion female.

Brown Swiss.

O. O. Phelps and Sons showed four head on which they were awarded all prizes for which they entered, and Mrs. Peter Jensen showed a junior bull calf which won first. Philps' bull Menlo Mark and his two-year-old heifer Velva N. were given the championships.

Shorthorns.

George Bertrand of Olequa, Wash., the only exhibitor, received awards as follows:

Bull, three years and over—1, on Chief Goods. Junior yearling—1 and 2, on Gold Mine and Chief's Golden Goods. Senior calf—1, on Chief Goods Jr. Junior calf—1 and 2, on Chief Sultan and Chief's Duke.

Cow, three years and over—1 and 2, on Roselawn Daisy and Miss Rose 3d. Two-year-old—1, on Rose 4th. Senior yearling—1 and 2, on Chief's Lady Pet and Roon Welcome 81st. Senior calf—1 and 2, on Bonnie Lass, and Bessie Lass.

Brown Swiss.

O. O. Phelps and Son won all prizes awarded except on junior bull which was won by Mrs. Peter Jensen.

Horses.

The number of horses shown was smaller than usual, but the quality was excellent. Pure bred animals of only two breeds were shown.

Percherons.

L. P. Schumacher, of Chehalis, Wash., was the only exhibitor. His awards were as follows: Stallion, two-year-old—1, on Kyrube, a magnificent colt.

(Continued on page fifteen.)

BEGIN JAIL SENTENCE.
N. W. General Trading Co. Men.

Gale Smith, president of the defunct Northwest General Trading company, sentenced February 16 to serve one year in jail and pay a fine of $10,000 on conviction in the federal court on a charge of conspiracy to defraud by the use of the United States mails, surrendered himself to the United States marshal's office Sunday and began serving his sentence in the Spokane city jail.

Stephen T. Knudson, sales agent of the Northwest General Trading company and president of the Olympic Trading company of Seattle, a subsidiary, whose sentence was one year in jail and $7500 fine, surrendered at the same time and entered the jail with Smith.

Clyde L. Davies, whose sentence was nine months in jail and a fine of $5000, failed to appear, although he had telegraphed the United States marshal's office from Great Falls that he would surrender himself.

Bank Makes Loans
Approved Applications $8,741,095

That the intricate machinery of the federal loan bank of Spokane is at last in order and working at high speed, is shown by the report just issued by D. G. O'Shea, president.

According to this report, which covers the operations of the institution from its creation up to date, $1,505,445 has been paid out in loans to farm loan organizations in the four states covered by the Spokane bank; applications have been received for $19,954,313, of which loans amounting to $8,741,095 have been appraised and approved.

Of this amount, $1,356,190 is credited to Idaho, $2,213,350 to Montana, $2,274,890 to Oregon and $2,896,665 to Washington. Applications for loans have been received and tabulated: From Idaho, $2,611,870, from Montana $5,200,964, from Oregon $5,074,855 and from Washington, $7,066,624.

In reply to a question as to whether any friction had developed in the working of his new machine, President O'Shea said:

"In the organization of a system as large as this, covering four large states, in which the people of every community apparently desire service at one time, it is to be expected that some who have to wait longer than others may feel aggrieved. The conduct of a mortgage loan business necessitates inspections, examination of reports, examination of land titles, drawing up of legal papers necessary, satisfying old liens and distributing the proceeds of the loan. In addition to that it is necessary to organize the various associations.

"After all those things have been done it is necessary to submit securities for approval for bond issues and to receive such bonds as may be allotted, and then dispose of the bonds. It is a long road to follow, but we have covered it all and have been making loans all over the territory in large amounts and chartering associations daily. Where many are waiting, one has to begin somewhere and in making appraisals in a certain locality of our district, we always try to give service in the order in which the papers reached us since our records were established."

In the four states of Washington, Oregon, Idaho and Montana there are 169 loan associations for which charters have been recommended, and 36 additional associations which have been appraised and reported on.

President O'Shea has also announced the appointment of W. J. Crismas, a farmer of Joliet, Mont., as appraiser for the Spokane bank, the appointment being made by the farm loan board in Washington. Mr. Crismas, who is experienced in the farm and mortgage business, will report for duty soon, making 16 appraisers for the Spokane bank.

Appeals to War-Ridden German People

President Wilson's Forceful Reply to the Peace Proposals of the Pope

President Wilson's rejection of the pope's peace proposals comes as a climax to the remarkable series of state documents in which the chief executive of the American republic has argued the cause of world democracy against autocracy in the court of public opinion and accepted more and more by the people of all allied countries as expressing their ideals.

Text of the Note.

WASHINGTON, D. C., Aug. 28.—President Wilson has rejected the pope's peace proposals. The text of the note follows:

"August 27, 1917.

"To His Holiness, Benedictus XV., Pope:

"In acknowledgement of the communication of your holiness to the belligerent peoples, dated August 1, 1917, the president of the United States requests me to transmit the following reply:

"Every heart that has not been blinded and hardened by this terrible war must be touched by this moving appeal of his holiness, the pope; must feel the dignity and force of the humane and generous motives which prompted it and must fervently wish that we might take the path of peace he so persuasively points out. But it would be folly to take it if it does not in fact lead to the goal he proposes. Our response must be based upon the stern facts and upon nothing else. It is not a mere cessation of arms he desires; it is a stable and enduring peace. This agony must not be gone through with again, and it must be a matter of very sober judgment that will insure us against it.

"His holiness, in substance, proposes that we return to the status quo ante bellum and that then there be a general condonation, disarmament and a concert of nations based upon an acceptance of the principle of arbitration; that by a similar concert freedom of the seas be established; and that the territorial claims of France and Italy, the perplexing problems of the Balkan states and the restitution of Poland be left to such conciliatory adjustments as may be possible in the new temper of such a peace, due regard being paid to the aspirations of the peoples whose political fortunes and affiliations will be involved.

"It is manifest that no part of this program can be successfully carried out unless the restitution of the status quo furnishes a firm and satisfactory basis for it. The object of this war is to deliver the free peoples of the world from the menace and the actual power of a vast military establishment controlled by an irresponsible government which, having secretly planned to dominate the world, proceeded to carry the plan out without regard either to the sacred obligations of treaty or the long established practices and long cherished principles of international action and honor; which chose its own time for the war; delivered its blow fiercely and suddenly; stopped at no barrier either of law or mercy; swept a whole continent within the tide of blood—not the blood of soldiers only, but the blood of innocent women and children also, and of the helpless poor; and now stands balked, but not defeated—the enemy of four-fifths of the world. This power is not the German people. It is no business of ours how that great people came under its control or submitted with temporary zest to the domination of its purpose; but it is our business to see to it that the history of the rest of the world is no longer left to its handling.

"To deal with such a power by way of peace upon the plan proposed by his holiness, the pope, would, so far as we can see, make it necessary to create a hostile combination of nations against the German people, who are its instruments; and would result in abandoning the new-born Russia to the intrigue, the manifold subtle interference and the certain counter-revolution which would be attempted by all the malign influences to which the German government has of late accustomed the world. Can peace be based upon a restitution of its power or upon any word of honor it could pledge in a treaty of settlement and accommodation?

"Responsible statesmen must now see, if they never saw before, that no peace can rest securely upon political or economic restrictions meant to benefit some nations and cripple or embarrass others, upon vindictive action of any sort or any kind of revenge or deliberate injury. The American people have suffered intolerable wrongs at the hands of the imperial German government, but they desire no reprisal upon the German people, who have themselves suffered all things in this war, which they did not choose. They believe that peace should rest upon the rights of peoples, not the rights of governments—the rights of peoples great or small, weak or powerful, their equal right to freedom and security and self-government and to a participation, upon fair terms, in the economic opportunities of the world—the German people, of course, included, if they will accept equality and not seek domination.

"The test, therefore, of every plan of peace is this: Is it based upon the faith of all the peoples involved or merely upon the word of an ambitious and intriguing government, on the one hand, and of a group of free peoples on the other? This is a test which goes to the root of the matter; and it is the test which must be applied.

"The purposes of the United States in this war are known to the whole world—to every people to whom the truth has been permitted to come. They do not need to be stated again. We seek no material advantage of any kind. We believe that the intolerable wrongs done in this war by the furious and brutal power of the imperial German government ought to be repaired, but not at the expense of the sovereignty of any people—rather a vindication of the sovereignty both of those that are weak and those that are strong. Punitive damages, the dismemberment of empires, the establishment of selfish and exclusive economic leagues we deem inexpedient and in the end worse than futile—no proper basis for a peace of any kind, least of all for an enduring peace. That must be based upon justice and fairness and the common rights of mankind.

"We can not take the word of present rulers of Germany as a guarantee of anything that is to endure unless explicitly supported by such conclusive evidence of the will and purpose of the German people themselves as the other peoples of the world would be justified in accepting.

"Such guarantees, treaties of settlement, agreements for disarmament, covenants to set up arbitration in the place of force, territorial adjustments, reconstitutions of small nations, if made with the German government, no man, no nation could now depend on. We must await some new evidence of the purposes of the great peoples of the central powers. God grant it may be given soon and in a way to restore the confidence of all peoples everywhere in the faith of nations and the possibility of a covenanted peace.

"ROBERT LANSING,

Farming Logged-Off Lands

Requires Much Hard Work and Common Sense

By RAY W. FELTON

"Settlers will make good on logged-off land if they will stick," said J. B. List, a young farmer of Bonner county, Idaho, the other day to a representative of The Farmer. "The failure usually is the person who comes here expecting to make a Garden of Eden of his place the first year. He drives by places which have been under cultivation a few years and thinks he will be able to accomplish the same results in a year's time. It can hardly be done. This job, like most any other successful undertaking, requires lots of good, hard work and common sense. When applied, that combination will win out big here."

Mr. List's views are shared by almost every other successful farmer in the community in which he resides, an old lake bed of rich loam with a deep subsoil in the vicinity of Pack river, about 10 miles north of Sandpoint. Farming the wild lands of the logged-over areas from which great quantities of merchantable timber have been taken by the Humbird Lumber company has been in progress only a few years in this district, but remarkable results have been achieved in most every instance where the "combination" Mr. List speaks of, has been applied.

The high price of stumping powder is the chief difficulty experienced in the development of this detimbered section, but this has served to discourage only the faint-hearted. It has, in some cases, been an actual help, because it has emphasized the necessity of producing crops among the stumps before actual clearing operations are possible. Failure to realize the possibilities of "stump farming" has been the cause of many an abandoned attempt to make good on cut-over land.

In this endeavor Charles Selle, the first permanent settler in the Pack river district, has led the way. Twenty years ago Mr. Selle bought a homestead relinquishment for $50. From the claim Mr. Selle sold timber amounting to approximately $25,000. Nine years ago, the timber gone, Mr. Selle began to demonstrate what could be done on the same land from which the timber had been taken. He didn't wait to blow the stumps. He cleared patches of brush and bark, plowed and disked and then sowed his crop. He has produced bumper yields of hay and grain, the wheat running some years as high as 35 and 40 bushels per acre on land still thickly dotted with big white pine stumps. He is now past 60 years of age, but he is just as active a stump fighter as he ever was. He has made it pay and his efforts are a source of inspiration to the younger farmers in the district.

The List brothers, J. B. and Edwin, went to the valley four years ago with Rudolph Bierlein and Herman Benthal. All had farmed in the Camas prairie country. They have farmed here much after the fashion established by Mr. Selle and their places show the result of careful management and good judgment. Their farms adjoin and they trade their labor with each other. Three years ago they began growing field peas and have experienced good results, all coming to the conclusion that the pea is a legume highly beneficial to raw land of this character. They found a ready market in their own district for the seed. Last year their places averaged 20 bushels to the acre and they disposed of the crop at 5 cents a pound. Due to dry weather and late spring the crop will not be as heavy this year, although indications are that it will be fair.

William Ahlborn settled in the valley three years ago. He is farming a place of 120 acres owned by his son, William H. Ahlborn. They came from Pennsylvania.

J. Shelton owns 240 acres in the valley, 12 of which is cleared entirely of stumps, with 12 more now being made ready for a spring crop.

Victor V. Hannus is a Butte miner who has purchased 20 acres and is gradually getting it ready for cultivation. Mr. Hannus spends his summers on the farm and goes back to the mines in the winter, leaving Mrs. Hannus and their baby boy to look after things. Asked if she became lonely during the long winter days Mrs. Hannus said she really hadn't time to be lonely. She finds contentment and satisfaction in being able to help her husband provide a home which they hope to enjoy together all the year round in a little while.

Many of the men in the valley find employment in the logging camps and mills during the season when farm work can not be pushed to advantage.

F. A. Sager came to the valley this spring from Montana. He is clearing 27 acres as fast as he can supply the muscle and financial wherewith and soon hopes to have his family with him.

W. J. McRae settled in the valley a year ago. He has 76 acres partly cleared and with some improvements.

R. H. Hoss left Morrow county, Oregon, in February and settled on an 80-acre tract near the McRae and Sager farms. He has built a substantial dwelling and, with his wife and four children, has made a good start toward a good home near the junction of Lightning creek and Pack river. Mr. Hoss tried an experiment with clover this year which is interesting. On one patch he planted clover with a nurse crop of oats. The oats seemed to sap the ground of needed moisture and a poor catch of clover was the result. In a field adjoining he planted clover alone and secured a good stand.

Fred Foster is one of the new settlers from western Washington. He has 40 acres, three and one-half of which he has cleared.

C. A. Larson, who comes from La Grande, Ore., is making good on 120 acres.

H. E. Wilkinson has 100 acres seeded to clover and is keeping a number of cows, which he finds profitable.

F. A. Knodel left Seattle a short time ago and is successfully farming 80 acres in this district. His Jersey cows are finding the natural pasture grass a feed upon which they are able to produce results for their owner.

George L. Beckwith arrived in the valley a short time ago from Willamette valley, Oregon, in search of land upon which to graze 300 head of cattle. He found it and bought a half section. He has a meadow which he has drained and in good shape. He is clearing with a donkey engine.

C. H. Robison is another Willamette valley man who has established a new home in this district.

K. H. Sletager and sons own 320 acres. They came last spring from Canby, Ore. They are carying on extensive clearing operations.

A. A. Brackett, Peter D. Brackett and Percy E. Brackett, accompanied by Kirk P. Doolley, all of North Yakima, have new places in the vicinity of Grouse creek.

Dairying and stock raising are promising industries for this section, as it is a natural grass country and is well protected from severe weather by the hills which form a part of the western slope of the Rocky mountains.

Condensery at North Yakima.

S. J. Simonson, manger of the Cascade Creamery company, announces plans for establishing a milk condensery at North Yakima. Contracts have been made for machinery, and negotiations are pending to turn the Read laundry building into an up-to-date plant to house both creamery and condensery at an outlay of $25,000, to be ready for operation next spring.

M. H. Houser

—Photo by C. Elmore Grove.

Few names are more familiar in wheat market circles than that of M. H. Houser, whom the food commission has appointed to represent the administration in the northwest in connection with the control of the wheat market and the probable purchase by the government of large quantities of grain. He began his grain business in a flour mill in Garfield county, Wash., and has increased it until he is now one of the greatest wheat exporters in America. He has announced that he will devote his entire time to the position to which he has been appointed, and give to the Red Cross the profits from his regular wheat buying business this year.

Calls for More Winter Wheat and Rye

Assistant U. S. Secretary of Agriculture Conducts Important Conference at Spokane

Dr. Raymond A. Pearson, assistant United States secretary of agriculture, and until recently president of Iowa State Agricultural college, at Ames, conducted at Spokane Monday, August 27, the fifth and last conference in a series of five great regional gatherings to weigh problems of deep concern to the American farmers and the nation.

The dominant purpose of the conference was the devising of ways and means to increase the wheat and rye production for 1918; and to that end three main points were considered:

First. Stimulation by various agencies —government price-fixing, more efficient tillage, etc.

Second. A survey of soil and other conditions, particularly with reference to learning the seed needs of the various districts.

Third. Means of financing those farmers who will have to buy seed, and particularly such farmers as suffered losses through adverse conditions in 1917.

The Spokane conference dealt with conditions in eight western states—North Dakota, Montana, Idaho, Washington, Oregon, California, Nevada and Utah, and was attended by representatives from the agricultural colleges, government experiment stations, county agricultural agents, bankers, railroad officials and millers and warehousemen.

Opening the conference, Dr. Pearson declared the war "is not one of bullets alone," and stated the grain requirements for feeding the allied nations. The normal wheat crop of the United States, he declared, ran between 750,000,000 and 800,000,000 bushels, having been cut down in 1916 to about 650,650,000 bushels. Normal exports of wheat ran about 100,000,000 bushels annually, but had run up to 330,000,000 in 1915, gradually being reduced since that time, being 240,000,000 in 1916, and promising to be 175,000,000 in 1917.

"Unless Mr. Hoover succeeds in a large way to decrease the consumption at home," Dr. Pearson said, "our export next year will be even smaller."

Summarizing the conference Dr. Pearson said that weather conditions with difficulties in getting seed wheat, presented the only obstacle, and that with rain in the northwest, the average increase of 20 per cent in winter wheat sowing would be attained.

The government is urging that the winter wheat seeding this fall be increased to 47,337,000 acres, as compared with an acreage sown in the fall of 1916 of 40,090,000 acres—a requested increase of 18 per cent.

Under the proposed schedule California is asked to increase its winter wheat seeding 20 per cent; Idaho, 27 per cent; Montana, 29 per cent; Oregon, 50 per cent; Utah, 12 per cent; Washington, 13 per cent, and Nevada, 14 per cent.

It is further urged that Montana increase its rye acreage 173 per cent; North Dakota, 11 per cent; Oregon, 41 per cent; Washington, 67 per cent, and that California, Idaho and Utah maintain their normal rye acreage.

Wheat Acreages Recommended.

	1917.	1916.
California	509,000	413,000
Idaho	465,000	346,000
Montana	1,000,000	775,000
Nevada	25,000	22,000
Oregon	708,000	472,000
Utah	275,000	246,000
Washington	850,000	754,000

Rye Acreages Recommended.

	1917.	1916.
California	12,000	12,000
Idaho	3,000	3,000
Montana	30,000	10,000
North Dakota	1,036,000	936,000
Utah	12,000	12,000
Washington	10,000	6,000
Oregon	45,000	32,000

Expect Crop Increases.

Notwithstanding certain minor difficulties, all of the states present expected to make the crop increases requested by the government, if crop conditions were at all favorable. California, asked for 509,000 acres of winter wheat, expected to exceed the request by replacing barley with wheat, plowing up and seeding poor alfalfa fields to wheat, and bringing new lands into cultivation. Friendly rivalry in that state has been started to see whether the larger increases can come from more acres of wheat, or from higher yields per acre following improved farming, two professors in the agricultural college leading in the two sides of the contest.

As experiences of the present year were told, it came out very clearly that in thoroughly good farming lies the way to increased crop production. In the Dakotas, Montana, Idaho, Washington, Oregon and Utah numerous instances were cited of the farmers who last spring responded to the nation's call for large farm production by putting in a great deal of ground which they had expected to reserve for summer fallow and fall sowing. Many of the farmers had in other ways departed from farming practices which in their experience had proved good.

An unfavorable crop season in many parts of these states had resulted here and there in disaster. President W. J. Kerr of the Oregon Agricultural college very strongly held that farmers should be urged to do better farming, rather than reckless farming, in behalf of increased farm production. The same view was held by Director W. S. Thornber of the Washington extension service and by O. L. Waller, vice president of the Washington State college. D. W. Davis, banker, of American Falls, Idaho, stated that he would prefer to loan to farmers who were intensifying and improving their farming operations rather than to farmers who were spreading out over larger acreages.

A survey of the seed situation in the different states brought out the fact that here and there were regions in which there was a shortage of the particular kind of seed needed; and that here and there were small groups of farmers who might need financing for the next year's seed. A canvass of the situation from state to state revealed the presence in the states of all the seed that was necessary; the problem merely being one of locating the seed and getting it at the right time and in the needed amounts to the places needing such seed.

On Tuesday, August 28, Director W. S. Thornber of the Washington State college extension service, acting under instructions from Dr. A. C. True of the States Relations service, appointed a seed committee for Washington, consisting of himself, R. Insinger of Spokane, R. J. Stephens of Spokane, E. G. Shafer of the Washington State college and M. A. McCall, superintendent of the Adams county branch experiment station. This committee met with the leading grain men of the Inland Empire Tuesday noon, all of whom agreed to do their utmost in locating good seed in their respective territories and in holding this seed so that it would not be milled or shipped out of the country before seeding time. They agreed to report the locality, amount and kind of the desirable seed wheat to the state seed committee, above named, which committee would reecive requests for seed from farmers throughout Washington, and immediately put them in communication with the source of supply for the seed they needed.

It was the expectation that the Washington seed committee organization would be at once duplicated in all the western states present at the Spokane conference, extension directors of these states having been requested by Director True to at once appoint seed committees to aid in the location and prompt distribution of seed wheat or rye.

C. B. Kegley, master of the state grange, said smut-free seed wheat of the highest quality, taken direct from the field and not to the warehouses or elevators, cleaned and treated, ought to be worth an advance of 25 per cent on the market price for the same kind of wheat. This was the consensus of opinion.

E. F. Benson, state commissioner of agriculture, said burned-over forest land in Idaho and Montana ought to be sowed to pasturage grasses. Millions of acres might be converted into summer pastures for sheep, he said.

Byron Hunter, representative of the U. S. bureau of farm management, suggested that the wheat production would be increased if summer fallow land were planted to beans and peas. This could be done where the raintail is not less than 20 inches per year. The wheat crop the following year would be greater than that following summer fallow.

Representatives from the agricultural colleges, government experiment stations, bankers and other prominent men attending the conference, coming from the eight states, were:

California—J. W. Gilmore, Berkeley; J. W. Schmitz, Madera; C. J. Shepherd, San Francisco.

Idaho—J. S. Jones, Moscow; D. W. Davis, American Falls; O. D. Center, Boise; G. S. Ray, Moscow; H. W. Hulbert, Moscow; F. S. Randall, Lewiston.

Oregon—F. L. Kent, Portland; Paul V. Maris, Corvallis; A. E. Blackland, La Grande; F. L. Myers, La Grande; A. R. Hunter, Island City; C. L. Smith, Portland; W. J. Kerr, Corvallis; W. W. Harrah, Pendleton; Albert S. Roberts, The Dalles.

Montana—F. S. Cooley, Bozeman; C. D. Greenfield, Helena; F. S. Luck, Missoula; Charles Vanderhook, Bozeman; T. B. Story, Bozeman; Thomas Connolly, Cottonwood; Paul P. Banker, Havre; Guy Fitzpatrick, Reno.

Nevada—C. A. Norcross, Reno.

North Dakota—L. M. Thomas, Fargo; J. E. Phelan, Bowman; Thomas Cooper, Fargo.

Utah—John T. Caine, Logan.

Delegates From This State.

Washington—C. B. Kegley, Spokane; R. B. Coglon, Pullman; J. L. Ashlock, Pullman; Byron Hunter, Walla Walla; E. F. Benson, Olympia; T. W. Busby, Oakesdale; C. M. Chatham, Spokane; P. W. Smith, Spokane; H. R. Raymond, Spokane; N. A. Roberts, Spokane; Richard N. Stephens, Spokane; E. L. Farnsworth, Wilbur; R. K. Stephens, Spokane; David Munroe, Spokane; John Harris, Mead; R. Insinger, Spokane; Joshua Beeman, Usk; F. S. Barrett, Spokane; R. C. McCroskey and wife, Garfield; P. J. Sweeney, Tacoma; E. A. Smith, Spokane; N. W. Durham, Spokane; J. R. Shinn, Spokane; W. H. Childs, Spokane; R. T. Lord, Spokane; A. J. Porter, Cheney; M. Hergood, Chester; George W. Martin, Spokane; H. C. Blair, Spokane.

Proposes $3 and $4 Wheat

Says It Would Add Little to the Food Costs

"Instead of quibbling over a few cents more or less, and proposing a $2 wheat price, the government ought to guarantee $3 wheat next year and fix this year's price at $4," declared Louis W. Hill, president of the Great Northern railway, who attended the Spokane regional conference conducted by Assistant Secretary of Agriculture Pearson.

Mr. Hill made this statement to the Washington Farmer after he had addressed the conference, and in further conversation with a representative of the Farmer said:

"Even $4 or $5 wheat would add very little to the food costs of the average workingman. If the government wants a billion bushels of wheat in 1917 it must hold out extraordinary inducements to the farmers. After all, the American farmer is entitled to generous profits. He has not had his share of national prosperity. We ought to give it to him now. Instead of the government arbitrarily fixing the price at $2 this year, it ought to consider the laws of supply and demand, at least to a generous extent. Where do you think wheat would go this year if not for government action?

"Now what I am going to say next might not please some of the business men of the towns and cities, but it is true none the less. It takes a high degree of intelligence to succeed at farming—more intelligence and more hard work at weighing and solving problems than are necessary to succeed in the business world. Show me a successful farmer and I will show you a keen and intelligent mind.

"Patriotism is fine, and we demand it from all classes, but something more than patriotism is needed in this great work of increasing food production in the United tSates. The farmer must have his financial reward. Suppose we have two tables. On one you put a sack labeled $1.50 wheat, and with it an American flag. On the other you put only a sack labeled $3 wheat. At which table is the farmer going to take his seat?"

President Hill impressed his views on Assistant Secretary Pearson of the United States department of agriculture. The two met in the lobby of the Davenport hotel, just prior to the conference of agricultural experts gathered in Spokane from eight western states.

"Even with $3 wheat, there isn't enough labor in the country to run up this wheat acreage to the point the government wants," Mr. Hill told Dr. Pearson. "Wait and see."

"——but we have the assurance of representatives of nearly all the wheat-growing regions outside of this that the demand will be met," Dr. Pearson interjected. "Don't you consider that this sort of a difficulty can be overcome?"

"Well, we've been trying for 28 years to run up production," Mr. Hill said. "I'm sorry for Hoover if he has this job of increasing production."

"Mr. Hoover's job is that of conservation and of distribution, Mr. Hill," Dr. Pearson inserted again. "It's up to the department of agriculture to try and stimulate production."

"Well, whoever has it has a hard job," President Hill returned. "I'm not criticizing. But don't get any idea that you can appeal to the farmers' patriotism to accomplish results when it comes to fixing prices. He'll get out and fight for his country, all right, but when it comes to accepting a lower price for his wheat, he isn't there. Most humans aren't.

"The government ought to throw open these Indian reservations, and get them into use. We are feeding and supplying an army of Indians in this country, and it probably costs more to administer the supplies than it does to buy them.

"I've just been down through the Horse Heaven country, a place I'd never been in before. They have got an imemnse range there, with nothing but horses on it. If we need food, they ought to can them and ship the meat to Japan, and restock that range with cattle.

"There's planty of range in the mountains. The grass is long enough to mow on some slopes. I don't care what the sheepmen say, we ought not be killing the young females, for either lamb or veal. But open up the Indian reservations, and put the ground to work."

Interstate Fair

Record Crowd Marks the Opening

The Interstate fair at Spokane opened its doors for the 24th consecutive time Monday with a crowd that broke the first day's record since 1911. The paid admissions Monday were 15,495.

Everything, weather included, points to a successful fair at the time of opening. The displays are excellent, equal to those of former years, except where the unkindly drouth of the last two and a half months cut into the agricultural displays. But even in this department there are many features of especial interest and educational value.

Several strong exhibits are on display by various granges and farmers' union locals. The state college has a booth specially educational this year. The machinery, automobiles, tractors and trucks, live stock and the like are prominent. The boys' and girls' club work is ably portrayed. Women's work is featured.

All in all, it is believed that when the fair closes Saturday it will have proved to be one of the best, if not the best, ever given by the association.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

The Cost of Education

We note some interesting and enlightening items on the cost of the state college of Washington at Pullman. This institution is supported by the taxpayers of the state, and is a large, well financed and thoroughly equipped school. It educates a host of young men and women every year, and they go out from its portals stronger and better fitted for a battle with life.

If your taxes are $25 a year, the college costs you 22 1-2c. If your taxes are $100 a year, the college costs you 90c. Less than 1 per cent of the income of the state is spent on the college. Less than 3 per cent of the income of the state is spent for higher education.

After a visit through eastern states a few years ago, and a comparison of the rural communities with those of Washington, the writer has come to the conclusion that Washington and the northwest is in advance of the eastern and the central states when it comes to a regard for education.

In Washington it is not unusual to find a high school in a small place of perhaps a few hundred inhabitants. You will go a long way in the east before you find high schools in such small places. Perhaps they do not need them; but this is only typical of the attitude you will find in the country toward education. In the northwest it is prized and sought and cherished. It is valued. But once in a while you will find a man who does not regard it very highly, who thinks it "costs too much."

Shortening the Road

It seems almost certain that the government will shorten the road between producer and consumer, and that the producer will get a decent profit, while the consumer will pay less. It is necessary to allow the producer a fair profit, in order to stimulate production. It is necessary to reduce the cost of food to the masses of consumers, in order that they may live in comfort and bring up and educate their children. In order to do this it is only necessary to cut out a lot of food speculators who earn nothing, add nothing to the wealth of the country and grow to be wealthy on the labor of others. This is not confined to commission men entirely. Occasionally our own home merchants catch the spirit of speculation and charge too much for many of their goods. For instance, it is common in the apple growing sections of the northwest for grocers to buy of neighboring farmers apples at 75c to $1.00 per box, and sell them to their customers at $1.50 to $2.00.

A few years ago we bought tomatoes at 10c per pound of a grocer who bought them of the grower for two and one-half cents. Of course tomatoes are perishable and must be moved quickly, but not so with apples in general.

Consider what the producer contributes to a box of apples. He owns the land on which he pays interest, or, if not, that has an interest value. He pays taxes, keeps up repairs, plants an orchard, waits for it come into bearing, prunes, sprays, irrigates, cultivates, thins fruit, picks, packs, buys boxes and paper, hauls to town, and so on. Now, is it reasonable that he should only get as much as the merchant who simply buys and sells?

GRANVILLE LOWTHER.

"She Flies With Her Own Wings"

The problem of financing farmers unable to buy seed grain for the 1918 harvest precipitated a lively discussion at the Spokane conference of agricultural experts, bankers and others last week. Bankers present from North Dakota and Montana wanted to "pass the buck" to Uncle Sam or the state legislatures, but expressions from bankers of other states indicated a pretty confident belief that the community interests that benefit from the farming industries were able and willing to take care of local needs in that respect.

One of the delegates thought government action should be taken under the food control law, but Assistant Secretary Pearson of the U. S. department of agriculture reminded the conference that this law only authorizes government sale of seed for cash.

The conference refused to adopt a resolution proposed by a Montana banker asking for government relief in the purchase and sale of seed to such farmers as could not get local credit.

When the pioneers settled old Oregon nearly three-quarters of a century ago, they took for their motto a Latin maxim translatable thus: "She flies with her own wings." It was eloquently expressive of the high spirit of independence that animated the people of the Pacific northwest. Out of old Oregon, the mother state, have sprung Washington, Idaho and a portion of Montana. It is a region rich in natural resources and abounding in created wealth, and the men and women who have prospered here should regard it as a patriotic privilege to finance such agricultural products as may need a temporary helping hand in their willing response to their country's call for increased production of food.

Proof of the Farmers' Loyalty.

The August crop forecast of the United States department of agriculture shows conclusively that the American farmers have responded right loyally to the president's appeal for increased production of foodstuffs.

The United States harvested last year 4,703,000,000 bushels of cereals. But the cereal harvest this year, if the August forecast of the department of agriculture holds true, will be 5,559,000,000 bushels. Detailed comparisons are as follows:

	1916.	1917.
Wheat	640,000,000	653,000,000
Corn 2,583,000,000		3,191,000,000
Oats 1,252,000,000		1,456,000,000
Barley	181,000,000	203,000,000
Rye	47,000,000	56,000,000
Totals 4,703,000,000		5,559,000,000

In other words, this year's cereal harvest bids fair to exceed that of last year by 746,000,000 bushels, and the five-year average, 1911-15, by more than 500,000,000 bushels.

All of these cereals can be made into nutritious breadstuffs, and the 746,000,000 bushel increase is more than sufficient in itself to feed all the people of Great Britain and France for a year.

These figures will carry consternation to the minds of the kaiser and all his junker lieutenants, for their unmistakable meaning is that out of our abundance we shall have a great surplus for our allies. In spite of German submarines we shall find ways to transport that surplus to our friends across the sea. In scores of American yards ships are now building to help carry America's surplus grain to the allies, and congress has laid on the president the bounden duty to make it certain that none of these precious breadstuffs shall find their way into Germany.

Washington Gleanings

Okanogan county proposes to spend more than $100,000 on its highways next season.

Wenatchee orchardists are making surveys against car shortage, labor shortage and storage facilities.

Irving West of Colfax has sold 337 acres to Joseph Faires of Endicott for $34,500. The land lies three miles east of Colfax.

S. J. Simonson, manager of the Cascade Creamery company at North Yakima, announces plans for establishing a milk condensery.

Some of the larger farmers of Klickitat county are installing farm elevator plants with bins having a capacity up to 5000 bushels with lifts operated by a gasoline engine.

The first big food contract for the American Lake cantonment was awarded in Seattle recently when the government placed an order for 3,000,000 pounds of potatoes with commission merchants there.

During the last few weeks over 200 Seattle professional and business men, together with many women, left for eastern Washington, where they will spend their vacations in aiding in the harvesting of crops.

The official statement of the cost for the Benton extension of the Sunnyside project, received at the reclamation office in North Yakima, shows a total of $349,460, or $70,000 less than the original estimates.

One hundred dollars in extra prize money will be awarded at the Whatcom County fair this year, as a part of the program of the Bellingham Chamber of Commerce to encourage the farming industry of Whatcom county.

Northwestern Washington, including King, Pierce, Kitsap and the other northwest counties, will produce about 400 cars of apples, 80 of pears, 40 of prunes, six of peaches, beside the cherry crop, which totals about 130 carloads.

The Wahkiakum county commissioners have made and entered an order establishing a new diking district composed of all the land on Puget island, enclosed by what is known as the Brown dike in the west end of the island.

The first shipment of fruit and vegetables for troop A, now stationed at Camp Lewis, was carried across the mountains by express to American Lake recently, a message of remembrance from Ellensburg farmers and Elks' lodge, which paid the freight.

The Yakima valley beet crop promises a better yield than crops in Idaho and Utah, according to Mark Austin, agriculturist for the Utah-Idaho Sugar company, who is in the valley for an inspection of crop conditions to report to the headquarters of the company at Salt Lake.

Joe Devan, one of the best-known sheepmen of the Walla Walla country, and J. M. Davis of Benge, an extensive sheep operator of that district, have consummated sheep ranch deals recently involving 20,000 acres of Walla Walla and Adams county land, valued at approximately $180,000.

Apple growers in the White Salmon valley of western Klickitat county and the Underwood district of Skamania county will have a market this season for all of their cider and cooking apples brought about by the leasing of the White Salmon fruit cannery plant to the Hood River Valley Produce company, which will install machinery for making cider.

What Others Say

Green's Fruit Grower: If you sit down a mere philosopher you will rise almost an atheist.

Hoard's Dairyman: When milk sells for 12 cents a quart it is cheaper food than beef at 30 cents a pound.

Farmers' Mail and Breeze: The time to begin to educate men away from war is now when the nations are war-weary.

The National Wool Grower: The tick remains not because its eradication can not be accomplished, but because some of you are not sick enough of its presence.

Successful Farming: If every town and city would cooperate with the farmers in a campaign against rats millions of dollars' worth of food products would be saved for human consumption.

Labor Holds Council

Would Unite in National Democracy

One of the most significant gatherings in America since the beginning of the war marked this week when, on Tuesday, representatives of labor from all parts of the nation met in Minneapolis in a "conference of American Alliance for Labor and Democracy." The coordination of all interests in behalf of the country was the object of the meeting. The greatest national labor leaders and others prominent in public life were present. President Wilson was invited to address the meeting, but was unable to do so, though he sent a warm message approving the objects of the meeting.

Union Labor and I. W. W.

The labor committee of the Washington state council of defense, a committee consisting entirely of labor union officials, has been in Spokane looking into the causes and conditions surrounding the arrest of I. W. W. leaders, as well as the action of the Spokane Central Labor council in denouncing those military arrests as an "outrage." The committee reports that "in view of the fact that the I. W. W. had openly defied the governor of the state * * * the committee believes the governor of this state acted honestly and fearlessly in meeting the situation and is deserving of no word of criticism or censure."

The committee adds: "We believe the I. W. W. philosophies to be founded on utter fallacy. We believe its tactics to be destructive and productive of no lasting good to labor. No movement founded on utter hatred and contempt of all things and all men not subscribing in toto to its fantastic doctrines, un-American, illegitimate, and without the pale of society's respect. We disapprove absolutely of this organization's teachings and its practices. We believe the trade union movement has everything to lose and nothing to gain through identification through actual support or by inference with the I. W. W."

Pause in Heavy Fighting.

There has been somewhat of a pause in the big campaigns now in progress by the allied armies, while the Italians are displaying an activity more pronounced on the Austrian frontier than either General Petain for the French or General Haig for the British, in their respective fields of Verdun and in the Arras-Flanders areas. Although the British armies on the Franco-Belgian front were engaged in much notably heavy fighting during August, including the great attack of the Anglo-French forces in Flanders, the casualties were notably less than during July. The British figures for August total 59,811, as compared with 71,832 for July, a falling off of more than 12,000. The casualties have been on a descending scale during the entire period since the active campaigning season opened, the high mark being set in the May figures, which totalled 112,233.

Riga Has Fallen.

The port of Riga, situated on the Baltic sea, has fallen before the relentless attacks of the Germans. It was the Baltic outlet for Russia, being at the head of the railroad direct to Petrograd, the Russian capital. This is not taken to mean any immediate danger to Petrograd, however.

War Bonds of $21,000,000,000.

Two billion dollars may be added to the total of bonds to be authorized at the present session of congress, making a total of approximately $31,000,000,000 available to the government during the fiscal year ending June 30, 1918.

It is now expected that the next Liberty loan campaign will open October 1 and close November 1. The next offer will approximate $3,000,000,000.

Voting on the war profit section of the war tax bill was begun in the senate Saturday.

Moscow Conference.

Premier Kerensky of Russia declares that the Moscow conference will have a lasting effect upon the Russian nation and the conduct of the war will be speeded up. The premier adds that the conference was called in order to get acquainted as fully as possible with the opinions, tendencies and needs of the country, to tell the representatives of all classes, races and creeds the truth concerning the crisis through which Russia is passing and to impress the entire nation with the necessity for united effort for the defense of the country and for securing liberty for the Russian people.

"I am sure," the premier said, "that the truth learned by the whole nation at the conference will not fade away. On the contrary, it will have an effect for a long time to come and will burn in an ever-increasing flame. The conduct of the war and the struggle against our enemies will gain greatly."

Homemade Liquor.

That the manufacture of liquor for private use in one's home is illegal under the state-wide prohibition law of Washington, known as initiative measure No. 3, is the ruling of the state supreme court.

Liquor Imports to Stop.

All distilled spirits will be refused entry into the United States after midnight of Seyptember 9, according to orders issued by the treasury department. Not only will entry be refused, but the spirits will be seized and the case reported to the United States district attorney. Also after this date, no food, fruits, food materials or feed shall be used for the purpose of making beverages.

Exemption of Farmers.

In disapproving the proposal by Representative Shouse of Kansas, that all men engaged in agricultural pursuits last March be exempted from military service, President Wilson writes to the congressman that a class exemption would lead to "many difficulties and to much heartburning." Adding that "the matter of leaving the farmers on the farms has been given the most careful and sympathetic attention by the war department."

No Third Term.

In an interview regarding the work of the state board of equalization, Governor Moses Alexander of Idaho declared:

"My term will epire the first Monday in January, 1919, and I shall retire to private life with the highest regard for the consideration that I have received from coworkers in the cause of good government without which aid and assistance nothing could have been accomplished."

Waste of Feeding Stuffs.

A tremendous waste of feeding stuffs occurs annually on American farms, according to figures presented in this publication. In 1914 about 120 million tons of straw were produced in the United States. Of this amount 55 per cent was fed to live stock, 15 per cent was burned, 8 per cent sold, and 22 per cent plowed under or otherwise disposed of.

Poultry a Good War Crop.

Poultry has been called the crop that never fails. It offers one of the best ways of increasing food production on short notice. Pountry uses feed more economically probably than any other class of farm animals when it is carefully handled. It will produce a pound of meat or eggs on four pounds of grain when protein concentrates are fed. Pullets will begin laying in from 6 to 8 months. Cockerels are ready for market at the age of 12 to 16 weeks.

The above pointers are from the Missouri College of Agriculture.

Venison as a Food Resource.

The department of agriculture urges all persons to cooperate to secure the best possible protection of deer so as to get the maximum amount of venison as a source of meat. It is estimated that about 80,000 deer are killed legally in the United States each year. These produce nearly 10,000,00 pounds of venison.

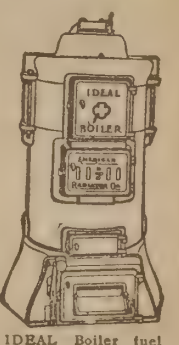
More Stock on Forset Range.

District Forester, George H. Cecil, Portland, Ore., announces that the national forests of Oregon and Washington are furnishing grazing during the present summer for 177,167 head of cattle and horses belonging to 3269 ranchers, and 1,025,843 head of sheep, owned by 705 sheepmen. These figures show an increase of 462 cattlemen, with 19,478 head of cattle, and 48 sheepmen with 29,102 head of sheep above the numbers taken care of in 1916. This increase is due to the introduction of better methods of handling the stock.

Boys If you want to earn some dandy prizes by doing some easy work among your neighbors, write to the **Prize Editor of the Washington Farmer, Review building, Spokane, Wash.**

IDEAL heating makes a home out of a house

Put in AMERICAN Radiators and an IDEAL Boiler right away and have plenty of heat all winter with a great saving of fuel and labor. Not necessary to have basement or water pressure



Any building *old* or *new*, in country or city, can be successfully heated with an IDEAL Boiler and AMERICAN Radiators. The economy of IDEAL heating outfits is known to all users. They cannot say enough about the great fuel savings, the splendid comfort, the lack of repairs, the little attention, the cleanliness, and the every-day good, solid service that they get from their IDEAL Boiler and AMERICAN Radiators. They have made *homes* out of their *houses*.

AMERICAN RADIATORS & IDEAL BOILERS

Especially this year you should choose an IDEAL heating outfit for its *great fuel saving features.*

***Any fuel anywhere* can be burned with greatest heating results.**

The IDEAL heating outfit will last forever. We have never heard of one wearing out. Repair bills are unknown and the attention is so slight for getting plenty of heat day and night that you will wonder why you do not have to look after it more than once a day.

IDEAL Boiler fuel pots mix the air and coal gases as in a modern gas mantle, extracting ALL the heat from the fuel.

Save fuel this year with IDEAL heating

If everyone would use IDEAL Boilers in their homes, we would have no high priced fuel question. You can burn the low priced fuels of any localities and IDEAL Boilers and AMERICAN Radiators are such great savers of fuel that you will soon save the first cost of the outfit.

Phone or call on your heating dealer today and get estimate for putting in an IDEAL heating outfit.

Send for this book (free)

Write today for copy of "Ideal Heating." We want you to read this book through, for it gives you the truth about the heating question and shows why we want you to have IDEAL heating to change your house into a *home*.

Sold by all dealers. No exclusive agents

Feed the Fighters! Win the War!

Harvest the Crops! Save the Yields!

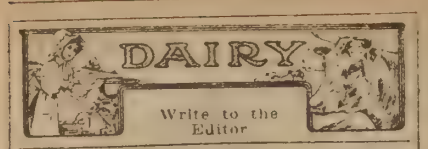
On the battlefields of France and Flanders the United States boys and the Canadian boys are fighting side by side to win for the World the freedom that Prussianism would destroy.

While doing this they must be fed and every ounce of muscle that can be requisitioned must go into use to save this year's crop. A short harvest period requires the combined forces of the two countries in team work, such as the soldier boys in France and Flanders are demonstrating.

THE COMBINED FIGHTERS IN FRANCE AND FLANDERS AND THE COMBINED HARVESTERS IN AMERICA WILL BRING THE ALLIED VICTORY NEARER.

A reciprocal arrangement for the use of farm workers has been perfected between the Department of the Interior of Canada and the Departments of Labor and Agriculture of the United States, under which it is proposed to permit the harvesters that are now engaged in the wheat fields of Oklahoma, Kansas, Iowa, North Dakota, South Dakota, Nebraska, Minnesota and Wisconsin to move over into Canada, with the privilege of later returning to the United States when the crops in the United States have been conserved, and help to save the enormous crops in Canada which by that time will be ready for harvesting.

HELP YOUR CANADIAN NEIGHBORS WHEN YOUR OWN CROP IS HARVESTED.
Canada wants 40,000 Harvest Hands to take care of its
13 Million Acre Wheat Field.



One cent a mile railway fare from the International Boundary line to destination and the same rate returning to the International Boundary. High wages, good board, comfortable lodgings.

An Identification Card issued at the boundary by a Canadian Immigration Officer will guarantee no trouble in returning to the United States.

AS SOON AS YOUR OWN HARVEST IS SAVED, move northward and assist your Canadian neighbor in harvesting his; in this way do your bit in helping "Win the War."

For particulars as to routes, identification cards and place where employment may be had, apply to Superintendent of Immigration, Ottawa, Canada, or to

J. N. GRIEVE, Cor. First and Post Sts., Spokane, Wash.
Canadian Government Agent.

REASONS FOR TESTING.
Jefferson Association Ends Year.

The five reasons given by O. E. Leonard, tester for the Jefferson County (Wash.) Cow-Testing association, why testing should be practiced by all dairymen should be considered by every owner of dairy stock.

The Jefferson county association recently completed its first year's work. All conditions considered, the association was a success and the cows entered made a very creditable showing in comparison with other cows in the state.

During the year a total of 654 cows were tested; of these 26 were sold to other herds, 52 were sold for beef, 4 died, 119 were withdrawn from test and 144 were entered after the year's work began, leaving 309 cows of which there is a complete yearly record.

Cows Show Strong Records.

Of the 309 cows entered for the 12 months 20 produced over 400 pounds of butterfat; 96, or 31 per cent of the cows produced over 300 pounds of butterfat and 176, or 57 per cent produced over 250 pounds of butterfat.

The average of all cows having 12-month records, was 6993 pounds of milk containing 278.55 pounds of butterfat.

The champion cow in the association was a graded Holstein, owned by H. L. Hansen. She produced 16,161 pounds of milk and 574.34 pounds of butterfat in the year.

The high herd honors for both butterfat and milk goes to George Hendricks. His herd of purebred and grade Holsteins produced an average of 11,028 pounds of milk and 392.50 pounds of fat, at a food cost of 16 cents for each pound of fat produced.

High and Low Production Compared.

Comparisons of high and low production shows clearly the economy of good cows; 10 cows with the average of the best herd would produce as much butter in a year as 23 cows having the average of the poorest herd. And as for net profit over feed cost, it would take 35 cows of the poor herd average to make the net profit of 10 cows with the average of the best herd. Owners of both herds were selling cream at the same price per pound.

The association has been reorganized for another year with increased interest and enthusiasm. The farmers are finding the association of much value to them.

1. The records show the cost of producing milk and butterfat from each cow in herd.
2. Calves can be selected from the best cows.
3. Value of the herd sire is shown by comparing his daughters with their dams.
4. Results from different methods of feeding are shown by the records.
5. Cows need not be kept for the pleasure of their company—unprofitable cows are soon detected and may be disposed of.

Oregon Dairymen's League.

The committee of the Oregon Dairymen's league held its meeting in Portland, August 27, as scheduled. This committee, it will be remembered, was selected at a meeting called to devise ways and means if possible, to meet the conditions that confront the dairy industry—higher cost of feed, labor and everything necessary for the dairy, without a corresponding increase to the producers in the price of dairy products, especially market milk.

At the committee meeting the plans under which the New York Dairymen's league is operating was read and reports from other dairymen's associations, organized for the same purpose, was read. From these in the very near future a plan that can be operated under the laws of Oregon and that will give the dairyman some voice in the price of his products will be evolved. In fact, it is already pretty well worked out and as soon as completed the committee will ask a good number of the leading dairymen of the region to meet with them and give it their indorsement. This being accomplished, a general meeting will be called and comprehensive organization attempted. While it takes time to get reports and make plans to fit our western conditions, the committee is hard at work and the dairymen and public will be kept apprised of whatever they accomplish or attempt.

Montesano Cow Testing.

The July report of the Montesano Cow-Testing association in western Washington contains a list of 27 cows, a greater number of cows in the 50-pound list than any month so far during this year of the association. Three of the cows produced over 70 pounds of butterfat, the high cow being a purebred Jersey belonging to J. R. Martin, producing 73.1 pounds of butterfat. The other two purebred Jerseys producing 70 pounds belong to E. L. Brewer.

There were 337 cows tested during the month which average 788 pounds milk, 3251 pounds of butterfat, at a feed cost of $2.76 per cow. Some of the individual herds of the association did very well. The herd of J. R. Martin averaged 51.02 pounds of butterfat and 1151 pounds of milk. Mr. Martin is a very careful feeder and gives his cows good care all the year round, as his high averages for the year would indicate.

The 1917 Dairy Cattle Congress.

The dairy cattle congress, which will be held at Waterloo, Iowa, October 1 to 7 inclusive, will undoubtedly surpass all previous shows because its purpose is in direct line with the extensive food conservation campaign now being conducted by the government. Arrangements are under way to give a practical demonstration of every important phase of dairying and emphasize the magnitude of the industry. The Iowa State Dairy association will again hold its interesting sessions on the grounds. Special emphasis will be placed on the dairy product exhibits consisting of butter, cheese and market milk.

Makes Record of 70 Pounds.

Ormsby Hemgewold, a 4-year-old cow belonging to E. B. Marks, heads the list of the high producing cows in the Ahtanum Wide Hollow Cow-Testing association for the month of July, according to the report of Roy Larsen, the official tester. She has the record of 70 pounds of butterfat for the month.

Adds to Dairy Herd.

Andrew Townsend of Oakland, Ore., recently purchased eleven head of Jerseys from F. L. Calkins of Roseburg, Ore Mr. Calkins has used a bull of Sweet breeding and a Flying Fox bull and has a very creditable little herd. Mr. Townsend got considerable of the foundation herd, besides some young stock, and has a start that should make him a fine herd of Jerseys.

Tractor Tests
Conducted at Fremont, Neb.

July 26 to August 2, 1917, by the Agricultural Engineering Department of the University of Nebraska

Prof. L. W. Chase in Charge

A series of interesting tractor tests have just been made. Every farmer may now know facts.

The object of the experiments was to determine under actual farm conditions the amount of fuel required and the rate of doing various field operations, and to study the quality of the work done. Also the effect of different depths of plowing in the same field.

The tests were not of a competitive nature, but were made with the object in view of observing tractors in actual farm work so that all farmers might have actual figures.

The tests were made with Case tractors operating standard farm equipment, under the auspices of the Department of Agricultural Engineering of the University of Nebraska, directed by Prof. L. W. Chase, assisted by Prof. O. W. Sjogren, Mr. Louis Runnels and Mr. Ray W. Carpenter.

For Free Distribution

A bulletin has just been published covering twelve tests. This is the first authoritative statement of its kind.

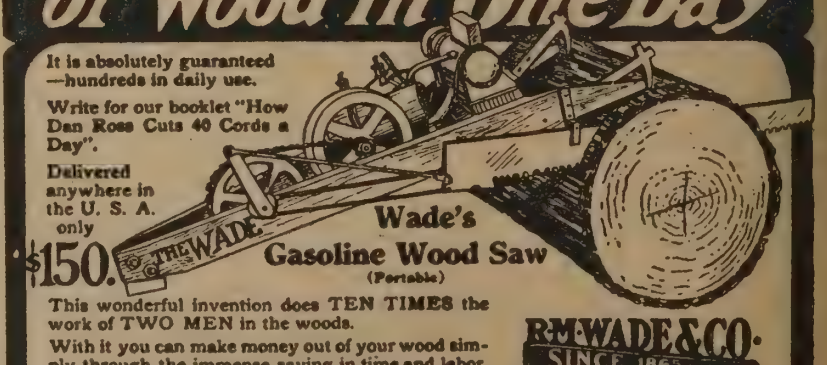
It shows the equipment used, the kind of fields, the different operations. Of chief interest to all farmers is the fuel consumption and cost per acre. Much of this information has hitherto been speculative. Now it is down in black and white. It shows the advantages of Case tractors.

Some of the Data

Each test is complete. Different size tractors are used. Some tests are for plowing at different depths. Some are for spike-tooth harrowing and disking, drilling, etc.

Kerosene was used, and based on a cost of 8½ cents per gallon, the cost per acre for plowing under different conditions and depths is shown. These are exact figures—not estimates. The temperature was 100 degrees in the shade—but the heat, however, had no effect on the operation of the tractors in any way.

Send for Your Copy



This bulletin created a sensation at the Fremont Tractor Demonstration. All farmers have been waiting for conclusive figures. Case, the leader for 76 years in power farming, now sets a new pace. No farmer should fail to get this bulletin.

Copies are free. Merely send us your name and address, asking for "The Tractor Tests Bulletin," and a copy will be forwarded at once—without charge. The first edition is just off the press. So don't delay—write today.

American Royal Stock Show.

The annual American Royal Live Stock show will be held at Kansas City, Mo., October 1 to 6, inclusive. On account of the prevailing high price of beef cattle, unusual interest is taken in the raising of beef cattle, and herds of the four leading beef breeds of America, namely, Herefords, Shorthorns, Aberdeen-Angus and Galloways, will be represented at the American Royal this year from all quarters of the United States. There will be a horse show several nights and space also has been provided for a poultry show.

Herds and Flocks of Europe.

It is estimated that the herds and flocks of Europe have been reduced during the present war by 28,000,000 cattle, 54,000,000 sheep and 32,000,000 hogs. This reduction will increase, too. The future of our live stock industry looms large.

Veterinary

Dr. S. B. Nelson

Rubs Hair Off—I have a mare that each summer rubs off her tail hair and mane. She has no lice. Also, what is best remedy for inflamed and caked udder? H. L., Goshen, Wash.

Answer—Try washing the root of the tail with a one to one-thousand solution of corrosive sublimate. You may also find some benefit from taking a rag dipped in kerosene and rubbing the under side of the tail and the parts about the tail with that. Give this treatment each day or every other day. Do not get too much kerosene on the rag so as to blister the parts to which it is applied. Regarding your cow with the inflamed udder, I would advise the following treatment: First, I must suggest that the treatment of mammitis is a serious matter, and takes considerable time on the part of some one, owner or employer.

It requires the frequent bathing of the udder with hot water, in which has been dissolved a handful of common salt. This pailful of water should be as hot as possible without burning the animal. Wash the udder until the water is cool, then rub dry and apply a little of the following liniment: Fluid extract of bella donna, two ounces. Fluid extract of phytolacca, two ounces. Then massage. The application of this medicine should not be severe. In bad cases it is advisable to give from a teaspoonful to a tablespoonful of the fluid extract of phytolacca morning and evening.

Sometimes it becomes necessary to poultice the udder. Take about five yards of 7c to 9c unbleached muslin, tear the ends into strips, and tie these over the loins, so that the udder is supported in this bandage. Cut four holes where the teats of the udder should come through. Now fill in the poultice made of dried hop leaves. The leaves should first be pulled apart, then soak with hot water; in order to keep the poultice hot, I have found that a Chinese hand warmer is very fine. This is a small tin box, in which tinders made of charcoal, rags, etc., may be burned, and which when wrapped up in a piece of cloth and placed in the poultice, so as not to burn the cow, will keep the poultice warm from two to three hours.

Frequently it is advisable to give the animal at the beginning of the treatment one pound of Epsom salts in about two gallons of water.

Twin Heifer Calves.—I have twin heifer calves and am told not to keep them as they will not bring calves.
W. O. N., Taylor, Wash.

Answer: There is a general belief that twin calves—twin heifer calves or one male and one female—that the heifer calves will not breed. There are quite a number of instances on record where they have bred and brought calves. There occurred at Colfax some years ago an instance, of which very careful record was kept, in which there was four generations of twin calves and they all—all of the heifer calves—bred and brought twin calves. It happens sometimes that the twin heifer calves with the bull calves, generally known as freemartins, do not breed. But if you have good stock, I would advise you to keep them and try to breed them.

Cow's Teats Close—I had a cow last winter that I was milking. One of her teats began to close up until I could not milk it. Of course, it got sore. I got a milking tube and used it a while, but the teat closed entirely and her milk got slimy. Then another one of her teats closed up, and in a few days the other two did also. One teat of another one of my milch cows is closed so I can not milk it. What disease is it, and is there a cure?
C. E. G., Creston, Wash.

Answer—The chances are that the first cow had an injury which caused the teat to close up. It may also have gotten an infection. I would advise that you, for some time, wash all of your cows' udders and teats with a 2 per cent creolin solution before and after milking. The trouble with your first cow was that you carried the infection into the first quarter and then later from the first quarter to all the rest of them. Now, if you want to keep the first teat open, use the following: First dip the teat in ticture of iodine; then, before this, having bought at the drug store the largest violin catgut that you could buy, tie a knot in the end of it; cut off two inches then and dip that thoroughly into 10 per cent carbolic acid solution, after which slip the catgut up into the teat, which, as before stated, has been dipped in tincture of iodine, and leave it there until the following milking. The heat and moisture from the teat will cause the catgut to swell and open the teat.

Lame Horse.—We have a horse that is real lame in one front foot and stiff when starting out. Sometimes it is not as bad as others. Sometimes it will set the toe down first and stumble. It sets that foot ahead of the other when standing. What is the cause? And what can I do to cure it?
Mrs. A. J. A., Sedro-Woolley, Wash.

Answer—The fact that your horse sets his foot out in front when standing would indicate his trouble is in the foot. Likewise that he sometimes steps on his toe when starting would indicate that the trouble is in the back part of the foot. It may, therefore, be one of three troubles. In the disease known as sidebones the lateral cartilage has hardened and become bone. There is only one remedy, and that is to enlarge the hoof by rasping it quite through and then oil the hoof at the hair line night and morning with equal parts of lard and tar. The other troubles might be a sore tendon or a disease of the navicular or coffin bone. I could not give you a general treatment for either one of these two troubles. You would require the services of your veterinarian.

Punishment by Pillory.

The term "stocks," as an instrument of punishment, is applied to the authorized version of the Bible to two different articles, one of which answers rather to the pillory. The other answers to the stocks, the feet alone being confined in it.

CUTTER'S
BLACKLEG PILLS
"California's Favorite" for nearly 20 years
For the Prevention of Blackleg in calves and young cattle

Their superiority is due to nearly 20 years of specializing in "Vaccines and Serums only."
Year in and Year Out they give better satisfaction than any other vaccine made, and the cost of a few cents per dose is cheap insurance against a disease that always takes the fattest and best.
Single Pills may be used for ordinary and range stock.
Double Pills should be used for pure bred and high grade stock.
Use any Injector, but Cutter's simplest and strongest.
Prices:
10 dose pkge. Single pills $1.00
50 dose pkge. Single pills 4.00
10 dose pkge. Double Pills 1.50
50 dose pkge. Double Pills 6.00
Cutter's Pill Injector.... 1.50
Insist on Cutter's. If unobtainable, order direct.
Write for new booklet, "The Control of Blackleg." It tells about Anti-Blackleg Serum which cures Blackleg and may be used simultaneously with vaccine to combat outbreaks and safely protect valuable stock.
The Cutter Laboratory, Berkeley, Calif.
The Cutter Laboratory of Illinois, Chicago
Eastern Agent

Jerseys for Net Profits

You're in the dairy business for profit—the *net* profit that your herd has made you at the end of the year will determine the size of your bank account. Jerseys yield the largest returns from every ounce of feed—proved by tests at two great expositions. Jersey milk averages 5.3% butter fat, 9.1% solids not fat—highest of all breeds. Buy a Jersey bull. Write the breeders advertised below for prices, pedigrees, etc.

The American Jersey Cattle Club, 324 West 23rd Street, New York City

Jersey Isle Stock Ranch
Herd headed by Bright Light's Knight 103741, a line-bred Gamboge Knight-Combination. Castilian Lady 26628 made 603.3 lbs. fat (715.3 lbs. butter) and 11,530 lbs. milk in 11½ mos., and my herd has highest average test of 399.8 lbs. fat in Buhl Cow Testing association. Young stock for sale.
C. E. LONG, Buhl, Idaho.

Waikiki Farm
Register of Merit Jerseys. Largest Jersey herd in the northwest. Young stock for sale.
IRA P. WHITNEY, Manager.
ROUTE 7, SPOKANE, WASH.

Two Choice Bull Calves
From cows with official records of 914 and 663 lbs. butter in a year. Prices in proportion to production and quality.
ED CARY. P. O. Carlton, Oregon.
Station, Lafayette, Ore.

MEET ME AT THE FAIR
where I will show a few bull calves from some of my best cows. For 8 months my herd has had highest average in Marion County Cow Testing association. For 8 months the whole herd averaged almost 60 lbs. of fat per month, per cow.
F. A. DOERFLER, Silverton, Ore.

Pearl Riga 206648
dropped bull calf July 10, 1917. Her record 458 lbs. butter in 297 days. Sire, Upright's Chief, sire of 6 in R. of M.; half bro. to Golden Glows Chief, sire of 31. Calf's sire, Dominus, out of 817-lb. cow and by bull out of 853-lb. cow. $75 if taken soon.
JOHN B. STUMP & SON, Monmouth, Ore.

$100 to $250
Young Jersey bulls, ready for service, sired by St. Mawes Golden Poppy, whose dam has official record of 1120 lbs. butter in a year. Some out of Register of Merit dams, priced according to quality of dam.
M. H. JONES, Perrydale, Ore.

1120 Pounds of Butter in a Year
by St. Mawes Poppy is the sixth highest official record of a Jersey cow in the world. She is dam of my herd bull, and his first heifers in milk are heavy producers. Write for prices on young bulls by him out of register of merit dams.
F. E. LYNN. Perrydale, Ore.

Bull Calf, 8 Months Old
Dam — 10,851 pounds milk, 710.38 pounds butter in 365 days, at three years and eight months.
Sire's dam—535 pounds 5 ounces butter in 365 days.
H. THIESSEN & SON, Milwaukie, Ore.

Every Cow a Record
Fifty per cent of our cows that have dropped more than one calf have records above 700 lbs. butter, 85 per cent fat. Golden Glow's Chief and Adelaide of Beechlands blood predominates. Special prices on bull calves under 9 months old.
LADD FARM. Oswego, Ore.

Bull From Gold Medal Dam
Out of Brown Bessie Alphena's Gem, 827 lbs. butter in year. Sire, Engineer's Bluster, whose dam, Mabel's Bluster, once held world's record for 3-year-old production. His first daughter on test, in this herd, beginning under 2 years old, will make over 500 lbs. butter. Other bulls from Register of Merit dams.
N. H. SMITH, R. D. 2, Oregon City, Ore.

Green Meadows Farm
Jerseys
Young bull out of dam on official test making good record. Sire a grandson of Goldon Glow's Chief, out of dam with official test of over 700 lbs. butter in a year. Other bull calves from register of merit dams. Also cows and heifers.
HENRY STEWART, Prop., Albany, Ore.

Ashburn Farm
Register of Merit Jerseys
Offering of the great butter sire Valentine's Ashburn Baronet, from dams carrying the blood of St. Mawes and Golden Glow's Chief. Real foundation heifer calves for sale.
J. M. DICKSON & SON. Shedd, Ore.

Fit for Herd Headers
Young bulls of good individuality, ready for service, sired by Landsler's Tormentor Boy, a strongly bred Tormentor bull, with high-producing cows in his pedigree. Dams of Brown Bessie and Tormentor breeding, with register of merit records. Price reasonable.
J. C. BROWN & SON. Shedd, Ore.

Oak Ridge Jersey Farm
Register of Merit Cattle
Twenty-nine years breeding Jersey cattle. Write us for prices and pedigrees. For information address
RILEY E. HULBURT, Albany, Ore.

Wynoochee Home Farm
Home of the Gold Medal Jerseys. Young stock whose dams or granddams in my herd have won gold medals from the A. J. C. C.
JOHN H. TAYLOR, Montesano, Wash.
Box 426.

Ashwood Farm Jerseys
Herd headed by the great sire, HOLGER, and the young bull, ST. MAWES OF ASHWOOD (son of Poppy's St. Mawes and Gertie's Fern Princess). Nothing for sale at present.
McARTHUR & STAUFF, Rickreall, Ore.

MAPLE LAWN PLACE, ALBANY, ORE.,
Home of
Register of Merit Jersey Cattle.
Herd headed by a double grandson of Spermfield Owl—"Moose o' Fernwood" No. 137024, whose dam has an official record of 916 lbs. butter.
We are offering young stock from this rich butter inheritance whose dams are now on official test.
ROBT. L. BURKHART, Albany, Oregon.

A Bit of Courtesy
When writing to any of the Jersey breeders advertising in these columns, you will confer a favor to the breeder and to the American Jersey Cattle Club by mentioning this paper, as they want to be able to trace the exact source of their inquiries. Will you do this, please?

POULTRY

Write to the Editor

JAMES DRYDEN
Editorial Contributor

Poultry Judges Judged

At a recent meeting of poultrymen at the Ontario Agricultural college there were 22 Canadian poultry judges that were put through a judging test. The results of the test are published in the Canadian Poultry Journal. The variations were very striking, so much so that Professor Graham remarked after the judging was completed that: "You judges have about all the possible placings there could be on these five birds." In one class of five Buff Orpingtons, for example, just 12 of the 22 judges agreed on the bird that should be given first place. That would be about 50 per cent perfect judging. Twelve of the 22 judges agreed that bird 2 should be placed first, while in the case of the bird that received the most votes for second place, only seven agreed that it should be second, about 31 per cent perfect. Each of the five birds was placed first by one or more of the judges, and the same was true of the second place.

Poultry judges are evidently not infallible. I don't wish to slur the judges. They are doing the best they can. If there is anything wrong, it is in the system, not the judge, usually. In the first place the poultry judge has more than a hundred breeds and varieties to pass upon, and when it is understood how many and various are the points in each variety that he has to pass upon we need not be surprised if he is only 50 per cent perfect. Not many of them can become expert in so many breeds.

But the chief difficulty is in the system itself or the standard of perfection which judges follow. The standard is loaded down with too many immaterial points, too many for the judge to master. A great many of them could be cut out of the standard without sacrificing either beauty or utility. If judging can be only 50 per cent perfect that means that the balance is 50 per cent lottery or chance. This may be some comfort to the fellow at the next poultry show whose birds do not get a first prize.

J. D.

Judging Hens

In a yard are four hens, one lays 175 eggs per year, another 154 eggs, another 125 eggs and the fourth hen but 60 eggs in the same time. An expert passing this yard is able to pick out the best layer and the poorest layer of the four hens. What physical characteristics does he look for in the good layer and what are missing in the poor layer? I am well aware that there is but one real sure way of determining this, viz., the trap nest. That is all right if one is in a position to handle trap nests, but if you want to buy hens you are not then in a position to use a trap nest. Therefore if you do not know how to choose a good layer it is a gamble. I think this would be very valuable information.

T. J. M., Lake Bay, Wash.

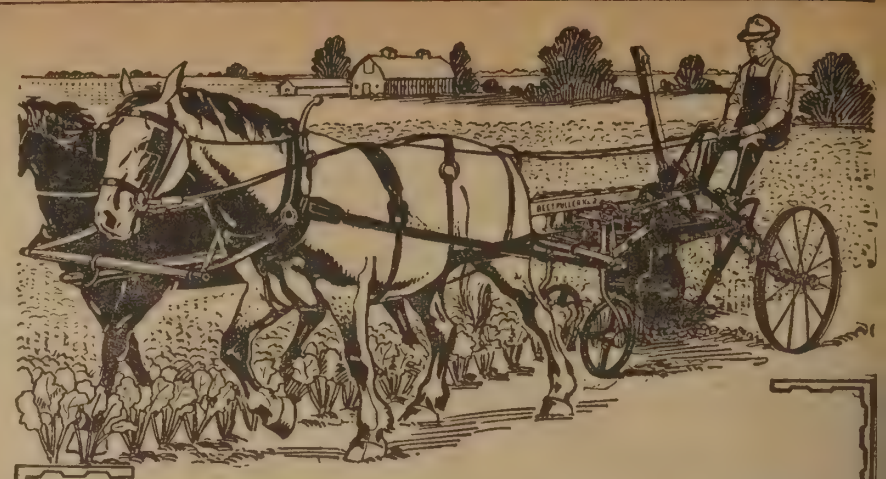
It is not always possible to pick out the best and the poorest layers in the flock by external or physical characteristics. The best experts fail in this very often. Type is not very well correlated to egg production in the fowl. It is possible, however, for the expert who handles his fowls and closely observes them to get a good line on which are the best and the poorest if they are all of the same breed and same age. Before the end of the year, if he has been observant he should be able to tell, on the average, what are the poor producers.

The poor layer will quit laying and molt earlier than the good layer. Those that do not molt before the first of October and continue laying up to that time are usually good layers and should be kept over.

It has been found, also, that if the hens are of a yellow-legged breed, at the end of the laying year, or before, the good layers will have lost more of the yellow in the legs than the poor layers. The hen is drawing upon the yellow coloring matter for the making of the egg yolk. The same thing happens with the yellow color in the earlobe. A hen that starts the laying year with yellow earlobes will, at the end of the year, if she has been a good layer, have pale or white earlobes. These two tests, of course, apply only to breeds that have naturally yellow legs and earlobes.

If the correspondent wishes to purchase a flock of year-old hens at about the end of the laying year, say in October, he should select those preferably that have not finished the molt and discard those that are through with the molt and have a new coat of feathers. The slick, well-feathered hens at that time have been the poorest layers and will be poor layers in subsequent years because it has been well demonstrated that the best layers in the first year are, on the average, the best layers in subsequent years. This test, however, will not be very accurate if the flock from which the selections are made have not all had the same feed and care during the year.

Old hens, of course, are poor layers, on the average, and it is a safe plan to discard all that have been through two laying years. It may pay to keep some of them another year if the above test can be carefully made; otherwise they should be killed off at the end of the second year.



These tests apply to hens that have been kept a year. It is another thing to make a selection at the beginning of the year, or before the pullets have been laying or shortly after laying. A very accurate test, however, can be made of the pullets. The principle is this: Good layers come to laying maturity early. It may take the poorest layers two or three months longer to reach laying maturity than the good layers. I have found this to be true in the great majority of cases at the Oregon station. To make this test the pullets should be of about the same age and of the same breed. We have found that pullets that lay at 200 days of age, say six months, on the average lay 200 eggs in the year. Those that do not lay till 300 days of age are poor layers and should be marketed at once. If Leghorns or the smaller breeds, under good care, do not lay at eight months of age they should be killed off and save feed. The trapnest is the best way to tell which are laying, but in the absence of trapnests laying will be evident by bright comb and wattles, soft or flexible abdomen, good width between the pelvic bones and good depth between the pelvic bones and keel bone.

There are other points that a close observer will notice. It is not a good plan to pick out the nice, large hens as the best. The best layers are usually the smaller or medium sized hens of the breed. The nice, slick hen is the one that has molted early and stopped laying, and is therefore a poor layer. The active hen of bright eye, rather fine in bone and not too fluffy in feather is the good layer. The temperament of the hen is a point of value. The good layer usually has plenty of nervous energy. The head should not be coarse. There should be no suggestion of the rooster in the head. The rooster head is very often evident in the poor layer. The size of head does not seem to indicate much, but it should not be coarse.

These tests, however, are not infallible. They may sometimes result in the good hen being sent to market and sometimes in the poor layer being retained. But on the average they will work. If it is 75 per cent accurate, then it is worth using. We can afford to kill off one good layer if we get half a dozen poor ones.

The trapnest is the most accurate; in fact, the only sure test, and poultrymen should be encouraged to use it, especially those who make a business of selling breeding stock. In fact, it would be well if the latter should be required to use them.

Moline Foot-Guide Beet Puller
Meets Every Condition of the Beet Field

When the sugar factory gives the word to "Pull," be ready with a Moline Foot-Guide Beet Puller to insure quick and perfect work. The Moline Foot-Guide was especially designed to facilitate every operation at harvest time and has advanced features of convenience, adjustments and control possessed by no other beet puller.

Foot-Guide Control Is Positive and Quick

Irregularities of the beet rows may be followed without regard to movement of team—pulling point always in line and runner lifts whatever front wheels straddle.

Short turn is another exclusive Moline feature. Front wheels may be raised clear of the ground, allowing machine to turn on two wheels at ends of rows—a time saving feature in fields with irrigating ditches.

Large, wide, adjustable main wheels and strong, properly placed standards give correct set to runners, insuring perfect raising of beets of varying sizes, without cutting or bruising them. Rolling coulters cut trashy tops—prevent clogging.

Moline Foot-Guide Beet Puller is built for two or three horses; is extremely light draft, due to four wheel construction and proper balance. High carbon steel construction and strong bracing insure permanently dependable service.

Ask your Moline Dealer about the Moline Foot-Guide Beet Puller, or write us for Illustrated Literature.

Address Department 60

MOLINE Walking Beet Puller

is popular with beet raisers everywhere because of its simplicity and efficiency. Pullers are strongly shaped with an easy downward curve and straight runner—raise beets out of the ground gently without bruising them. Chilled points and diggers add greatly to long life under hard service, are easily detachable. Lifting rods adjustable up or down to meet different requirements.

$1.00 Puts It On Your Farm

SIMPLEX "2 in 1"
Double Duty—STRAW and Manure SPREADER

Here is positively the only machine that actually spreads straw and manure perfectly. Shreds hardest lumps of manure or bright straw into fine pieces and spreads it 21 ft. at a time—20 acres a day! Greatest invention of the day. Thousands of farmers using it to insure big crops this year.

Save Your Wheat From "Winter Kill"

Don't risk $2.00 seed this winter. A straw mulch will save it from Winter Kill—insure big yields. Spread straw and manure for fertilizer. My machine does both. Add 5 to 10 bushels to your crops. Fits any wagon! Has double drive and differential! Will last a lifetime. Costs half the price of a good manure spreader. Write for big catalog, low price, long credit and details of my amazing "Dollar installing terms," which puts it on your farm for 30 day trial. Do it now.

Supply and Demand.

The farmers never fix the prices of their products. Of course, the old theory is that prices are determined by the law of supply and demand. That would be true if the law were not interfered with and if commodities could flow freely without obstruction. But it is a little like the old theory that "Waters flow in the river beds toward the seas." That is true where waters are not obstructed or diverted in their flow. In this irrigated country, we impound large quantities of water for irrigating purposes. We also divert large quantities that are used in crop production, are absorbed by the soil and never find their way to the sea. At certain seasons the river beds are comparatively dry. The same is true of the law of supply and demand. When speculators buy up the principal commodities, store them, keep them in storage until the needs of the people are so great that they are willing to pay two prices for them, then the law does not work freely. Now, I would rather the government would fix the prices of food products at a fair profit to the producer, and sell at a fair price to the consumer, than for the speculator to fix them. The government is the only force that can make an equitable adjustment between the producing and consuming public.

Barrels or Boxes, Which?

A new discussion has been started on the advantages of barrels for shipment of fruits and other commodities, instead of boxes. "The war is the cause of it," as we so often hear when we ask the reason for high prices, and it has grown partly out of the difficulty of transportation. There is no reason to suspect that there will be any considerable number of apples shipped in barrels, because the rules for grading are fixed by law, and because the habit of shipping in boxes is pretty well fixed for this whole northwest. However, it is well to consider the arguments, and they are as follows. "The barrel can be handled with less labor than boxes, because it can be rolled and the box must be lifted." "It costs less in shipping, because of the ease with which it can be handled."

On the other hand, box apples have grown into favor partly because of the ease with which the boxes can be examined. The old habit of "facing the tops and bottoms of the barrels with good fruit and putting culls in the middle," is responsible for the larger amount of the sentiment for boxes.

In boxing cherries, we in the northwest follow the rule of "facing" practiced by the apple growers of other sections, and which has made the barrel as a container for apples odious. I do not like it; I think the cherries in the bottom or center of the box should be the same as those on the top. To make them anything else, is an effort to deceive. It is true, as it has been said in reply, that it deceives no one because everybody knows they are faced. Then why face them? G. L.

Drying Prunes.

By J. F. STOUT, Caldwell, Idaho.

To dry prunes it is necessary to break the skin in some way to let the moisture escape. Some people have been growing prunes many years who dried a few by cutting them open and let the hogs have the rest, and yet they can be very easily and cheaply dried.

If you have but a few, combine with neighbors if convenient and rig up an outfit to dip them. It is very much the old-fashioned plan for making sorghum molasses. Use galvanized iron 32 to 36 inches wide and nine feet long for bottom and ends. The sides and three cross pieces should be of 2x12 pine. One should be placed across center of pan to divide it into two equal vats. Saw side pieces at both ends at an angle of about 60 degrees and put short edges at bottom. It makes a better job to mortise the cross pieces, which should be set vertical one-quarter inch into the sides. Nail on bottom with 6d nails, driving them about three inches apart and letting the iron extend upward on the slanting ends to top of boards. This will leave a small triangular cavity across each end of the pan, which should be kept filled with water to prevent wood from checking. Place pan on furnace, two feet high with low chimney. The dipper should be of cubical shape and large enough to hold one and a half bushels of prunes, although you seldom should put more than a bushel in at a time. Make it of galvanized screen, quarter-inch mesh is good. For handles nail on two pieces 1x4x6. This dipper should be used by two men. To make the dip for cutting the skin of prunes use any good commercial lye in water, making the mixture strong enough to cause the skin of prunes to check that have been submerged 40 seconds in the boiling dip, and then dipped in cold water. If left in too long the skin will all be removed, which is not desirable. While dipping the lye becomes weaker and a little lye must be added occasionally.

The dip must be kept boiling, which can be done more easily by using vats alternately. Have clear, running water convenient, into which prunes must be dipped and rinsed as soon as scalded. This is done by moving the dipper containing prunes up and down a few times. Then pour them into boxes and when you have a load haul to drying grounds. Trays are best to dry them on, but any kind of clean boards laid close together on cross pieces will do. Place where there is plenty of sunshine and where they can not be damaged by stock or fowls. The writer once dried two tons in his garden, on boards that were afterwards used for building a barn. If it should rain fruit should be put into boxes and covered, or if trays are used they must be stacked. When dry enough dip again in vat in boiling water, to which a little salt has been added. This will help to keep the fruit moist and destroy all insect life. Pour out again on trays for about three hours or until fruit is in the proper "condition." Then store in tight room or cellar and keep covered with canvas. If you prefer a black gloss on fruit, boil some of your prunes till the mixture is of the consistency of paint, and dip prunes into that instead of the salt water. Now don't be afraid you can't do it. It's easy. The writer had many years of experience in fruit drying in California, but the two tons referred to above were dried in Idaho. They were fully equal to those shipped in and were sold for the same price. If you have but a few, heat lye in wash boiler, using any kind of convenient dipper, and dry on roofs. All figs and nearly all raisins are dried right on the ground, but the figs are afterwards dipped. Only ripe, sound fruit should be used, and all trays and boxes kept clean, then the fruit from a small drying plant will be fully equal to that from a large one.

FEDERAL
DOUBLE CABLE BASE TIRES

Over there on my car is a set of Federal Tires that have given me not only good wear, but safe travel.

I bought them because I know how they are built on the inside. That's the important point.

Up hill or down, through ruts and holes, and the worst kind of going, those tires stay on the rims, and give perfect traction.

Experience has taught me the value of equipping a car all 'round with Federal Tires.

In the base of each Federal tire four strong steel cables anchor the tire safely to the rim against the hardest kinds of strains. Yet they slip off easily when necessary.

Made in white Rugged and black Traffik non-skid treads. Sold by leading dealers everywhere.

Producers Use All Straw Raised

Potato Crop Is Normal and Farmers Generally Giving Their Efforts to Meet Demands of the War

SHELTON, Mason County, Wash., Aug. 27.—The prospects for winter's supply of food is about up to standard for man but below par for stock. The cold, wet spring and the hot, dry summer cut short the hay crop. Grain is good, but the dryness cut the quantity. It is the custom here to save and utilize all forage growth and this summer will be no exception. Farmers use all the straw they raise, selling none except occasionally a little in loose form as a special favor to cover some pressing need. None has yet been shipped in to establish a price. The potato crop is about normal, but will not come up to expectations. Larger acreage was planted, but the dry weather will reduce the percentage of yield. About the usual effort is being made to increase tillable acreage. Hardly more could be expected because the logging interests demand the workers. Our farmers are giving their best efforts to meet the demands of war and are heart and soul for our country's good. SCOTT HAYES.

Get a Few Sheep.

CENTERVILLE, Klickitat County, Wash., Aug. 21.—The crop injury from drouth does not seem to be very high here in Klickitat county to small grain. The loss is more severe on corn and very late sown spring grain. The grain crops now threshing are turning out quite well for what seemed an off year from the start. The worst is potatoes, which are going to be almost an entire failure. The price for wheat and other crops are a stimulant to everybody to keep up the amount of acreage if possible. We have managed to get through the harvest with sufficient help, but the draft is beginning to tell in the help line. The best plan, as I see it, is for every farmer to get a few sheep as well as other stock. He can handle these most economically without outside help. The labor question will have a good deal to do in the future crop condition. Turn the wheat fields into alfalfa or grass to feed stock which will not take so many to look after. Potatoes are about 4 cents in the market and no prospect of much relief. The fruit condition is good, with some apples beginning to arrive in the market.

CLARENCE A. LESTER.

Hay and Fruit Active.

TOPPENISH, Yakima County, Wash., Aug. 18.—The second cutting of alfalfa is now in stack. Very little if any trouble was had in getting sufficient help to care for the crop. The quality is good and the average yield is considerably larger than last year. Some sales have been made f. o. b. car at $22.50 for alfalfa and $25 for clover. The market on timothy is not proportionately as high as for alfalfa and clover. A great many sales have been made to feeders, who expect to bring their stock to the valley at prices ranging from $12 to $16 in the stack. The third cutting of hay is well started and the water supply is better than usual, consequently an excellent third cutting is to be expected. The long-continued, extremely hot weather is forcing the corn and alfalfa to a very rapid growth, but has done considerable injury to the potato crop and has perhaps damaged some beets where not properly watered. The beets that have been properly watered are making an excellent growth and the growers who prepared their ground carefully and have given them proper care are going to be well repaid for their labor. Wheat in the irrigated sections is making an excellent yield and is of very fine quality. The yields so far reported for wheat are from 25 to 65 bushels per acre; oats are ranging from 50 to 100 and barley from 25 to 80. Barley has been selling from $45 to $50 per ton and oats at about $50. Wheat is selling today for $2.20 per bushel and has sold as high as $2.35.

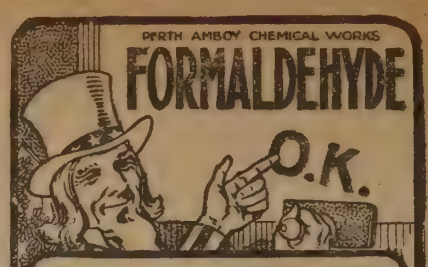
The acreage of watermelons and cantaloups is smaller, but the extremely hot weather has produced an excellent quality of melons. The first picking of pears is just now under way, and the prices being offered are $40 per ton for loose pears, or $1.25 for those boxed. The first prune picking is well under way, but none of the firmer peaches are yet on the market in any quantity. Slappys will go on the market next week and a few Elbertas in the following. One sale of apples and pears of three grades has been made at $1.10 per box, the buyer to pick and pack the fruit. The orchard will produce about 10,000 boxes combined apples and pears. This sale was made by Dick Hart of the Buena district. Mr. Hart sold his crop last year at $1 f. o. b. car. The general offer for staple varieties of apples is considerably higher than last year. Early potatoes are now selling at $35 per ton, but no quotations are yet offered on the Gems and Burbanks. Tomatoes are plentiful and reasonably cheap. Beets are looking well and promise a good yield. The supply of garden vegetables in the Yakima valley will be much the best ever produced. The extreme high price of feed is causing a few people to dispose of their cattle and cattle prices are lower than in the early summer. Sheep and hogs remain high and are in much demand. The onion crop is excellent, but the prices promise to be not so good as formerly. C. A. WYCKOFF.

Spring Wheat Is Poor.

GARFIELD, Whitman County, Wash. Aug. 17.—Threshing began the first of this week. East of here, especially near the mountains, many fields of fall wheat made 30 or more bushels to the acre of wheat that was seeded in August. Some of the earliest seeded near Garfield and a fine stand made a very poor crop, but think it was pastured too heavily.

The largest yield reported so far is 14 acres joining Garfield on the west, which made 37 bushels to the acre. This belongs to Walter Noble, a rural letter carrier, and was the first wheat taken to the warehouse. It was seeded in August. Spring wheat is poor, and the oats also. There is very little smut. Most of this wheat reported is forty-fold and shattered badly this year. No rain here since June 23, so the wheat was not up to what it should have been for prospects.

M. KIDWELL.



Peas Will Help Stockmen.

SPOKANE, Spokane County, Wash., Aug. 21.—I have just completed a tour through the southeastern portion of Spokane county and can report that the crop conditions this season are very bad indeed. In fields where we should be harvesting from 35 to 40 bushels of oats per acre it is likely that not over 10 bushels will be threshed. The same conditions prevail with the pea crop and in some instances the farmers will not be able to harvest more than the amount of seed they planted. Spring wheat promises to do somewhat better, but it is hard to say just how good a yield will be secured. Some fields are not making over eight or 10 bushels per acre, while others are making as high as 15 bushels per acre. The greatest difference in the yield of peas seems not to agree with what we would naturally expect during a normal season. The earlier seeded peas this year are generally a shorter crop than those seeded late. This is due entirely to the hot weather which seemed to blight the blossoms. The late seeded peas which are yet to be harvested promise a very good crop compared to the earlier ones. These peas came into blossom after the hot weather had abated. In regard to the price conditions of grain there seems to be a chance that the live stock business will be somewhat displaced, but there is no special reason for this, owing to the fact that on all of our farms there is generally enough waste material to keep several hogs. If it were possible to place hogs in the pea fields after the crops have been gathered this season Spokane county could produce enough pork to materially increase the profits of the farmers and at the same time do much toward meeting the market demands for pork in Spokane. As we look ahead into the future, our farmers are not greatly discouraged over the outlook for growing peas here and with the peas we will be able to produce more live stock. As I see it, there are many ways in which the pea business will assist us in developing the live stock industry in this country. The shattered peas in the fields, of course, offer the greatest opportunity for pork production, while the split peas offer cheap feed not only for pigs, cattle and sheep, but also for poultry. Further than this, the straw which is left behind after the peas are threshed means excellent feed for cattle, sheep and horses and the farmer this season can rely upon this source to materially decrease the cost of his hay in wintering his stock. Wherever possible, we are endeavoring to get the dairymen to buy pea straw and ship it from the pea fields to the various parts of the county where their dairy stock is to be fed. After our people become sufficiently acquainted with the value of peas and byproducts, I am sure that the live stock industry will develop extensively here. J. R. SHINN.

Grain Being Stacked.

CHIMACUM, Jefferson County, Wash., Aug. 24.—We have had about two weeks' dry weather that has dried up the pastures, also has hurt the late crops of grain that have been planted for ensilage. Carrots and mangels also need rain, but might turn out all right later on. Grain is being stacked at present and the straw, such as oats, which is the best, is going to be saved for feed during the winter. The potato crop is not very good by indications at present. A large acreage is in the ground, but the early drouth stopped the growth three weeks ahead of time.

Good Clover and Timothy Land on Easy Payments—Wood and Building Timber Free

This is rich alluvial land near Spokane. Three transcontinental railroads. Deep subsoil, plenty of excellent water, ample rainfall, cool summers, mild winters. Clover and timothy grow to perfection eight months in the year. Some stumps, but it's the kind of stump land it pays to clear. $10 to $20 per acre, 10 yearly payments at 6 per cent.

IF YOU ARE AMBITIOUS TO OWN A GOOD FARM OF YOUR OWN HERE'S YOUR CHANCE, EVEN THOUGH YOU HAVEN'T MUCH MONEY. WRITE US FOR PARTICULARS.

Humbird Lumber Company, Box T, Sandpoint, Idaho.

Fix $2.20 Wheat Price for 1917

(Continued from page one.)

According to Max H. Houser, federal grain representative for the northwest, the markets here will be classed as northern spring. The freight rate on wheat between Portland and Chicago is 30 cents a bushel.

Turkey red will be classed under hard red winter based on the Chicago price of $2.20, as will bluestem, early baart, Allen, Galgalos and Martin amber. The best quaities will be graded hard white wheat.

Fortyfold, white Russian, gold coin and Palouse bluestem will be classed as soft white wheat on a basic price of $2.18 at Chicago.

Club, white hybrids and Sonora will be classed white club and the basic price will be $2.16 at Chicago.

Red fife will be classed as soft red winter on a basic price of $2.18 at Chicago.

Red Russian and red hybrids will be classed as red Walla Walla on a basic price of $2.18 at Chicago.

The above are basic No. 1 in the federal grades.

Farmers Holding On.

Farmers all over the Inland Empire are now holding on. Records in several local offices show grain was being purchased in rather large quantities under the milling-in-transit rates, by Spokane flour mills, at a price of $2.23 to $2.25 Coast. This meant between $2.13 and $2.15 a bushel for the wheat producer, whose product under the fixed rate dropped suddenly overnight to a figure somewhere between $1.85 and $1.90 at the shipping points in eastern Washington.

"There is no question that the big chance for the northwestern wheat raiser is to get the discrimination between the price paid him and the price paid the eastern grower," said R. J. Stephens of the Stephens-Smith Grain company. "The government has the shipping and the market control.

"We must export from this coast, but the system of subtracting the cost of carrying the wheat to Chicago from the national price fixed can be avoided if the wheat is put in vessels and shipped straight to Europe from Pacific coast points. This is the only way out for the northwest. In the meantime the farmers are holding on everywhere."

Millers Pleased.

A Seattle dispatch reports that: "Local millers, brokers and exporters are practically a unit in declaring that the food committee's price of $2.20 for wheat at Chicago, working out at $1.85 on Washington farms, is equitable."

Naturally the millers want cheap wheat to stimulate their export trade in China and other countries of the Orient, but there is no valid reason why American wheat should be sold at better prices to the Chinese than to our own people in the eastern part of the United States or the price paid by our allies in Europe. It is hoped that, on second thought, Coast millers will take a fairer and broader view of the problem. The difference between $1.85 wheat and the price our growers should receive and would receive if they had basic prices and basic markets at Coast terminals means a difference on this year's crop in the Pacific northwest of from $15,000,000 to $20,000,000. That vast sum is about to be unjustly taken out of the northwest, and its loss would mean an injury to all lines of business, both on the Coast and at the interior.

More Protests.

A statement of the feelings of the wheat men of the northwest, that their geographical position has been ignored while those of the growers of Texas, Nebraska, Kansas and Minnesota have been taken into account, also has been telegraphed to H. A. Garfield, chairman of the committee which recommended the $2.20 basic price, and to Max H. Houser of Portland, federal grain representative for the northwest.

Numerous telegrams are being sent to the national capital from wheat growers and others interested in all parts of the Inland Empire. R. C. McCroskey of Garfield has been visiting points in the Palouse and urging growers to send protests to Washington.

Can Hold Their Wheat.

Ex-Governor Hay of Washington predicts that unless the government deals more justly with the wheat-growers of the Pacific northwest, farmers will organize and withhold their grain until they are put on an equality with the growers of the eastern states.

They would have that right under the law. The government can name a price, but it can not compel the producers to take it. Section 6 of the food control law relates to hoarding by dealers, and expressly exempts the producer in the following proviso:

That any accumulating or withholding by any farmer or gardener, cooperative association of farmers or gardeners, including live stock farmers, or any other person, of the products of any farm, garden or other land owned, leased or cultivated by him, shall not be deemed to be hoarding within the meaning of this act.

Drop in Flour.

Flour in the northwest market, Tuesday, dropped 40 cents a barrel or 20 cents per 49-pound sack, as a result of two days of deliberation by representative Pacific coast millers at Portland.

Best new crop wheat will bring from $1.90 to $2 a bushel at northwest points in the judgment of leading grain men at Portland, including Max H. Houser, government grain commissioner for the northwest. Grain dealers claim that the agitation for a government fixed, based price on the Pacific coast to match that at Chicago would result in shipments of grain to the Pacific coast rather than the eastern markets and that congestion would result because tonnage is not available to carry the wheat to European ports. The only practical plan, it was said, was to make a differential between the Portland and the Chicago price which would absorb the freight charge and thus cause the shipment of wheat or flour eastward for export. This freight charge is 30 cents a bushel.

Walla Walla Growers.

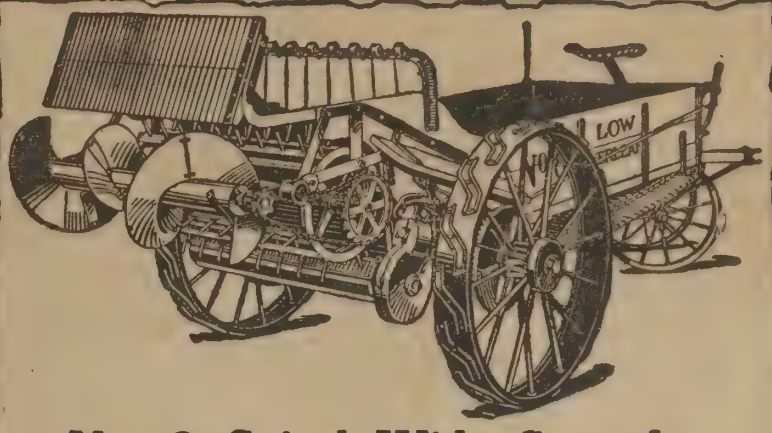
WALLA WALLA, Wash., Sept. 1.—(Special to The Farmer.)—Walla Walla farmers describe themselves as "between the devil and the deep blue sea" on the grain question. Local buyers are equally befuddled and until something more definite is learned they will "wait and see."

Hugh A. Martin of Portland, a federal grain inspector who was here Friday explaining the new grain standards act, told the farmers that they might as well submit, that to store up their grain would do no good, as the government was empowered to take it. The government can as easily take a farmer's wheat as it can his boys, Mr. Martin said. Some farmers have argued that as long as they keep their grain in their barns or private elevators the government can do nothing; that the law applies only to public warehouses.

About 50 of the leading farmers met in Walla Walla Friday to listen to Mr. Martin and they also discussed the wheat prices. Most of them seemed dissatisfied, having hoped for higher figures, but no action was taken toward a protest.

The principal objection the farmers have is that the western farmer is discriminated against in favor of the eastern grower.

The consensus of opinion of the farmers was that the wheat would be largely sold on a consignment basis.



It is believed that bluestem and turkey red will bring about $1.90 to the farmer and club about $1.85.

Men who have expressed themselves —Henry Vincent, O. T. Cronwell, George Ginn, Fred Hofer, Arthur Cornwell, B. F. Brewer and others, all big wheat growers, declare that the western farmers have good grounds for complaint because a middle western terminal was named and the western farmers will have to take less for wheat than the eastern farmer. They said they believed the government should pay all the farmers a uniform price, regardless of location.

Until the market steadies and something more definite is known here there will be no buying or selling and no decisions on whether to sell or hold, the farmers said.

King County Grange Fair.

It is the pleasure of the managers and directors of the King County Grange Fair association to thank in advance the friends and patrons of the association for the very hearty cooperation given them in the development of what portends to be a grand and successful fair at Renton, September 14, 15, 16, 1917. Every one is cordially invited to contribute a specimen of his or her products, skill or ingenuity, so as to make the annual fair an epitome of the accomplishments and advancements in agriculture, manufacturing and live stock during the year. For information concerning the fair write to Fred Nelson, president and general manager King County Grange Fair, Seattle, Route 5, or W. B. Satterthwaite, Secretary, Renton, Wash.

No. 8 Spiral Wide Spreader

Latest in International Harvester Spreaders!

WE have added the **New No. 8** Spreader—Spiral Wide Spread, Light Draft—to the **Low Corn King** and **Low Cloverleaf** lines. We are in a position to suit exactly any regular farmer, whatever his previous spreader experience may have been.

Grasp an opportunity to study the features of the No. 8, the spreader for every average farm, the lightest draft spreader made. No. 8 has the famous International spiral wide spread that has thoroughly demonstrated its success as a wide-spreader for all-around use. In addition, the **Low Corn King** and **Low Cloverleaf** lines provide you with your choice of larger capacity spreaders, with the regular disk-wide-spread (well-known wherever spreaders are sold) or with the spiral spread on special order.

The **New No. 8** Spiral Wide Spreader and other **Low Corn King** and **Low Cloverleaf** Spreaders will go onto thousands of farms before the close of the year. They are all light-draft, low-loading, easy-handling, built of steel—and satisfactory. We have an idea one of them would stand a good chance of going onto your farm if you were fully posted. At any rate it will pay you to write us for catalogues. Write the address below.

SNAPS in ALBERTA and MANITOBA FARM LANDS

The undersigned have for sale, as administrators, the following parcels, which must be realized on to enable them to close up the estates under their care, and the beneficiaries are prepared to accept, for a quick turn, reasonably low figures for the properties compared with their actual values.

Parcel 1 5066 acres south of Lethbridge, Alberta, on the famous Milk River ridge, with the Milk river running through it, fenced and cross fenced; A1 for mixed farming and stock. Excellent buildings, outbuildings, corrals, etc. Large area under cultivation, magnificent pasturages and hay lands, 400 acres in summerfallow. Price for the whole only $15 per acre. Easy terms.

Parcel 2 6 sections open undulating prairie near Cardstone, Alberta, a large proportion of which has already been broken and cultivated; soil of the best, elevator close at hand. Acquired at $25 per acre. Will sell for quick turn-over at $17.50.

Parcel 3 2400 acres with large summerfallow, about 800 acres crop land, excellent buildings, close to the famous wheat city of Brandon, Manitoba. Location to market and elevator quite convenient. Soil of the best. Our close valuation $35 an acre. For quick sale will sell for $25.

Parcel 4 640 acres near Otterburn in the famous Red River valley. Splendid house and barn. All the cultivated land summerfallowed and ready for 1918. Soil black clay loam of the best. Our close valuation $25 an acre. For quick turnover will sell for $18.

Parcel 5 26,000 acres suitable for colonization, convenient to Winnipeg. A decided snap. $20 per acre. Another 7000 acres near Raymond, Alberta, at $16.50 per acre.

Further details of all or any of these properties forwarded on application.

346 Main Street. Winnipeg, Manitoba.

Truth in Advertising

Nationally advertised goods may be depended upon for the reason that national advertisers know that their goods must be truthfully advertised to gain and hold popularity. A good name in advertising has to be won on merit, therefore the buyer may be sure of obtaining right value when buying widely advertised articles.

Community Cooperation

Success Follows Neighborhood Pulling Together

Did you ever hear the story of the 10 negroes who went out to hoe cotton? Nine of them started to work in one field, while the tenth darkey commenced in a field all by himself just over the fence in the next field. He hoed down one row and back on another. Then he looked over the fence and saw the swath of nine clean rows made by the other workers.

"Huh," he said, "nine niggers, nine rows; one nigger, one row. Drat one nigger."

And he climbed over the fence and joined the other nine. This is a pretty good illustration of the difference between community team work and trying to rely altogether on one's individual effort. Where a whole neighborhood is pulling together to accomplish certain things you usually find that success comes out of the united effort. If you, personally, have joined in the community effort, you have not only gained your share of the good accomplished, but you have the satisfaction of knowing that your work has helped all the others. After all, then, being actively interested in the welfare of your community is securing for yourself a share of the advantages coming from the efforts of all those who have helped make these advantages possible.

Do you fully realize what the community in which you live means to you individually? If you are in a live, progressive comomunity, it's ten to one the town that is your trade center is an "up-and-coming" place with good stores, good streets, good schools, good churches, and good places of amusement.

If your community is the other kind, then manifestly there is lacking the spirit of community cooperation and your home town is lagging behind—listless, unprogressive.

At present your local stores may not be as large, or as handsomely equipped as some of the big city stores, but you will agree with me that your home merchants can not possibly enlarge or improve their businesses if they are not patronized. If you are interested in bringing about better local shopping facilities, it is squarely up to you, and other residents of your community, to patronize home merchants, thus keeping your money where it will circulate in various channels for the improvement of the community.

There are only two possible reasons why a person should remain in any certain town or community; their duty demands it, or they simply like to live there. Isn't this true in your case? In either event, it is to your distinct advantage to do everything in your power to assist in improving local conditions. The community belongs to you and your neighbors, and you are necessarily governed by conditions as they exist.

A prosperous community is in every instance a desirable place in which to live, as it affords its residents advantages which invariably are limited to and controlled by the amount of local commercial activity.

State Council of Defense

To Protect Grain and Other Food Crops Against Fire

By N. W. DURHAM.

Leonard S. Martin, fire preventing engineer of the state council of defense, has been touring the grain districts of eastern Washington to stir up interest and urge communities to organize to protect grain and other food crops against fire.

"Owing to the long drouth fires are increasing at an alarming rate," said Mr. Martin.

"To what extent to you find them of incendiary origin?" he was asked.

"To a very slight extent. The great majority of the fires which I have investigated were the result of carelessness and due to natural causes. I am convinced, however, that in some instances fires were deliberately set."

Mr. Martin asks that county defense councils give wide circulation to the following bulletin from the office of the state fire marshal:

To the owners, operators, and all having charge of grain warehouses and elevators, or warehouses where food products of any kind are accumulated and stored:

The serious conditions which confront us in regard to food production and conservation, makes it our duty to use every possible effort to preserve, for the needs of our own people and those depending upon us, every item of food that can be harvested or produced. The loss of a single item at this critical period means hunger for some one depending thereon for sustenance.

In my official capacity as state insurance commissioner and exofficio state fire marshal, I deem it expedient that the following rules be established regarding the care and conduct of storage properties.

Warehouses—All warehouses wherever maintained should be kept clear of all rubbish and where open spaces exist underneath where litter can accumulate, the same should be cleaned out and either boarded up or enclosed with close wire netting. Where possible a clear space of at least thirty feet should be maintained around the warehouses and in localities where weeds drift with the wind and accumulate, a barrier constructed of wire net or boards should be erected along the outer edge of the clear space to hold back the dangerous matter.

Every warehouse should have two 2½-gallon chemical fire extinguishers and one or more barrels of water and buckets located at convenient points readily accessible.

Smoking should absolutely be prohibited in and around all warehouses where food products are stored.

Special representatives working under the authority of this department will visit and inspect conditions in the various localities in the state and are instructed to require immediate compliance with such of the above provisions as in their judgment may be deemed necessary for the protection of the properties.

As it will be impossible for our limited force to cover each individual property in the short time allowed, it is made a special request that any one having knowledge of conditions which appear to be dangerous or which are likely to cause fires or be conducive to the spread of fires shall furnish information at once to our representative in the field or report to this department using wire at our expense if it is deemed circumstances warrant.

H. O. FISHBACK,
Insurance Commissioner, and Ex Officio State Fire Marshal.

Failure by owners of grain and food warehouses to heed this apepal may result in the prosecution of the offenders under the following provision of the state law:

"Any owner or occupant of buildings or premises failing to comply with the orders of the authorities above specified shall be punished by a fine of not less than $10 nor more than $50 for each day's neglect."

Look for the Trademark

Trademarks are placed only on articles that the manufacturer knows will do the work expected of them—that will satisfy the buyer. The manufacturer isn't afraid to let it be known that he made the goods—and it is certain that he isn't going to send out anything that will be a discredit to his trademark or that will cause the buyer to pass that mark when he is buying again.

The trademarks of the various lines of equipment and merchandise you buy are safe guides to follow. They will lead you to goods of high quality and goods that are sold at one price. Your dealer who sold these goods can stand back of them, for he knows that the manufacturer who sold them to him will stand back of the goods and back of him, too.

Contagious Keratitis

Disease Affects Eyes of Cattle

By DR. S. B. NELSON,
State College of Washington.

The College of Veterinary Science has received during the past few weeks numerous reports relative to a peculiar disease affecting the eyes of cattle, in some cases the affecting being so serious that it resulted in the destruction of the eyesight.

Investigations made to determine the nature of the disease show it to be identical with contagious keratitis—contagious opthalmia—which has been observed in the middle eastern states for some years past.

Symptoms.

The first symptoms noticed is a swelling of the eyelids and a flow of tears over the face. The animal will also try to rub the eye on some object, generally its front leg, showing the presence of an irritation or itching. These premonitory symptoms are followed by a true inflammation of the cornea.

Upon a close examination of the eye it is seen that the disease has its beginning in or near the center of the cornea, the clear part of the eye. Near the center of the cornea there is found a small blister projecting slightly from the rest of the eye. A little later this blister breaks, discharging its contents, and forms a ragged-edged ulcer. Toward this ulcer the blood vessels radiate, giving a very characteristic appearance to the eye. As the disease continues, the front of the cornea becomes opaque, having a scum over it, due to the dying and passing off of the outer layers of the cells forming the cornea. If the disease assumes a light form, the ulcer heals, leaving a scar that is hardly noticeable after the eye has cleared. However, if it should be a severe attack, the ulcer may slough through the cornea and cause the destruction of the eye.

The period of incubation, the period that the disease is in the animal's system without the symptoms being visible, is probably from three to seven days. The full course of Keratitis is from three to six weeks, depending on the severity of the attack. All cattle, both young and old, are subject to it.

Treatment.

Isolation, the separation of the diseased animal from the well ones is of great importance, and should be practiced whenever it is practicable.

Treatment has proven quite satisfactory. If possible, the affected animal should be placed in the dark as the light is often painful to the eyes. We would recommend the following treatment out of the many that have come under our observation:

Drop into the eye two or three times every day, morning, noon and night, a few drops of the following eye-wash:

Argyrol, two grains; water, one ounce, or protaryol, two grains, water, one ounce.

If the ulcer refuses to heal it may be stimulated by touching it with a solution of silver nitrate, five grains, to one ounce of water.

The opacity of the eye will gradually disappear but it can be materially hastened by the use of three grains potassium iodide to the ounce of water dropped into the eye two or three times daily.

To put the medicine into the eye use a small eye dropper. Place the hand that holds the dropper firmly against the head of the animal so that the hand will follow all of its movements and so prevent any accident of injuring the eye with the dropper. The medicine should always be put in at the outer angle of the eye as the lids commence to close at this angle and will therefore force the fluid over the surface of the eye.

Deers Drop Old Horns for New.

As every year horses shed their old coats for new ones, so the deer drop their old horns. Then in about 13 weeks a new pair of horns arrives, but they are tender and easily hurt.

Now Is the Time to Learn Telegraphy!

We know of nothing that will bring such quick and sure returns for a small investment of time and money than a thorough course of Telegraphy. Not only are the railroads and telegraph companies short of men, but the United States army is needing hundreds of operators for the signal service. We have the strongest school of telegraphy in the northwest. We can not fill the demand for our graduates.

Other practical courses given, such as bookkeeping and accounting, shorthand, college preparatory and vocational training.

Southwest Wash. Fair

(Continued from page three.)

Mare, four years and over—1, on Louise. Three years old—1, on Thelma. Yearling filly—1, on Lyzetta. Colt unnamed—1, on unnamed.

Belgian.

Stallion, four years and over—1, C. A. Packenham, Chehalis, Wash., on Bourbon; 2, Fred Blechschmidt, Oakville, Wash., on Carlos d'Elst.

Grade Draft.

Two very fine draft teams were shown. H. W. A. Tram, Adna, Wash., was first; W. A. Hamilton and Sons, second. A few other mares, geldings and colts were shown.

Duroc Jerseys.

C. W. Shumate was the only exhibitor, with eight head. Little Chief was the champion boar and Jennie L. Goodwin, champion sow.

Large Yorkshire.

J. A. Scollard showed one magnificent sow and litter of eight pigs. They were awarded first in their class.

Berkshires.

George Bertrand of Olequa, Wash., and C. W. Shumate, Tumwater, Wash., exhibited Berkshires. Mr. Bertrand received every first. His three-year-old boar, Woodrow Wilson, was made champion, and Majestic Girl, champion sow.

Poland Chinas.

C. W. Shumate, Tumwater, Wash., was the only exhibitor, with a full herd. Championship on boar was awarded to Hercules Pride and on sow to Pride's Lily.

Chester White.

Ed Schoel had a full herd and O. O. Phelps and Son a few. The latter received first and second on sow pig, without competition, and Mr. Schoel all the rest, including championships.

The sheep shed was well filled and most of the exhibit was of excellent quality, though some might have had more fitting.

Southdowns.

J. S. Hubbard, Monroe, Wash., was the ony exhibitor. He showed 16 very fine, highly-fitted animals and was awarded first and second in all classes.

Hampshires.

J. G. S. Hubbard and Ed Schoel of Tangent, Ore., each had an exhibit, Hubbard winning all firsts and seconds.

Shropshires.

Felzer Brothers, Tangent, Ore., filled all classes and were awarded all firsts and seconds.

Oxfords.

C. P. Kizer, the only exhibitor, was awarded all premiums competed for.

Rambouillets.

Ed Schoel showed the only sheep of this breed and received all awards for which he made entry.

Lincolns.

Just two very nice Lincoln yearling rams were shown by J. G. S. Hubbard. They were awarded first and second.

Entiat Fruit Shipments.

From reports of the various district horticultural inspectors in central Washington, compiled by the United States agricultural department, the Orondo and Entiat fruitgrowing district will ship 643 cars of all kinds of fruit during the season of 1917. Six hundred cars will be apples. There will be a normal crop. There has been little difficulty in obtaining the necessary help.

Farms Sixteen Sections.

Luther P. Turner, who farms 16 sections of land near Harrington, in the Big Bend country of Washington, has returned to Spokane after a visit to his property, where harvesting is under way. Mr. Turner has four combines working on his 4700 acres of wheat, and they are cutting about 130 acres a day. "We will not have a heavy crop this year," says Mr. Turner. "In fact, we will have very little wheat. The grain is not running more than 12 to 15 bushels to the acre."

Fair Dates.

Pendleton, Roundup—Sept. 20-22.

SAVE $2.00

In these strenuous war times, when the ever thought of saving in every way possible is foremost in each mind, mighty few real opportunities are placed before the farmers of this glorious Pacific Northwest. No real bargains, when any big saving worth while can be made, are offered to the reading public. Right now, when prices of all things are mounting skyward, here comes a bargain offer that should appeal to every one that it reaches. Instead of adding to the increased expense of our readers, we are making them an offer that they can not and should not hesitate to grasp. Read this big bargain offer and see for yourself the saving you are making by taking

THE WASHINGTON FARMER

(A Three-Year Subscription.)

Included in this special saving offer is a three-year subscription to The Washington Farmer, the biggest and best exclusive farm paper published in your own state, for your own interest and of such value to the farmer that he can not afford to be without it. Its various features, its many departments, its interesting and educational items and facts, and its general farm news are worth their weight in gold to the farmer. It's the most complete farm paper published.

REGULAR SUBSCRIPTION PRICE $1.00 A YEAR

There is also in this same bargain another paper—a twice-a-week newspaper, which keeps you accurately posted on local, state, national and world affairs. Its news is complete and reliable—condensed for the busy readers. Its connection with the largest daily newspaper in the Inland Empire, its membership in the Associated Press, the greatest news gathering service in the world, give it news value that no other similar paper can claim. The regular annual subscription price is $1.00.

Ups and Downs of a Bunch Grass Boy

CHAPTER XXVI.

By JOE L. ASHLOCK

(Copyright, 1917, Joe L. Ashlock.)

Looking back to the days of pioneering in the Big Bend bunchgrass when I was beginning to take hold of the heavier tasks on the farm, I can remember a few brights spots in the weather. There were days when the wind blew cool and moist across the miles of waving grass, and the sun smiled down in a friendly way, neither too hot nor too cool; and if it did begin to get a bit warm, an accommodating cloud blew across it about that time and cooled it down a bit. The country was very nice to live in then.

But more frequently I can remember the mornings when the wind was cold and raw, and searched out the holes in one's clothes, chapped his hands, face, lips and bare feet. A child's skin is more tender to the cold wind than that of a grownup. Under the constant beating of the cold wind a child's skin becomes raw and inflamed. Tiny lines of blood appear, and crisscross the top of one's bare feet and neck and cheeks and hands. The lips crust hard, and then the crust cracks in lines and bleeds. The dust gets into these bleeding places, and if the dust happens to be a bit alkali, it is most irritating.

But the real trial came at night when mother got out a bottle of glycerine and rubbed my face, lips, feet and neck. Wherever she found the crisscrossed lines of blood she put on plenty of glycerine. The pain was excruciating. It was a good deal like being scalded with hot water, or stepping on a hot iron. Out in the wind when my face and neck and hands began to chap I thought not of the pain of the chapping. I shrunk when I thought of bathing these chapped places with cold water, and having glycerine rpbbed on them. Sometimes I howled and kicked, but, finding resistance useless, I gave up. About that time I read a story in which was emphasized the "stoicism" of Indians when tortured. The story aroused my admiration for the noble, intrepid red man. Thereafter, when I saw the glycerine bottle coming, I "played Indian" and suffered in silence. There was some consolation in thinking how much worse it would be if I were being burned alive.

Next to the chapping wind, a hoe handle, or the handle of a pitchfork, used all day long, ranked as a producer of misery. The country life enthusiast who gets out in the nice spring mornings and basks in the fresh morning air at the end of a hoe handle for a little while misses the real pleasantries of a task of this kind. Let him hoe all day long—or, better still, let him pitch hay all day long. If he is not "hardened to the work" by evening he will feel numerous aches and pains where he never felt aches and pains before. Many oth his joints will feel as if they were loosely strung together and would fall apart if he moved too suddenly. In short, he will feel as if he had been used as the rope in a Fourth of July tug-of-war.

But that is not all, nor the worst. His hands will have most of the skin worn from the palms and parts of the fingers that were in constant friction with the fork handle. If his untrained muscles had stood the tension during the day and his bones continued to work in their customary sockets, he would have hands so stiff, raw, and inflamed that he could hardly use them at the supper table. Of course, if one could wear gloves during the day his hands would be saved. But wearing gloves in farm work was an indication of wealth which none of us bunchgrass youngsters ever dreamed we would possess.

My first farm task of real importance was to pull water hand over hand from our 50-foot well for the farm stock. Two buckets were put on a rope, one at each end. The rope ran through a pulley up above your head. While you pulled one bucket up, the other went down. One must be careful not to bang the buckets together as they passed in the well, nor should one bang the upcoming or the downgoing bucket on the side of the well.

My dog chased a squirrel under the curbing once, and right away afterward I heard a squeal and then a splash down in the well. Looking down I could see a few ripples in the water and thought I saw a swimming squirrel. Of course it drowned in a little while and, of course, it was my job to go down in the well and get the squirrel.

Mother and father both remarked upon my courage while they were fitting up the windlass and rope to let me down. I was surprised that they did so. Inside, I felt like ice water, and the only reason I did not talk was that I knew my teeth would chatter if I did so. I examined every inch of the rope twice to make sure that each strand was good and strong. I would trust no one, not even my father, to tie the loop in which I was to sit while being let down. These details I looked to myself. The time at last was at hand. I slipped into the loop, took a farewell look at the sun, and told father to "let 'er go." Down I went.

I reached the bottom of the well without mishap. It had been dipped almost dry, but there was still six inches or so of water, and it was trickling in from the sides. I felt about till I found the squirrel, then another and another. After that came a pocket knife I had lost; then a couple of tin cans that somehow had gotten in the well, and there was a lot of mud. I asked for a broom and a tin pail, both of which presently came down. I could see the anxious faces of my parents hanging over the edge of the well, and I yelled at them to keep back—I was afraid they would fall in on me. With my bucket and broom I scrubbed the well till the black rocks were perfectly clean, and sent up bucket after bucket of mud. By the time the job was done my courage had returned; but just the same I was glad when they wound me out of the well and with steadying hands helped me away from the edge of the deep hole.

By the time I was 15 we had several horses and a few cows and some hogs and chickens. I suppose I pulled water from the well two hours a day. One can imagine what several years of daily exercise of this kind would do to the arms and shoulders of a growing boy. It gave me a muscular development in those "pulling places" clear beyond the average for my years; and helped to put me into the harvest field a bit ahead of time.

My first season in the harvest field was the hardest. I think that for days the ache never left my shoulders, arms and wrists. I did a prodigious amount of lifting—much more than I needed to do. I had not learned the tricks of the trade.

Gradually I learned. I found that muscle was not all that counted. One must use muscle shrewdly and conservatively if it lasted all day in the hot harvest field when the grain was heavy. I learned to know by the "feel" of the straw when I shoved my fork in whether the load would pull out well balanced and compact, or loose, unbalanced, and stringy. If it came up lop sided, I felt again. I learned to get under the lift, instead of pulling up a forkful at arm's length. Pitching onto high stacks, I learned the trick of giving a well-balanced forkful an artful, upward shove just at the right time as it went up, so that it would by its own momentum spring up on the stack. Tricks of this kind made one's muscle last.

I learned to take hold of the fork low; to apply the leverage of my body to exactly the right spot in the fork handle so that my leverage would bring up the load with the minimum lift. I learned the crime of pulling at a load that was bound in the bunch—always feel for the top, loose part. These and a lot of other pitchfork tricks I learned, and all this was merely in the pitchfork department of my training for farm work.

When I started to handle horses in the field I had another education to acquire. The driver of a team has more to do than to hold the lines and yell "get up" and "whoa." The big horse will shirk, maybe, and do it so cunningly that the untrained driver would think he was pulling his heart out. The little horse may dig in and kill himself if not held back. There is the right and the wrong adjustment of every buckle on the harness, the collar, the tugs, the eveners, and so on. It is an education by itself, merely driving a team in the field, if it is done right.

Joe Hennon, fresh from Missouri, where he had worked at the barber's trade, helped us in harvest one summer. He had had a little experience in pitching bundles. But he had never pitched loose grain. He could not tell by the "feel" when he struck in his fork whether it would bring out a well balanced load, or a loose, unbalanced load that woul dspill apart when he raised it. He would try to take a big forkful and get more than he could lift because he simply couldn't get the trick of getting under the load. Finally he would tear out his big forkful. It would come up lop-sided, the fork handle would twist in his hands, and half the load would spill off after he had lifted it once—waste of energy!

Joe was strong and wiry and determined and he went at the job with the energy of three men. But in spite of his frantic efforts, he began to get behind. We would drive into the stack, unload, and before he could get away from the stack, a wagon would be waiting for him to get out of the way, and the header puncher would be yelling "wagon" and waving his hat. Joe nearly went wild, and the harder he worked, the less he accomplished.

He began the job wearing a derby hat. In his stampede on the hardest day he had an accident of some kind, in which his hat fell off, nd in the confusion, he stepped on his hat and broke a triangular piece out of the crown; and the fragment flopped down over the back of his neck while he fought and worked madly.

Finally, towards the close of a hot day in fairly heavy grain, Joe gave out. I though he would die, he looked so white and weak. I climbed into his wagon to help him get his last load upon a high stack; but this offended his pride, and with the remnant of his strength he staggered to his feet, brandished his pitchfork and vowed he would hit anybody that climbed into his wagon. The poor devil was half delirious, but had the grit to stay with the job.

The next morning Joe was so stiff and sore that when he got out of bed he had to roll over and over and slide out standing up. He could not bend himself anywhere without groaning. When he walked he took steps about a foot long and moaned every third or fourth step. In his body he had some badly misused muscles, and they were getting even with him.

A few days later Joe was sent out into the field to harrow. This task involved driving four horses abreast hitched to a three-section harrow. It was assumed that he could do this, since it was mainly a matter of walking, turning corners, and hanging to the lines.

So far as Joe Hennon was concerned, all horses were wild, I suppose. Anyway, he had a runaway his second day in the field. Why under the sun the horses ran away I can not imagine, for they were all gentle and well broken, except one, a big, clumsy, 1400-pound colt that was so lazy that it would go to sleep and fall down while standing in the harness.

The horses broke loose from the harrow, and ran into a two-strand barbed wire fence. Two went over the wires and two stopped. The runaways then swung around and raced down the fence, two horses on each side of the wires. No one will believe me, I suppose, but, anyhow, it is the truth that not a horse was injured, barring a few scratches. Nor was the harness badly broken.

Joe Hennon was scared nearly out of his wits. He raced over the plowing behind the team yelling "whoa" and falling down now and then in his extremely great excitement. After it was over, it seemed funny, and some one said that nobody but a greenhorn from Missouri could have a runaway like that and not smash something or kill a horse. Joe didn't see the humor of it all, when we told him that on the morrow we would send him out in the field driving a cow, a pig and a sucking calf. At the supper table he trembled so that several times he spilled potatoes from his fork before reaching his mouth.

While I never learned to handle "wild horses" with my great amount of confidence, I at least had a good bump of caution; so on the morrow it was my lot to take Joe's spoiled team out in the field. Most people will know that a spoiled gentle team is even more treacherous than a wild team. Spoiled horses are liable to do anything at any time, and when they do it, they do it all at once.

On my first day I shaved so closely to disaster with this spoiled team that I do not think of it with any great comfort now.

I had been riding and driving all day. That is, instead of walking behind the harrow, I rode a tolerably well broken saddle horse. When I stopped to

SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University).

What Red Hair May Tell Those Who Read Character

Human hair contains bits of substance called particles or pigments, which are either reddish yellow or a sepia brown in tint. These are the only two colors which tint the hair. According as your hair is red or brown, flaxon or black, the numbers of these pigments specks are large or small, numerous or few, intensely colored or not.

Red hair, for instance, may be Titian or light red. The intensity of the yellow pigment in each hair occurs in such variation that almost any shade of red may be formed. Combined with brown pigment, the yellow yields the more sombre shades of red hair. An excess of brown pigment may completely hide the few yellow particles. This will yield chestnut, brown or black tresses. Often the brown particles are all absent. When this occurs red hair appears at its best.

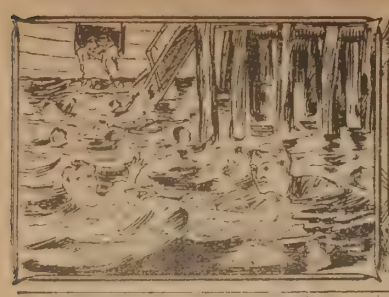
Dr. Hirshberg.

The Laws of Nature.

When a brilliantly red-haired girl is married to a bright red-haired man, the entire absence of brown pigment in their hair will be passed on to their offspring. The children will all have red hair and usually the temperaments, such as bravery, quick temperedness and good nature, which often go along with red hair.

However, the laws of heredity make it equally certain that when a red-haired person marries a dark-haired individual, there will be no red-haired children. All of the children born of this match will be dark-haired. There is one exception. If the dark-haired mother or father of such a union had any red-haired ancestor not too far back, half of the children may have red hair. Should there be a few red-haired persons among the immediate ancestors and progenitors of both the mother and the father, these two may have hair ever so dark, yet a few of their children will have red hair.

Some Characteristics.



Obviously, if red hair is a temperament-linked factor in heredity, as it sometimes appears to be, such traits as this red badge of courage seems to picture in most minds, may be expected to be present.

Sandy, reddish, ruddy, auburn, aurora, sunburst and Titian are names given to various shades of red hair, but there is no certainty as to which is which in so loose a classification. Andrew Jackson, James Russell Lowell, Swinburne, Savonarola, Thomas Hobbes and other famous men had red hair of one tint or another.

Often characteristic of those who have red hair is an openness of deed and word, a care-free disregard of peril, a quick resentment of insult, a fine and fair sense of humor and justice and a wholehearted absence of all such mean impulses as malice, hypocrisy, insincerity and backbiting.

Cause of Lumbago.

Lumbago may be caused by the poisons from constipation, bad teeth, tonsils, prostate gland, position of standing or walking, posture, occupation, over-reaching or excessive bending. The cause must be searched for diligently by a qualified diagnostician, and treatment given accordingly. The use of a small electric vibrator on the painful part may relieve, but the search for the cause must be made.

UNDER THE BLACK CANOPY

By Paul E. Triem

CHAPTER V.

From somewhere on his right Joe could hear the silvery ripple of water on the pebbly beach, and with this sound as a guide he was able to strike a fairly even course along the smooth, firm shorelands. Sometimes he stumbled upon grotesque heaps of driftwood and logs, twisted and riven stumps showed white and ghastly in the days of his lantern. Sometimes the wind from the Sound was quickened, so that for a moment the smoke was driven back in swirling clouds, and at these times he could look over the distant forest, and could catch the sinister reflection of fire against low-lying clouds.

He walked swiftly and kept as close to the edge of the timber as he could, looking for the skid road of which Mr. McClosky had spoken. The night thickened about him and he broke into a trot. Once he tripped on a root and went heavily to the ground, extinguishing his light and narrowly missing breaking the chimney, but he was up and on his way a minute later. The long, strenuous afternoon was forgotten, and his mind was set upon but one thing—to find the logging road and follow it to the hotel before the racing fires should shut off this means of approach. As to what he would do when he got there he had not the faintest idea. He would answer that problem when he reached it.

A black niche showed in the underbrush at his left, and he paused suddenly and went closer. Then his heart jumped with exultation; it was, indeed, the entrance of an old road, whose corduroyed surface showed that it had been used for conveying logs. Joe held his lantern up and tried to see something of the trail ahead, but the air was thick and he might as well have been shut in a closet.

He had advanced perhaps a quarter of a mile along this road when there came to him from somewhere in the darkness which had closed down about him a sound that brought him to a standstill. A chill struck him, for it had been the sound of a human voice, thick and guttural and apparently almost beside him. He listened with his nerves strained to the snapping point, and next moment it came again. Joe thrust his lantern into the thicket at his right and stooped forward till he was peering at the ground some five feet away.

Then he threw out his hand and thrust the bushes aside, and in a moment was stooping over a figure huddled against the root of a tree. No second glance was necessary to identify it—the tall, lithe body was drawn up with a spasm of pain and the long arms were doubled under—but it was Andy Dubois, undoubtedly. Joe placed his lantern on the ground and gently rolled the Frenchman over upon his back. Andy's face was white, and a deep cut across the forehead and running up into the hair showed what had happened; in some way he had fallen and cut his head upon a rock. Afterwards he must have tried to resume his journey, though what his destination could have been Joe could not comprehend.

For a moment Joe paused to consider. Then he took up the lantern and crawled back into the road and hurried along it to where he had passed a puddle of water. In this he wet his handkerchief and hurried back to Andy. Carefully he bathed the wound, then wrung out the handkerchief and bound it in place with a strip torn from his shirt. He realized that this was a most unscientific method of treating a cut, but it was the best he could do.

Andy moved restlessly and spoke.

"Mighty dull ax you've got there, Jensen. Don't let it slip again—you've nearly killed me."

His eyes remained shut, and Joe realized that whatever he did for the injured man he would have to do unassisted. Andy was delirious, and might remain so for hours or days. With another strip from his shirt he tied the lantern about his neck. Then he raised the Frenchman into a sitting posture and braced him against the tree. Andy cried out incoherent protests, but Joe kept steadily at work. It was no easy task to kneel in front of that limp figure, to get it upon his back and to climb to his feet. After he had accomplished this Joe stood puffing. Then he pushed into the road and resumed his journey, which had become almost a hopeless one.

A score of times during the hours that followed it seemed to him that he must give up. If Andy could have helped a little, could have held himself upon the rescuer's back, it would have been infinitely easier, but to hold that nerveless weight in place and to stagger along through the thick, bitter air of the burning forest, minute after minute, became an unspeakable torture. But all the time there came to him the remembrance that if he surrendered he had no choice but to leave the Frenchman in the direct path of the fire, which was sweeping down along the edge of the Sound. Whether or not Andy would be better off by sharing Joe's fortunes remained to be seen, but it was very certain that he had no chance for his life if he were deserted.

The red flicker in the sky was visible constantly, and Joe imagined that at times he could catch the distant sound of wind or flames rushing toward him. Doggedly he staggered forward, with his mouth dry and his lungs aching.

And then, just as it seemed to him that he must surrender, that he must drop to the road under the weight of his insensible burden, the track widened before him and he came out into a clearing at the farther end of which stood a great log building. It was a two-story affair, built after the bungalow fashion and all of its windows were brilliantly lighted. The porch, too, was illumined with the subdued rays of a number of huge paper lanterns, and in this light Joe made out a group of people, sitting about in easy chairs. He called out hoarsely as he staggered into the clearing; and as they crowded about him he sank to his knees and let Andy slide to the ground.

A shrill, excited voice sounded close to him. "Why, it's Mr. Dudley—the man that pulled me out of the water! How ever did you get here?"

"Walked," Joe explained breathlessly. "What are you people sitting around here for—don't you know that the fires are closing in and that you'll be roasted like peanuts?"

A stout, florid, middle-aged man stepped close to him, his eyes bulging with excitement. "Do you think there is any danger?" he asked, in great excitement.

Joe, who had been examining the figure on the ground, looked up impatiently. "Danger," he repeated; "I hope it's no worse than that! I'm dead tired, but I want you people to get together what few things you actually need, and to be ready to come with me in twenty minutes. Don't load yourselves down with a thing that isn't necessary—just take a little food and some bottles of water."

The florid man, whom Joe afterward learned to be the landlord, led the race back to the hotel; and when the young man looked up, a moment later, there was no one near him except the youngster who had first recognized him.

"You must go and get something to eat, my boy," Joe told him. "And listen—is there a horse here that I can put this poor fellow on? He's coming to, but he'll be too weak to walk for some time."

"My horse is in the stable," Jerry told him. "I'll bring him in a jiffy—and I'll have Mrs. McCarty put up lunch enough for you and me."

He was gone, and Joe was alone with Andy Dubois. The young Frenchman was beginning to stir restlessly, and presently his eyes opened and he stared up at Joe. Then he tried to sit up, but the effort was too much for him and he dropped back with a groan.

"What's the matter?" he demanded in a husky whisper.

Joe shook his head. "I don't know. I found you beside the skid road with a nasty cut across your head. I brought you on here—this is the Crystal Springs hotel, and the fires are all about us."

An expression of bitter hopelessness settled over the logger's face, and he tried to turn away

"It was my own fault," he muttered sullenly. "I did a pretty mean trick to you—I think I was out of my head. And then I started to run, and I fell into a stump hole."

"How did you get so far in this direction?" Joe asked gently.

"I can just remember figuring that the fires were going to get in between these folks and the water, and I must have tried to get over here. I—I don't have much luck doing the square thing, even when I try."

Joe had taken off his coat and folded it into a thin pillow, which he placed under Andy's head. Jerry Stevens returned a few minutes later, leading his pony and carrying a basket of lunch.

"Mrs. McCarty put up mine first," he explained. "I knew she would—I say, you better let me get some bandages and cotton and fix that up. I know how," he added proudly, surveying Andy with a sort of professional interest. "I learned when I was in the hospital."

"That'll be fine," Joe assured him. "But don't waste time. We've got to be on the road in ten minutes."

Jerry was back in an incredibly short time, carrying a roll of bandage and some absorbent cotton. Joe had stripped of his own crude dressing, and helped the youngster, whom he quickly discovered to be as deft as a hospital intern. By the time the first of the summer boarders arrived, Andy was rigged up with a trim, white bandage.

He rebelled at the idea of riding, while the women and children walked.

"No, I won't do it," he declared tremulously. "I've done lots of things I'm ashamed of, but I couldn't do that, you know."

"You'll have to," Joe assured him kindly. "We've got to make good time, and you're in no shape to walk. Please hurry."

For an instant the Frenchman seemed on the point of rebelling fiercely; then he dropped his head and allowed Joe to help him into the saddle.

the landlord had marshaled his forces and had provided lanterns for about half a dozen out of the 15 guests and servants who formed the little company. Joe and Jerry started ahead with a lantern, and a few minutes later the forest had closed in behind and above them. Joe had explained his plan to the men.

"We must try to get back to the sound by following this skid road. I'm afraid it will be too late, but the fire won't run as fast in this green timber as it would in a slashing. If we can make the beach, we'll be all right."

Smoke was driving over them in inky clouds, and the sullen glare of the fires against the sky was creeping along so that it threatened soon to be directly over them. A little girl who had been bravely limping along beside her mother began to cry, than sat down in the road and declared she could go no farther.

"I've got a stone bruise from going barefoot," she wailed, "and I'd rather stay here alone till morning than walk another step."

"But, dear, you couldn't stay here," her mother told her. "The fire will sweep all of this timber, I suppose."

Andy Dubois leaped forward and spoke awkwardly to the woman. "If the little girl wouldn't be afraid, she could ride here behind me," he said. "I'm ashamed to ride with the rest of you walking—and I could at least do this much."

Without waiting for the youngster or her mother to accept this offer, Joe swung her up behind Andy.

"Hold tight!" he cried. "Come on—we can't stand here."

For half an hour the little procession hurried silently along the road. Then Jerry Stevens pulled Joe's sleeve and whispered to him.

"I don't want to scare the women," he said, "but—I saw a spark a moment ago—a big one—flying over."

Joe nodded. "We're not going to made it this way," he agreed. I've seen them before—and we must have two miles to go."

He stopped and explained in a few words what had happened and what it meant.

"We've got to turn back and try another direction, he concluded. "It is traveling pretty fast, in spite of the green timber. I'm afraid the wind is rising."

In spite of the darkness and hardships of the night it was a brave-hearted little company that fell in behind Joe when he made this announcement and faced in the opposite direction. Only Mrs. McCarty, the hotel cook, rebelled.

"Sure I'll not budge another step," she declared, seating herself firmly on a log beside the road. "I've been boiled and roasted ivery day for the last 30 years, and I'm thinkin' it's useless for me to run away from a forest fire. It would no more than give me a good sunburn—the rest of you run along, now, and lave me."

Joe looked at the set and unyielding pose of Mrs. McCarty, and his heart sank. Jerry Stevens, however, went over and whispered something into her ear; and with a sigh of resignation the good woman stood up and joined the others.

"All right, Jerry, boy," she agreed wearily; "if your heart's set on it I'll come; but it's not the loikes of a fire like this can scare me, remember."

By the time they had reached the clearing surrounding the hotel they could catch the roar of flames as they swept through the strip of timber lying between the hotel and the beach. Joe told the others to sit down and get a few minutes' rest while he climbed into the upper branches of a fir tree and reconnoitered.

The tree he chose was one which lifted him well above most of the others in the neighborhood, so that he had a distinct view of such parts of the adjacent country as were lighted by the fires. The others, which represented possible avenues of escape, stood out as indistinct masses. Joe tried to impress upon his memory the relative positions of these light and dark squares on the checkerboard on which he was playing his desperate game; then climbed swiftly down, and by the light of a lantern which Jerry held for him he committted it to paper.

"It won't be possible for us to reach the beach directly," he explained to his companions, "as the fire has cut us off for miles in each direction. We must strike out toward the west and try to find a river or creek large enough to help us."

He helped Andy back into his saddle and lifted the little girl up behind; and the diminutive army was on the point of resuming the march when there came from a thicket close at hand a sudden crashing and scrambling, accompanied by muffled exclamations. An instant later they could see him—a tall, lean figure, dressed in khaki. He plunged into the light of the lanterns and for an instant stood with his hand over his eyes as if to protect them from the sudden glare. Then he spoke.

"If I'm dreaming, please don't wake me up," he begged, and his voice was hoarse and tremulous. "And if I'm not dreaming tell me where I am.'

"You're not dreaming," Joe assured him. "You are within a few rods of the Crystal Springs hotel—though that won't help you much. We're trying to find a way out of the timber before the fire hems us in—if it hasn't already done so."

The stranger's hands dropped from before his eyes, and at the same instant his manner became assured and confident.

"Just so," he agreed, with a sigh of relief. "But at least I know now where I am—my name is Stirling, and I'm a government ranger. I started out to reach my telephone box last evening, and the smoke swept down around me till I was choked and confused. I've been floundering through the brush ever since."

Joe looked wonderingly at him. "With your help we ought to be able to make it," he commented. "Here—I've drawn off a rough map of the country, showing the location of the fires from here. Maybe you can make something of it."

The ranger took the sheet of paper. His eyes narrowed and his lips were pressed close together. Then he placed the tip of his forefinger on a spot in Joe's map.

"My phone is there," said he, "and as near as I can figure we ought to be able to reach it. There's nothing in the way."

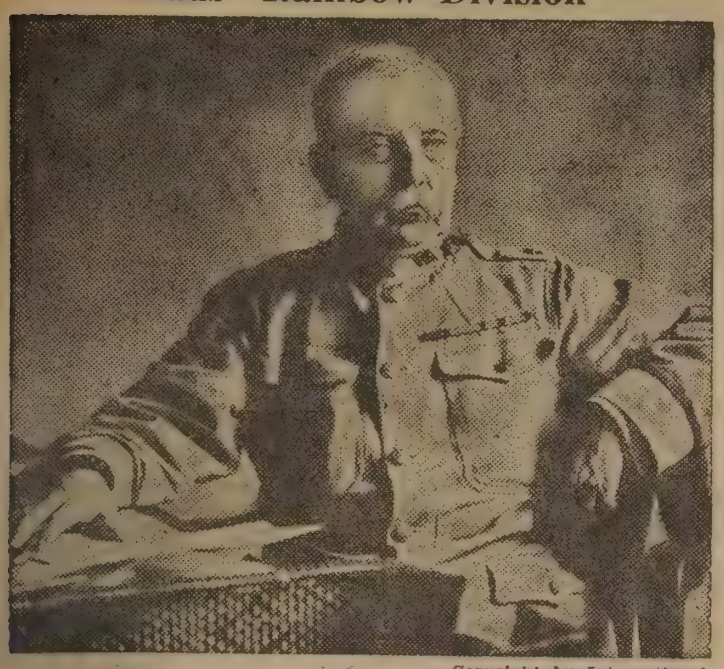
"How will that help us?" one of the hotel men asked querulously. "I don't want to talk to some one over a telephone—I want to get out of this and do it quick!"

Mr. Stirling nodded, with his eyes still fastened on the fire map.

"Sure, I know," he agreed. "But the phone is not far from here, and we may be able to get help, or at least information through it. If I can get headquarters they can tell us the best route out. Otherwise, we'll have to figure it out as we go."

He paused, and in the instant which followed there came to them from the distant forest the sullen roar of the fire and the crash of trees.

"Come," Joe said, "we must hurry."



(To be continued in next issue.)

English Army Grows.

In 1914 the British army, for which munitions were required numbered 275,000; today it numbers more than 5,000,000.

All the World's a Stage, and All the Men and Women Merely Players

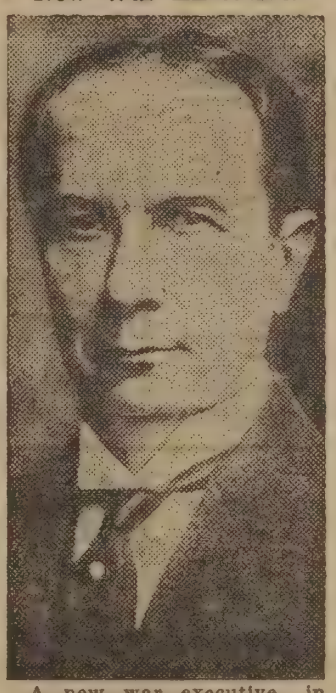
Leads "Rainbow Division"

Copyright by International.

A new specially posed photograph of Major General William A. Mann, who will command the Forty-second division, composed of national guard troops and known as the "Rainbow division," to leave soon for France. Some 26 states contributed troops to this division. The picture was made in Washington, D. C., and shows the major general at his desk.

Baking Bread for Fighting Men

Copyright by International.



Down on the old American battlefield of Gettysburg these days a huge corps of patriotic young nephews of Uncle Sam are learning the kind of "baking" that counts—they are baking bread for their uncle's fighting men. These bakers get good money, good clothes, good lodgings, good food and free medical attention—why don't you drop around to a recruiting office and see if Uncle Sam can't use you, too? What's more, he needs you. The picture shows some of those who have responded.

New Honor to Lafayette

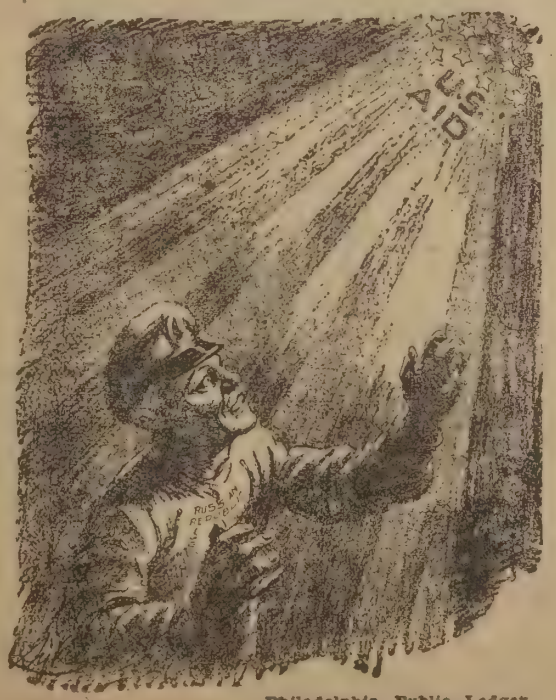
Statue of the Marquis de Lafayette, the work of Paul W. Bartlett, the famous sculptor, which stands in Paris and which will be formally unveiled on Lafayette day, September 6, in the French capital. It is likely that some of General Pershing's "Sammies" will take part in the exercises.

New War Executive.

A new war executive in Washington is Judge Lovett, executive chairman of the Union Pacific railway. President Wilson selected him to take charge of the determining of the priority of railroad shipments.

Ready for New York Guardsmen

Copyright by International.



The picture above gives a general view of Camp Wadsworth, Spartanburg, South Carolina, showing buildings erected for the great division of New York National guardsmen who left for the encampment August 30. Things are on the hum at Camp Wadsworth. The arrival of the entire division makes the post among the largest in the country. From here the guardsmen will embark for France at a time kept secret by the war department. Their departure from New York was marked with a big parade and send-off dinners. The division consists of about 32,000 men.

Many Ways to Save

To the Editor of The Farmer: I never throw out anything without thinking "can I use it." I never throw out any milk or cream. I use the cream to shorten biscuits or cookies and add the milk to the sour dough jar. I get a great many compliments on my biscuits and I make them with sour milk using baking powder, with a bit of soda to sweeten. Also use a little shortening.

Do you know that sour cream is much better with fresh strawberries than sweet cream? Prepare it as I say and you will never know it is sour cream. It has a velvet taste sweet cream never brings. It doesn't curdle.

Wash the berries, put on sufficient sugar to sweeten and stir thoroughly. Add cream and stir. I also use it in my short cake, as I prepare my berries this same way adding sweet cream to make thin, then put between layers of rich biscuit dough.

Never waste any fruit at all. Often there has been a little jelly, jam or preserve left from day to day. I put them all in a jar with what fruit is left over, add sugar and water and cook. You can combine anything except prunes, but these make dandy "prune cake."

Watch your bread can, as that is a leak in most households. What bread you cannot use, dry in the oven and grind to use over macaroni and cheese, or roll meat or fish in.

I always plan the general part of my meals in the morning. Even if there is only a little steak left over I cut it in small pieces, put it on the stove with some water and a chopped up onion, adding what gravy is left and cook it tender while there is a fire. You know we have to economize on wood at present. Just before a meal I repeat it, season, cover it with a short biscuit dough and have a meat pie, after it is baked.

We have a fine garden, but as space is limited in the city, I am putting a broccoli plant occasionally between my roses. As my radishes and lettuce were taken out I have transplanted cabbage and chard. I trim my roses in July for fall blooming for the showing at "State Fair." I have taken a good many prizes at fair on roses, dahlias, fancy work and canned fruit and vegetables, and why do not more of the women try for that? I don't find it hard.

I am going to dry corn so as to save the jars for other things we can't dry. Put the corn on to cook until the milk is set, cool a few minutes, then with a sharp knife cut off the top of the corn and scrape the rest. Put it on a cloth in the sun with mosquito netting over it. When dry heat in the oven but do not brown, then place in a tight bag.

I find you can make fine soup out of the leftovers, as beans, carrots, macaroni and cheese, rice, bits of meat and fish (not too strong), potatoes, etc., (anything except beets, and they make good pickles) by cooking, washing, straining and adding seasoning. Dice bread, brown and serve.

We have a large lot 100x130 feet with a large house and lawn, but we keep the rest of the ground busy. Even if people are only renting they could put out vines, berries and a few other things with the cost of only a few cents and sometimes they have them given to them. Think of the comfort some one else will derive. We have a plot 50x70 feet in garden, the rest of the place has a row of 50 feet in length of loganberries, Hymalalia berries of which I sold over 10 crates last year besides the jelly, jam and canned berries I used. Also Phynominal berries, everbearing raspberries, two peach and one quince and three cherry trees. We have four bearing walnut trees on the parking, six rhubarb plants, over 100 rose bushes, three lilac trees, one red Hawthorne tree, over 100 dahlias of different kinds, and this year planted over two bushels of Gladiolus bulbs. Besides we have some sweet peas, iris and lilies.

We derive quite a little revenue from the flowers as my small son has sold loads of them to the stores and restaurants up town. One summer we sold over $60 worth besides taking in $85 in prizes at the state fair. We have a lavender bush from which my daughter makes coat hangers and lavender sticks and makes quite a bit of pin money. Our lawn is 16 feet at the front of the house and 10 on each side. Our house is a large seven-room square one, hard finished and with a large porch. We have our bed on the porch this summer as it saves time and labor. A couch on the side porch behind the Virginia creeper for son and a bed on the screened in back porch for girls makes the work very much easier and by turning the hose on the porches it is cleaner for the summer than bedrooms. We have only lived in this place eight years and built our house in a bare lot. Any one could do with their lots as we have and it would cut down the high cost of living wonderfully. We do all our own work except sending our clothes to the "wet wash" besides doing dressmaking and growing about 200 varieties of dahlias. Interest the children is one secret of economy.

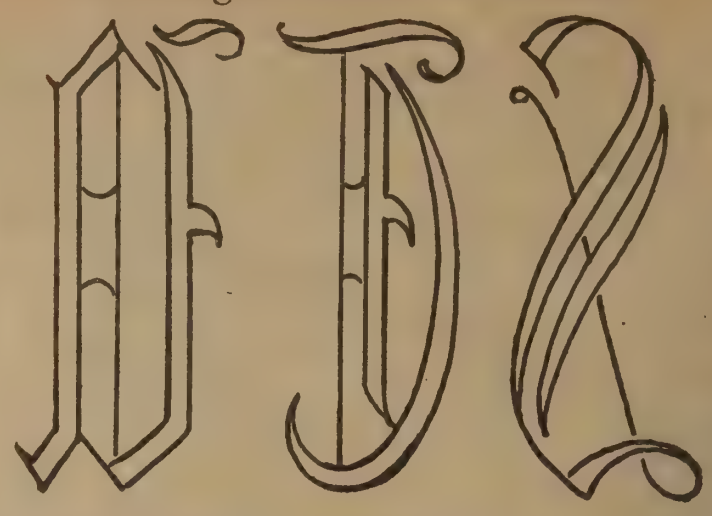
Ups and Downs of a Bunch Grass Boy

(Continued from page seventeen.)

unhitch in the evening, I was busy with the saddle or the lines for a moment, and my saddle horse started home. Busy, and used to being in the saddle, I did not notice that the animal was moving under me till he had passed the far end of the harrow, and the line to the far horse—the clumsy colt—was suddenly jerked out of my hand.



I did not shout "whoa," as oJe Hennon had done; that would have started the team like gunpowder. I did not have time to stop my pony; bent on getting the lost line, I reached for it, and lunged headlong out of the saddle as I did so.

My foot hung in the stirrup. I felt the yank as my startled horse bounded away. I snatched the lost line the very instant that the big colt made a forward lunge, stopping when he felt the strong jerk of the bit. It all happened in a breath, and silently. But at supper, like Joe Hennon the evening before, I was trembling a bit; and it was days before I got my nerve back to the point where I could safely ride behind a harrow and drive from the saddle.

Old Term for Judah.

The word "Jewry" occurs several times in the Apochrypha and New Testament, but only once in the Old Testament (Daniel v., 13). The same word is elsewhere rendered Judah and Judea

Old English Initials to Embroider

To transfer this design, put some soap in a pint of water, stir and remove excess moisture by partially drying design. Place material on a hard, flat surface and lay the design, face down, upon the material, cover with two folds of newspaper and, with a tablespoon, rub, pressing hard, until the design is entirely transferred.

White embroidery floss of linen quality, or the mercerized, is the best for making letters. Always soap the fabric with white soap under the initial before embroidering. It aids one in washing the color from the finished design.

In padding these old English initials, different methods may be used. Some use the twilled cotton for the purpose; others make the chain stitch, while others let a skein of floss out at full length and embroider a strip of it under the thick parts while forming the letter, clipping the skein when the initial is finished. This is a splendid method, quickly done, and is suggested, too, as a help in padding all large pieces in border or crescent outline.

Initial can be made by filling in the broad space with French knots. This is used largely on elaborate pieces, such as the laundry bag, table scarfs, and ornate gifts.

Perhaps He Had.

Outside on a board it had "Woman's Exchange" written in large type, and he walked in.

A tall, spinster-looking person, with a face that would have taken the polish off the furniture, came forward.

"Is this the woman's exchange?" he asked.

"Yes."

"And you are the woman?"

"Yes."

He scratched his head and regarded her for a few seconds, and then he said:

"Well, I think I'd better keep Sal, after all."—Ideas.

Any Way.

They were discussing the joke about getting down off an elephant.

"How do you get down?" asked the jokesmith for the fourth time.

"You climb down."

"Wrong!"

"You grease his sides and slide down."

"Wrong!"

"You take a ladder and get down."

"Wrong!"

"Well, you take the trunk line down."

"No, not quite. You don't get down off an elephant; you get it off a goose."—Indianapolis News.

BE SURE TO GIVE NUMBER AND SIZE.

Germans Death Toll.

According to German official reports, which place the German dead at one and one-half millions, more than 22 times as many Germans have been killed in action as were killed outright in our civil war. Nearly five times as many have perished in battle as died of wounds, of disease and on the field in the civil war. The number of these German dead are five times the total of men who engaged in the American revolution, and they are nearly three times as many as fought or shared in the war of 1812.

Federal Child Labor Laws.

The new federal child labor law went into effect September 1. Hereafter no child under 14 may be employed in any factory, mill, workshop, or cannery in the United States whose products are to be shipped in interstate commerce, and no child under 16 in any mine or quarry. The working day of children 14 and 15 years of age in factories may not be longer than eight hours and they may not be employed between 7 p. m. and 6 a. m.

Street railway employes at Vancouver, B. C., have received an increase in wages.

The DREADNAUGHT (REGISTERED)

ALL THE YEAR ROUND

Cooler cooking in summer—better and more economical cooking all the year 'round.

A good oil stove will cook anything that any wood or coal range will cook, and do it better because of the steady, evenly-distributed heat.

All the convenience of gas. Meals in a jiffy, and a cool kitchen in summer.

The long blue chimneys prevent all smoke and smell.

In 1, 2, 3 and 4 burner sizes, with or without ovens. Also cabinet models. Ask your dealer today.

NEW PERFECTION OIL COOK-STOVE

STANDARD OIL COMPANY
(California)

Dear Little Corner Children: I have received two letters recently which I classify together. One tells how a little girl earned quite a sum of money. The other tells of how another invested the money she had—buying a Liberty bond. Both these things are good and I am glad my nephews and nieces are earning money by honest work with the use of their hands and their brains, and also are spending it in such a fine way. While we think the Liberty bonds are going to be a fine investment, still that is not the real reason why we have bought them. The real reason is that we love our country and believe in her and want to help her.

This is a mesage to grown-ups, too.

Yours affectionately,

AUNT NELLIE.

Another Nice Letter From Alexander.

Dear Aunt Nellie: I have written to the Children's Corner before and was indeed surprised when I received my unexpected prize. I will have to thank Aunt Nellie many times for it. The prize was a story book by the name of "The Dog of Flanders." I thought it was a very good book. Its main characters were Nello, the little boy Patrasche, the old dog, and Jehan Daas, the old soldier. Jehan Daas lived in a little hut near Antwerp. Nello and the dog were both orphaned. Nello was Jehan's grandson. The old soldier was a very poor man. He was old and a cripple. Pat Rasche had to endure many hardships. His first master was a brute. He treated the poor dog terribly, and finally the dog had to give up. His master spent his time hunting pots, pans, buckets and wares of crockery and left Patrasche to draw the load as best he could. The load soon became too heavy and he gave up his work. He left him by the roadside where Jehan Daas found him and took good care of him. His only occupation was hauling milk to Antwerp. The dog, being very large and strongly sympathizing with Jehan, helped him take milk to town. Jehan soon died and left them all alone. They were too poor to pay rent to the owner and he being cruel now bade them to clean the home and leave everything to him for not paying rent. Nello and Patrasche were left to die in the cold. I am 13 years old and am in the seventh grade. I hope that my letter will please my cousins. Trusting to hear from anyone of my age and many others. Alexander Laurence Weitz, box 51, Endicott, Wash.

Loves the Beautiful Summer Days.

Dear Aunt Nellie: I enjoy the letters of the Children's Corner very much. I passed to the seventh grade and will be 13 years old August 25. Emma Sneva is my twin. She writes to me. Ellen Purcell is one year older than I am. There is a small creek that run into a larger creek and that is called the Olalla creek. We go swimming and fishing in it. I think summer is the best season in the year because then all sorts of berries are ripe and Oh, the beautiful summer days and the fun we have hauling hay and going swimming and wading. I live on a 26-acre farm. We have two cows, one bull, one heifer, one horse, one pig. The cows' names are Dollie and Lillie. The bull's name is Mutt. The heifer's name is Rosie. The horse's name is Maggie. We have three ducks, about 75 chickens, one dog and one cat. The dog's name is Duke. My cat hasn't a name. My brother and I have a strawberry patch together.—Esther Carslin, Olalla, Wash.

Has Fun Coming From School.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 9 years old and am in the fourth grade. I like to go to school. I live a mile and a half and more from school. I have lots of fun coming from school. We have 30 chickens, 24 chicks, four bantams and two big mother hens. I have light brown hair and gray eyes. My birthday is December 7.—Cecelia Viola Jones, Eatonville, Wash. R. F. D. No. 1, box 92.

Wants the Cousins to Write.

Dear Aunt Nellie: I have not written to the Children's Corner for a long time. I will choose for my subject "My Vacation." For my vacation I went up to my sister's and stayed up there three weeks. I came home and will stay until school starts. I will be glad when school starts. I have a garden of beets, lettuce, carrots, onions and cucumbers. There are four girls in our family and one boy. The girls' names are Minnie, Mamie, Pearl and myself. The boy's name is Wayne. He will be 2 years old the 16th of September. I am 11 years old and in the fifth grade at school. My birthday is the 14th of May. I have two ponies, and their names are Pet and Prince. I can ride Pet. Her color is black. Pet is a yearling, and Prince is just a little colt. I have a dog, and his name is Bonnie. He will speak. I have nine chickens. We have about 100 chickens. I have two sisters married and their names are Minnie Nickerson and Mamie Lenville. I have a little nephew named Glen Dale Nickerson. They call him Glen. He is seven months old and can stand against the wall. I would be very glad if some of the girls would write to me.—Beatrice Freddie Giles, Marengo, Wash., Box 24.

Tramping in the Hay Is Fun.

Dear Aunt Nellie: It is a long time ago since I wrote last. I thought I would write again. I was 9 years old March 10 and passed into the sixth grade at school. I am having a good time this vacation picking blackberries and they are hauling hay here now, so I have lots of fun tramping in the haymow. I am staying home this vacation. I wouldn't trade with a city girl for all the pleading one could say to me. Everything is lovely here now. There are many roses beside our house and around the yard. There are daisies and other kinds of flowers, too. The blackberries are ripe and the tame blackberries are in flower. The vegetables are in flower. The vegetables look very nice, too, as war is raging almost all over the world. I weigh 72 pounds. If I have a twin I would like to hear from her.—Walborg Brandt, Mount Vernon, Wash.

Fun to Go Wading in the Creek.

Dear Aunt Nellie: This is the first time I have written to the Corner and it may not be the last. I am 11 years old and my birthday is the 7th of January. I will go into the sixth grade in September. My two sisters, my brother and I are visiting on our grandfather's farm four miles from Northport. Grandpa has two horses, one cow, a calf, 12 hens, one rooster and about 90 little baby chickens. My uncle has a cat and a dog, too. We go fishing and wading in back of our house in the creek. We have lots of fun. I have three or four dolls, but the one I like best is named Evelyn May. I like to read the letters in the Corner.—Kathryn Smith, Northport, Wash.

Stand By Uncle Sam to the Very Last.

Dear Aunt Nellie: I am 12 years old and in the seventh grade. My birthday is January 31. I have written to the Children's Corner several times before. My subject this time is Loyalty to Country. Many heroes have bled and died on the battlefield serving and plodding onward for their country. These heroes died noble deaths and we should honor them. In this great world conflict we are now engaged in, we should especially honor it for it stands for our nation. We should support the United States boys who are in Europe for they may give their lives to give us freedom. We should all stand by Uncle Sam to the very last and help for world democracy. — Harvey Norris, Goldendale, Wash.

Julia Loves to Read the Letters.

Dear Aunt Nellie: This is the first attempt that I have made to write to the Children's Corner which I love to read. I live in the country on a farm of 120 acres. We have nine cows to milk of which I milk one. My father has four horses. Their names are Charlie, Fannie, Jessie, and Dolly. For pets I have three cats and two dogs, whose names are Cubbie and Dash, which is a hound. I have three brothers and one sister. Her name is Lena. My birthday is May 26 when I was 13. Have I a twin? I would like to correspond with any of the cousins about the same age as I am.—Julia Marie Neumeier, box 112, route 1, Chehalis, Wash.

Belong to the "Garden Club."

Dear Aunt Nellie: It has been about a year since I wrote to the Corner, but hope I am welcome again. I have one brother and one sister. My brother is 10 years old, and my sister 5. I am 12, and will go into the eighth grade when school starts. My brother and I belong to the "garden club" and are raising a garden. My garden contains beans and onions. I have 16 rows of beans about 100 feet long. By raising this small garden I am doing my bit for my country. I would like to get letters from my cousins and will answer all the letters I get.—Bertha Ellison, Thorp, Wash.

Kitty Lucy Is Belle's Pet.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am a girl 9 years old and in the fourth grade. I live on a 55-acre farm. We have 27 calves and 23 cows. We have eight big pigs and four little ones. I have one kitten. Her name is Kit Lucy. I have one sister and three brothers. Their names are Jennie Orral, Hampton and Wilbur. I would like to hear from some of the children.—Belle Hartung, Kennewick, Wash.

Is Visiting Her Grandmother.

Dear Aunt Nellie: I was very glad to see that the first letter I wrote to the Children's Corner was published. The subject I am going to write about is my vacation. I am spending my vacation with my grandpa and grandma. They live on a 160-acre farm. My home is in Spokane. My address is 302 West Indiana. I am 11 years old and in the sixth grade. I would like it if some girl woud write to me, because I have no sister. The first week while I was at my grandma's she gave me a little garden spot. I planted corn, beans, pumpkins, cabbage, carrots and muskmelon. I have to water my garden every day because it is so dry. I caught 100 squirrels in three months; I got 2½ cents apiece. There is always plenty of work to do, and I haven't much time to crochet as much as I want to. Last month I was very busy picking raspberries. There aren't any little girls around my grandma's for me to play with. I have a cluck hen with eight little chickens to tend to. I do not like to leave the farm, but I must as school starts next month. My grandpa takes The Washington Farmer, and I enjoy reading the letters very much. When I go home grandma is going to send the Children's Corner to me. And I will be glad to get it.—Barnetta Bartholomew, Tekoa, Wash.

Fido and Shep Are Ruby's Dogs.

Dear Aunt Nellie: This is the first time that I have ever written to the Corner, but I hope it won't be the last. I live on a 160-acre farm. We have 250 little chickens and 75 old chickens. We have 10 pigs, six head of horses, five geese, 10 head of cattle. I have three cats and two dogs. Their names are Fido and Shep. I have a piano. I like to play on my piano. I have taken 13 lessons. I am 11 years old. I have three brothers and one sister. My oldest brother's name is Alfred. He is 39 years old. Leona is 30, Henry is 37, and Sister Laura is 29. I go to the Lone Butte school. I am in the seventh grade. My teacher's name was Miss Rickerd. There are 15 pupils in my school. I live a mile from school.—Ruby Gertrude Hicks, R. R. 1, Box 24, Mansfield, Wash.

All About Margarette's Home.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. My subject is My Home. My home is at the foot of a hill and is entirely surrounded by trees. It is very pretty and very cool in the summer time. Our house was almost entirely surrounded by verandas. The roof slid off of one last winter. Our house is light green trimmed in dark green. We have an upstairs to our house. There are eight rooms in the whole house. I have some pets. I have two dogs, one cat, two bantams, one colt, named Prince, and chickens. I am 11 years old and in the fifth grade. My birthday is January 22. Have I a twin? I would like for some of the cousins to write to me. If this escapes the waste basket I will write again and tell you about being in the hospital sick.—Margarette Ruth Williams, Box 54 Anatone, Wash.

Collie and Dollie Are Saddle Ponies.

Dear Aunt Nellie: I will tell you this time how many sheep and hogs we have. We have 14 little lambs and 17 old sheep and we have 24 little pigs and 11 old pigs. My little sisters and I herd sheep, but Alice and I herd them most of the time. We have 13 horses and one spring colt and two yearlings. Our saddle ponies' names are Collie and Dollie. We have two cats and one dog. Their names are Snowball and Pussy and the dog's name is Bluche. I have three sisters and two brothers. Their names are Elsie, Alice, Clara, Victor and Chester. Elsie is the oldest of our family. She is 15. My little sister, Alice, will be 10 the 19th of December. I want the little girl that wrote to The Washington Farmer that is 9 and will be 10 the 19th of December to know that she has a twin. Our school was out the first of June. Our teacher's name was Mr. Stram. I like him fine. They are going to build a two-room schoolhouse. We milk three cows. We milk them twice a day. My papa is hauling hay. He will be through today. My birthday is the 21st of June. I was 13 years old.—Marie Ganguin, Goldendale, Wash.

A Good Time Wherever She Goes.

Dear Aunt Nellie: I have not much to say. This is just about what I did in the summer. I was out in the country and had lots of fun milking, feeding the chickens, getting the cows and taking care of the baby. My uncle and aunt live on the farm now. I baked cakes on the farm and in town I have lots of fun, too. I have a piano and am taking music lessons from Miss Inkster. I have been reading The Washington Farmer. I enjoy reading the stories that the children have been writing. I spent my Fourth of July in Spokane at Natatorium and had a very good time and in the evening we came back to Davenport to see the fireworks. We had a Sunday school picnic and had a good time. We had a program and dinner and in the afternoon we played games. I went to Minnie Falls and had a good time there fishing and playing. I was having a good time on Sundays. I go to Sunday school every Sunday. School is going to start pretty soon and I am going to be in the fifth grade. I am 11 years old. My birthday is the 12th of June.—Alice Reinbold, Box 136, Davenport, Wash.

We Can Help to Cheer the Soldiers.

Dear Aunt Nellie: I have chosen my subject which is How Can I Help My Country? Now I shall tell you. First, I can try to make money and help the auxiliary. Children can join the auxiliary and sew, crochet wash rags, knit sponges and so on. I can also economize. We can correspond with the soldiers in the trenches to cheer them up and many other things, too. I think I will write another subject which will be, What I Want to Be. Could you guess? I want to be a Red Cross nurse and nurse the soldiers that get wounded. I would like to be a nurse because you can help your country that way. I would like to win a prize if I could. There is a girl in Selleck, Wash., named Esther M. Bowers. Esther M. Bower of Roy, Wash., has the same initials as she has. I know Lucile Bowers. She lives in Selleck. I used to let her look at the Children's Corner in our Washington Farmer till she asked her father to subscribe for it and now they get it.—Mary Esther Symington, Box 97, Selleck, Wash.

Sunnyside	369	572.2	23.1	4.07

Coos Bay, Marshfield; W. C. Persinger, tester—"Ordered three carloads of alfalfa hay for members of association. 184 association cows tested for tuberculosis and only one reacted."

Siuslaw & Smith River, Florence; J. J. Henricks, tester—"We are making our plans for a dairymen's picnic on August 25th."

Lane County, Junction City; L. N. Ross, tester—"Two cows went to the butcher."

Linn County, Albany; E. W. Bortruff, tester—"Pastures are very poor. Many farmers are beginning to feed, while in a normal year they would still pasture for a month or two. Nearly all dairymen will have enough corn to fill their silos."

Polk County, Independence, W. J. Morgan, tester—"McArthur & Stauff's sale, the most successful ever held in Polk, again illustrates the value of records as an aid in selling animals."

Yamhill County, Amity; R. W. McNeal, tester—"Two men in the association are cooperating in the purchase of a purebred bull."

Gresham-Columbia Slough, Gresham; D. S. Frame, tester—"Pasture is practically gone and many of the dairymen are feeding from their winter hay."

Marion County, Salem; K. Hanneman, tester—"The members of the local cow-testing association expect to buy a number of carloads of feed if obtainable."

First Central Oregon, Redmond; G. M. Alexander, tester—"Heifers from best cows are being saved."

Washington County, Hillsboro; H. A. Stone, tester—"July being hot and dry with a scarcity of pasture as well as other feeds has resulted in a lower production; many cows being dried up has also caused a lower production; 12 unprofitable cows went to the butcher."

Tillamook Assoc., Tillamook; Ira J. Wolf, tester—"Since organization for 1917 work, four members have added purebred bulls to their herds for the first time. Twenty-five members out of 31 in the association have purebred bulls."

Washington Notes.

Enumclaw Assoc., Enumclaw—This association, which was without a tester during the month of June and which has never completed a year's record without a break or two of some kind, is now again on its feet.

Duvall Assoc., Duvall; A. J. Leonard, tester—"The state reformatory were feeding rye silage as a supplement to pasture. While some cows did not seem to relish it, most of them ate their feed up clean. Owing to the high price of milk, many farmers are trying to raise calves without feeding milk."

Montesano Assoc., Montesano; H. P. Hansen, tester—"One member who feeds about one-third of his milk to calves which he intends to raise for beef told me last month that they more than save their testing bill every month by picking out the low-testing cows for the calves."

Chehalis Assoc., Chehalis; B. C. Wright, tester—"The outstanding feature this month is the number of milking machines being installed. The labor factor is the principal stimulus. Cow-testing records here do not show that the machines are not as efficient in keeping up the production as the hand method; neither do they show the increased yield which salesmen very often claim for them."

Pierce County Assoc.; William C. Buell, tester—"Pasture is getting poorer, causing decreased production. Several members have filled their silos with a legume and grass crop and are now using the new silage to help out with the pasture."

Snohomish Valley, Snohomish; V. B. Riley, tester—"Ed Holcomb found that soiling and pasture were cheaper than pasture alone."

Skagit Valley No. 1, Mount Vernon; R. L. Lauderdale, tester—"With the present high price of milk, members are attempting to produce the most milk possible, dairying being the principal industry throughout the valley. New silos are going up rapidly."

Skagit Valley No. 2, Mount Vernon; Ray W. Ropes, tester—"The new wooden hoop silo which is now under construction on L. E. Jenning's farm is attracting a great deal of attention throughout the community. Many people have received bulletins from Puyallup and are planning on constructing one later, if Jenning's silo proves satisfactory."

Snoqualmie Valley, Fall City; Ray A. Walker, tester—"Pasture has been short the last month and in almost every case additional feed has been necessary."

Stillaguamish Assoc., Arlington; W. W. Henry, Tester—"The decrease in production last month is a good stimulus to induce the farmers to purchase milk scales. The most striking cases of decrease were due to pasture becoming short. Many cows dropped as much as 10 pounds per day. One member immediately began feeding green feed after the test last month. There are three members of the association who weigh each milking from every cow. These men have been able to hold their herd production up remarkably well."

Clallam County, Sequim; E. W. Soper, Tester—"Eleventh testing period finished and the association members are beginning to do some real thinking about signing for another year. From a personal standpoint I believe all the members have taken enough added interest in their herds to well repay them for the money spent in the cow-testing association."

White River Valley, Kent; Robert Cowan, Tester—"The farmers are commencing to wonder what they can feed this winter, so it behooves the testers to brush up on the fine points of feeds and feeding as the farmers must figure closely this year, and I find them already asking questions."

Wahkiakum Assoc., Skomakawa—"There were testing outfits on about half the farms visited, and although most of them have fallen into disuse, their effect on improving the dairy herds in the county is strikingly visible. So it naturally follows that the greater use of the tester will cause a marked improvement on the herds in the association. A. Grandberg has been using his tester for several years and I found that his lowest test for the month was 5.4 per cent in his herd of nine cows. I am arranging for the exchange of two Holstein bulls between William Morfitt and H. E. Caruthers. Both bulls are registered. I was called by Mr. Meserve to see a sick heifer suffering with some form of indigestion. I gave her one and a half pounds of Epsom salts, which had the desired effect and she was put on pasture the next morning."

Sunnyside Assoc., Sunnyside; G. W. Huston, Secretary—"A large number of the members are now stacking their cutting of alfalfa. Some is being contracted at $15 per ton, f. o. b. The tester, Mr. Keene, mysteriously disappeared at the close of the month and another tester has not yet been secured."

Ahtanum-Wide Hollow, North Yakima; R. Larsen, Tester—"The first six months of this association have just been completed with very encouraging results. We started the testing year with 550 cows listed. After the first month's test, two members of our association with eight cows each decided that they would change from dairying to beef raising—and a wise move too in consideration of the stock they had and the methods practiced. During the first six months in addition to the two herds of eight cows each which were doomed for the slaughtering block, a total of 30 cows have either been sold directly to butcher or are in process of preparation for the butcher.

A cooperative cheese factory located on the Tieton project has been recently set in operation and promises to give very excellent results. Mr. Bean has had personal charge of the work.

I think Cowan's idea of noting wants in exchange of dairy stock as well as supply, a good one. I frequently have demands for some good grade cows and nothing seems to be available around here except for the butcher. Of course, we will have some heifers from the hills this fall which will help some, but I have men who want tried and proven cows. I have heard that in Oregon quite a number of good dairy cows are being sold because of shortage of feed for this coming winter. I would like to hear more about this and something of the prices expected.

I would like to comment on the helpfulness of the monthly news letter which certainly contains many helpful ideas and suggestions concerning our work."

The Motor Car
On the Farm

Tractor Efficiency.

Reports we have gathered during the past few weeks show many tractors will be bought in the Pacific northwest during the next 12 months. This being the case, the following report from O. F. Weske, who farms 600 acres with a tractor having 8 horsepower at the drawbar and 16 horsepower on the belt, is especially interesting. Here is the way Mr. Weske sets it down:

One man, 6 months, at $65 a month.	$ 390.00
One man, 22 nights, at $2.50 a night	55.00
Repairs used on tractors, plows, disks and drills	56.22
Gasoline and lubricating oil used	333.45
Figuring 20 per cent depreciation on the tractor and 10 per cent on the other machines	195.00
Interest on $1200 invested in the tractor and other machines	72.00
Miscellaneous expense	54.44
Total cost of putting in 600 acres of wheat	$1156.11

"This is a total cost of $1.93 an acre, which, of course, does not include harvesting. When harvest time comes, I hitch two binders behind the tractor, and the work goes ahead pretty fast when it is done in this way.

"At the time I put these figures together, I was eager to know how they compared with the cost of doing the same work with horses, so I worked out the following comparison between the two methods:

"I have two horses, which I have owned for the last nine years, so I figured up the cost of these for the nine years and then divided it by nine to get the average cost of the horses per year. The result was $276.04, or $138.02 per year per horse.

"My tractor, which has a capacity of eight horsepower on the drawbar and 16 on the belt, is equal to at least eight horses. If you figure the cost of feeding one horse for one year at $138.02, it will cost $1,104.16 to feed eight horses. The cost of the fuel and oil for the tractor is $333.45. The difference in cost in favor of the tractor is $770.71 a year.

"Furthermore, it required only one man to operate the tractor and the implements behind it. It would require at least two men to drive the eight horses, which means the additional expense of one man. More time is required to take care of eight horses than to take care of one tractor, and, counting the original cost of eight horses and harness, it would mean twice the amount invested in horses as in the tractor.

"I think that sometimes we farmers do not realize that we can buy a tractor cheaper than we can buy horses for the same work. The depreciation of eight horses and eight sets of harness would be much more than depreciation on the tractor, and the interest on the investment would be at least twice as large.

"Besides making this splendid saving by the use of a tractor instead of horses, I do not believe that any average eight horses would do the same work under the same conditions, that was done with this tractor, and do it so well. We had very little rain while the work was being done, and I am sure the horses would not have stood up under these trying conditions. The tractor, however, works even better when it is hot than when it is cool. Moreover, you know that the average farmer who puts in as much as 600 acres of wheat keeps more than eight horses."

Here Is the Conservation Program

This is what the government is urging upon everybody as a means of preventing great suffering from hunger in many parts of the world, with the possible loss of the war as a result of improperly fed armies:

1. To eat one wheatless meal a day.
2. To eat beef, mutton or pork not more than once a day.
3. To economize in the use of butter.
4. To cut the daily allowance of sugar in tea or coffee and in any other ways.
5. To eat more vegetables, fruit and fish.
6. To urge, in the hotel or the restaurant frequented, the necessity of economy.

For The Ladies

Every housewife and home lover in the state would be proud to possess one of these fine quality articles.

- ☐ Coffee Percolator
- ☐ Table Silverware
- ☐ Aluminum Steamer
- ☐ Stag Carving Set
- ☐ Tea Ball Tea Pot
- ☐ Set of Dishes
- ☐ Ironing Board
- ☐ Aluminum Tea Kettle
- ☐ Peerless Cooker
- ☐ Casserole

Mark an X in the square of the prize you desire to earn. Any one of those ten quality value items would make a woman's heart glad. Each and every one is a useful article of exceptional quality that would add to the finest home in the state.

These fine articles are given away to our readers who secure a few of their neighbors and friends as subscribers to our paper. It's very easy.

News for Breeders

An Oregon Prize Winner.

C. P. Hembree of Monmouth, Ore., will show his fine Jersey herd at the California state fair this fall. His old herd bull, Unduletta's Prince, is looking good and he has a very showy lot of young stock, sired by Unduletta's Prince and Rochette's Noble. Imported Brilliant Spray, the cow shown above, that has a number of firsts and one or two championship ribbons, promises to show as good as ever before; and Noble Peer's Jewell, a cow with a show record begun as a calf, is looking well. Mr. Hembree has some Register of Merit records as well as show records, made by his herd. He is being urged to disperse his herd at a California sale this fall and seriously contemplates doing so.

H. A.

Green Meadow Chief.

The above picture snows Green Meadow Chief, one of the herd sires in the Jersey herd of Henry Stewart, Albany, Ore. He is a grandson of Mr. Stewart's senior herd sire, King Melia Ann Albany, and his dam, Abbe Lorinda, daughter of Golden Glow's Chief, that has 31 daughters in the register of merit. She has an official record of 701 pounds of butter in a year and an average test of 6.37. Her record was made with cheat hay and no kale. Tootsie of Wild Rose, another of Mr. Stewart's good cows, mentioned in these columns nearly a year ago, has a record of 755.8 pounds, made under the same conditions.

At present Mr. Stewart has 11 Jerseys on official test, one of them, 4 years old, on test the second time. The balance are all heifers with first calf and all making nice records. They are all daughters of the old bull King Melia Ann of Albany. This bull was bred in New York and his dam has an official record of 18 pounds, 15 ounces of butter in seven days. He already has seven register of merit daughters. Some of them began their test under 2 years old and produce from 405 to 455 pounds of butter.

H. A.

Spozza of Auburn.

The picture above shows Spozza of Ashburn 2d, one of the good Jersey heifers owned by J. M. Dickson & Son, Shedd, Ore. The photo was taken while she was under two years old, when fresh with her first calf. She has milked 42.1 pounds of a 5.3 test. She is one of the 20 arguments they present in favor of their senior herd sire, Baronet of Ashburn. This bull has one daughter with an official record of 545 pounds of butter in a year, begun under two years old. The Messrs. Dickson test all their cows the first year they freshen and at least once more. All Baronet of Ashburn's heifers have made good records. The one that produced 545 pounds as a senior yearling is again on test as a three-year-old. She has started off 50 per cent better than at her first lactation.

Bull Sold for $770.

St. Mawes Korree Violet Lad, the young bull that sold in the Henry Zorn Jersey sale June 22 for $770, and Ward L. Hull, the man who bought him.

WINONA HOG DEMONSTRATION.

The annual Winona hog demonstration was held on August 11 under the auspices of the extension service of the O. A. C., the U. S. department of agriculture, and Winona ranch at Grants Pass., Ore. About 150 farmers and breeders enjoyed a picnic lunch, including roast Berkshire pig—a real pure bred Laurel Champion barrow—after which talks were given by Prof. George R. Samson, head of the hog department of the O. A. C.; C. D. Thompson, county agricultural agent of Josephine county (who was in charge of the demonstration), and F. R. Steel, president of the Western Berkshire congress. After the talks the crowd was taken through the breeding plant, thence to the sweet clover fields, sown in slashings that have not yet been plowed, where the herd of registered Holstein-Fresians grazed. The Holsteins have been fed almost entirely on this sweet clover since February and are in splendid condition and making excellent milk yields practically without grain, and without either hay or silage, which latter is used only in the winter at Winona. The sweet clover was merely sown broadcast on top of the ashes at the burning of the timber and brush slashed. The combination of good clover with Berkshire hogs and Holstein cattle was generally admitted to be a winner.

AUCTIONEERS

AUCTIONEER

Special attention given to live stock sales.
BEN T. SUDTELL. Albany, Ore.

O. I. C. SWINE

John Van Trojen Sr., Breeder

O. I. C.

of the famous Ohio Improved Chester White Hog. All stock registered. Write for prices. Orders filed after Oct. 1.

Chimacum, Jefferson County, Washington.

SHEEP

Registered Sheep

Rams—Hampshire, Shropshire, Lincoln and Cotswold. We deal in pure blood registered rams. Grade ewes, one, two and three years old.
GRANT B[illegible]DIMICK, Oregon City, Ore.

REGISTERED COTSWOLD BUCKS.
A few February and March lambs.
TWO YOUNG GUERNSEY BULLS.
R. F. Baughman, Redmond, Ore.

JACKS and JENNETTES

Jacks and Jennettes

DUROC SPRING PIGS.
15 head, including one service jack, younger jacks ond colts, all at reasonable prices. A few well-bred registered Duroc Jersey spring pigs, only $15.
F. J. CHALMERS. R. 1. Cornelius, Ore.

DOGS

Fox and Wolf Hounds

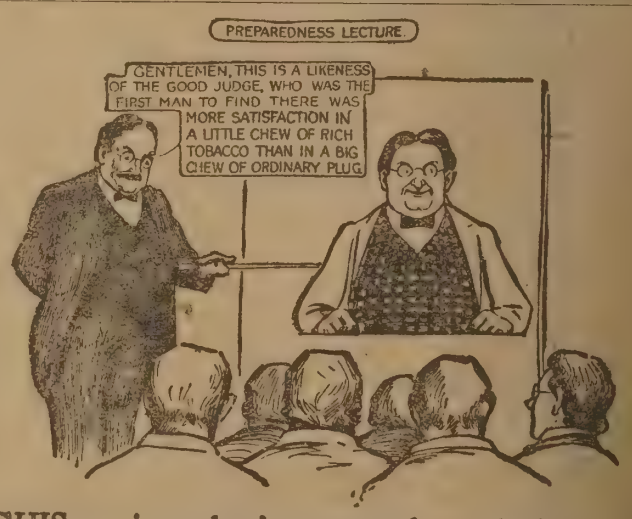
of the best English strains in America; forty years' experience in breeding these fine hounds for my own sport and protection of sheep, hogs and poultry. Send stamp for catalog.

T. B. HUDSPETH.
Sibley, Jackson County, Missouri.

Get Rid of Worms

Figure how much it's worth to you in dollars and cents to keep your hogs free from worms. Worms prevent thrift—retard growth—rob you of good, high-priced pork.

Dr. Hess Stock Tonic
Drives Out the Worms



and at the same time tones and conditions the system. It enables your hogs to be at their best—to do their best. You take no chances. My Stock Tonic is guaranteed. You buy it at an honest price, from my dealer in your town who will return your money if it does not do as claimed.

Why Pay the Peddler Twice My Price?
25-lb. Pail, $2.25; 100-lb. Drum, $7.00
Smaller packages in proportion.

DR. HESS & CLARK, Ashland, Ohio

DR. HESS POULTRY PAN-A-CE-A
will help your hens through the moult.

Dr. Hess Dip and Disinfectant Kills Hog Lice

THIS war is awakening men to the truth about a lot of things besides Preparedness—and chewing tobacco is one of them. Soldiers are strong for W-B Cut and the facts are right before you. These shreds are *all* tobacco, no gummy sweetening—*rich* tobacco—more sap in the leaf than in ordinary tobacco by a long shot. That's why it's so satisfying and so economical—a little bit goes a long way.

Made by WEYMAN-BRUTON COMPANY, 1107 Broadway, New York City

HIDES

WOOL, PELTS, MOHAIR, CASCARA BARK

We do the largest consignment business in the northwest. Equally fair treatment on all shipments, large or small. Returns at full market value mailed same day goods are received. Trial shipments wanted and appreciated, but all handled as regular shipments and not at inflated values.

E. E. METCALF, Dayton, Ore.

Early Spring Pigs
Well grown, best quality, sired by a son of the great Laurel Champion and out of prize sows.
GEO. BERTRAND, Olequa, Wash.

RIVERBY ORCHARD BERKSHIRES
won 12 out of 15 first prizes at the Washington State Fair, 1916. A few outstanding boars for sale at reasonable prices.
D. C. BUNN, Prosser, Wash.

HAMPSHIRE SWINE

HAMPSHIRE SWINE
Choice stock of all ages at bargain prices.
HIGHLAND FARM, Box 22, Underwood, Wn.

YORKSHIRE SWINE

Brodmead Farm
Large Yorkshire Swine.
A. SCOLLARD, R. D. 1., Chehalis, Wn.

HOLSTEIN CATTLE

Holstein Friesian Cattle
All our own breeding. A herd equally strong at both ends. Herd head, Sir Korndyke Ormsby Piebe, sired by Sir Korndyke Hengerveld De Kol 36th; dam Queen Piebe Ormsby Mercedes, record junior 2-yr.-old, 24.65 lbs. butter in 7 days, 3-yr.-old in 365 days, 952.28 lbs. butter, 20,286.20 lbs. milk; 4-yr.-old, 35.16 lbs. butter in 7 days. She is ¾ same blood as Queen Piebe Mercedes, world's record 4-yr.-old, record 1389.45 lbs. of butter in 365 days.
Most of the cows are sired by Sir Jonathan Ruth Fayne, now 9 yrs. old, still in service. For average A. R. O. test of daughters, age and production considered, he stands near the top of the list.
WM. TODD & SONS, R. 4, North Yakima, Wn.

HOLSTEIN BULLS
and a few females for sale out of A. R. O. dams of the noted Segis family. Herd bull, Model Annie De Kol Segis, No. 81071, dam's record, 30.91 lbs. butter in 7 days, his 4 nearest dams' average, for 7 days, 29.63 lbs.
MOREHEAD & HOBSON, Outlook, Wn.

Bargains in Bull Calves
Just a few, sired by Barrington Fayne, son of the great sire Sir Johanna Ruth Fayne, sire of over 20 A. R. O. daughters, including Ruth Illustrates (4 years), 27.42 lbs. butter, and out of a show cow that produced 23.93 lbs. at 10 years old. $60 to $75 if taken while young.
THURSTON & SON, Jefferson, Ore.

Holstein Bull Calves
sired by Segis Riverside Pontiac, that sold in the Pacific International sale, 1914, for $1025, and whose dam has A. R. O. record of 31.47 lbs. butter in 7 days, 118.99 in 30 days and big records all through his pedigree.
ERNEST JOHNSON, Scappoose, Ore.

WAYSIDE RANCH HOLSTEINS.
Am offering 13 heifers for sale, sired by my herd bull Buffalo Duke Doede, a half brother to the world's champion cow. An opportunity of a life time to the man wanting No. 1 stuff.
H. H. STIYER. Buhl, Idaho.

HOLSTEINS
Well bred young bulls for sale.
THOS. CARMICHAEL, Gaston, Ore.

HOLSTEIN BULL CALVES.
One from 20-lb. cow, another from a 16-lb. jr. 2-yr.-old. Herd headed by Model Fobes of Idaho, whose four nearest dams average 27.25 lbs. butter 7 days.
EARL BEEBE, R. F. D. 2, Rupert, Idaho.

GUERNSEY CATTLE

Medium Type Polands
Quick growing, easy feeding breeding stock, sired by the 1915 grand champion at Pacific International.
FRANK NEEDHAM, Eugene, Ore.

$20—SPRING PIGS—$20.
Big type boars and gilts of April farrow, from big litters and of good breeding; $20 if taken soon.
W. HUNTINGTON, Kelso, Wash.

Pure-Bred Poland China Fall Gilts
will be shipped c. o. d., subject to your approval. Write to
HERBERT WILLARD. Dayton, Ore.

QUALITY HERD.
If you want to improve your herd, try stock from my winners at the Oregon state fair.
RAY J. FOX. Lyons, Ore.

DUROC-JERSEY SWINE

Crescents Top Col.
for sale, at a bargain. An extra large 2-year-old prize winning boar. Also younger pigs by this great boar.
G. O. SWALES, Johnson, Wash.

Hillcrest Duroc Jerseys
For immediate sale:
1 11-mo. gilt, bred to farrow Oct. 3d, $60.
1 10-mo. gilt, to farrow Nov. 8, $50.
3-month pigs, $25.
Extra fine stock, combining the blood of noted show winners.
R. P. Camp, Ione, Wash.

TOP DUROC BOARS.
To make room for fall litters, I must close out my spring boars. I have saved 12 of the tops, of such breeding as Sprong's Prince, Topeka, Advance Wonder and Western Leader. Hogs with show records and of most popular breeding.
CHAS. G. SPRONG, Grandview, Wash.

Prolific, Profitable Durocs
Pigs from Champion Sow, bred by Exhibitor of the state of Washington, and other blue-ribbon sows, headed by the great 900-lb. boar, Red Dandy, 159453. Choice boars and gilts for sale from these prize-winning sows.
JNO. B. PETERSON, Mountbourne, Wash.

PREMIUM HERD
Spring pigs from champion and first prize sows at Ontario, Ore., and Gem State and Idaho State fairs.
C. H. KIRKPATRICK. Parma, Ida.

DUROCS.
Boars and open or bred gilts of excellent breeding.
E. E. PRICE, CABINET, IDAHO, OR
JAMES N. PRICE. Pullman, Wash.

Grain and Produce Markets

Chicago Grain.

CHICAGO, Sept. 1.—Corn futures showed an easy tone today. Holders of abundant stocks offered freely and shorts seemed to have satisfied their wants. Pre-holiday dulness prevailed in view of the two days closing over Labor day. Frosts in the northwest were generally ignored, though with cooler weather coming they were expected to be a bullish factor.

The buying was mainly on resting orders. The close was weak, 3-8 to 1 1-8c lower, with December at $1.11 1-2 to $1.11 5-8, and May at $1.07 3-4. Oats finished 3-8 to 3-4 to 1c lower. Provisions advanced, with a firm undertone and a moderate shipping demand.

There were light offers of cash wheat and fair demand, with some sales above the government price limit. No deliveries of wheat on September contracts were recorded today. Sales aggregated 25,000. Traders generally were waiting for the government buying and selling to begin. There was a slow cash demand for corn, but receipts were small and prices advanced somewhat, No. 2 yellow selling at $2.10.

Evening up trades over the holidays were a feature in the oats market. Casn sales aggregated 215,000 bushels.

Packers were the principal buyers of provisions and produce prices advanced, closing about the top. Strength of the hog market continued to be the controlling factors.

Cash Quotations.

CHICAGO, Sept. 1.—Wheat—No. 2 and No. 3 red and 2 and 3 hard, nominal.

Corn—No. 2 yellow, $2.10; No. 3 and 4 yellow, nominal.

Oats—No. 3 white, 57¾@58½c; standard, 58@58¾c.

Rye—No. 2, nominal.

Barley $1.10@1.28.

Timothy, $5@8.

Clover, $15@20.

Hogs—Receipts none, market strong. Prime light, $17.50@17.75; prime heavy, $17.25@17.50; pigs and skips, $16.50@16.75; stockers and feeders, $13.75@15.

Cattle—Receipts 28, market steady. Prime light steers, $8@8.25; prime heavy steers, $8.25@8.50; good steers, $7@7.80; ordinary to fair, $5.25@6; prime cows, $6@6.75; good cows, $5@6; common cows, $4@5; best heifers, $6@7; bulls, $5@6.50; calves, $7.50@9.25; stockers and feeders, $5@6.75.

Sheep—Receipts none, market steady. Prime lambs, $12.50@13.25; good lambs, $11.25@11.75; prime yearlings, $9.75@10.25; prime wethers, $9.50@10.25; prime mutton ewes, $6.50@8.

Portland Wheat.

PORTLAND, Ore., Sept. 1.—There are many points not clear in the government rules for wheat buying, as they relate to the Pacific coast, but M. H. Houser, administrator for this zone, believes they will be cleared up so buying can begin Tuesday morning. In the meantime the big grain dealers are idle. Millers are also unable to proceed in their readjustmnt of flour prices until Mr. Houser has definitely announced wheat prices. As the matter now stands wheat is considered to be worth here 20 cents under the Chicago base, or $2 at Portland for bluestem, $1.98 for fortyfold, $1.96 for club and $1.95 for red Russian. Interior prices are 30 cents under Chicago and freight from the interior to tidewater averages 10 cents.

Flour is likely to be on a $10 basis for patents, but millers think it probable the new price will not apply until flour milled from 1917 wheat is ready for market, which will be several weeks hence. The flour now selling is made from old wheat, which cost the millers about $2.50 in the country, but as a starter toward a general reduction they cut the price 40 cents at the close of the week, which put patents at $11.20.

Millfeed holds firm, as there is but little of it on hand, but when the mills begin grinding government flour in the fall, much lower feed prices are expected.

Oats and barley are firm. The oats crop is small, not over half a crop in the northwest, according to local authorities. Thousands of cars of eastern oats, it is said, will have to be brought in this winter to supply the deficiency. whereas in past years the northwest has shipped oats to California, east and abroad.

The Wool Market.

BOSTON, Aug. 31.—The Commercial Bulletin will say tomorrow:

The demand for wool, aside from what the government has taken, has been only moderate the last week. Government purchases thus far have not been heavy.

Fair quantities of scoured wools, principally of quarter blood grades, have been secured. Manufacturers appear to be waiting the result of the publication of maximum prices by the government wool committee, having already covered fairly well for several months ahead. The goods market, except for further government contract awards, has been sluggish.

Scoured basis:

Texas—Fine, 12 months, $1.65@1.70; fine, eight months, $1.55@1.60.

California — Northern, $1.70@1.75; middle county, $1.45@1.50; southern, $1.35@1.40.

Oregon—Eastern—No. 1 staple, $1.75@1.80; eastern clothing, $1.50@1.60; valley No. 1, $1.55@1.60.

Territory—Fine staple, $1.80; half-blood combing, $1.70@1.75; three-eights blood combing, $1.40@1.45; fine clothing, $1.60@1.65; fine medium clothing, $1.55@1.60.

Pulled—Extra, $1.80@1.85; AA, $1.70@1.80; A supers, $1.60@1.65; C supers, $1.25@1.28; fine combing, $1.40@1.45; medium combing, $1.25@1.30; coarse combing, $1.05@1.10.

Butter and Eggs.

PORTLAND, Ore., Sept. 1.—Butter firm; city creamery prints, 47c; cartons, 48c; buying price butterfat, 46@48c, Portland; cube extras, 44c; prime firsts, 41 1-2c; firsts, 36 1-2@40c; dairy, 34c.

SAN FRANCISCO, Sept. 1.—Butter—Fresh extra, 41 1-2c; prime firsts, 41c. Eggs—Fresh extra pullets, 41c.

CHICAGO, Sept. 1.—Butter receipts, 10,799 tubs; unchanged. Creamery, 38@41 1-2c.

Eggs—Receipts, 7716 cases; unchanged.

ELGIN, Sept. 1.—Butter market, 41 1-2c; no sales.

Seattle Market.

SEATTLE, Sept. 1.—Some exhaustive investigations have just been made of the fruit districts of western Washington by Seattle jobbers, and the present stiff f. o. b. market in peaches, pears and apples is conceded. That there will be a reactionary tendency as soon as the excitement induced by eastern buyers subsides is now claimed.

Many contracts have been made for apples for future fall delivery and prospects are that there will be few if any consignments. Jobbers concede that the trade will be on a cash basis this year.

The flood of tomatoes from eastern Washington shippers has ceased and the demoralized market strengthened. Prices today are 60@70c per crate.

Producers have been shipping in their heavy hens, but the demand is sufficient to buoy up the market. Buying prices of poultry will be strong and unchanged for next week.

The butter market is very firm, but none of the city creamerymen are willing to take steps to meet the shortage by advancing prices.

The fresh ranch egg trade is quiet, due to the large volume of receipts. The city trade is flat, and jobbers are not active after country offerings.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered for the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 42@44c per dozen; eastern Washington, Idaho and Oregon, 40c per dozen.

Poultry—Live hens, fat, 4 lbs. and over, 19@20c per lb.; 2 lbs. and under, 15@17c; old roosters, 11c per lb.; squabs, large, $3.50 per dozen; geese, fat, live, 10c per lb.; broilers, live, 18c per lb.

Butterfat—49c per lb.; dairy butter, 33c

Beef—Buying prices: Prime beef, steers, 7@8c per lb.; cows, fat, 7@8c; heifers, 6@8c per lb.

Veil—Fancy light, 14@16c per lb.; do heavy, 9@13c per lb.

Hides—Salted, 19c per lb.; salt kip, 19c per lb.; salted calf, 30c per lb.; green hides, 16c per lb.; salted bulls, 16c per lb.; dry hides (short trim), 40c per lb.; bull and dry salts, 4c per lb. less; green bulls, 12 1-2c per lb.; dry butcher full wool sheep pelts, 36@38c per lb.; green calf, 30c.

SELLING PRICES.

Raspberries — Red, $2.25@2.50 per crate.

Feed—Scratch feed, $82 per ton; all grain chop, $66 per ton; oats, $58 per ton; rolled oats, $59 per ton; rolled or ground barley, $61 per ton; clipped barley, $63 per ton; wheat, $82 per ton; bran, $38 per ton; shorts, $41 per ton; soy bean meal, $70 per ton; whole corn, $88 per ton; cracked corn, $89 per ton; alfalfa meal, $36 per ton.

Hay—Eastern Washington timothy, $30 per ton; alfalfa, $26 per ton; double compressed, $33 per ton; wheat hay, $25 per ton; Puget Sound, $22 per ton; straw, $12.

Butter—Washington creamery extras, cubes, 46c per lb.; do bricks, 47c per lb.

Eggs—Fresh ranch, 48c per dozen.

Potatoes—Puget Sound, $45@50 per ton.

Portland Market.

PORTLAND, Ore., Sept. 1.—All lines of country produce are strong with light receipts. Poultry and dressed meats are selling at nigh prices as the supply is not large enough for local requirements. Butter and eggs are tending upward, and an advance in cheese is expected soon unless rain improves the Tillamook pastures.

In the following list of quotations the grain, hay, mill feed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 1 $47.50 per ton.

Mill stuffs—Bran, $37 per ton; shorts $40.

Barley—No. 1 feed, $45.50; brewing, $48; rolled, $55@57.

Hay—Buying prices; Timothy, eastern Oregon, $27; alfalfa, $22.50@24; grain, $20.

Eggs—Oregon ranch. case counts, 36c per dozen; candied, 37@40c.

Poultry—Hens, 16@17c; ducks, 12@13c; turkeys, live, 20@22c; geese, 7@8c.

Butter—City creamery, prints, 47@48c per pound; cubes, extras, 44c.

Cheese—Tillamook triplets, 24c; young Americas, 25c.

Dressed meats—Veal, 15½@16c; pork, 22c.

Hops—1916, 21c; contracts, 30@35c.

Potatoes—New, 2½@2¾c per pound.

Wool—Eastern Oregon, fine, 52@61c; coarse, 60c; valley, 58@60c.

Beans — California small white, 15 1-5c; large white, 15c per pound.

Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers: they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer.

Potatoes—New local potatoes, $2.50 cwt; sweet potatoes, $4.50 cwt.

Apples—New Washington apples, $1 20-lb box; $1.75 50-lb box.

Butter—Blanchard cartons, 47c lb; Medo-Maid, 47c lb; Cascade, 47c lb; Gold Leaf, 47c lb; Better Butter, 47c lb; Attalia, 47c lb; Diadem, 47c lb; Hazelwood, 47c lb; Solid Pack, 46c lb.

Cheese—Wisconsin full cream, twins, 28c; triplets, 25c; Hazelwood full cream, triplets, 25@26c lb; Hazelwood Young America, 27c lb; Wisconsin limburger, 29@30c lb; brick cheese, 29c lb; domestic Swiss, 33c lb; Young Americas, 26c lb.

Eggs—Fresh local ranch eggs, $12.50; fresh eastern eggs, $12.50 case.

Live Poultry—Hens, 13c lb; broilers, 20c lb; old roosters, 8c; ducks, 12½c lb; geese 10c; turkeys, 20@25c.

Dressed Poultry—Hens, 18c lb; broilers, 28c lb; old roosters, 12½c; ducks, 18@20c; geese, 16c; turkeys, 25@30c.

Hide Quotations.

Green cows and steers—25 lbs and up 17½c; salted cured, 20c; green bulls and stags, 13c; salted cured, 16c; kip, 15 lbs to 25 lbs, 23c; calf skins up to 15 lbs, 31c; dry flint hides, 34c; dry salted, 27c; dry calf skins, under 7 lbs, 42c; dry sheep pelts, full wooled, 22@26c; dry shearlings, 10@75c each; green horse hides, $3@5 each; dry horse hides, $1@2.50 each.

Scores Lamb Boycott

The so-called boycott of lamb is effectively nailed by Herbert C. Hoover, food administrator, in a communication to Frank M. Rothrock of Spokane, recently appointed to the United States live stock industry committee, outlining the proposed work of the committee. Mr. Rothrock was the first sheep raiser to protest to the administration against what he considered a hysterical movement in the way of food conservation. Mr. Hoover says:

"Some sections of our country are stocked to capacity with mother ewes, from which lambs are marketed at from 70 to 80 pounds weight. This is the most economic method of producing mutton just as 'baby beef' is the most economic method of producing beef and the quality of both these meats is of the best.

"What we need is more cows and more ewes producing the 700-pound calf and the 70-pound lamb. We wish to restore the confidence of the farmer in his industry by convincing him that he will get a fair share of a fair price paid by the consumer and extending to him credit on a reasonable basis so he may be able to equip his farm for handling sheep, hogs and cattle successfully.

"The law that we are now operating under as to food control is conceived and administered in a desire to maintain remunerative and stimulative returns to the producer and to enable these products to reach the consumer with only a reasonable profit allowed for services rendered. Therefore, it is the object of the administration to eliminate unnecessary cost between producer and consumer.

"One of the incidents of the European war has been the slaughter of large numbers of animals and it is estimated that already the herds of Europe have been diminished by 28,000,000 cattle, 54,000,000 sheep and 32,000,000 hogs. An accelerated increase in this diminution of meat animals must take place in Europe from month to month as long as the war lasts.

"We have two problems in meat supplies: First is the task of supplying our own soldiers and citizens and helping feed the soldiers and citizens of our allies during the war. The second is the one which we desire to bring particularly to the attention of the American producer, and that is:

"After the war, Europe, with diminished animals and therefore diminished animal production of animal food, will require larger imports of meats during the years of recuperation and will probably require the actual importation of breeding animals. Therefore, in a broad way, the outlook to the American producer from now on and after the war will be (a) larger demand for animal products, (b) continuing necessity for meat and dairy animals to convert forage and grains not needed for human consumption into meats and dairy products. The herds and flocks of the country can only be increased over a period of years and the foundation of such an increase should be laid at once. Such interest is a national interest and it must be made to the interest of the American producer."

The first definite step to increase live stock production is outlined by Mr. Hoover as follows:

"The county agents of the department of agriculture will take orders for cattle, ewes or ewe lambs, among the small farmers of communities, in less than carload lots and we have arranged with the live stock exchanges to contribute to this mobilization of the nation by buying the stock and seeing to it that it is properly handled while in the yards, free of any charge to the buyers.

"This campaign should not be considered to have terminated successfully until the great majority of our farms have their flocks of sheep and a sufficient stock of cattle to consume all roughage now largely wasted."

FAIR NUMBER

The State Fair Is Ready Once More to Entertain and Instruct

The prospects for the state fair at North Yakima this season are declared to be excellent. The Interstate fair at Spokane last week opened the northwest season auspiciously and the state fair promises to equal or excel it. Above are some illustrations of what will be seen at North Yakima next week. At the top are shown members of the boys' and girls' industrial teams. In the center are seen stock judging and the new grandstand with 4000 seating capacity. Below is a typical fairgrounds street scene.

MAXWELL

Most Miles per Gallon - Most Miles on Tires

A Good Investment— The Maxwell Motor Car

"Webster" says: *"Investment: the laying out of money in the purchase of property, especially a source of income or profit."*

We maintain that that definition exactly fits the purchase of a Maxwell.

American industries have hundreds of millions of dollars invested in labor saving devices.

That's what the automobile is today—a saver of human energy and time.

And, friends, energy and time are *you*—are *your* life.

Can you afford to waste time and energy when you can run a Maxwell for $2 a week?

You can drive a Maxwell 5,000 miles a year at a cost of $2 a week.

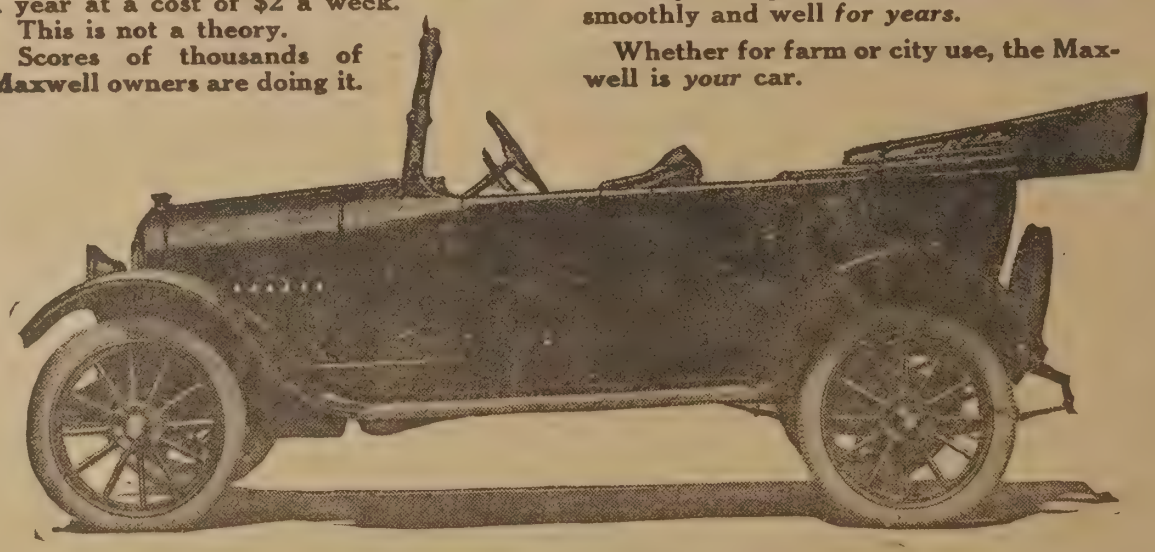
This is not a theory.

Scores of thousands of Maxwell owners are doing it.

In our great economy contest on May 23rd, last, 1,092 Maxwells averaged 27.15 miles on a gallon of gasoline each.

In our great economy contest in June and July last, 2,040 Maxwells averaged 29.04 on one gallon each.

The Maxwell engine holds the world endurance record—22,022 miles without stopping.



The Maxwell clutch runs in oil—is wear-proof, smooth, efficient.

Maxwell transmission is simple, trouble-proof.

The mighty Maxwell axles stand the strain of the road.

Every vital part is built to do its work smoothly and well *for years.*

Whether for farm or city use, the Maxwell is *your* car.

Touring Car $745

Roadster $745; Berline $1095
Sedan $1095. All prices f. o. b. Detroit

Interstate Fair Breaks Records

Dry Season Fails to Diminish Excellence of Agricultural Exhibitions

Nearly 76,000 persons paid admission to the interstate fairgrounds at Spokane last week to enjoy and learn from the twenty-fourth annual fair given by the association. This number exceeds that of last year by about 16,000.

There is no positive basis for comparison, but the 1917 fair was probably the best ever put on by the interstate association, and augurs well for the other fairs that are now following it in rapid order.

The exposition began with money in the association's bank account. The excellent attendance increased this deposit.

"I would not attempt to give an accurate statement now, for many bills have not yet been audited, but I will say that the fair association has a small amount of velvet," said President T. S. Griffith of the fair association.

Agricultural Exhibit Good.

Contrary to early expectations, the display of agricultural products was one of the best if not the best ever shown in Spokane. A. A. Kelly, superintendent of the agricultural exhibit, said after the close Saturday evening:

"It has been the best exhibit of agricultural, horticultural and industrial exhibits ever seen in Spokane. Notwithstanding 67 days of unprecedented drouth, the showing in all agricultural departments has been, without doubt, the best in the history of the country. The exhibits from the soil compare favorably with the exhibits of former years when the season was better and the show was held enough later to permit of many exhibits that are not now ready."

Industrial Interest Great.

Superintendent G. E. A. Bond, having charge of the general grounds and the industrial exhibits, said that there was an increase of about 400 per cent in the farm machinery displays this year over previous years. The automobile and tractor displays, he said, exceeded former shows by three times, while the exhibitions of industrial companies were considerably larger than previously.

Good Hog Showing.

Stockmen agreed that there had never before been so good a showing of hogs as were on display at the fair this season. Especially was this true with regard to the Duroc Jerseys, which were present en masse. While in some branches of the live stock section numbers were lacking, the quality of horses, sheep and cattle is generally conceded never to have been surpassed.

"The quality of stock shown here has never been surpassed. There have been more hogs and cattle, but never a showing of better quality in these classes. There have never been as good hogs here as were shown this year, and the showing of sheep is indeed creditable," said E. E. Jones, assistant superintendent of the live stock department.

The Live Stock Awards.

The ribbons were placed on the winning horses by James Clements of Edmonton, Alberta. John A. Lee of Shelbyville, Ky., judged the cattle, except the beef breeds, which were judged by E. L. Potter of Corvallis, Ore. William Hislop of Pullman, Wash., judged the sheep, while Thomas W. Brunk of Salem, Ore., judged the swine.

(Owing to space limitations only the horse, beef cattle and dairy cattle awards are given this week. The awards in the sheep and swine divisions will be given in next week's issue.)

HORSES.

Percherons.

The awards in the Percheron division were made to five competitors, the Colfax Blue Ribbon stud, Colfax, Wash.; J. W. Prall, Spokane, Wash.; E. S. Jordan, Cheney, Wash.; J. K. Ralph, Spokane, Wash., and Auto Sykes, Spokane, Wash. The awards follow:

Stallions, 4 years old and over—1. Royal Duke. Colfax Blue Ribbon stud. 2. Carlo, J. W. Prall. 3. Hamack, E. S. Jordan. 4. Beauty Steel, E. S. Jordan. 5. Artiste, J. K. Ralph.

Stallion, 3 years old and under 4—1. Royal Quartermaster, Colfax Blue Ribbon stud. 2. State of Maine, E. S. Jordan.

Stallion, 2 years old and under 3—1. Pickard, Colfax Blue Ribbon stud. 2. Picket, Colfax Blue Ribbon stud. 3. Royal, E. S. Jordan. 4. Freeman, Auto Sykes.

Mare, 4 years old and over—1. Galere, E. S. Jordan. 2. Gardienne, E. S. Jordan. 3. Mignonne, E. S. Jordan. 4. Paree, E. S. Jordan.

Three-year-old mare—1. Marie Douglas, E. S. Jordan.

Two-year-old mare—1. Beau Ideal, E. S. Jordan.

Foal, under 1 year—1. Black Rover, E. S. Jordan. 2. Beaulah, E. S. Jordan.

English Shires.

The Colfax Blue Ribbon stud was given all the Shire awards, as follows:

Stallion, 4 years and over—1. Bushnell Hero. 2. Bushnell Pride.

Mare, 4 years old and over—1. Sylvia's Best.

Foal, under 1 year—1. Cottered Prince Royal.

Clydesdales.

All awards for Clydesdales went to the Colfax Blue Ribbon stud of Colfax, Wash., as follows:

Stallion, four years old or over—First, Victor Favorite, also Champship second, Bobbie Burns; third, Prince of Orion.

Stallion, two years old and under three—First, Majesty's Chief; second, Delightful Caliph; third, The Clinker.

Stallion, one year old and under two—First, Clydesdale Baron; second, Orion Times.

Mare, three years old and under four—First, Thelma.

Mare, two years old and under three—First, Maid's Darling. Also championship.

Thoroughbred.

The following are the thoroughbred awards:

Stallion, four years old or over—First, Unnamed, Galbraith, Independence, Ore.; second, Marta Mac; J. Z. Smith, Walla Walla, Wash.

Stallion, three years old and under four—First, Chokio; Franklin & Randall, MacLeod, Alberta.

Stallion, two years old and under three—First, Hustler Joe; Franklin & Randall, MacLeod, Alberta; second, Fort MacLeod; Franklin & Randall, MacLeod, Alberta.

Standard Bred.

Stallion, four years old or over—First, Catoma; C. J. Maxwell, Spokane, Wash.; second, Lucifer, William Beck.

Stallion, two years old and under three—First, Gar M.; A. B. Wentworth, Spokane, Wash.

Mare, four years old or over—First, Mayon Line; Allan Maxwell, Spokane, Wash.; second, Colyess, Rule 1, Vol. XXI.; C. D. Boswell, Spokane, Wash.; third, unnamed; David Gouin, Spokane, Wash.

Boys' Colt Show.

Best driving colt foaled during 1917—First, Judge Dilliard Junior; Allen Maxwell, Spokane Wash.

BEEF CATTLE.

Shorthorns.

Four exhibitors shared the premium awards in the Shorthorn division, as follows: Alex. Morrison, Valley, Wash.; J. H. McCroskey & Sons, Fishtrap, Wash.; Washington State college, Pullman, Wash., and Day & Rothrock, Sprague, Wash. The following are the Shorthorn awards:

Bull, 3 years old or over—1. Western Star II.; Alex Morrison.

Bull, 2 year old and under 3—1. Cottonwood Sultan; McCroskey & Sons.

Senior yearling bull—1. Golden Heir; McCrosky & Sons; 2. Village Excelsior, State college.

Junior yearling bull—1. Rusper Sulton II., Day & Rothrock; 2. Golden Robin, McCroskey & Sons; 3. Golden Dale, McCroskey & Sons; 4. Red Star, Alex Morrison.

Senior bull calf—1. Superb Clarion, Day & Rothrock; 2. Fair Cumberland, Day & Rothrock; 3. Wry Marshall, McCroskey & Sons.

Junior bull calf—1. Hercules Good, Day & Rothrock; 2. Unnamed, McCroskey & Sons; 3. Unnamed, McCroskey & Sons; 4. Golden King, Alex Morrison; 5. Achilles, State college.

Cow, 3 years old or over—1. Olive V. II., Alex Morrison.

Cow or heifer, 2 years old and under 3—1. Canadian's Lassie, McCroskey & Sons; 2. Olive V's Jewel, Alex Morrison.

Senior yearling heifer—1. Topsy IV., Day & Rothrock; 2. Fancy Mine II., McCroskey & Sons.

Junior yearling heifer—1. Luana II., McCroskey & Sons; 2. Village Rose IV., Day & Rothrock; 3. Lady Rothrock, Alex Morrison; 4. Violet of Valley, Alex Morrison.

Senior heifer calf—1. Perfection's Pearl, Day & Rothrock; 2. Lady Missie, X., Day & Rothrock; 3. Dale's Lady, McCroskey & Sons; 4. Bonny Lorne IV., McCroskey & Sons; 5. Louisa Faulson, Alex Morrison.

Junior heifer calf—1. Hercules Topsy, Day & Rothrock; 2. Escana Laura, McCroskey & Sons; 3. Golden Light, Day & Rothrock; 4. Marry Lady, McCroskey & Sons; 5. Golden Queen, Alex Morrison; 6. Little Bo Peep, Alex Morrison.

Graded herd—1. One entry, McCroskey & Sons; 2. One entry, Alex Morrison.

Exhibitors' young herd—1. One entry, Day & Rothrock; 2. One entry, McCroskey & Sons.

Breeders' calf herd—1. One entry, Day & Rothrock; 2. One entry, McCroskey & Sons; 3. One entry, Alex Morrison.

Get of one sire—1. One entry, McCroskey & Sons; 2. One entry, Alex Morrison.

Produce of cow—1. One entry, Day & Rothrock; 2. One entry, McCroskey & Sons; 3. One entry, State college; 4 and 5. Two entries, Alex Morrison.

Aberdeen Angus.

The Aberdeen Angus premiums were shared by Congdon & Battles of North Yakima and the Washington State college of Pullman. The awards were as follows:

Bull, 3 years old or over—1. Eileenmerer; Congdon & Battles, also senior and grand championship.

Bull, 2 years old and under 3—1. Meraman of Tierra, Alta.; Congdon & Battles.

Bull, junior yearling—1. Blackburr of Rosemere; Congdon & Battles, also junior championship. 2. Irenmere, second; Congdon & Battles.

Bull, senior calf—1. Heatherburr of Yakima; Congdon & Battles. 2. Yakima Black; Congdon & Battles.

Bull, senior calf—1. Heatherburr of Yakima; Congdon & Battles. 2. Yakima Black; Congdon & Battles.

Bull, junior calf—1. Yakima Eric; Congdon & Battles.

Cow, 3 years old or over—1. Idessa of Rosemere; Congdon & Battles. Also senior and grand championship. 2. Inez of Woodlawn; third, State college.

Cow, 2 years old and under 3—1. Heather of Rosemere, fourth; Congdon & Battles.

Heifer, senior yearling—1. Blackbird of Rosemere, 22nd; Congdon & Battles. Also junior championship.

Heifer, junior yearling—1. Blackbird of Rosemere, 23d; Congdon & Battles.

Heifer, senior calf—1. Blackcap of Rosemer, 10th; Congdon & Battles. 2. Blackbird of Rosemere, 24th; Congdon & Battles. 3. Jerome's Queen, 2nd; State college. 4. Rose of Rosemere, 4th; Congdon & Battles.

Heifer, junior calf—1. Barbara of Rosemere, 24th, Congdon & Battles.

Graded herd—1 and 2. Two entries; Congdon & Battles.

Exhibitors' young herd—1 and 2. Two entries; Congdon & Battles.

Breeders' calf herd—1 and 2. Two entries; Congdon & Battles.

Get of sire—1 and 2. Two entries; Congdon & Battles.

Produce of cow—1 and 2. Two entries; Congdon & Battles.

Special Beef Breeds.

A. V. Bradrick & Son of Palouse, Wash., and Alex. Morrison of Valley, Wash., divided the premiums on the special beef breeds as follows:

Bull, 3 years old or over—1. Western Star, 2d; Alex. Morrison.

Bull, 2 years old and under 3—1. General Clay's Palouser; Bradrick & Son.

Bull, junior yearling—1. Red Star; Alex. Morrison.

Bull, junior calf—1. Golden King; Alex. Morrison.

Cow, 3 years old or over—1. Lady Washington; Bradrick & Son. 2.

(Continued on page sixteen.)

Breeders Get No Special Favors.

The shipment of live stock for breeding purposes will have to continue to pay regular live stock freight rates, says the interstate commerce commission to the breeders of the northwest. This was brought out at the stockmen's banquet at the Interstate fair when a report from Frank M. Rothrock was read. The commerce commission said that it had been a long established custom to deny special freight rates on the ground of the use to which the article shipped was put. This report was taken by the stockmen to mean that there was no immediate prospect of securing the reduced rates on breeding stock that have so long been sought. The fight will be kept up, however,

GRANGES SHOW PRODUCTS

Oregon Farm Wins First Premium.

One of the distinctive features of the interstate fair was the excellent exhibitions of a number of granges, mostly within a short distance of Spokane. While the individual farm display of Leonard Gilkey of Linn county, Ore., was awarded first place for best individual exhibit over the granges, the half dozen grange booths can not be adequately described. To illustrate the possibilities of production in small localities the following list of products shown by the Glenrose grange of Spokane county is given, though it is little if any more elaborate than the exhibitions of others:

Dahlias, sunflowers, cherries, plums, geraniums, grapes, pears, apples, peaches, crabapples, prunes, tomato cherries, tomatoes, sweet clover, hops, lettuce, kale, pepper, onions, beans, hydrangeas, cucumbers, parsley, rutabagas, turnips, beets, carrots, parsnips, buckwheat, mangels, salsify, rhubarb, leaks, potatoes, grass seed, vetch, peas, gladioluses, corn, popcorn, gourds, squash, egg plant, muskmelon, cabbage, asters, cauliflower, citron, chic peas, alfalfa, asparagus, oats, red clover, red top and castor beans.

The following canned or preserved goods: Chicken, soup filling, veal, vegetable soup, soup stock, mincemeat, tomatoes, peas, asparagus, corn, beans, squash, beets, apricots, gooseberries, peaches, strawberries, pears, watermelon pickle, olive oil pickle, cherries, peach conserve, jellies, raspberries, fruit juices, corn salad and dried cherries.

Half Moon grange added a further touch to the community exhibits by a tempting display of foods, including cakes, cookies, pies, biscuits, butter and eggs.

Scant Purpose to Curb Retailer

Finds the Producer Is Not the Man Receiving Abnormal Profits

By N. W. DURHAM

Governor Edge of New Jersey says that from his investigations he has not found that the producer is the man receiving abnormal profits. "It is the continuous adding to the producer's price multiplied through many hands that establishes the retail price."

Apparently there is no standardization of profits in farm produce in New Jersey. Reports to Governor Edge showed that on cabbage the price at Atlantic City grew 900 per cent in its route between the producer and the consumer. In Trenton it was 140 per cent. Jersey City and New York were content with 80 per cent, and Newark retailers asked but 50 per cent more than the farm price.

Governor Edge is convinced that government control will not benefit the consumers if price-fixing stops with the producer. That unless it is the intention of the federal government to follow this down to the price that can be exacted by the retailer there will be little relief from food gouging.

A study of the law reveals but scant purpose to curb the retailer. For example, take section 5, the section authorizing the president to license wholesalers and curb excessive profits. It expressly exempts the retailer, and defines a retailer as "a person, copartnership, firm, corporation or association not engaging in the wholesale business whose gross sales do not exceed $100,000 per annum."

Section 11, under which the government has fixed the price of wheat, provides "that the president is authorized from time to time to purchase, to store, to provide storage facilities for, and to sell for cash at reasonable prices, wheat, flour, meal, beans and potatoes."

So far the government has acted only with respect to wheat. It has fixed the price which it will pay for wheat wanted by the allies and wheat which it will buy for distribution to the mills, and by a voluntary agreement has limited the millers' profit at 25 cents a barrel. There it seems to drop the product. Apparently it has no intention of cutting out the retailer by selling flour direct to the consumer.

Mr. Hoover, in fact, has issued a statement that under the food control act, except in isolated instances, the food administration has no control of prices from the time flour reaches the wholesaler until it is sold by bakers and retailers as bread. A price reduction, he says, can be accomplished only by voluntary action by bakers and retailers and by the assistance of the public in eliminating waste.

But that is the case only because the government is not exercising the full extent of its powers.

The government can buy wheat and it can sell, and the law sets no limitation on the extent to which it can carry its sales. But so far it will sell only to the mills, and after that it is hoped that the price will not run wild before it reaches the consumer. The wholesaler and the retailer are being given an opportunity to handle the product at moderate profits. If they fail, if they show greed, the president has ample power under the law to sweep them aside and sell government flour direct to the consumers.

Looks Good for the State Fair

Sheep Sale Leading Feature and Splendid Agricultural Exhibits

The Washington state fair sheep sale gives promise of being a distinguishing feature of the state fair at North Yakima this year. The innovation was suggested by Agricultural Commissioner E. F. Benson and the management of the sale has been given over to Professor William Hislop, head of the animal husbandry department of Washington State college, who reports excellent success in listing animals for the sale. He announces he will have 1000 to 1500 registered rams and ewes which will be put at auction Friday and Saturday, September 21 and 22, 1917.

Prof. Hislop attended the big sale at Salt Lake last week and secured listings from some of the best breeders in the United States. A. G. Butterfield of Weiser, Ida., will send 60 Hampshire rams and five Rambouillets. A. J. Knollin, Pocatello, Ida., 25 Hampshire and 25 Shropshire rams and 40 Shropshire ewes; Queal Sheep company, Casewell, Wyo., 80 Rambouillet ewes; Walnut Hill Farms, Donerail, Ky., 65 head Hampshires, and F. W. Harding, Waukesha, Wis., 40 imported Lincoln and Hampshires.

Fine Stock Show.

The Washington State fair, which is held this year the week beginning September 17, gives promise of being one of the best ever featured by the state, taking all departments into consideration. Dr. R. J. Donohue, superintendent of the live stock department, after making a trip through the Olympic peninsula and meeting the stockmen who are fitting herds for the fair, says he expects to see the finest stock show ever pulled off in the northwest.

Children's Department.

The county and district exhibits that have already contracted for space insure a splendid showing in the line of agricultural crops. The children's industrial department that was launched with such success last year is to be continued and enlarged this year. This is under the supervision of Supt. Rodney Ackley, who is confident that 250 boys and girls will be at the fair during the week competing for the prizes and exhibiting their products.

Secretary Frank Meredith has the race cards well filled and offers five days of splendid sport in this line. He calls attention to the new $20,000 grandstand built this year for the comfort of those who wish to see the races. The new grandstand is set at an angle to the quarter stretch, which will give the spectators an unobstructed view of the races from start to finish. The seating capacity will furnish ample room for the crowds that overran the old accommodations.

The White Hussar Singing band will be the chief music feature and will give two concerts daily during the week. They will play in the afternoon at the grandstand and in the evening at the Horticultural building. In addition there will be two other bands. Crawford's band will play during the day wherever there is a center of attraction on the grounds and the Wortham shows that furnish the midway attractions will have a special band.

Governor's Day.

Thursday is Governor's Day at the fair and Governor Ernest Lister has consented to address the people at the grand stand. Special music by the White Hussar band and the biggest racing events of the week will mark this as one of the big days of the week. Monday is automobile day with five big races on the card and $1250 in purses and a silver cup will be hung as prizes.

Patriotic Day.

Tuesday is Children's day and all children under 14 will be admitted free. Friday is Elks' day, which means there will be something worth while doing in the way of amusement. Saturday is Patriotic day and a program to stir enthusiasm in this line is being worked out by the secretary.

Not only does the Washington state fair at North Yakima, Wash., September 17-22, promise to be one of the best yet held in the line of agricultural, horticultural and live stock exhibits, but there seems to be a closer cooperation between the fair management and the business interests of the city than on any previous fair. Among the plans this year the business men are placing a large number of autos at the convenience of outside visitors and those who come from a distance will be taken on trips out over the beautiful valley and shown the country that produces the major part of the material exhibited. Commissioner of Agriculture Benson is enthusiastic over this feature of cooperative work and Secretary Meredith, who has been untiring in his efforts to secure exhibits commensurate with the importance of a state fair, is assured of a display in all departments that will be satisfying and feels very sure of a large attendance.

Fruits and Grasses

The Spokane Interstate Winners

The following were prize winners at the Spokane Interstate fair on fruits and on forage and grasses:

A. J. Gage, Mica—Apples, crabapples, pears.
W. L. Perriman, Spokane, R. F. D. 3—Strawberries.
P. H. Hebert, Trinidad—Apples, pears, grapes.
Oscar Reinhardt, Brewster—Apples, pears, prunes, quinces.
E. W. Bennett, Opportunity—Apples.
R. A. Jones, Hillyard, R. F. D. 10—Apples, pears, plums, prunes, nuts, corn.
F. P. Spencer, Trinidad—Apples.
W. R. Sanders, R. F. D. 1, Mead—Apples, pears, plums.
Mrs. Hans Peterson, Mead—Apples, pears.
J. C. Ristan, R. F. D. 3, Spokane—Apples, alfalfa.
Ed Tiedt, Soap Lake—Apples, pears, corn.
M. R. Emerson, Opportunity—Apples, crabapples, pears, grapes.
Nels Munson, Trinidad—Apples, pears.
P. H. Cronkite, Trinidad—Apples.
H. Johnson, Trinidad—Apples.
H. A. Jones, R. F. D. 10, Hillyard—Apples.
C. M. Lockwood, Opportunity—Apples, crabapples, grapes, prunes.
W. S. Gatten, Mead—Apples, pears.
J. B. Felts, Opportunity—Apples, crabapples.
A. Knutson, Harrison—Apples, pears, alfalfa, bluegrass, orchard grass, red clover, sunflower.
Marguerite Wright, Opportunity—Apples.
W. T. Robbins, Mead—Apples, grapes.
T. C. Lenny, Opportunity—Apples.
R. Kiesling, Kiesling—Apples.
C. Atkinson, Mead—Apples, crabapples.
Henry Sudhoff, Elk—Apples, rye, wheat, peas.
Henry Knebel—Crabapples, prunes.
D. E. Black, Trinidad—Pears.
E. Schlinker, Kiesling—Pears.
A. J. Fearon, Neppel—Pears.
Dr. Utzey—Grapes.
W. J. Chambers—Grapes.
H. A. Feller, Greenacres—Grapes.
Edwin Perry, Greenacres, R. F. D. 1—Grapes.
Joseph Break—Plums.
W. W. Ferdham—Plums.
W. A. Hughes—Alfalfa, sweet clover, sheaf bluegrass, spring oats, red clover, sheaf vetch, oats, barley, beans, rye, winter wheat, spring wheat.
B. F. Hughes, Colville—Alfalfa, sweet clover, alsike clover, oats, rye, flax, winter wheat, spring oats.
J. R. Orrock, Sharon—Alfalfa, sudan grass, timothy, orchard grass, sheaf vetch, spring wheat, spring oats.
Leonard Gilkey—Sudan grass, alsike clover, field peas, corn.
Carl Mickelson, R. F. D. 3, Spokane—Sudan grass.
I. R. Remlinger, Springston, Idaho—Timothy, alfalfa.
R. J. McClure—Sunflower.
M. W. Curtis, Opportunity—Corn.
James Crumn, Opportunity—Corn.
Mrs. Ellen McKenzie—Corn, peas.
Joseph Fisher, R. F. D. 2, Spokane—Corn, peas.
J. N. Grieve—Corn, barley, oats, flax, wheat.
G. O. Kennedy, Box 24, Colbert—Barley, wheat.
R. L. Danson—Beans.
Willis M. Fisher—Rye.
G. W. Berries, Rathdrum—Wheat.
Mark W. Gitthens, Medical Lake—Barley.
William Long, Ephrata—Wheat.
C. E. Maynard, Ephrata—Wheat.
Mrs. F. F. Dodge, Kiesling—Beans.

Injury by Moles.

Considerable complaint is reported by Agriculturist G. B. Sprague of Kitsap county, Washington, in regard to the injury done by moles, mountain beaver and small squarrels. A campaign for their extermination is being planned.

Cooperative Bull Association.

By getting seven farmers to sign up the first cooperatively owned bull in Pend Oreille county, Wash., is an assured fact, says County Agent M. J. Newhouse.

Ask Pacific Coast Basis of $2.20

Wheat Growers Will Carry Their Fight Direct to President Wilson

Wheat growers of Washington, Oregon and northern Idaho assembled in a meeting at Portland September 7, decided unanimously to carry their fight for a north Pacific coast terminal as a base in the establishment of a 1917 wheat price direct to President Wilson.

The meeting was attended by 150, virtually all previously chosen from massmeetings in their respective communities forllowing the Spokane conference of September 4. While the majority of the wheat growers present were members of the grange or farmers' unions, there was a substantial representation of unattached growers, as well as delegates from the various commercial organizations and financial interests. Eastern Washington sent nearly 40 men, and the Washington delegation represented nearly 90 per cent of the total attendance.

A delegation will be sent in the near future to Washington, D. C., to confer with the congressional delegation of the northwestern states in an effort to secure a personal hearing before President Wilson.

The following were declared elected after a vote by ballot: R. Insinger of Spokane, commercial organizations; W. W. Harrah of Pendleton, farmers' union; C. L. McKenzie of Colfax, at large; R. J. Stephens of Spokane, commercial organizations; C. W. Nelson of Seattle and Nez Perce, Idaho, farmers' union; S. C. Armstrong of Seattle, commercial organizations, and C. E. Spence of Oregon City, grange.

R. Insinger, chairman of the agricultural committee of the Spokane Chamber of Commerce, was chairman of the conference and A. A. Elmore, national organizer of the farmers' union, acted as secretary. The meeting was entirely harmonious, unanimity of action and thought marking the discussions. The attitude of Mr. Houser, while he was unable to assure any relief in his official capacity, was gratifying to the growers, as he frequently expressed his desire to do all in his power to help the northwestern situation and to transmit to Mr. Hoover the sentiment of the wheat growers as expressed at today's conference.

Some Consumers Favored.

Chairman Insinger declared the northwestern farmer was willing to have the consumer get flour at the lowest possible price, but objected to giving the consumer in certain parts of the country a present because of price discrimination. He contended that the price differential was less than the freight rate differential in many instances, while the northwest is to be assessed the full freight rate of 30 cents a bushel to Chicago on a price of $2.20 on the Chicago base. He handled. He estimated the 1917 production in Oregon, Washington and northern Idaho at 42,000,000 bushels, of which 18,000,000 would be needed for home consumption and seed and 12,000,000 for California, Alaska and other natural northwestern markets, and 1,000,000 for flour sales to the southeast, leaving 11,000,000 bushels to export. He declared the fair northwestern wheat price must be based on the water rate via the Panama canal from a north Pacific terminal base.

In reply to questions, Mr. Houser declared that probably not one man on the price-fixing board knew what wheat was sacked in the northwest. He said the farmer could retain his sacks if he cared to, the prices fixed being on bulk grain. He suggested that an investigation be made as to the sacks available. Northwestern wheat shipped via Chicago for the southeast, he said, would take the Chicago rate, and the suggested that the government could commandeer ships now building on the Pacific coast to move northwestern grain just as easily as it could commandeer the wheat. He said it is a waste of effort to ship interior wheat to the coast for milling and back to the interior as flour.

Stephens Talks of Tonnage.

R. J. Stephens of Spokane, chairman of the Washington grain convention, stated that new shipping now on the Puget sound ways could handle 100,000 tons of wheat by January 1. Others declared twice this amount could be buyer must absorb the difference between the Chicago and southeastern basic port prices.

Means Tax on Farmers.

A. A. Elmore, national organizer of the farmers' union, declared price control meant a direct patriotic contribution from northwestern wheat growers of $20,000,000 on the estimated 1917 crop.

C. E. Spence of Oregon City, master of the Oregon grange, pledged the support of that organization behind the movement to secure redress for northwestern wheat growers.

"We want equal rights and privileges with other sections of the country," he said. "There is no reason for discrimination. The northwest has never been the tail of the Chicago kite."

The report of a special commission composed of R. Insinger, A. A. Elmore, J. S. Klemgard, R. J. Stephens and C. L. McKenzie was read by Mr. McKenzie. He submitted figures for 10 years showing that the Chicago price had never been 20 cents over the Portland price, that 15 per cent of the time the Portland price was higher and that the average differential favoring Chicago was only 5 cents.

Among those present were the following:

Washington.

Spokane—Thomas H. Brewer, M. E. Hay, W. B. Davis, J. K. McCormack, C. B. Kegley, P. J. Stephens, David Munroe, F. Alspaugh, William Huntley, C. T. Hansen.
Lind—J. M. Robbie.
Seattle—George Albers, S. C. Armstrong, H. P. Chapman, C. W. Nelson, A. A. Ryer, M. J. Lehman, William Levengood, J. H. Noyes, William J. MacDonald, A. E. Sutton.
Garfield—A. C. Whisler.
Ephrata—Will J. Logg.
Reardan—W. H. Childs.
Pullman—George A. Olson, J. S. Klemgard, O. G. Waller, H. W. Price.
Tacoma—P. J. Sweeney.
Colfax—C. L. MacKenzie, W. R. Anderson, George L. Neil.
Kahlotus—Logan E. Perry.
St. John—Frank A. Ratliffe.
Lacrosse—Ira M. Camp, C. E. Helm, M. E. Stansell.
Oakesdale—J. J. Browder, S. M. Lathrum.
Latah—H. C. Kreyssler.
Odessa—Joseph Nechanicky.
Hooper—Peter McGregor.
Krupp—H. W. Hull.
Wilbur—J. F. Kunz.
Tekoa—L. J. Lauritzen.
Lyle—J. E. Foss.
Centerville—J. Crocker.
Palouse—A. J. Webster.
Goldendale—R. D. Sunderland.
Othello—J. F. Lee.
Dayton—R. M. Jonas, John Brining, G. M. Thompson.
Sprague—C. L. Fish.
Hatton—B. L. Sutton.
Uniontown—Lambert Taufer.
Wheeler—C. G. Henderson.
Warden—Ed G. Bowker.
Ruff—C. L. Barnham.
Bickleton—George Matsen.
Rosalia—A. J. Stone.
Walla Walla—John F. Casper, O. T. Cornwell, W. H. Kirkman.

Oregon.

Portland—M. G. Bussi, William Albers, J. D. Brown, R. J. Patterson, A. Cohn, T. E. Morgan, D. W. L. MacGregor, Leo Peterson, Sherman C. Draper, D. A. Pattullo, William MacMasters, H. A. Cushing, R. P. Knight, E. Rohlfing, N. P. Peterson, L. Smith, George H. Crawford, A. R. Jobes, C. E. Kindt.
Heppner—C. E. Jones.
Oregon City—C. E. Spence.
The Dalles—Louis J. Gates.
Ione—E. R. Lundell.

Pendleton—T. G. Taylor.

Idaho.

Nez Perce—B. L. Cole.
Ilo—U. R. Warnacht.
Cottonwood—George S. Downer.
Genessee—H. J. Herman.

Spokane Conference.

The Spokane conference of September 4, made up largely of wheat growers, together with business men, adopted resolutions to ask the food administration's price fixing commission to establish a Pacific northwest terminal on a $2.20 basis for No. 1 northern wheat. That would mean $2.10 in interior northwestern points. At the Spokane meeting, A. A. Elmore, national organizer of the farmers' union, submitted the following figures to show the trend of relative prices in Chicago and Portland:

The wheat market in Chicago in 1914 was $1.09 per bushel. In Portland in 1914 was $1.12 per bushel.

Chicago in 1915 was 94 1-2 cents per bushel; in Portland in 1915 was 89 cents per bushel.

Chicago in 1916 was $1.38 3-4 per bushel; in Portland in 1916 was $1.26 per bushel.

Chicago on August 29, 1917, was $2.20 per bushel; in Portland on August 29, 1917, was $2.25 per bushel.

"It is argued that we must assume or absorb the freight rate to Chicago in order properly to meet the middle west competition in the flour trade," continued Mr. Elmore. "I want to ask who absorbed the freight rate of 30 cents per bushel and 5 cents per bushel premium on August 29, 1917?"

Interstate Fair Live Stock Show

Courage, Enterprise and Staying Qualities of Northwest Stockmen

By E. J. IDDINGS

It is happy augury of the future when realization of any event far surpasses expectations. This is true of the live stock show at the Spokane Interstate fair.

Feed has been so high in price as to discourage many from preparing animals for public exhibition; many of the able men interested in live stock production have been called to assist in some of the many phases of the national effort for effective prosecution of the war; herdsmen have enlisted or have been drafted; many of the small shows, which are in some cases feeders for such exhibitions as is now closing at Spokane, have been abandoned, and other facts of a similar nature made many feel that there would not be "much doing" with live stock at Spokane this year.

It is, therefore, a pleasant surprise for the visitor as he steps on the fairgrounds, and it gives one a new and deeper appreciation of the courage, enterprise and staying qualities of the stockmen of the northwest to find on the grounds this year a large and very fine display of purebred live stock.

Some of the old horsemen who are veterans of many a battle of the arena were not on hand, but new men brought horses to fill the vacant stalls, and displayed well-groomed specimens of the horsebreeders' skill to admiring throngs that do not own and never will permit a gas-driven means of transportation to take the place of affection that the horse has had in man's heart since early ages.

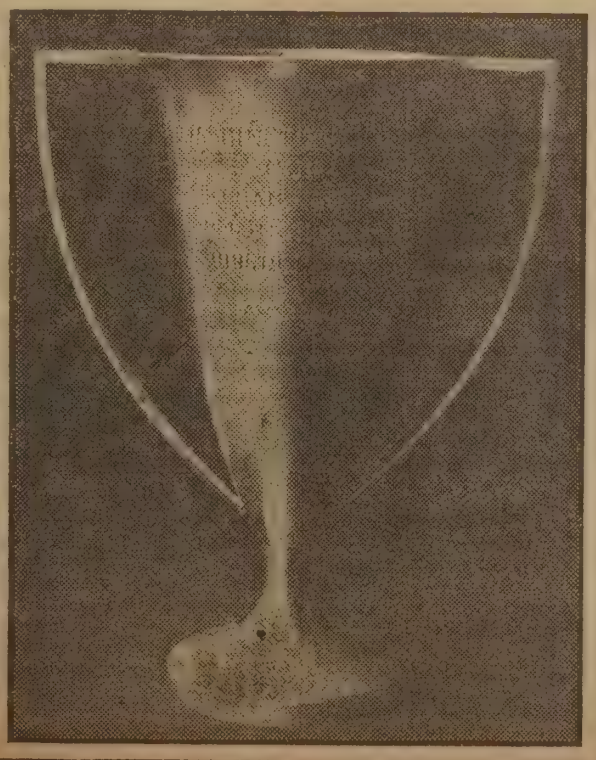
Space does not permit extended comment on the Percherons, Shires and Clydesdales which made up the larger part of the show. A newcomer, the blue ribbon stud of Colfax, took all championships in the above breeds except in Percherons, when the purple award went to S. E. Jordan of Cheney. Particularly worthy of most favorable comment is the 3-year-old Percheron, Royal Quartermaster and the 4-year-old Clydesdale Victor Favorite, stallions of the Percheron and Clydesdale breeds, respectively.

The beef cattle show consisted almost altogether of Shorthorns and Aberdeen-Angus. It is a matter of regret that the Herefords, long a prime favorite at Spokane, are not represented except by fat steers in the awards of the Washington State college and the University of Idaho. These two schools have well-finished steers for the fat classes. The purple award for grand champion after the battle of the various classes for ages, went to the varsity yearling, a purebred Shorthorn.

The Aberdeen-Angus exhibit is probably the best of any ever seen in Spokane, and is made solely by one exhibitor, Congdon & Battles of North Yakima.

The reds, whites and roans exhibits attracted the eyes of visitors, with McCroskey, Hercules farm, Morrison and Bradrick making the greater share of the showing. These herds, three of which have been at Spokane before, show an improvement year by year. This is not only the result of judicious selection from herds long used by these men as foundation, but there is further a marked evidence of improvement from the introduction of Shorthorn blood secured from the distant and well-known breeding districts of America and Canada.

The showing of dairy breeds is excellent with the four principal breeds, the Holstein-Friesian, Jerseys, Guernseys, Ayrshires well represented. The Holstein interests were well taken care of by the splendid herd from the Carnation stock farm, and a smaller but very creditable exhibit from Hulbert of Mount Vernon.



The Jerseys and Guernseys, those two sister breeds representing the constructive skill in animal breeding of the Channel islands, made a most notable showing. The herds were of uniform and outstanding individuality and noticeable in most of the classes entered for competition. The Ayrshire exhibit came from Waikiki.

The swine breeders of Washington and contiguous states may feel proud of this year's show at Spokane. There

(Continued on page sixteen.)

For Grand Champion Holstein Female

The cup shown herewith will be given by The Washington Farmer to the exhibitor of the Holstein female that wins the honor of grand champion at the Washington State fair at North Yakima, September 17-22. The state possesses some of the best Holsteins in the country, and the competition should be keen for honors.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Farm With Extreme Care This Year

The soil of the United States is asked to produce the largest crops next season in the history of American farming. Promise of good prices, as well as the spirit of loyalty to their country, will lead farmers to put forth special effort to meet the requirements. The world must have food; the soldiers of the allied nations must be well nourished if they are to win the war.

The farmers must, and will, rally to the call for the production of bumper crops, but they must farm judiciously. Never before was there so great need for careful farming. Scientific cultivation of the soil was never so much needed. Fertilization is necessary as it never was before. Patriotism and the temptation of high prices are likely to lead the farmer to take from his soil at this time the maximum yields possible, without putting back any fertility. But he must look to the future as well as to the present. It is immeasurably harder to build up depleted soil than to maintain it year after year in a state of fertility. Therefore, it behooves the owner of land to see that every fertilizing element obtainable is put into the soil. No waste vegetation should be burned. There are practicable ways of putting even straw and stubble into the soil. Every pound of manure should be utilized. Every drop of moisture should be conserved by means of cultivation.

This is necessary in order to meet the present crisis, but it is more necessary for confronting future conditions in crop production. Carl Vrooman of the department of agriculture uttered a profound fact while in the northwest recently when he said, "We ought almost to thank God that this crisis has come to force upon us the adoption of scientific agriculture."

Direct Marketing Plan

The direct marketing plan that has been under way for some time bids fair to be in operation soon, is the report of Agriculturist C. B. Sprague of Kitsap county, Washington. The committee has been at work changing the plans to better suit the conditions of the present time, and have made their final report to the Pomona grange, under which the market project was first given its start. The matter of trying to standardize package and parcel best suited for the consumer as well as the producer is still up for adjustment. The committee is to encourage the buying in quantity rather than the day-to-day plan that is commonly used, so as to do away with as much overhead charges as possible.

Accept Just Punishment for Plunder ng Farmers

Gale Smith, president of the swindling Northwestern General Trading company, and Stephen T. Knudson, sales agent of that company, and president of the Olympic Trading company, a subsidiary concern, have wisely quit battling against their just sentence and will now serve out and accept their penalties—a year in the county jail and fines, respectively, of $10,000 and $7500.

The conviction of these men and two lesser offenders—Clyde L. Davies and Olin C. Fowler—will have a wholesome and far-reaching influence. The audacity and the magnitude of their operations, resulting in the fleecing of honest and hard-working farmers and other workers out of hundreds of thousands of dollars, came to the attention of vigilant officials of the United States government, who fearlessly turned the searchlight on their dark manipulations.

They had a fair trial before an unbiased judge of the United States court, and were ably defended by capable and resourceful counsel. But their guilt was so obvious that a jury of fair-minded citizens found them culpable and returned a righteous verdict against them.

This just ending of a celebrated case should stand as an enduring and impressive warning to all schemers bent on plundering farmers and other investors. In its proper work of exposing the swindling operations of the Northwestern General Trading company, and giving its readers full and accurate reports of the trials, The Farmer had clearly in mind and purpose a plain duty to the public. It felt that it was of the highest importance that these men should be punished for their improper exploitation of the cooperative principle.

Cooperative movements are of large and increasing benefit to farmers when conscientiously conducted by honest men, but if plundering schemes like the Northwestern General Trading company, cloaking themselves under the false guise of honest cooperative effort, were allowed to go unpunished, and their managers were permitted to walk off with their ill-gotten gains, it would not be long till worthy cooperative undertakings would be discredited.

If You Must Cuss, Don't Forget Congress

The New York Journal of Commerce thinks that "in one great vital respect we have fallen down on our war plans for obtaining a big supply of food."

It points out that the farmers have responded to the government's appeal for increased production, but the government has not been forehanded in providing marketing machinery and storage facilities to handle the increased output.

Excepting wheat, the country is harvesting abnormally large crops in the cereals, and the potato yield promises to be the largest in history. Eventually all this food will be needed—for home consumption and exports to our allies. But that much of the production will go begging for a temporary market seems inevitable.

The responsibility for this unpreparedness rests with congress, not with the president and Mr. Hoover. Congress took all summer to debate and wrangle over the food control legislation, and until it acted the administration could do nothing.

Now the whole complicated, gigantic problem is thrust suddenly on the administration, which must work out details in days for which it should take weeks.

There will be costly mistakes, and at times the undertaking may seem hopeless in many lines; but the Farmer believes that we shall muddle through it some way. But when the tangle seems hopeless, and you feel that you must express your feelings in emphatic language, don't forget that a great part, if not all, of the blame belongs to those senators and representatives who kept the bill hung up for months after the president had outlined his program.

Washington Gleanings

The canning school in Everett, which has been so popular this summer, will be continued through September.

T. H. McBroom of Garfield has sold his country home of 75 acres to S. G. Leach for a consideration of $10,000

E. C. Bradley, assistant secretary of the interior, has been investigating irrigation districts in the section of North Yakima.

According to reports, there will be about 25,000 more stock on the ranges of the Oregon-Washington grazing district next year than this.

For the purpose of securing more effective results in marketing their produce, Thurston county dairymen and farmers have formed the Thurston County Dairy and Farm Produce association.

Plans for installing the starch factory in Toppenish have been abandoned for the present year. The company is unable to obtain the necessary machinery at the present time. The project will probably be carried out next year.

A fruit drying plant with a capacity of 20 tons a day is to be in operation at Walla Walla prison within the next few days, work of excavating for the kilns having been started. Culls and the ordinary waste fruit of the valley will be handled.

Lynn S. Keyes, county agricultural agent of Cowlitz county, is taking a census of the horses which will be available for sale to the United States army and government, who are in the market for a large number of first-class horses for war service.

Beet farmers in the Yakima valley who sell their produce to the Utah-Idaho Sugar company, whose new plant at North Yakima will be open for this year's run are to receive a profit-sharing contract this year, provided they feel inclined to accept this type of paper.

The advance agent of a circus and menagerie that visited Seattle recently found the only available show ground convenient to the center of the population occupied by 24 war gardens and he was obliged to compensate the owners before he could lease the land for the show.

Timber appraised at $193,559.33 will be offered for sale by county auditors of the state on October 2, together with uplands valued at $116,503.89 and tide lands valued at $4934.63. Practically all of the land is east of the mountains. The sales will be held in 29 counties.

Washington farmers have not yet suffered from a shortage of harvest hands, according to L. Wood, federal director of employment in charge of the Seattle office. He says that the establishment of subagencies throughout the state, which keep in direct touch between farmers and jobless, has worked splendidly.

Irrigation of an additional 30,000 acres on the Yakima Indian reservation next year, raising the total to about 90,000, is promised if congress approves the recommendation of the department of the interior that Senator Jones' amendment appropriating $750,000 for work on the Wapato project this fall and winter be passed.

A committee to handle the problem of providing wheat and rye seed for farmers of the state has been appointed, with Professor W. S. Thornber of Washington State college as chairman. A sufficient quantity of wheat suitable for fall planting will be held by the warehouse men, they promise, until the needs of the farmers have been supplied.

What Others Say

Hoard's Dairyman: Let us not make the mistake of giving the land on which alfalfa is to be grown too little preparation.

Rural New Yorker: The potato is a necessary part of the food for Americans, and the more of the skin we eat the better off we are.

Dakota Farmer: The man who makes two motions grow where only one is needed for the task is not a public benefactor—he is merely wasting time, muscle and energy.

Country Gentleman: Children who are regularly taught methods of thrift in school will constitute a bodyguard of criticism of extravagance in the home. A national department of thrift is needed.

National Stockman and Farmer: The great monument which marks the graves of 4760 soldiers on the Antietam battlefield bears this inscription: "Not for themselves but for their country." And that spirit should actuate all of us these days.

Five Books Free

DO YOU want to save money on your stump blasting? Do you want to get the stumps out cleaner—split them up better—and cut down the quantity of powder required? Our Stump book, "Better Stump Removing," tells and shows how to do it.

OR do you want your fruit trees to grow faster, yield sooner and bear bigger crops. Our Tree book, "Better Orchard Tillage," shows how you can secure these results by blasting when planting.

IF you want to save fertilizer and grow bigger crops, send for our Crop book, "Better Farm Tillage." It tells how blasting will make the subsoil mellow several feet deep and release new plant food for your crops.

ARE there rocks on your farm? Our folder, "Better Boulder Breaking," shows how a few minutes' work will get them out of your way forever.

DOES your farm need draining? Our Ditch book shows how to blast clean, smooth ditches of any size—the easiest, quickest way of making them.

GIANT FARM POWDERS
STUMPING — AGRICULTURAL

Here are some of the reasons why you should insist upon Giant Farm Powders for all farm blasting.

1. They are made especially to suit Western farm conditions, by a Western company with 50 years' experience.
2. They are the *genuine* Giant Powders—the product of the manufacturers who originated the name. The fact that other explosives are often called "giant powders" indicates the high quality of the genuine.
3. They go further than ordinary dynamites. They exert their strength over a wide area, cracking, splitting and heaving out stumps, roots and all, rather than shattering and throwing them high in the air.
4. They will not freeze at ordinary temperatures, standing 32° for days without requiring thawing.
5. They are being used by thousands of farmers, scores of whom state that the Giant brands "give better results"—"save money"—"have wider breaking power"—"shoot the roots"—and "are always uniform in strength and action."

There are two of the Giant Farm Powders: Giant Stumping Powder, for wet work, and Eureka Stumping Powder, for dry work. Eureka costs less and many careful blasters use it for wet work, too.

Ask Your Dealer

Your local dealer probably has Eureka and Giant Stumping Powders and other Giant blasting supplies. If he does not have them, write us. We will see that you are supplied promptly through the local dealer with whom you prefer to trade, through a dealer in a nearby town who has a magazine, or direct from our nearest distributing point.

The Giant Powder Co. Home Office **San Francisco**
CONSOLIDATED *"Everything for Blasting"* ESTABLISHED 1866
Branch Offices: Seattle, Spokane, Portland, Salt Lake City, Denver

Make This Test

Get a 25 or 50 pound case of either of the Giant Farm Powders. Get at the same time a case of any other dynamite or stumping powder.

Blast with each. Keep track of the quantities used. Figure the cost. You will find—as farmers everywhere have found—that the Giant Farm Powders save farmers time, work and money.

To make it easy for you to secure Giant Farm Powders we print a trial order form in the coupon at the right. Fill it out and we will have our nearest distributor supply you with a trial case at the lowest market price.

Mail the coupon below or a post card and get one or all of the Giant books. You will find them valuable. They contain illustrations of the most economical ways of doing farm work with Giant Farm Powders.

Farmers Live on Last Year's Profits

So Says One Writer in a Letter About the Crop and Price Condition; He Says It Takes Two Dollar Wheat To Break Even

BICKLETON, Klickitat County, Wash., Aug. 30.—Harvest operations are about through in this locality, but threshing will last about two weeks yet. Grain is beginning to come in the warehouses and the testing shows serious damage by the hot weather. I doubt if there will be any wheat in this vicinity that will test No. 1. It is going from 48 to 58 pounds to the bushel, and the bulk of it going at 50 and 54 pounds. I judge the crop will be about 65 per cent of a normal yield. Oats and barley stoed the east winds a trifle better than wheat. The acreage of spuds this year is large, but they are also affected by the dry season. We have not had a rain for nearly three months. Stock is looking well, as there are lots of stubble fields to run on. The water supply is getting low with the continued dry season and many are drilling new wells. The farmers as a rule are in good circumstances from last year's big crop, having paid off many old debts, but the increase in wages paid harvest hands and the great increase in the price of supplies of all kinds and also considering the low test of his grain, the farmer must have $2 per bushel for his wheat if he is going to break even and $2.50 if he is going to make a profit. If Uncle Sam wants a big acreage next year he must let the farmer make a profit this year. No farmer can accomplish anything by just merely making a living, as it takes the best part of a man's life to start from nothing, and accumulate land by degrees until he has a moderate-sized farm and then improve and equip it so he can live in comfort. By the time he has all this paid for and is out of debt he is beginning to gray around the temples. Then the I. W. W.s and certain laboring men make a great howl that he is rich, with a bulging bank account, as one man expressed it. They ought to be thankful that he is able to pay them double the wages they used to receive, so as to enable them to bear the increased price of living.

BERT H. FAULKNER.

Future Stock Outlook.

TWISP, Okanogan County, Wash., Aug. 21.—All farm crops have been injured more or less from drouth and heat. Even the men that irrigate have learned their crops can be affected by heat and drouth. Of course, they make some kind of a crop; but the heat has been so intense this season that the second cutting of alfalfa is far below normal. Good heavy soil on upland will always produce one fair crop of alfalfa, some seasons two. A good seed bed and deep planting is the greatest defense against drouth on dry land. The crop condition will have a tendency to discourage, but the price and demand will stimulate live stock. The future looks bright for the fellow that will hold on to and care for his young stock for the next two or three years.

GEORGE LA RUE.

Must Farm Intensively.

GIG HARBOR, Pierce County, Wash., Aug. 28.—From such observations as I have been able to make would say that the stock feed question for the coming winter is better in hand than it has been heretofore. A stronger effort is apparent to produce something nearer an adequate supply of roughage and roots for winter feeding. The weather for gathering and housing the former could not have been better. Considerable corn for fodder was planted in favorable locations along our creek bottoms, and that, too, is doing finely these warm sunny days. Threshed straw is but little used here, there being no threshing done in this section. It is occasionally bought in baled form from the east side, but is not relied upon as a main feed. It is not thought that its value will bear the high freight rates that must be added to its first cost. It usually sells at about one-half to two-thirds the price of alfalfa. Potatoes will yield moderately well on lands of suitable moisture. With the larger acreage that prevails there will be a considerable surplus over the needs of the local markets. Generally speaking, the acreage here that is being planned for next year's crop in all lines can not, under existing conditions be greatly increased; but there will be a strong move toward getting larger yields from the areas available. We here must necessarily give our strongest efforts toward intensive rather than extensive farming. W. D. BOYNTON.

Increase in Silos.

CHEHALIS, Lewis County, Wash., Aug. 26.—There was a fairly large crop of hay in Lewis county which was saved in good condition. Weather conditions have been favorable for the growth of corn for ensilage and the crop looks fine. There has been a large increase in the number of silos in the district and in the acreage of ensilage corn. The practice of saving straw is now almost universal here. Great quantities of straw is baled and sells at $7 and $8 a ton in the bale. The oat crop is short and some pieces of oats have been cut for hay because they promised to yield but little grain. The yield of potatoes will generally be light although there are some fine fields. The acreage was largely increased last spring so there should be more than an average tonnage for the market. Acreage of crops can only be gradually increased in this country because of the labor necessary to clear the land of timber and stumps. However, the acreage under cultivation next year will undoubtedly be larger than in any previous year.

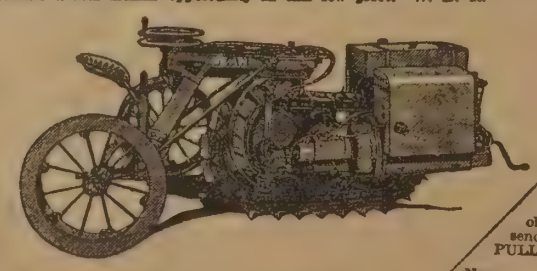
J. C. BUSH.

Pea Crop Is Light.

FAIRFIELD, Spokane County, Wash., Aug. 25.—All spring sown crops seem to be injured from 50 to 75 per cent, but the fall-sown wheat on summer fallow, where it was sown early, has yielded a normal crop. The pea crop, while very light, will pay expenses, and in some cases have a profit, especially is this true where peas were grown on old pea land. The first crop of peas were generally very light. Spring oats and spring wheat are less than one-half normal crop. The shortage and high price of feed will tend to depress live stock. Farmers should keep their hogs where peas are grown and this can be done by providing alfalfa pasture for the spring and summer range, then run them on the pea-stubble in the fall and a double profit is made. ROY G. ADAMS.

Go Slow Selling Cattle.

GRANDVIEW, Yakima County, Wash., Aug. 20.—There is no injury to crops, for we irrigate here. Prices of feed will make many sell stock for what they can get for them. I think we should be slow to sell off cattle at a low price. Butter fat is not high priced as feed. This is very hot weather but all crops are doing well.



E. H. FAULKNER.

Farmers Not Discouraged.

BOSSBURG, Stevens County, Wash., Aug. 27.—This has been the worst year we have had since the country was settled. There has been no rain since June 4, about the time of the last spring seeding and we have had more wind than ever before. All crops are short. Wheat, oats and barley are about one-third of a crop. Corn is not more than one-fourth of a crop. Potatoes are 50 per cent of a crop. Hay is not quite so bad as we had a pretty fair first crop of alfalfa and the timothy was fair, but the second crop of alfalfa was a failure where there was no irrigation so we have about 60 per cent of a hay crop. Wheat seems to have stood the drouth best and may make a little better than 30 per cent of a crop. Fields that were plowed last fall have stood the dry weather best. Some of the early spring plowing has produced some grain, but where the grain was put in with a disk or drill without plowing there will be no crop this year. In fact the latter style of farming will not do in this part of the country, and I doubt if it pays anywhere. The short crops have not discouraged our farmers in regard to live stock, as they will hold to all they have except those ready for the market. Most of our farmers have enough feed to keep what stock they have, but few will be able to buy any more this fall. I have heard several farmers say if they had feed they would buy more cattle. Most every one seems to think prices will be better in the next two or three years. Hogs are scarce and there are none for sale at any price. That does not seem to stimulate the breeding of more hogs in our part of the country. Most farmers will continue to raise enough hogs for home use, but none for market. We have no irrigation here and hogs will not pay on dry pasture. Cattle and sheep do well on our dry pastures and should be kept on every farm. There is not a farmer in our part of the country, but has made money on what cattle and sheep he has been able to keep, and they are all in favor of keeping more rather than selling a part of what they have. As I have stated before I believe there is more money in sheep here than any other stock. As we have a lot of rough hill land that produces mutton and wool, any farmer that has not tried sheep will be surprised at what a few head will do on the small farm. I know of many small farms in this country where less than one-half of the land inclosed is in cultivation on account of being too steep or rocky to plow. All this class of land will produce, if given a chance to grow mutton and wool. So let us all boost for cattle and sheep in our non-irrigated districts and boost for the hog where we have fresh green pastures. The market is sure to be good for the next few years.

I Say "Don't Buy This Tractor or Any Other Until You Get This Book"
It tells all about the most wonderful little Track-laying Tractor ever built for Orchard and Vineyard work. Write me direct today, or send the "Tractor Opportunity" coupon. Lowest prices now.
My name is W. B. Raymond, and I am the man in this concern whose job is to get the story of the wonderful little Bean TrackPULL Tractor before orchardists and vineyardists. And I say "Don't buy *this* tractor or any other until you get the TrackPULL story, because that story may revolutionize your tractor ideas to your great benefit.
"There are some things that the TrackPULL won't do, and you want to know those things before you buy a Bean TrackPULL—and there are other things it *will* do that other tractors *can't* do, and *those* things are *vitally important*, particularly to vineyardists and orchardists.
"The front drive principle—steering with the track that PULLS—is just one of the features of this great little tractor that is patented. No other tractor is like it. A patent, of course, always means a *big advantage*.
"Look at the illustration. The Bean —6 h. p. at the draw bar — *pulls* instead of *pushes* itself over the ground, and you *steer* with the track that pulls. That means you can do everything with the Bean that you do with horses plus a lot of things horses and other tractors *never* have done—like going under tree-boughs only four feet off the ground and pulling full load on turns. The Bean works between seven-foot rows in vineyard—that's another advantage.
"But I couldn't begin to show you in an *ad* all the advantages. They've got to go in a book, and you ought to have that book before you buy a tractor because it will *save you money*."
BEAN TrackPULL Tractor
Send me the coupon below and I'll send you the book free. Read about the "Fifteen Features of the Bean." The price is $1150.00 now—the lowest priced track-laying type of tractor built—but material costs are steadily going up so I suggest you act quickly before a raise. There's a real tractor opportunity in this low price.—W. B. R.

No More Whisky

Grain to Be Eaten; Not Distilled

The new federal law, a part of the far-reaching food administration law, prohibiting the manufacture of distilled liquors from grains, is in effect, and any distillery now in operation is running illegally. The law went into effect with the closing of the plants Saturday night, and thousands of distilleries in the United States have closed their doors.

For some time since it became evident that national war legislation was coming to prohibit the use of grain for liquor manufacture, the distillers have been working overtime manufacturing whisky for storage. It is now estimated that there is plenty of whisky in the United States to satisfy the demand for at least a year, and possibly longer, and the distillers are hopeful that the war will be over and the prohibition removed before the supply is exhausted. The law does not interfere in any way with the prohibition laws already existing in the states or the nation except that the manufacture of grains into distilled liquors is forbidden, in order to conserve the grains for food.

Some of the distilleries are continuing to operate for the production of alcohol for commercial uses, but most of them have closed down and placed their employes in other kinds of work.

Lumber Strike Off.

The I. W. W. lumber strike in the northwest has been called off. What the reasons back of it are is not announced by the union officials. In some quarters it is believed that the action is taken because of the apparent failure of the strike to result in betterment of conditions as sought by the strikers; in others it is believed or feared that the malcontents are planning to hamper the industry more by resorting to practices of sabotage. In some localities the merchants have banded together and absolutely refused to grant credit to the strikers, thus virtually forcing some of them to return to work or go hungry.

Business Men to Meet.

A great meeting of business men has been called for Atlantic City, N. J., next Tuesday for the purpose of formulating plans for the more efficient conduct of the business life of the country in behalf of the nation and her allies. The meeting is under the auspices of the Chamber of Commerce of the United States. Secretary Baker of the war department and Secretary Lane of the interior department will address the men as representatives of the government. It is proposed to organize the great industrial and business resources of the nation with a view to strengthening as far as possible the government in its war against Prussianism.

Sweden Not Neutral?

Evidences are declared to be had that the representatives of Sweden at Buenos Aires, the capital of Argentina, in South America, have been acting as the allies of Germany in furthering the submarine campaign. The Swedish legation is charged with having been transmitting messages for the German government secretly and in direct violation of the regulations governing neutral nations. There has been talk in official circles of possible breaking of diplomatic relations between this country and Sweden as a result of the disclosures, but that is not likely at this time.

Exempt From Mortgages?

A meeting of the Farm Mortgage Bankers' association is in progress at Minneapolis this week, and one of the big subjects before them is whether or not enlisted or drafted men should be exempt from foreclosure of farm mortgages during the period of service. There appears a strong sentiment throughout the country to grant concessions of this general character to men enlisted in the country's service, and it is not unlikely that some such action will be taken by the bankers.

More Peace Terms.

More talk of peace terms in the air. This time rumors of what Germany is likely soon to propose are sifting through the lines. The rumors fix Germany's terms in language very similar to that of Pope Benedict, recently rejected by the United States and her allies. In a general way the terms as proposed are not wholly objectionable, and may form the basis for actual negotiations within the near future, but the one great fundamental necessity, the elimination of German autocracy and militarism, is not included in the rumored proposal.

Russia Takes Stand.

After evacuating Riga, the port on the Baltic sea, to the German forces, the Russians retreated some distance and at this time appear to be entrenching themselves with a view to making a deliberate stand against further invasion. It is apparent that the German generals have no intention of attempting to march on Petrograd.

The fighting continues on the northern French front, with the allied armies having the better of the conflict, though no great gains are reported of late.

Apple Men Cooperate.

A meeting of persons directly interested in the apple crop is being held in Portland this week, with a view to uniting all such parties for the more efficient distribution and conservation of the apple crops. The meeting was called by W. B. Ayer, Oregon state food commissioner, at the request of National Commissioner Herbert Hoover.

High Bred Stock.

One of the plans of Armour & Co. of Chicago in connection with their big packing plant in Brazil is to establish a breeding department that will be stocked with high bred cattle, hogs and sheep. It is proposed to institute an active campaign of education among Brazilian breeders and to loan them stud animals when necessary, as well as to sell breeding animals at practically cost prices. The projected plant at Sao Paulo is to handle 2000 cattle, 3000 hogs and 2000 sheep a day when running at full capacity, and to eventually have 3000 employes on its payroll.

More Grain; Less Cattle.

The 1918 harvest program for England and Wales contemplates 2,000,000 acres less grass and 2,600,000 more grain, according to an official statement received by the national food administration at Washington. The first plan was to plow up an additional 3,000,000 acres of grass land, in the hope of making England as near self-sustaining for cereals as possible. The agricultural program proposed, taken in conjunction with the declining scale of prices fixed by the government for cattle, indicates that cattle are to be sacrificed for grain in the present emergency as a part of the British government policy, and that the end of the war will find the meat and live stock problem left largely to the United States for solution, with increased demands upon us for live stock and dairy products and lessened demand for grain.

Live Stock Decreases.

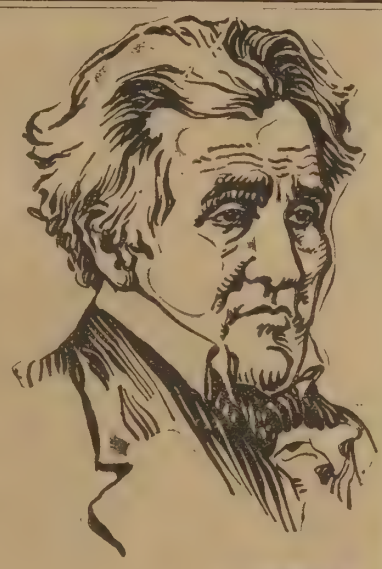
At the close of 1916, according to official figures, cattle in France have decreased to 12,341,900, as compared with 14,807,000 in 1913, or 16.6 per cent; sheep decreased from 16,213,000 in 1913 to 10,845,000 December 31 last, or 33 per cent; swine decreased from 7,048,000 in 1913 to 4,361,900 at the close of last year, or 38 per cent.

The French figures emphasize the recent statement of the United States food administration that the nations of Europe are now rapidly depleting their supply of live stock and must, therefore, depend largely upon the United States for their meat and dairy products after the war.

Windmill Makes Dough.

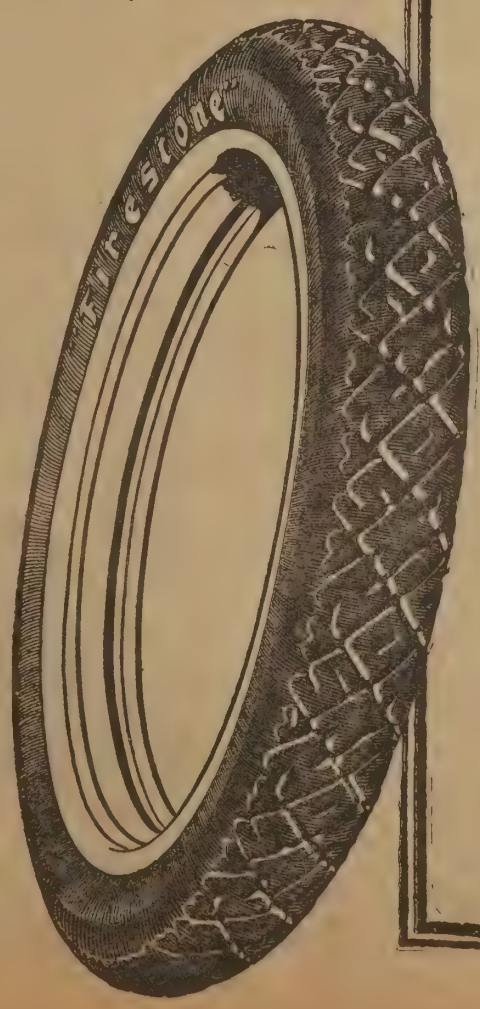
A windmill in Europe grinds grain into flour for a baker and then mixes and kneads it into dough.

MUST CONSERVE STOCK.



Industry Is a Fundamental One.

At the stockmen's banquet, at the auction sale and everywhere at the Interstate fair last week leaders in the live stock industry were heard pleading for the conservation of live stock. C. M. McAllister of Portland, E. F. Benson of Olympia, E. J. Iddings of Moscow, E. S. Sweet of Grangeville, George Gue of North Yakima, and many others urged continuously the holding of stock by the farmers in every case possible, rather than sacrificing them because of feed shortage.



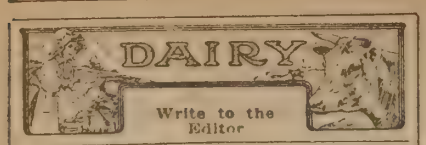
In spite of these pleas, however, there was little interest expressed by buyers at the auction sale on the fairgrounds. Few bids were placed and few animals sold for good prices. Only one hog sold, a Chester White boar that went for $50. Fifteen cattle sold for an average of about $67 each, the highest price being $115 paid for a Holstein bull. A considerable number of reasonably good private sales were made. Two Duroc hogs were sold by B. E. Smead at $150 each. Both were excellent animals, pure bred and prize winners. A few horses were sold at fair figures at private sale. But on the whole, the sales aroused slight interest.

Loses Purse, Finds Brother.

A lucky thing that happened to Sophie D'Amour of Lowell was the loss of a pocketbook containing $5320. The account of it in a New York newspaper attracted the attention of her brother, who found her at the trial of the Pullman porter accused of stealing the pocketbook. They had not seen each other since the family became separated when they first reached this country, 12 years ago.

"I Stand for Service to all the People."
Andrew Jackson

SERVICE to all the people as interpreted by the Firestone organization means building tires to carry any machine, pleasure car, truck or trailer, motorcycle or "bike" anywhere, any time. It means the service which shall do this with greatest saving and satisfaction.



The busy car-owner who has learned to rely on Firestone service finds that reliability a big factor in comfort, convenience and money saving. He depends on the tire as he would on any public service of proven character.

This confidence in Firestone character has been learned either by personal test, by observation, or by the endorsement of the motoring majority which is unquestionably for

Firestone

The Firestone factory is the pattern of the industry for advanced facilities and scientific methods. They give you Firestone quality at the cost of ordinary tires. Your dealer and the nearby Firestone Branch unite to give you efficient, economical service.

A. B. NYSTROM, Editorial Contributor

The fine point in feeding dairy cows is to use such feeds in such amounts as will give the greatest production at the most profit. This calls for balanced rations. With feed prices at their present altitudes it will pay dairyman to make a special study of their feeding practices.

Buhl Association

Cow Testing Report for August

By R. E. Snell, Tester.

There was a great decrease in the number of cows on test for the full month. In a number of herds over half the cows were dry and two herds, those of Bower & Hatfield and O. R. Smith were sold. The 383 cows on test for the 31 day period produced 272,907 pounds of milk testing 3.77 per cent, or 10,363.7 pounds fat, giving averages of 712.5 pounds milk and 27.05 pounds fat per cow for the month, which compared very favorably with July, when the average milk production was only 2.5 pounds higher and the average fat production .05 lower. This average is being maintained by cows which have been milked for several months; relatively few freshened in July.

Seven herds have averages over 30 pounds fat, one less than last month. Only 28 cows produced over 40 pounds fat during the month; 12 of those produced over 45 pounds.

Hy G. Schaefer had the honor herd for the month, with an average of 35 pounds fat. H. H. Payne's herd was second with an average of 33.85 pounds.

H. H. Payne's grade Holstein No. 9 was the high cow for the month. She is six years old and weighs 1050 pounds and was fresh July 25; her fat production for the month was 69.1 pounds. C. F. Smalley's grade Jersey Pet was second with 51.1 pounds.

The Schools and Harvest.

The term in most of the schools of Chelan county is starting from one to four weeks earlier than usual, the plan being to have a vacation during the apple harvest in October. Provision for this vacation has been made by most of the school boards in their contracts with teachers.

Twenty Silos Built

Professor C. F. Monroe, county agriculturist of Gray's Harbor county, Wash., reports about 20 silos built in the county during the past year. They are all of wood and of several types. Three of them are wooden hoop silos, 12x30 and cost only $71 each for material. The labor is some greater than on a patent silo. So far they seem to be entirely satisfactory. The name indicates the kind of silo. Usually 3-8x8-inch flooring is used for the hoops, which are set two feet apart. Two thicknesses of common four-inch flooring, set upright inside the hoops tells almost the whole story of how the silo is built. The Western Washington Experiment station bulletin for May, 1917, is devoted partly to a description of this silo.

Oats and vetch, oats alone, wheat and vetch and peas and vetch, are the principal silage crops in this region. Corn has not yet been satisfactorily grown, but small grains with vetch or peas make heavy yields. Alfalfa has been started in a few places and seems to promise fairly well.

Clallam County Report.

The following cows in the Clallam County Cow Testing association of Washington, produced over 50 pounds of butterfat during the month of August, according to the report of E. W. Soper, tester:

A. F. Fasola, Gr. Holstein, 1200 lbs. milk, 58.80 lbs. fat; J. F. Willis, Gr. Jersey, 1365 lbs. milk, 57.33 lbs. fat; Edwin Pettit, P. B. Jersey, 876 lbs. milk, 56.94 lbs. fat; E. F. Gierin, P. B. Holstein, 1596 lbs. milk, 51.85 lbs. fat; Thos. Laurenson, Gr. Jersey, 894 lbs. milk, 51.85 lbs. fat.

Better Sauerkraut

How to Save Early Cabbage

The popular idea that sauerkraut made from early cabbage will not keep is based upon the fact that the fermentation occurs in warm weather and the rapid growth of scum soon destroys both brine and kraut, if the surface is not properly protected, says an expert of the United States department of agriculture. Vinegar at the rate of one quart to 25 pounds of cabbage will prevent decomposition which sometimes takes the form of a soft and slippery product.

Sauerkraut of excellent quality can be made from cabbage maturing at any season of the year. This is the process:

Remove the outer green leaves of the cabbage, just as in preparing for boiling. If an instrument for chopping is not available quarter the heads and slice off the part of the core remaining on each quarter. Inexpensive shredding machines are now sold upon the market, but if these are not available the quarter heads may be cut into thin slices with a large knife. Pack the shredded cabbage immediately in a clean watertight receptable such as a cider or wine barrel, keg, or tub. Except in the case of large families four or five gallon earthenware crocks are preferable. This quantity after opening can be used up before spoilage begins.

As the cabbage is packed salt at the rate of one pound to 40 pounds of cabbage should be added and distributed evenly. When the barrel or crock is nearly full the cabbage should be pressed down as firmly as possible and covered with a clean board. It is desirable, but not essential, that a cloth be placed over the cabbage before the cover is put into place. The salt soon extracts a considerable amount of the cabbage juice, and a sufficient weight of clean brick or stone should be added to cause the brine to rise above the wooden cover. Do not use limestone or sandstone for weights, as the action of the acid produced by fermentation on these substances destroys the keeping quality of the brine. Tubs and covers made of yellow or pitch pine should not be employed, as such woods cause disagreeable flavors.

The container then is set aside and fermentation allowed to proceed undisturbed. If the weather is cool or a cold cellar is used three to five weeks may be necessary for the fermentation to be completed; if in a warm room 10 days to two weeks. Scum should not be allowed to grow on the surface of the brine. As soon as gas bubbles cease to rise the scum should be removed and a layer of hot melted paraffin about one-fourth to one-half inch thick should be poured upon the brine while very hot.

If the sauerkraut is made during the fall and stored in a cool place there is no absolute necessity for a layer of paraffin. The low temperature will prevent decomposition.

Economy Stock Powder

HAS STOOD THE TEST OF TIME

Economy Stock Powder and Economy Germicide Dip have been on the market for seventeen years. They are today used by over 200,000 stockmen and are highly indorsed and recommended by the largest breeders in the country.

We are going to disinfect the State Fair grounds at North Yakima this year with ECONOMY GERMICIDE DIP. Our representative, Mr. Geo. A. Gue, who resides at North Yakima, will be on the grounds daily and shall be only too glad to talk with any stock raiser about ECONOMY PRODUCTS.

We will have a large supply of free literature on the grounds and hope that every man that raises hogs, horses, cattle or sheep will get one of our booklets, "ECONOMYIZE" YOUR FARM. If you do not get to the fair or fail to get one of these books just write us a letter or postal and we will mail same to you. If you wish we will also send a liberal sample of Economy Stock Powder free for you to test out on a few head of your stock.

Economy Hog & Cattle Powder Company

Summer Pastures

Burnt Areas Should Be Seeded

All over this western country, when pasturage in the low lands is cropped down or shriveled by the heat of summer, stockmen operating under government permits drive their flocks and herds to the green heights of the mountains—into the national forests.

So great is the demand for this summer pasturage that the forest reserves are always pastured up to their capacity.

E. F. Benson, Washington state commissioner of agriculture, is urging government action looking to the increase of this summer pasturage. At the recent Spokane conference of agricultural experts, bankers and millers from eight western states, Mr. Benson dwelt upon the importance of extensive seeding of burned over areas. Millions of acres can be converted into summer pasturage, he said, and thus provide at little cost a material increase of the country's meat supply.

"Right now is the time to attend to this matter," said Commissioner Benson. "Extensive areas have already been burned over this summer, with a probability that forest fires will spread over larger areas. After these forests are burned over it costs little to scatter timothy seed in the ashes. There would be no outlay for labor, for the forest rangers and the stockmen could easily and gladly scatter the seed in the ashes.

"But unfortunately no one under the government has made it his business to see that the seed is provided. The whole government organization is so busy with other matters that this opportunity is neglected."

We should think that the stockmen who range their cattle and sheep on the public forests might well make it their business to stir up their senators and congressmen to stir up the United States department of agriculture until some one at Washington made it his business to attend to this important matter.

As a war emergency measure the national rorest ranges are carrying this summer approximately 100,000 more cattle and 200,000 more sheep than in ordinary years. Ordinarily the national forests furnish pasturage for about 1,800,000 cattle and horses and 700,000 head of sheep.

An announcement from the forestry bureau at Washington says:

"It is fully recognized that the increases which have been made in the allowance of stock on the national forests involve danger that the range will be depleted through orvergrazing, but it is believedi by the grazing experts of the government that the emergency increases made can be taken care of, at least this year, without material sacrifice of producing capacty. The condition of the ranges is, however, being made to secure the most intensive utilization consistent with sustained productiveness, by improved methods of handling the stock. Better salting methods and the development of new watering places are among the means employed for this purpose.

"At the close of the grazing season a careful examination will be made of the range on each forest to determine its condition and to find out how many cattle or sheep it will support next season. On areas which are found to be overgrazed, an attempt will be made to shift the surplus stocks to ranges that can stand the strain better.

"While the grazing officials do not think that the increase could be carried indefinitely without serious damage to the forage, regulated grazing has brought about a steady improvement of ranges and some areas will probably be able to support the larger number permanently."

Frazier Farm Is Sold.

One of the biggest farm deals consummated for some time was closed when Charles Playle, Floyd McKennon and Charles Webster bought the Colon R. Frazier farm of 1280 acres on the Sand ridge for approximately $150,000, says the La Grande Observer. This farm was accumulated by Colon R. Frazier, one of the pioneers of the valley now deceased, and on his death was devised to George and Marie Frazier (now deceased) and was held in trust for the heirs in the name of Charles R. Frazier, a prominent business man of Portland and a nephew of Colon R. Frazier.

Demand for Prune Trees.

Large acreage of hay land in the vicinity of McMinnville, which was planted to beans this season will be set out in prune trees.

Colorado Beetle

Is Quick in Stirring Up Trouble

To the Editor of The Washington Farmer: Having read the several discussions on the Colorado beetle, would say that I am well acquainted with him and can not give him any credit except that he can stir up trouble faster than most insects. Having been born in Ontario and made his acquaintance in the year 1872 and fought him for 35 years, I therefore would like to offer the following suggestion, which I found to be the most effective way to lessen his depredations. As soon as spring opens with heat sufficient that you see him crawl around cut pieces of potato and soak in paris green or arsenate preparation and scatter on all plowed fields where the stock are not allowed to run. The old bugs will eat freely of them and die, thereby nipping the crop of bugs in the bud. Then spray as often as necessary. In Michigan I sprayed every two days in the heat of summer, using six pounds bluestone, six pounds lime and six ounces paris green, which also prevented blight. It is very important that every farmer should realize the importance of fighting the pest and should go after him to win the war. I do not know of any in Whatcom county, however. T. E. POMEROY.

Ferndale, Wash.

Twelve Official Records.

Years ago the J. H. Hulbert herd of Jerseys at Albany, Ore., was famous as a working herd. Riley E. Hulbert, who now has his father's farm and herd, is again bringing the herd to the front. He now has 12 official records completed and six more on test. Quite a number of these are young cows. One of the mature cows, Olga's Pomela, produced 620.01 pounds of butter and 8923.9 pounds of milk in 344 days, with an average test of 5.91. All of the herd but two or three test above 5 per cent. This is the herd that originally used Golden Glow's Chief, and it has considerable of his blood. Besides this, several daughters of Pride Olga 3d's Son have register of merit records. The present herd bull is from one of Ed Cary's high-producing cows, and he is siring nice calves. H. A.

Potato Bug Surprises.

Agriculturist H. W. Reaugh of Grant county, Washington, reports surprise in finding the Colorado potato beetle. Numbers of the larvae were found in a field near Wilson Creek. This field is being watched closely in an endeavor to keep the pest from spreading. The seed for this field came from the Coast, but it is not known whether the pest came with the seed or not."

Test Whatcom Cows.

To the Editor of The Washington Farmer: Dr. W. D. Garrett, state veterinarian, has been in Whatcom county the past two weeks, where he tested dairy stock for tuberculosis. In the vicinity of Ferndale only five out of something over 500 reacted to the test, and they were promptly butchered and their owners compensated according to the assessed value of the affected cow, the price not to exceed $35.

MRS. JACK PLASTER.

Ferndale, Wash.

Hog Raising Will Receive Stimulus

College and Business Men Finance Wide-Spread Scheme

With a view to increasing the output of meat in the state of Washington, a wide-spread movement has been launched whereby a swine expert will be placed in the field to work with farmers and boys and girls for the stimulation of the industry. Under the plan as announced, a group of Spokane business men, headed by the Spokane Clearing House association, have raised $1000, to which the state college at Pullman will add enough from its available appropriations to finance the work of the expert in a thorough manner.

It is declared not to be the purpose of the movement to stimulate wholesale hog production, but rather to endeavor to induce thousands of farms to carry one or two brood sows, which, with their pigs, will be raised as nearly as possible from feedstuffs that would otherwise go to waste.

The movement embraces the organization of scores of new pig clubs among the boys and girls, and the bankers throughout the country districts are being urged to make provisions for financing them. Commercial clubs in many of the small cities and town are being requested to take up the movement for the organization of more clubs. The expert is expected to be in the field not later than September 1. It is the aim of the college extension department to secure a man of special adaptation.

SANITATION

IS THE RELIABLE METHOD FOR PREVENTING

FOOT AND MOUTH DISEASE

HOG CHOLERA

AND OTHER CONTAGIOUS DISEASES.

You can make all live-stock quarters sanitary by using

KRESO DIP No. 1

The Standardized, Reliable Dip and Disinfectant.

KRESO DIP No. 1 has been used at the large state fairs in the United States for the last ten years to prevent the spread of contagious disease. It has done it, and KRESO DIP No. 1 will do the same for you on the farm.

KRESO DIP No. 1 is reliable. It is easy to use. It is inexpensive.

FOR SALE BY ALL DRUGGISTS.

We will send you free a booklet on the treatment of mange, eczema or pitch mange, arthritis, sore mouth, etc.

We will send you free a booklet on how to build a hog wallow, which will keep hogs clean and healthy.

We will send you free a booklet on how to protect your hogs from lice and parasites and disease.

Write for them.

Find Liver Spotted.

We have lost several hens this summer and have examined them after they died and find the liver spotted and soft. They mope around for a few days and die. Some of them are fat and some get poor. Could you tell us, through the columns of your paper, what is the trouble and what to do for them? A. A. B.
Creston, Ore.

This is evidently a case of tuberculosis. There is very little doubt of it. The liver is the organ most commonly affected. As the disease progresses the liver becomes enlarged by the growth of the tubercles. It is not often that there will be found spots on the liver from other causes. The tuberculous spots are rather hard and gritty when touched with a knife, while other spots are soft. The symptoms are not always the same. While the disease usually affects the liver sometimes it affects the intestines and may not be evident in the liver. It very frequently affects the intestines and often both liver and intestines. Sometimes the hen will be lame. There is usually a loss of flesh, but occasionally a fat hen will die of the disease. In the former case the hen becomes so emaciated before death that there is little flesh on the bones. In other cases the hen becomes filled with a watery fluid and the abdomen is full and hard. This is a dropsical condition frequently found. On opening the fowl after death there will be little trouble in diagnosing the case. If there should be any doubt as to the disease a specimen should be sent to the state experiment station for examination. Occasionally the fowl dies when the symptoms are not very positive, and it is then that a bacterilogical examination will be necessary.

There is no cure for the disease. When the disease has been in the flock for some time and the stock has no special breeding value the best plan is to kill off all the stock and start anew. The carcasses need not necessarily all be destroyed. Quite a large percentage of them may not be affected. Others will be but slightly affected. With proper cooking it is perfectly safe to use them. The edible portions are not usually affected, the disease being confined largely to the digestive organs. Diseased fowls should not be marketed alive. In some states there is a law against selling tuberculous fowls.

The remedial measures necessary will be indicated when it is understood that the baccilli pass through the fowl in the droppings. The intestinal wall breaks down when the tubercle becomes large and the germs are passed out in the excreta. A healthy fowl picking up feed that has come in contact with the infected droppings may take the disease. This is how the disease spreads in a flock and probably the only way, and is why the disease is confined largely to the digestive organs. Before other fowls, therefore, are put in the same house or same yards the ground must be thoroughly disinfected. They had better be left vacant for six months. If the direct rays of the sun can get at the ground the germs will be killed. The ground should be plowed or spaded up. The house should be sprayed as well as all drinking vessels and food troughs. In purchasing fowls it is a good plan to inspect the yards from which they come and not to purchase any from a flock that has shown any suspicion of the disease. J. D.

Hen Lays Four Ounce Eggs.

Dr. L. F. Straight of Eugene Ore., is the owner of a hen that lays eggs weighing four ounces each. Dr. Straight states that an egg is produced every other day and that all are of uniform size. The hen is of the barred Plymouth Rock variety.

Named "Garden City"

By H. H. BUSHNELL.

It is a fine custom to call a city by some title which describes its characteristics and gives a handle for its citizens to exercise their civic pride with. Sometimes these titles are not appropriate.

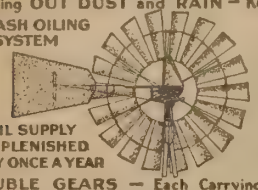
But with Walla Walla the "Garden City" is the most natural in the world. No matter how you approach it, you conclude that that is what it is, for its suburbs and the country adjacent on all sides are devoted to gardens. There are big gardens and little gardens; flower gardens, fruit gardens and vegetable gardens; there are private gardens and commercial gardens.

Soil, climate and an ample supply of water makes this a splendid garden section; and a conjunction of railways enables Walla Walla to handle the very large quantities of products without any serious glut. It is a garden city indeed, and it is a market city, too.

Riding into Walla Walla by electricity, steam or gasoline, the fertility of the soil is enforced on the imagination. Here is a field of onions, bulging from the ground and goggling at you; there is the misty, fringy asparagus gone to seed, for the season is over. Here is an orchard extending into the environs of town; melons ripen in the genial sun; corn waves its green banners; on the hillsides are long rows of beans. In the distance they look like little green stitches taken in the brown garments of the earth, and farther back are the wheat fields.

Walla Walla drains 2500 square miles of their products. It seems especially adapted to meet the needs of the market gardener; some arrangement of the hills it must be that enables green things to mature earlier here than elsewhere. This is not the doing of the Walla Walla people, but they have taken advantage of it.

The following figures are vouched for by a number of growers in the immediate vicinity of Walla Walla:



Yield per acre of onions, 600 sacks; carrots, 100 sacks; spinach, 600 boxes and a second crop, and other things in proportion.

Snohomish County Dairymen.

The board of directors of the Snohomish Dairymen's association met with County Agent C. C. Farr and went over plans for a series of meetings in advancing the association membership. They report 500 cows under contract at present.

On account of the great variation in local climatic conditions, moisture, soil, etc., it is up to the readers of The Washington Farmer always to remember that methods which prove successful in one locality may not work out in others. It is our aim to gather the experiences of farmers in every section of this state and pass these experiences on to our readers, that they may try out or adopt such as may be applicable to their locality and conditions.

Apple Picking Rules

Hand Should Be Wisely Directed

It is rather a fine art to know when to pick apples, and published rules do not make a good picker. When to pick depends first of all on the nature of the apple in relation to its general time of ripening. A Red June, in this climate is supposed to be ready in July and the early part of August, while the winter varieties are at this season undeveloped. All varieties have a natural period of development and of ripening, but on account of the differences in seasons and locations, can not be determined by the calender, or the days of the month, but by the appearance of the fruit.

If apples are to be shipped long distances, they must be picked earlier than if they are to be used at home or in the local markets. By leaving them longer on the trees they will become more highly colored, more fully ripened and have a better flavor.

Some Judge by Seed.

A rule with a great many orchardists, is to pick when the seed is brown. When this stage is reached, the apple is supposed to have reached it full growth and development, and after that the changes which occur are of a chamical nature and may go on as well off the tree as on it.

Some orchardists depend more on the color of the fruit than on the browning of the seed. An expert can walk through an orchard and tell by looking at the trees when the fruit is ripe enough to pick. This, of course, implies a knowledge of the habits of the different varieties, for the Arkansas Black, for instance, has a deeper color a month before picking time than some apples ever take on.

Some apples, like the Ruby, begin to fall as soon as they are ripe and are bruised in falling, therefore should be picked as soon as they are ready. It takes observation and experience to teach persons at what time the different varieties should be picked, and nothing but a practiced eye can determine.

There are various mechanical devices for picking, such as a pole by means of which the highest limbs can be reached. To this pole is attached a canvas sack large enough to conduct the apple from the tree to the vessel held by the picker as he stands on the ground. Having tried this, I do not think it satisfactory. My observation is that picking should be done by hand and that the hand needs intelligent guidance. Generally there should be more than one picking, since the apples ripen irregularly. At a time when one-third of the apples are ready for picking, another one-third should hang on the trees a week, two weeks, or possibly three weeks longer in order to reach their largest growth, the best color and flavor. Two or three pickings costs more, but the extra cost is more than met by the increased value of the fruit.

Pickers should be trained. Especially should they be trained on the following points:

First, they should be trained to pick apples without pulling off fruit spurs, because if the spur is pulled off it is certain that spur will never bear another apple, whereas if it is left on the tree it is probable that it will bear fruit the following year.

Second, care should be taken not to pull out the stems, or in any way break the skin. Wherever the skin of an apple is broken ferment begins at once, decay rapidly follows and the apple is not fit for market. It is a cull and a total loss to the grower except as he may at very low price find a market for culls, which market does not usually pay the cost of picking and hauling to the cider mill or vinegar factory.

Third, apples should be placed carefully into the picking bag or bucket, without bruishing, and then should be emptied from the picking vessel carefully into the lug box, as carefull as if they were eggs. In fact, certain varieties of eggs are much less likely to be damaged by rough handling than the tenderer varieties of apples.

Habits of Certain Varieties.

The habits of certain varieties in relation to the subject of picking are as follows:

Those dropping badly when they are ripe are Grimes Golden, Wagner, Wealthy and Winesap.

Those dropping badly before they are ripe are Gravenstein, McIntosh and Snow.

Those that may hang on the trees indefinite periods of time after ripening ar Northern Spy and Ben Davis.

Other varieties if they hang too long on the trees get mellow or soft after picking and have a short season in which they can be marketed or consumed. Among this class are the Jonathan, King and Baldwin.

Some, if they hang too long on the trees, develop core rot, as in the case of Jonathan, Delicious and Ortley.

Some apples, especially the Thompkins King, incline to water core and our observation in our own orchard is that this is worse in the latest pickings.

BOYS' AND GIRLS' WORK

Club Demonstrations High Grade

So succesful was the work of the boys and girls' department of the interstate fair this year that President Thomas S. Griffith announced upon conclusion of the fair that the department would not only be maintained next year, but that it would be more fully financed and developed. Interest among the boys and girls was keen, and illustrated the widespread activity among them in their homes. Aside from the pig clubs, canning clubs, sewing clubs and the like, in which there were scores of boys and girls competing in friendly rivalry, there were 460 entries in the garden display division. This is the largest number ever to exhibit at the interstate fair.

The test of real oratory is the power of the speaker to convey a message to his or her hearers. Measured by this standard, the boys and girls of the various clubs proved themselves real orators in some instances, when they told the fair visitors in short speeches of their club work, and why they did things as they did, and what results they produced. Especially was this feature interesting and educational in the canning club demonstrations. The girls' teams of three each were organized for one to lecture on canning while the other two performed the canning operations.

In the canning contest the Benton county team won first place. Greenacres and Yakima tied for second. The Dalles (Ore.) team won third.

In the speaking contest each speaker was given three minutes in which to tell of the value of club work. Leona McBride of Adams county, Wash., won first; Robert Pease of Pend Oreille county, Wash., second, and Vera Cowens of Heppner, Ore., third.

Courier of Soldier and Civilian

Our troops are now on the firing line in France. While at home every instrumentality of our government and private industry is being urged at top speed to insure victory. The telephone is in universal demand as courier, bringing to the front men and the materials of war.

From the farms the telephone courier brings foodstuffs; from the mines the telephone courier calls forth metals; from the factories this courier gathers manufactured products. The telephone courier leads troop and supply trains to the front; summons fighting flotillas and transports; and, in fact, leads practically every contributing unit of supply to the firing line.

At such a time, when the government is straining at its task and every industry is loyally contributing its energy, this national courier is constantly being used to call up the reserves. It is at the base of every contributing activity.

The right of way must be given to the military for the direction of troops and to the government for the marshaling of endless supplies. To do this, and also make the telephone serve all other needs, both patriotic and private, all must economize.

Feed the Fighters! Win the War!

Harvest the Crops! Save the Yields!

On the battlefields of France and Flanders the United States boys and the Canadian boys are fighting side by side to win for the World the freedom that Prussianism would destroy.

While doing this they must be fed and every ounce of muscle that can be requisitioned must go into use to save this year's crop. A short harvest period requires the combined forces of the two countries in team work, such as the soldier boys in France and Flanders are demonstrating.

THE COMBINED FIGHTERS IN FRANCE AND FLANDERS AND THE COMBINED HARVESTERS IN AMERICA WILL BRING THE ALLIED VICTORY NEARER.

A reciprocal arrangement for the use of farm workers has been perfected between the Department of the Interior of Canada and the Departments of Labor and Agriculture of the United States, under which it is proposed to permit the harvesters that are now engaged in the wheat fields of Oklahoma, Kansas, Iowa, North Dakota, South Dakota, Nebraska, Minnesota and Wisconsin to move over into Canada, with the privilege of later returning to the United States when the crops in the United States have been conserved, and help to save the enormous crops in Canada which by that time will be ready for harvesting.

HELP YOUR CANADIAN NEIGHBORS WHEN YOUR OWN CROP IS HARVESTED.
Canada wants 40,000 Harvest Hands to take care of its
13 Million Acre Wheat Field.

One cent a mile railway fare from the International Boundary line to destination and the same rate returning to the International Boundary. High wages, good board, comfortable lodgings.

An Identification Card issued at the boundary by a Canadian Immigration Officer will guarantee no trouble in returning to the United States.

AS SOON AS YOUR OWN HARVEST IS SAVED, move northward and assist your Canadian neighbor in harvesting his; in this way do your bit in helping "Win the War."

For particulars as to routes, identification cards and place where employment may be had, apply to Superintendent of Immigration, Ottawa, Canada, or to

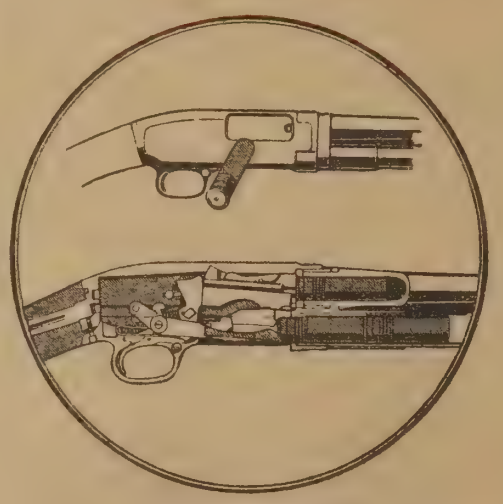
Winchester Model 12—Hammerless Shotgun, 12, 16 and 20 gauge



The gun with a dog's pointing instinct

A dog points by instinct. Its nose, body and tail come into line naturally—instantly. So with the hunter and his gun.

Armed with the right gun, he "points" it instinctively. If properly balanced, his gun comes up into line naturally, as easily as pointing a finger.

But if the gun is not right, if it has not been perfectly balanced in the shop, it won't work out well in practice, just as a dog, if not properly bred, will not work out well with its master in the field.

The Winchester Model 12 Repeater is a *thoroughbred* of shotguns. It has been classed by experts as "The Perfect Repeater."

Quick feeder, sure ejector. Throws empty shells to the side, out of your way

Its balance enables you to get onto fast flying birds instantly. Pointed right, it never fails to bring down the game.

Fifty years of the best gun making traditions have produced in the Winchester Model 12 a gun of almost human instincts.

The right amount of choke for different loads has been worked out after exhaustive experiment. Result: a pattern that spreads out evenly—neither too scattered nor too bunched—and lands with lots of steam behind it.

It is a triumph of guncraft. Nicely balanced, with its slim, graceful barrel, the Model 12 is a beautiful weapon, with a fascination about it that few sportsmen can resist.

WINCHESTER

World Standard Guns and Ammunition

Even spread, maximum penetration. Winchester shot pattern brings down the game.

The pattern that brings down the game

The remarkable game-getting pattern of the Winchester Model 12, shooting its own standard ammunition, is the result of infinite care taken in boring the barrel.

The barrel *is* the gun

Men who know guns realize that the accuracy and durability of a gun lie in the barrel. On the quality of the barrel depends the quality of the gun. There is absolutely no difference in the standard quality of the barrels on the highest and lowest priced Winchester guns. With Winchester, the barrel *is* the gun, and the single standard of quality has been attained only by the most unremitting attention to the boring, finishing and testing of the barrel. The same high quality of Winchester barrel is found on every gun made by Winchester. The great volume of guns sold makes this policy possible.

The Winchester barrel

The barrel of the Winchester Model 12 has been scientifically bored to micrometer measurements for the pattern it is meant to make. The degree of choke exactly offsets the tendency of the shot to spread. Until its pattern proves up to Winchester standard, the gun cannot leave the factory. The Bennett Process, used exclusively by Winchester, gives the Winchester barrel a distinctive blue finish that with proper care will last a lifetime. The Nickel Steel construction preserves the original accuracy forever.

What (WP) means

This mark on the barrel means *Viewed and Proved Winchester.* This stamp stands for Winchester's guarantee of quality, with fifty years of the best gun-making reputation behind it.

Every gun that bears the name "Winchester" and that is marked with the Winchester Viewed and Proved stamp has been fired many times with excess loads for strength, smooth action and accuracy.

At every stage of Winchester manufacture, machine production is supplemented by human craftsmanship. It is a *test and adjustment process.*

It is this care in manufacturing that has produced in the Model 12 a gun of unsurpassed game-getting qualities and whose grace, balance, beauty of lines, and never failing performances in the field have earned it the title of "thoroughbred of shotguns"—*the gun with a dog's pointing instinct.*

For those who prefer a hammer action gun, we have made the Model 97. It is built on exactly the same lines as the Model 12, but with hammer action.

Write for details of Winchester shotguns, rifles and ammunition

The Winchester catalog is an encyclopedia on shotguns, rifles and ammunition. Every hunter should have one. It gives detailed specifications of the Model 12 and describes at length the principles on which every one of the world famous Winchester shotguns and rifles is built. Write today. We will mail you a copy free, postpaid.

The Motor Car
On the Farm

The "Why" of Cord Tires.

By A. G. PARTRIDGE.

Cord tires effect a saving of at least 12 per cent in power, according to data compiled by engineers of one of the largest manufacturers of tires. Practical tests again and again have proved the superiority of cord tires as to power saving as well as long mileage, but until an accurate laboratory test was devised the exact saving in power was not known.

Tests were made under varying conditions and loads and were checked against error several times before they were accepted as final. In almost every case the cord tire consumed only 88 per cent as much power as the fabric.

Translated into popular terms, this conservation of power means increased speed in racing cars and a saving of gasoline in the ordinary passenger car. In practical tests the value of cord tires to the auto racer has been shown many times. Many world's records already have been shattered on cord tires within the present racing season.

In a scientific analysis of the cord tests the engineers pointed out that the power lost in the fabric tires is consumed by the greater resistance to flexing and is transformed into heat. The fabric tire supports much of the weight of the car instead of acting merely as a resistance to the air pressure within, while the cord tire "makes the air column do the work." Hence, the cord tire is able to deliver more of the power received from the motor to the road.

Truck Spells Economy.

"Horse and wagon travel is impossible these days," says F. E. Sheldon, a well-known rancher living near Cheney, Wash. "My work," says Mr. Sheldon, "is to collect and haul cream and milk to the big creameries of Spokane. For a good many years I have been using horses and wagons. But since the motor truck has been made more and more useful for ranch work and hauling of all kinds, I made up my mind that it was money in my pocket to cut down time and push up on accomplishment. So I recently selected a light, fast truck having one and a half ton capacity and my story from the day of purchase is much like that of the thousands of truck users all over the country. It is saving me money every day and I would never dream of again going back to the old, slow and more expensive plan of hauling with horses and wagons. My belief is that every farmer should have either a good truck or truck attachment, because either spells economy."

The Tractor Attachment.

For the man who, for one reason or another, prefers the tractor attachment, with which he can convert a new or used motor car into a tractor, there are some very satisfactory and serviceable attachments of this kind on the market at attractive prices. Practically all of them have passed the experimental stage and are thoroughly practical in every way.

Interstate Fair Stock

(Continued from page five.)

are Berkshires, Durocs, Chester Whites, Poland Chinas and Hampshires. There are better than 200 Duroc Jerseys on the grounds, representing the herds of the northwest, and many of the animals on display carried the most famous blood lines of red hog history. The Duroc men are progressive, and have built herds that have been of great value in the development of the business of swine production during the last few years, and these herds will be of great value in the days of reconstruction, when Idaho, Oregon, Washington and Montana must come again to the hog as one of the fundamentals in a wise and permanent system of diversified farming

The same thing in a way of commendation for constructive breeding skill may be said of the other breeds that are represented this year at Spokane. Numerically speaking, however, the Durocs are noticeably in the ascendancy on the fairgrounds. The Berkshire exhibit consists of swine from three breeders, but the large herd of Silver Birch farm that has been seen on many a large circuit, carried away the larger share of the awards. The Chester Whites have been improving year by year, and this year's showing was most creditable. The single Hampshire exhibit of Fruitts of Oregon is, as in past years, highly finished and a credit to the breed and the breeder. The Poland Chinas were not numerous but of excellent quality. Ray J. Fox, a comparatively new exhibitor in Poland China circles of the northwest, made the stronger showing with a herd of Poland Chinas of very great excellence.

Sheep are fast coming into their own, and the era of the golden hoof seems near at hand. A sheep show of Hampshires, Southdowns, Shropshires, Oxfords and Lincolns and fat wethers is one of the largest and best ever seen at Spokane. The broad backs of the fat wethers of the university and the state college, the plump Southdowns sent up by Hubbard of Oregon, the woolly faced Shropshires of Kizer, Felzer Brothers, Donison, Vaughn, Fox and Ed Shoell, the growthy Oxfords of Fiske, Hastings and Kizer, the long wools represented by Hubbard's Lincolns, and the Hampshires of Hubbard and Shoell all held the attention of the visiting public, and the only regret of the exhibitor was that there was not enough breeding stock for sale, especially for foundation flocks, to satisfy the unusual demand.

On the whole, the live stock show is unusually satisfactory, has been splendidly handled and judged, and a distinct credit to the live stock industry.

Interstate Fair Awards

(Continued from page three.)

Naomi, 2d; Bradrick & Son. 3. Olive, 2d; Alex Morrison. 4. Lady Mayflower, 27th; Bradrick & Son. 5. Janesville Rose, 79th; Bradrick & Son.

Cow, 2 years old and under 3—1. Olive V.'s Jewel; Alex Morrison. 2. Lady "B," 8th; Bradrick & Son.

Heifer, junior yearling—1. Violet of Valley; Alex. Morrison.

Heifer, senior calf—1. Louise Faulson; Alex. Morrison. 2. Milkman's Laurel; Bradrick & Son.

Heifer, junior calf—1. Little Bo Peep; Alex. Morrison. 2. Golden Queen; Alex. Morrison.

Graded herd—1. One entry; Alex. Morrison.

Breeders' calf herd—1. One entry; Alex. Morrison.

Get of sire—1. One entry; Alex. Morrison.

Produce of cow—1 and 2. Two entries; Alex. Morrison.

Fat Cattle.

Aside from one prize taken by Alex. Morrison of Valley, Wash., the University of Idaho and the Washington State college herds secured all the awards in the division of fat cattle, any breed, grade or purebred. The awards were as follows:

Junior 2-year-old steer, spayed or martin heifer—1. Washington State college. 2. University of Idaho. 3. University of Idaho.

Senior yearling steer, spayed or martin heifer—1. University of Idaho.

Junior yearling steer, spayed or martin heifer—1. University of Idaho. 2. Washington State college. 3. Washington State college. 4. University of Idaho.

Senior calf, spayed or martin heifer—1. University of Idaho. 2. University of Idaho. 3. University of Idaho.

Junior calf, spayed or martin heifer—1. Washington State college. 2. Washington State college. 3. Alex. Morrison.

Herd, consisting of one 2-year-old, one yearling and calf—1. Washington State college. 2. University of Idaho, 3. University of Idaho.

Grand champion steer—1. University of Idaho.

DAIRY CATTLE.

Holsteins.

The Holstein awards went to four exhibitors—the Carnation Stock farms of Monroe, Wash.; J. H. Hulbert of Mount Vernon, Wash.; William Sanders of Hermiston, Ore., and Bellwood farm of Valleyford, Wash. They were as follows:

Bull, 3 years old or over—1. Matador Segis Walker, Carnation farm; 2. Segis Pontiac Acme, J. H. Hulbert; 3. Dutchland Governor Sir Colantha, Carnation farm; 4. Canary Paul Umatilla Homestead, William Sanders.

Bull, 2 years old and under 3—1. Mutual Lad Tritonia 2d, Carnation farm; also senior and grand championship.

Bull, 1 year old and under 2—Laconner Pontiac Houttje, J. H. Hulbert, also junior championship; 2. Carnation Rouble Segis, Carnation farm; 3. Carnation Fayne Colantha, Carnation farm; 4. Unnamed, Bellwood farm.

Bull, senior calf—1. Laconner Pontiac King, J. H. Hulbert; 2. Governor Tsussie Colanthan, Carnation farm; 3. Matador Segis Walker Delman, Carnation farm.

Bull, junior calf—1. Matador Segis Walker, Carnation farm; 2. Korndyks Segis Klaver, Carnation farm; 3. Laconner Pontiac Sir Hartog, J. H. Hulbert; 4. Carnation Walker Pontiac, Carnation farm.

Cow, 4 years old and over—1. Nena Newman Cornucopia, Carnation farm; also grand and senior championships; 2. Nena Kaan Selah, Carnation farm.

Cow, 3 years old and under 4—1. Korndyks Model Hartog, Carnation farm; 2. Laconner Pontiac Beatrice, J. H. Hulbert.

Heifer, 2 years old and under 3—1. Segis DeKol Flower, Carnation farm; 2. Mercedes Pontiac DeKol Elbate, J. H. Hulbert; 3. Matador Mechthilde Vera, Carnation farm; 4 Leda Hartog Ormsby, Carnation farm.

Heifer, senior yearling—1. Lady Parthenea Segis, Carnation farm; 2. Laconner Pontiac Beatrice, J. H. Hulbert; 3. Carlotta Mechthilde Rooker, Carnation farm.

Heifer, junior yearling—1. Segis Daisy Fern 2d, Carnation farm; 2. La-

(Continued on page twenty-seven.)

What Is the Nonpartizan League?

This question has been asked from many sources concerning the organization that sprang into existence in North Dakota a few years ago. The organization is expanding until Dakota no longer contains it, and the Pacific northwest is feeling an interest in its activities. In order to answer the question, "What is the nonpartizan league?" The Farmer has secured an exclusive article by a member of the editorial staff of the official publication of the National Nonpartizan league. Watch for this article in next week's issue.

Can't Fix Meat Prices

Price fixing for meat and dairy products has no place in the government's food control plans, Herbert Hoover, the food administrator, told the national live stock conference held at Washington last week. Not only would it be inadvisable to institute price fixing in these industries, he declared, but the food administration has not been given such power.

As long as there is a heavy demand for meat, with a decreased production, Mr. Hoover said, meat prices will continue to soar. The hope of the food administration is that it can stabilize quotations and thus eliminate speculation.

England Says No
Will Accept No American Apples

That the fruit industry of this country should make a strenuous and unceasing effort to induce the British government to remove its embargo on American apples and thereby allow them to be shipped into that country is the attitude taken by Wilmer Sieg, sales manager of the Earl Fruit company at Spokane.

Manager Sieg says that the average annual exportation of apples to England is about 3,000,000 barrels, or 9,000,000 boxes, of which the northwest has furnished about 1,000,000 boxes.

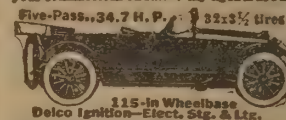
The result of the present British embargo, if allowed to stand, will not be so great a disadvantage this season as it will next year and subsequent years, Manager Sieg believes, as he thinks that if the regular trade is destroyed it will have to be built up again through the same long drawn-out effort that marked its establishment.

The people of Europe, he says, are apple hungry, but are denied the use of American fruit by this embargo. Australia and Canada are allowed to export apples to England, and Spanish and tropical fruits are admitted.

Will Keep Milk Records.

Agriculturist A. R. Hahner of Stevens county, Washington, reports that he has secured the consent of three men to keep records of milk produced and have the milk tested twice monthly at the local creamery. They will keep the records on blanks furnished by the extension department of the state college.

Chinese Pheasants.



State Game Warden L. H. Darwin has announced the first shipment of birds to Spokane county from the new state game farm at Walla Walla will be made soon. Spokane county will receive Chinese pheasants from the state in the shipment for distribution in this county.

Spotted Beetle Pest.

The bean and potato crop of J. N. Martin near Knab, Lewis county, Wash., will be saved as the result of spraying with lead aresenate for the western spotted beetle pest, is the report from County Agriculturist A. B. Nystrom.

Rochdale Plan of Cooperation

Assistance From Accumulated Earnings of Nine Months

To the Editor of The Washington Farmer: An article in your issue of May 3-17, ostensibly written by Mr. Paulhamus, has just been called to my attention, and while not wishing to belittle the work of that worthy gentleman, I do feel it my duty, as manager of a cooperative store run on the "English Method," or Rochdale plan, to endeavor to correct the impression which any reader of that article would naturally get, namely, that stores run on the Rochdale plan are working a deception on their members and "doing something they do not mean."

I believe cooperation, once thoroughly understood by both producer and consumer, will sound the death knell of the trusts; it is the only agency in sight at the present time capable of distributing the earnings of exchanged commodities equitably, or in such a manner that each individual receives the gain or saving created by his dealing with such enterprise. The question then is this: Has Mr. Paulhamus originated a plan which is superior in fairness to all, than the old Rochdale plan? Kindly allow us to use his own figures and comment, and compare same with exact figures from the records of The Enumclaw Rochdale company of Enumclaw, Wash.

The business of the Puyallup and Sumner stores for the month of March, 1917 (banner month for feeds and seed), is given as $39,799.67, with a profit of $5869.46 or 14.75 per cent, expenses $2706.13 or 6.8 per cent, which you will please note leaves just about 8 per cent net profit, or, in round figures for the month, $3163.33. We will now admit that the purchasing is done on a keen basis, that the expenses are minimum, but how about that profit? Especially when it is remembered that interest on the capital has already been deducted, isn't that "taking from the customer each day of the year a surplus of money for the food products and keeping it?" That is what Mr. Paulhamus charges us with doing and we plead guilty, but what is he doing? The very same thing—his statement shows it in plain figures, and we are also told in the same article: That "the net earnings of the stores are turned into the association to be distributed pro rata upon the number of pounds of fruit that each grower delivers to the association."

We pay our member at a certain stated time of the year his share of the earnings of the store in the shape of a dividend, based on the amount of his purchases and in cash, while the purchaser at the Puyallup store will get the earnings from the store operation only in proportion to the amount of fruit he brings in; if he happens to be a small fruit grower with a large family and keeps a few cows to keep up expenses, between paydays from the association, and hence must buy heavy at the store he will only get a small share of the earnings, while the large fruit grower who may not even trade at the store, gets the lion's share. Is that fairer than the "Old Rochdale?" Think it over, go over that article of The Washington Farmer of May 3 again and see if you can find where the little fellow gets a lift from the association stores; and the little fellow of today may be the mainstay of our community tomorrow; he should not be neglected; it is better to have thousands of small farmers in a community than a few multimillionaires. Do the "stores" extend a hand during the spring months in the line of credits? No. Do they make delivery when you are busiest in the field? No. Even if a man has his entire fruit crop in the association warehouses and not far enough advanced for payments, he can not get a sack of flour "on tic."

Why do we charge a profit? For three principal reasons:

First—Very few people of this prosperous nation realize the importance of small savings and as the GAINS to be made in supporting a Co-op is the all-important binding material of our institution. Those would be lost sight of unless collected for a reasonable period and then turned back to the member in a lump sum.

Second—It enables us to maintain respect and standing among business houses as well at the wholesale houses, as in our own community we are the pioneers in this line of distribution; we are as yet only a small part of the great commercial organization of this country and, as such, it is better for all that we work in reasonable harmony, and as the entire earnings are paid back to the members, they can not lose.

Third—We are doing a general conservative credit business; on the first day of March, each year, we have on hand the accumulated earnings of nine months. This enables us to extend assistance in the line of credit to the farmer at a time when he most needs it. We have at times gone as high as $29,000. This would, for us, be impossible if we did not have these earnings. On our close capitalization we could not otherwise extend this help. (We are now going to shift the dividend date to February, so the patrons may have the cash at this period).

In the four years during which the writer has been manager of the Enumclaw Rochdale company we have paid back to the shareholders over $40,000 in interest on stock and dividend. Our business for the year just past was $276,273.92. The total expenses were $16,882.52, or less than 6 1-4 per cent. We do not figure on a heavy profit, but aim to give a dividend of 5 per cent on purchases each and every year. It should also be noted that we handled 56 carloads of feed grain and hay on a strictly no-profit, no-dividend basis, besides 35 carloads of drain tile in like manner.

In conclusion I wish to say that it is far from my intention to ascribe to Mr. Paulhamus any intent to place us in a false light. The article was possibly dictated hurriedly, but it does seem that at this time when cooperation is struggling to get a permanent foothold all over the nation we should have no doubt as to the fairness and practicability of the English Rochdale system. PETRUS NELSON.

Enumclaw, Wash., July 27, 1917.

Veterinary

Dr. S. B. Nelson

Lump at Navel—I have a 4 months old sow pig with a lump the size of a lemon at the navel. Does not seem to bother it much except that it has not the pep at feeding time that it should have. I thought it to be a rupture, but examination showed it to be very solid. It has been there about a month. There was no sign of a wound except a slight abrasion, which I thought to be caused from rubbing on logs. R. L. C., Carson, Wash.

Answer—The chances are that a tumor is forming at the navel. You might try, for a few days, painting the lumps with tincture of iodine three times daily. However, if that does not remedy it it will be necessary to operate on the pig and remove the tumor. This will have to be done very carefully, because the tumor may be in connection with the intestines. I do not know that you could do this without the services of a veterinarian. I rather doubt it. I am therefore recommending the iodine treatment.

Curing Hay in Rainy Season.

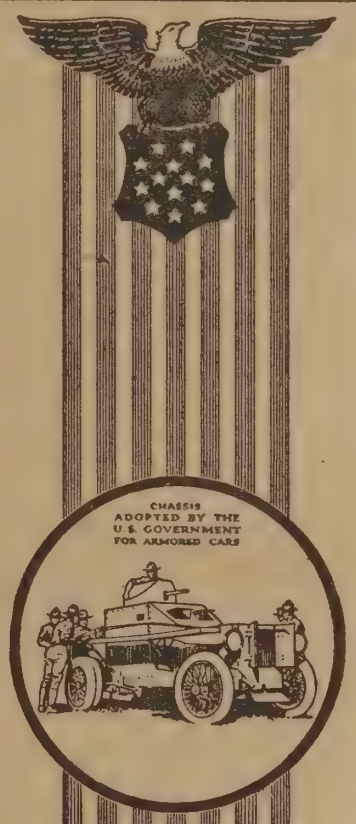
To the Editor: In many of the upland districts of western Washington, where the clover is heavy and ready to cut for hay during the rainy season, considerable trouble is had in drying the hay quickly and not getting it spoiled by rain.

To help remedy this trouble, many resourceful farmers that have migrated to this country from northern Europe have reverted to the old country's method of curing hay. Briefly, the method followed is to drive a row of posts in a zig-zag line—to prevent the rack from blowing over—and to string a wire along, near the ground, and then pile the green grass on the wire to a depth of about eight inches. When the first wire has been covered, another is stretched, so that an air space remains, and then it is covered with hay as the first wire. The method is continued this way until the tops of the posts are reached. Those who use this method claim that the hay dries quicker, will withstand a rain better and is most practical for a heavy, early crop in a rainy season.

CARL J. MENZE.

Ferndale, Wash.

Whatcom Pea Crop.



Pea harvest in Whatcom county is well under way, with weather conditions favorable. The yield is expected to be about an average, and, with the increased acreage, the quantity will be much larger than ever before.

Fair Dates.

Pendleton, Roundup—Sept. 20-22.
Boise, State—Sept. 22-29.
Salem, State—Sept. 24-29.
Helena, State—Sept. 24-29.
Lewiston, N. W. Lvst.—Nov. 16-23.
Portland, Pac. Nat. Dairy—Nov. 16-23.
Portland, Pac. Int. Lvst.—Nov. 19-24.

Washington Fairs and Shows.

Mabton, Hay Palace—Sept. 11-15.
Walla Walla Pow-Wow—September 13-15.
Renton, County—Sept. 14-16.
Kelso, Local—September 15.
North Yakima, State—Sept. 17-22.

KING EIGHT CYLINDER

Unfailing Service

On the Farm, in the City, or Battlefield

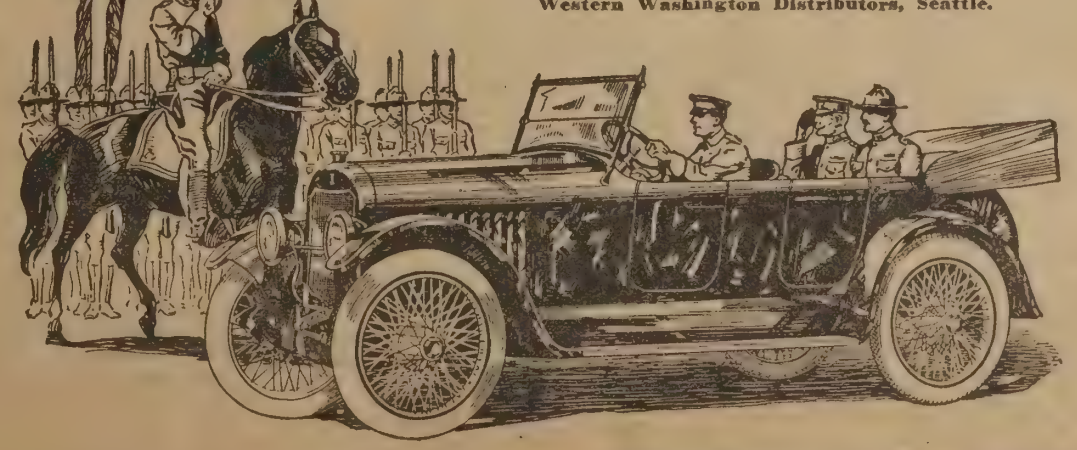
WILLIAM G. McADOO, secretary of the treasury, in giving the signal that started the King on its 7-day non-motor stop run in St. Paul-Minneapolis honored with his presence the placing of one more block on the carefully reared structure of King RELIABILITY.

The stock car which began that seven-day test had already traveled 29,550 miles, and is the same car used in the famous 10,850-mile non-motor stop run at Sheepshead Bay under official A. A. A. supervision.

King RELIABILITY was most adequately proved when the United States government, after the most severe official tests, adopted the King chassis for armored cars.

It has been proved by high-gear climbing achievements on Mt. Wilson, the San Bernardino Mountains, Mt. Hilo, Mt. Diablo and Lookout Mountain.

It has been proved by the "sealed-in-high-gear" non-stop and fuel-economy tests made in California, Colorado, Virginia, New York and seven other states—every test either officially conducted or made under impartial supervision.



It is being proven daily by the satisfactory operation of King cars all over America and in fifty-two foreign countries—in every climate and on all kinds of roads.

PRICES $1,585 TO $2,300

Prices F. O. B. Detroit and subject to increase at any time.
Wire Wheels $150 extra.

The Ups and Downs of a Bunch Grass Boy

By JOE L. ASHLOCK

(Copyright, 1917, Joe L. Ashlock.)

A squirrel poked its head through a knothole in the schoolhouse floor one day, and espied Jim Paullus' big toe about two inches from its nose and sharp teeth.

Maybe the rodent thought Jim's toe was a dusty young potato, or some other vegetable; anyway, it edged cautiously up through the hole and after an examining sniff or two, nibbled sharply at Jim's big toe.

Jim was asleep when it happened. He should have been studying, of course; but the afternoon was hot, and at the noon recess Jim had been "it" in a spirited game of Andy Over. He was tired; so, disregarded or overlooked by the teacher he had propped his big geography up in front of him, reclined his head on his folded arms, and was soundly, blissfully, dreamlessly asleep.

He awoke with a howl—a most unearthly howl that elicited echoing screams from the teacher and all the big and little girls. The squirrel, innocent author of the din, whistled and made a rush at the knot hole; but Jim's foot had accidently moved over the hole. So the squirrel raced down the aisle and under the seats, looking vainly for a hole into which it might dive.

Jim hopped about on one foot and held his toe. He saw that the big boys were laughing at him, and wrath rose in his soul like a flame. Bent on vengeance, he made after the fleeing squirrel, telling the nimble creature what he meant to do to it. His pursuit took him between and over seats, under seats, thrice around the aisle, and a dozen times around the teacher's desk while she stood on a stool with skirts drawn tightly about her ankles. With a great inspiration, Jim at length repaired to his seat and lay his big geography over the knot hole, shutting off this avenue of escape for the squirrel. Then he went out of doors, coming back in a moment with the school's only baseball bat in his hands. Unfortunately, he left the door slightly ajar as he came in; and through the crack the squirrel darted. Jim flailed vengefully at it with the bat as it darted through. He missed the squirrel, but bent the doorknob.

To guard against similar mishaps in the future, Jim stuffed his slate sponge in the knothole; and then proceeded to doctor his toe. Tommy East had a tube of arnica. This was passed across the aisle to Jim, who saturated his big toe and most of his dusty foot with the arnica. In his ministrations he occasionally said "ouch"; and also paused to smell the arnica in an admiring way. He whispered to Tommy that he guessed the arnica would fix his toe all right; it smelled like some chewing gum he once had had. Not only did the arnica give forth a pleasant odor, but it also quelled the sting in his toe.

One of the big girls tore her handkerchief in two and passed half of it to Jim. He thereupon wound the white rag about his toe, tying it in place with the red string which formerly had attached his sponge to his slate. The string was long, so he had to wind it about the toe many times. He took up part of the excess length by tying the string in a big bow knot. This done, he and some other tots were called to the front to recite. Jim walked proudly down the aisle, not neglecting to limp. He sat next to the aisle, crossed his legs, and stuck his injured foot out where a third of the pupils of the school could look admiringly at it.

Jim's adventure with the squirrel that mistook his big toe for something good to eat was my hunch or "tip" on a literary production which I proudly called "my novel." I wrote on my novel till I had filled a huge, thick writing tablet clear through one way, and half way back the other. For a long time this novel of mine sat on a high shelf in the cupboard. Mother used it to set the coffee pot on, not desiring to set the blackened bottom of the coffee pot on the clean, white oilcloth that lined her cupboard shelves. I would hunt through the bunchgrass for "material"; then with some material in mind, would mount a stool, slip the thick writing tablet from under the coffee pot, hie away to seclusion, and write.

Oddly enough, all the while I told no one about my novel. Mother scolded me once for taking the writing tablet from under the coffee pot; so thereafter, when I wanted to write, I would replace it under the coffee pot with a newspaper folded together. But I never thought of telling any one of my work; so it came to pass that one time when I mounted the stool and reached for my tablet, it was not under the coffee pot. It was gone forever.

Instantly I raised a yell—a more distressed yell, if anything, than Jim had uttered when the squirrel pierced his dusty toe with his sharp, white teeth. Mother was sorry. Why hadn't I told her I was writing a novel? She had used my novel to start a fire with. She told me to get her some kindling—why hadn't I minded her? If I had done as I was told, she wouldn't have needed my novel to start a fire.

Years later, when a student in college, I was reading the life of the Scottish historian, Thomas Carlyle. When I came to the part telling of his great grief when his wife mistakenly threw the notes and manuscript of one of his books into the fire, I knew how to sympathize with him. I admired him intensely because he had the nerve to start the job all over again.

The connection between a squirrel poking its head through a knothole and nibbling at the toe of a barefooted boy, and the plot of a noval written by a 14-year-old boy may, to the unliterary person seem remote. However, I did not find it at all difficult to use the idea I evolved from the incident in the schoolroom.

First, I should explain that the teacher had asked us to write an "essay" about "something." In the school I was racking my brain for "something" when I saw the tip of the squirrel's nose come sniffing cautiously up through the knothole under Jim's seat. I had also observed Jim falling to sleep behind his big geography, so adroitly curled up behind the book that from the little of him the teacher could see, she might easily mistake his recumbent attitude for one of deep study. I saw the squirrel stretch its neck while it sniffed at Jim's big toe, which undoubtedly had an earthy smell, like a young potato freshly removed from the soil. It sniffed several times; arrived at a decision; bit with decision, and deeply. I have already told what followed.

Having observed all this, I decided to write an essay about it, but at once encountered an obstacle. I should have to say that Jim was asleep behind his geography when the squirrel bit him. That would not be honorable.

I decided to change the names of my principal characters. Jim I could turn into a young calf adroitly leaving the two teats "on its side of the cow," and reaching across to the teats whose white stream was intended for the household milk supply; the squirrel I could turn into a pup biting the calf's heels. But the combination did not work just right. It seemed to lack something.

I did some more thinking. A few days before I had looked through a "telescope"—a small field glass—at some cows a mile away, and was amazed to see them move up to within a few hundred feet of me. Then I had looked at my pony a few rods away, and he had looked as big as an elephant.

So I decided to enlarge upon the incident, visualizing it through my mental telescope so that the squirrel's head poking up through the knothole would appear as the head of a fierce mountain lion glaring through a hole of some kind at its intended prey of some kind. What kind of a hole would the mountain lion look through? What would it look at? For a minute or two I was stuck.

An inspiration came through the open window. Far away, out somewhere in the gray-green sea of bunchgrass that surrounded our small, rough-board schoolhouse with knotholes in the floor, a coyote yelled two or three times; and the yelping came to me on the slow breeze that drifted into the open window. I had it!

My mountain lion with fierce, round eyes and teeth like daggers, and an appetite like our big, black hound whom I had fed small cubes of chewing tobacco spread with butter or lard to see what manner of stuff he could swallow as I tossed it to him, was glaring down into a badger-hole, at the lower extremity of which cowered a father coyote, a mother coyote, and a lot of little son and daughter coyotes.

How could I tell the story about a mountain lion poking his head and neck into the mouth of a coyote den, unless I had been there to see it. That was easy. I decided to be the coyote telling his own story. I was ready to begin; and did so by writing the title of my first novel in high, staggering lead pencil print:

TOLD BY A COYOTE.

I wrote one chapter that afternoon before reciting time; observing as I did so that Jim had again fallen to sleep; that Tommy East had slyly pulled the sponge from the knot hole, in the hope that the squirrel would come up and take another bite.

I got away with the first chapter in fairly good shape, I suppose. The teacher reprimanded me for copying my "essay" out of a book, or paper. She wanted to know where I had found the story. Up to that time I had possessed at least an average reputation, as boys go, for veracity. She was inclined to doubt, however; finally, to clear myself, I told her in detail, whence came the idea, omitting, however, that Jim had been sleeping. She laughed at my turning a squirrel head into a mountain-lion. I told her, truthfully enough, that when I was "little" I used to "imagine" all kinds of queer things, but that people made fun of me for it, and that I had quit—at least, I had ceased telling people about my queer imaginings.

This teacher was young, pretty and inexperienced in her profession. She thought I knew more than I did, I suppose; she told me a lot of things about books and novels and great writers and "imagination" which I totally failed to comprehend; and when she asked me for this scrawling, lead pencil chapter of "Told by a Coyote," saying that she knew that some day I would be a great writer and then she would show the lead pencil chapter to her grandchildren, I didn't know whether to be pleased, puzzled, or hurt. But I gave her the story, and reconstructed it from memory.

I am sure that the story had no real merit; but the teacher was young, inclined to be a bit romantic, and had her head full of notions about "genius" which she discussed learnedly with me, not a bit of which I comprehended; she saw I was interested in the coyote yarn, and encouraged me to go ahead with it, saying I could do this in lieu of other class work in grammer. So it came to pass, in the course of weeks and months that the big tablet under mother's coffee pot was written clear through and I had started back the other way—for I did not have 10 cents with which to buy another tablet; so I had to write on both sides of the paper.

My speaking character was an old, lean grandfather coyote—a regular Moses, leading his tribe out of the land of Egypt. He had lived a hundred years or more, and had founded a tribe of coyotes in a rock-bound, inaccessible place, from which coyotes could sally forth and steal chickens, young pigs, calves and lambs, always returning safely. I told how the baby coyotes played about in the grass and became large, sleek, swift-footed coy-

SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University).

Appetite Increased by Food—Real Hunger Satisfied

Dr. Hirshberg.

Time was, and very recently at that, when the most learned doctors and physiologists, like the rest of the plain people, did not even stop to consider that appetite and hunger were as different as a tadpole from a teetotaler. Then came the researches of Professor W. B. Cannon of Harvard, with his investigations upon the sensations of appetite and hunger.

Professor Cannon unearthed the fact that these two sensations were as distinct and independent of each other as are tapeworms from tape measures. Until these new facts were brought to light, medical men generally took it for granted that appetite passed by quantitative graduations into hunger.

We know now that appetite is one human experience and that hunger is wholly distinct and fundamenentally different. Instead of tweedledum and tweedledee, they are as different as Macedon and Monmouth, or chalk and cheese.

Appetite is intimately related to the perceptions of smell and taste and memories of such sensations as related to food and drink. Appetite, obviously, is largely determined by odors or tastes associated with edibles, which please or disgust.

By taking thought you may be able to form the image of a delectable food, the memory of which may stir your appetite to the point of sending you to a chop house there to realize in actual consumption, appeasing the sensations felt in your tongue, palate and nose, by eating of that dish.

Anticipation and realization are pleasures of the saliva and stomach fluids which appetite engenders, but they are far removed ordinarily from the pangs of hunger.

Appetite May Be Dangerous.

Holy scriptures, inspired divinely, seems to have taught physiologists what Prof. Cannon has just made known. "And put a knife to thy throat if thou be a man given to appetite," says Proverbs xxiii., 2. Good digestion, contrary to Macbeth, does not wait on appetite nor does health wait on both. An epicurean's cook can sharpen your appetite only too easily, when you should not have it.

The well man or woman who boasts "My appetite is always excellent; I was never sick a day in my life," is talking ancient, medical lingo of ignorance. The much heralded appetite may lead to the downfall or illness supposed to be absent.

Your Stomach Calls."

The sense of hunger is unpleasant. A good appetite is pleasant. The dull, gnawing, "empty feeling," which children, hard manual laborers, athletes and others feel in the pit of the stomach, after many hours of privation or want of pabulum, is almost painful. It is hunger.

Appetite grows on what it feeds on. It demands delectable viands. Peppers, condiments, seasoning, irritants, fresh air and drinks often sharpen an appetite. Hunger may make the starved person gulp some of the most distasteful, disgusting foods. The pleasures of the table are not for him—he needs must eat irrespective of quality, but in huge quantities.

Hunger occurs in stages which may begin with a gnawing, empty feeling of the inner man through aches, pangs and lassitude up to real pain. There may be a dull pressure, nausea and headache in addition to "an emptiness."

Prof. Cannon found that the muscles of the stomach begin to roll and gyrate in their search for food, when honest-to-goodness hunger is present and not mere appetite.

Hunger may be checked by tightening the belt or otherwise checking the muscular movements of the stomach. By instruments and stomach tubes the sensation of hunger has been definitely traceable to these contractions of the stomach. Whenever the stomach or intestines growl much or twist a great deal, it is evidence that they are empty and are begging for bread. Neither of them can sit up on their hind legs and bark like your pet poodle, but they can give you by growls and rumbles unmistakable signs that your body is needing nourishment.

All the World's a Stage, and All the Men and Women Merely Players

Accused of Treason.

General Sukhomlinoff, former minister of war, who is accused by M. Rodzianko, president of the Russian duma, of systematically resisting efforts to keep the Russian army at the front supplied with ammunition and that, as a result, the army retreated.

French Marksmen Lay in Wait for Taubes

French Official Photo.

The above very curious photograph shows one of the famous 75-mm guns mounted on an auto truck, painted and covered with boughs and branches so as to protect it against the enemy. The crew, whose appearance reminds one of the famous American Ku Klux Clan, are really in their newest gas masks, and are waiting for the enemy airplanes to appear in the sky. This is the newest type of the anti-aircraft guns to be seen on the French battle front.

Dr. Agramonte.

Dr. Eugenio Sanchez Agramonte, recently appointed secretary of agriculture of the republic of Cuba by President Menocal.

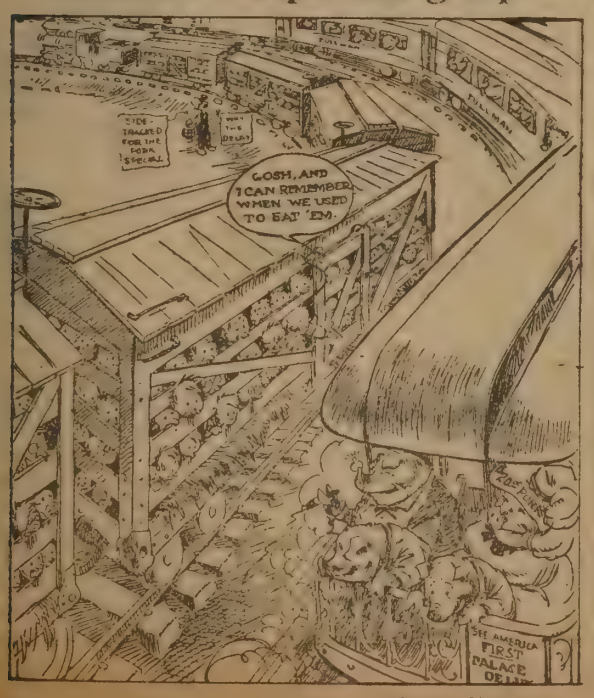
Women Are Serving the Country

Copyright by International.

The above photograph gives one some idea of how the members of the military training for women committee of Brooklyn, N. Y., are preparing to serve their country in this time of need. They are here shown giving an exhibition of first aid to the injured. This committee has succeeded in organizing a body of women "soldiers," all mounted and all well trained.

Asks World Peace.

Pope Benedict, who has made peace overtures to the belligerent governments. He recommends that the warring nations seek a basis for arriving at a solution of the differences existing among them, and suggests restoration by the central powers of Belgium, Serbia and Rumania.



Heroic Russian Women

Copyright by International.

Russian girls of all classes, and many married women, were members of the "Battalion of Death," which recently emerged so gloriously from its first actual conflict with the enemy. Fearing the most despicable of deaths if captured, each member of the battalion carried a small phial of cyanide of potassium. The picture shows two of the young women who made up the battalion. Like all other fighters, they have their mascots.

UNDER THE BLACK CANOPY

By Paul E. Triem

CHAPTER VI.

For some time after the march had been resumed, with Mr. Stirling in the lead and Joe a few steps behind, the latter was puzzled by the behavior of Andy Dubois. He had given the Frenchman credit for abundant courage, but unmistakably Andy was rather showing the white feather at present. His eyes were dazed and his face was drawn and desperate. It seemed to Joe that he should make a better showing—the cut across his forehead could hardly be painful enough to account for all this display of suffering.

The smoky pall above them was flecked with sparks, and the wind that drove against their faces was hot and acrid. Another child began to cry, and the ranger quickly swung her up in front of Andy.

"At the gait we're going, the cayuse can carry three all right," he commented. "And we can't waste a moment."

They had broken into a half obliterated trail which Mr. Stirling said would take them past the phone and at the same time carry them toward the river

"The phone is near the boundary of the reserve," he told Joe, "and a quarter of a mile beyond it is the Stevens river. If we can make the river, we ought to be all right."

Half an hour later they passed a blazed fir which the ranger said was on the boundary of the government forest reserve. He went ahead, telling Joe to follow the trail while he went forward and tried to get help over the phone.

During the next 10 minutes Mrs. McCarty rebelled twice, announcing each time that she positively would not take another step for all the fires in the state.

"Me, indade!" she protested when Joe tried to argue with her, "wid me sufferin' fate, trepsin' through the woods like I was tryin' to disciver the South Pole! No, I will not budge!"

Each time Jerry Stevens saved the day by whispering cajolingly in her ear, and the march was resumed.

Presently they came within sight of Mr. Stirling, standing before an open telephone box, nailed to a painted cedar post. He dropped the receiver as they approached and shook his head.

"The wire's dead," he announced. "Come on—we'll head for the river. I'm sorry, but I'll have to warn you that the lives of every one of us hang in the balance, and that we've got to travel faster. All ready!"

With the path before them almost indistinguishable in the swirling smoke, and with their eyes suffused and their breath poisoned, the refugees hurried desperately along. The roar of the fire came to them distinctly. Minute after minute passed, and finally the trail began to dip before them.

"Keep up your grit, everybody!" Mr. Stirling cried. "We're at the summit of the valley—we're going to make it! One more sprint, and you'll be able to rest!"

Jerry Stevens was tugging at Joe's sleeve, and when the logger looked down he saw that the youngster's face was white and that his eyes glowed with a strange terror.

"He's gone!" the boy said, fearfully. "The man that was riding my pony—see—he's gone!"

Joe whirled and looked back at the place in the procession where Andy Dubois had been riding. The cayuse still plodded along with the two children clinging to the saddle—but the saddle was empty! Andy had disappeared. The young man ran back and asked the children what had become of the wounded man.

"He got off a little while ago and told us to ride on. He said he would walk," one of the children told him, timidly.

Joe began tying some bundles, which he had gradually accumulated in helping the weaker members of the party, to the saddle. The ranger looked back and asked him what he was doing.

"You'll have to go on by yourselves," Joe told him quietly. "My friend must have become too faint to ride. I should have looked after him more carefully."

"But you're not going back into that furnace!" Mr. Stirling shouted.

"Yes. I can't let him die in there."

The ranger was a man who had seen life and its uncertainties reflected from a good many angles, and he wasted no time in argument.

"Take this blanket with you," he commanded, "and try to find a stumphole with some water in it. Goodby. I'll get the rest of them into the water within five minutes."

He gripped Joe's hand in an iron clasp that left the fingers tingling, and next moment he and his party had disappeared. Little Jerry had waved a broken-hearted farewell, and had insisted on giving Joe half a dozen cakes of sweet chocolate which he had been carrying, but the others were dazed with the swift movement of the night. Only Mrs. McCarty eyed him envyingly, thinking perhaps of her aching feet.

Joe sped back along the trail, which became each moment thicker and more stifling. He swunk his lantern before him, and presently, as he peered ahead, he caught sight of a black something in the path ahead. He dropped down beside it and a moan came to him.

"Why didn't you go on? I couldn't stand it any longer; my forearm's broken and the pain made me weak."

Suddenly Joe understood. "You ought to have told me," he said gently. "Come. We must get away from here. I saw a windfall back a few rods, and we may be able to find water where its roots were torn out. Put your other arm over my shoulder—so."

The light of battle had come into Andy's face and he forced himself to hurry forward beside his companion, although every step must have increased his agony. Suddenly Joe paused, looking up to where a sheet of fire sped over them, running through the tops of the trees. He realized that he had missed the windfall, and as far as he could remember there was nothing ahead that could help them.

Andy was speaking faintly.

"There's a gully in there," he said. "There might be some water in it——"

Joe swung him about and they plunged into the brush. The gully had evidently started during the last rainy season, and for a few rods after they entered it it was too shallow to offer any protection. Then it dropped suddenly before them and Joe cried out hoarsely:

"Careful, now—let me lower you over this step-off. Hold the lantern if you can—I can't see bottem, but I'll have to drop you."

Andy lit, and there came to the man in the trough above the welcome sound of splashing water. Next moment he had slid over the step-off and felt himself dropping swiftly, until he brought up with a chug and comprehended that he was knee deep in some sort of spring or bog.

Andy was leaning against the gravel wall that shot up almost vertically into the night, and as Joe turned toward him he smiled faintly.

"Perhaps we can stick it out here," he said. "At least, it gives us a chance."

Joe looked up to where, 100 feet above them, the fire was racing through the branches. He had to shield his face from the terrific heat, and speedily he remembered the blanket which Mr. Stirling had thrust upon him. Next moment he had plunged it into the water in which he and Andy were standing and had drawn it out and pulled it over them.

"Sit down," he commanded.

The noise above them increased and the air became moist and hot. Fragments of burning branches dropped down upon their shelter, and as often as Joe had to remove the blanket to wet it in the spring the heat seemed to settle down about them till their skin was seared and their eyes blinded.

Suddenly the Frenchman spoke. "You're a good fellow, Joe," he said faintly. "I don't know why you ever bothered about me—and it's likely to cost you dear. Why didn't you let me go, as I deserved?"

"Because I knew that you were a good fellow, too," Joe explained. "You and I started out wrong, but that was as much my fault as yours."

Andy remained silent a moment. "There's no use talking about that," he replied sadly. "I always was a sorehead, and I thought you were stuck up—I wanted to go to college when I was a boy and I never got a chance. I could see that you were better educated than I and it made me wild."

Joe nodded. He was listening tensely for some indication that the height of the fire had passed, but each minute the heat grew more stifling and the roar above them deepened. A scorching wind blew against their shelter, so that he was forced often to remove it long enough to plunge it into the water. Otherwise it would quickly have been reduced to a mass of tinder. His companion was silent, and his breath came faintly. When Joe spoke to him presently he did not reply, and the young man realized that he had collapsed.

Again he drew the blanket from over them and plunged it desperately into the spring. Blinded and almost overcome himself by the blistering atmosphere, he succeeded in drawing it back over them. Then he felt himself drifting out into a hazy sea of unconsciousness.

He awoke to a dim realization that he was very miserable; his face and hand smarted terribly and every breath he drew was an aded touch of torture. He stared about him with half-blinded eyes and realized that it must be day—a hazy and unreal day, but better than the night which had passed, at any rate.

Andy was lying against the sloping walls of the little canyon which had sheltered them, and for a moment Joe feared that the terrible ordeal through which they had passed had been too much for his companion. Then he saw that the young Frenchman was breathing, ever so slightly, and in a moment he had forgotten his own suffering.

His eyes rested on his companion's left hand and wrist, which were swollen and discolored. With his knife he carefully ripped open the sleeve and disclosed the injured forearm, and after examining it he stood up and looked about for something which he could use for a splint. Present he found it—a fragment of bark which had dropped from one of the trees high overhead and been quenched in the spring. Joe had had little experience at his kind of work, but he managed to wrap the forearm in a cradle of bandages and splint which would at least hold it firmly until they could do better.

The canyon led steeply down toward what Joe imagined was the river valley; and after he had bathed his companion's hands and face with some of the muddy water he lifted him gently and began to feel his way along the miry channel. The air was still torrid and smoky, but the fire had passed. Joe realized that it had run through the tops of the trees without doing much damage on the surface of the ground.

He found a level spot where the canyon opened out and became a tiny plateau. Here he deposited the limp figure which he had been carrying and sat down to rest. The night had left him so weak that his knees trembled with every step, and the bitter air which he drew into his lungs did little to strengthen him.

He had been sitting beside Andy for nearly an hour, bathing his face and hands and sometimes letting a little water trickle through his parched lips, when the Frenchman opened his eyes and stared confusedly up at Joe.

"Where are we?" he whispered.

"I think we're somewhere on the ridge above the Stevens river," Joe told him. "As soon as you're strong enough w'll get down into the valley and try to make our way along the river to the coast."

Andy laid his hand on Joe's arm and pulled himself up. His left arm Joe had bandaged in through the front of his shirt in such a way as to support it, and as Andy climbed slowly to his feet and stood steadying himself by holding his companion's shoulder, the two of them showed to the full the ordeal through which they had passed. Silently they turned toward the lower valley; and a couple of hours later the river opened out before them.

"We ought to make the beach by night," Joe said cheerfully, after they had rested for a time. "We'll have the rest of this chocolate and then be off."

He drew from his pocket a bar of sweet chocolate, the last of the supply which Jerry had pressed upon him the night before. It had proved wonderfully effective in renewing his companion's strength and courage, and without it they could hardly have reached the river.

"All right," Andy announced, after he had finished his share.

The march was resumed. An hour passed and another, and then in the distance they caught the shimmer of the sound. Silently, doggedly, they forced themselves along the uncertain track beside the river until suddenly they came out of a brushy thicket and caught the murmur of voices. Joe

paused, with his heart pounding so that it threatened to smother him. Next moment a shrill, boyish voice was raised in a triumphant shout, and Jerry Stevens came racing across the beach and threw his arms about Joe.

"See who's here!" he cried. "Both of 'em—and they're alive—and I'll bet they're hungry enough to eat everything in camp!"

Among the people who followed Jerry and who were now standing around Joe and his companion, the young man recognized not only the faces that had been burned into his memory by the terrible march of the night, but also Charlie Neville's round and prosperous visage.

"Of course they've starved," the cook declared, grasping Andy's uninjured arm and helping him along toward a spot where a camp fire smouldered near the water's edge. "McClosky and that government ranger and a bunch of the boys have gone in along the hotel road to try to find you, and they probably won't get back before night or maybe tomorrow morning. The ship will be in some time this afternoon—Mr. Stevens has been over in a launch, but no one was willing to leave until the search party reported."

Whistles boomed across the Sound, and Joe, from his seat near the prow of the "Avlon," could hear the hiss of water along the ship's sides. Mr. Stevens and Jerry sat beside him, and the other refugees were scattered in little groups over the ship.

"There's nothing you can do directly for me," Joe said, in answer to a question of Mr. Stevens'. "You know as well as I do that it isn't a kindness to any man to boost him—if I've got it in me to do good work, I'll get along all right; and if I haven't, no amount of help could keep me from sinking to my natural station. But I'd be glad if you could help Andy in some way—he's hungry for an education, and he never had a chance to get one. I think he'd take to forestry or some sort of applied science."

"Aren't you rather suggesting that I should boost Andy into an education?" Mr. Stevens asked quietly. "As nearly as I can figure you went through college without any one to help you. What was to hinder his doing the same thing?"

"I had no one but myself to look after," Joe replied goodnaturedly, "while Andy has his mother and a couple of sisters to support."

"I didn't know that," the lumberman admitted.

"No one has known it. Andy's faults stick out like door knobs, while he keeps his virtues hidden."

"The whole thing is as easy as pie," young Stevens broke in suddenly. He had been sitting with his hand on Joe's arm, looking from one of the speakers to the other. "Joe's to take that job you were talking about at the head of the mill; and if he doesn't get along without boosting, why it's easy enough for him to quit—and we'll try again. And Andy shall start to school this fall, and Dad will help him all he needs. There's no use talking a whole evening about a little thing like that."

Jerry, senior, laughed. "I think you've hit the nail on the head," he agreed. "Your way looks simple, and I'm pretty sure it will work. It isn't 'boosting' to promote a man when he's proved that he has initiative and energy and courage; that's simply a good business move on my part, and we'll consider it settled."

From the stern of the ship there came a sound of a voice, which floated out into the night with a weird pathos. The words were French, and Joe listened, spellbound, to the silvery tenor which gripped him and seemed to carry him out over the brooding water. There was a burst of applause at the end, and he heard Andy pleading that he could sing no more, as his throat was still parched from the torrid air of the fire. Then they were shouting his own name, and he understood that they were demanding a sort of "curtain speech." He tried to slide back into the shadow of a coil of rope, but Mr. Stevens caught him and forced him out into the light. Next moment they had surrounded him and had borne him, irresistibly, to the steps which led to the upper deck.

Joe stood looking down into the upturned, happy faces. Some of the women were crying—Mrs. McCarty among them, with her face so inflamed by alternate tears and laughter, that it looked very like a full moon. From the farther edge of the circle, Andy Dubois looked at him with a new gentleness in his dark eyes. And Joe realized that he was glad to be alive.

THE END.

"Rome Beauty Cookers."

I have received an inquiry about the meaning of the term "Rome Beauty Cookers" as used by growers and shippers of fruits.

To begin with, the Rome Beauty is probably one of the best cookers on the markets. Especially is this true as a baker. It is prized by the proprietors of hotels and restaurants because it is supposed to be one of the best bakers among the winter varieties of apples. Whatever else may be said for or against the Rome Beauty as compared with other varieties, it is conceded to be a good cooker.

Second, the Rome Beauty cooks well and has a good flavor, before it is fully grown. It is therefore common for growers, in thinning their fruit, to leave a large crop on the Rome Beauty trees than they would leave on the other varieties, and thin them later, saving the apples taken off in the thinning process for sale to the trade as cookers. They make good sauce, the consumer gets value received, besides the thinning are not wasted. Then the apples left on the trees develop and make good marketable fruits. The first pickings of the Rome Beauties are called cookers, to distinguish them from the second and third that have other values besides.

Discrimination Against Cheese.

The Snohomish County Pomona grange held its quarterly session at Twin Valley, with Twin Valley grange as host. A matter claimed to be of vital interest to the dairy interests of the state, and which, it is thought, will undoubtedly receive serious consideration, was brought before the Pomona in the form of a resolution dealing with the laws now on the state statutes which favor the condensery product known as "hebe milk" and discriminate against the dairy product known as filled cheese.

Reorganize Testing Association.

The Jefferson County (Wash.) Cow Testing association was recently organized for another year, with all but four of the former members joining for the second year. O. E. Leonard is the tester.

Farm Calispel Valley Lands

By RAY W. FELTON

Eureka Ranch, Inc., is one of the larger farms of the Calispel valley, Pend Oreille county, Washington. It is managed by H. O. Schumacher, son of A. Schumacher, well-known Spokane business man. With his mother to keep house for him young Schumacher, until recently a "city chap," finds the operation of 280 acres a task not at all unpleasant. He is going in for Duroc-Jersey hogs and has a good sized herd in splendid condition.

F. H. McLeish is farming 400 acres in the Calispel valley and is raising a fine type of roan Durhams. He has 40 head including calves and young stock and annually produces a large quantity of hay for shipment. The McLeish place is outside the main dyking district in the valley and is subject to overflow. This fact has resulted in green meadows on his farm this summer.

C. E. Rice of Locke, Wash., has 385 acres, a majority of which is cleared and under cultivation. He raises wheat and oats and produces cattle both of the beef and dairy type. The Locke district will harvest a fair crop this year, due to moisture provided by the overflow of the Calispel valley. Small crops were experienced by ranchers of this district last year and year before as the water stayed on until it was too late for cropping.

Baker brothers, in the main Calispel valley, are farming 280 acres, most of which is in grain.

John Leibrecht, a neighbor of the Baker boys, has 115 acres, a large part of which he has cleared himself. Mr. Leibrecht finds it is cheaper to blow stumps than to pull them. He has tried both ways. As a rule he undertakes this work after a rain or at any time when the ground is wet. Blowing stumps leaves a smaller hole than is caused by the stump pullers, he finds; the ground is less expensive to level afterwards and the stumps easier to burn.

Father and sons work side by side at the Crown ranch. A. Crown and his two sons are partners in every sense of the word and the fine spirit of the boys reflects the wholesome influence of well-conducted home life.

Mr. Crown and his sons have 290 acres, all under the plow. It is given over to the raising of hay, grain and pacsture for 20 head of cattle.

Mrs. L. Hunz is one of the successful women farmers of the Calispel valley. She manages 500 acres and is one of the few persons in the valley to report a normal crop of hay this year in spite of the dry season.

P. J. Sullivan has been in the valley 30 years. He is farming 320 acres. Mr. Sullivan remembers the day when stock raising was the principal agricultural industry of the Calispel and he is of the opinion that dairying will yet be the main occupation as it seems more certain of fruitful returns than most any other line of endeavor in that section.

Farmers in the Calispel valley will harvest short crops of grain and hay this year in most instances. The prolonged dry spell has worked a real hardship on this community although most farmers are in comfortable circumstances as the result of fair crops last year and prevailing high prices for all lines of farm produce. A July frost killed oats on many farms.

Grays Harbor Pioneers.

O. F. Fry of Oakville has been elected president of the Grays Harbor County Pioneer association. Other officers are: Mrs. E. P. French of Elma, first vice president; J. J. Carney of Aberdeen, second vice president; Mrs. J. S. McKee of Hoquiam, third vice president; J. A. Hood of Aberdeen, director for three years.

Organize to Sell Potatoes.

An organization to dispose of the potato crop of Whatcom county farmers jointly will be formed at the Laurel grange hall in Lynden on Saturday, September 8.

Vaccinating Hereford Calves

The photograph herewith shows Roy P. Bean, United States agriculturist for the Tieton irrigation project, vaccinating a calf with the aid of a man on the farm. The vaccination is for the prevention of blackleg. Mr. Bean made a community job of his work the day this photograph was taken, vaccinating 105 calves for a number of farmers. The picture was taken on the C. C. Bull ranch on the project.

Fats for Frying Are a Luxury in Germany

The demand for fats in Germany, notwithstanding the enormous quantities that have until recently been received throughout the neutral nations, is illustrated by advertisements in German newspapers just received in Washington.

"For sale, for cash on delivery, fat for frying, 17 marks ($4.05) per pound," reads one advertisement.

"Goose fat, 22 1-2 marks ($5.36) per pound," reads another.

"Duck fat, 1-4 pound for 4.75 marks ($1.13)," is a Dresden bargain sale announcement.

Salted goose legs are quoted at 94 cents each. Minced goose meat brings the same price. Larded goose breast, a delicacy, will cost the epicures $2.08 per pound. Fresh fowls for soup are quoted at from $1.01 per pound and up.

An official distribution of cheese is announced for Dusseldorf, with the announcement that there will not be sufficient to supply every one, but that "those who were not supplied at the last distribution and also go empty at the forthcoming distribution will be given preference at the next distribution. They must, therefore, preserve the current voucher." Prices quoted are 82 cents per pound for Gouda and 36 cents per pound for Swiss cheese.

Young country laying hens are advertised for sale at $3.32 each.

"Well-fed, snow-white Emden giant geese" are offered for sale at prices ranging from $11.91 to $19.08 each.

The egg ration at Hamburg for one week in June was one egg per person.

Rabbits bring high prices. "One buck, one doe and three young rabbits" are offered for $8.34.

Horses are in great demand for killing, and delicacies made of horse flesh are advertised at prices varying from 53 cents to 86 cents per pound.

ALICE W. BARLAND
Editorial Contributor

Down the Mississippi

By MRS. A. W. BARLAND.

Dear Women of the Family Circle: You are busy these days in the midst of the harvest work, and the days are full of cooking and dishwashing. I know all about it from actual experience and can see clearly, in my imagination, the rows of bread and pies and doughnuts that you are seeing disappear as the harvesters gather around the table three times a day. I have been going about through the middle west, and the last three weeks traveling by steamboat, rail and automobile.

I am thinking it might interest you to hear something of what I have seen as you pick up the Farmer to read and rest a while. One does not care always to read recipes and household notes, so let me share my vacation good times with you. Since people do not go to Europe on summer vacations, it has become popular to see things worth seeing in our own United States, and the grand old Mississippi river is one of those things.

When I was a child of 10 years I went down the river with my mother and the memory of that trip has stayed with me so I thought to go again. I took a long, unwieldy steamboat at St. Paul, Minn., with accommodations for 300 people and about 225 on board. We left the dock at 8 o'clock with the moon full. The boat was not much to brag about, being old-fashioned and rather crude, but it puffed along about 10 miles an hour. There was dancing in the cabin during the evening for those who enjoyed it, but many, like myself, preferred to stay out on deck and watch the wonderful and beautiful moonlight on the water and the shore. The boats follow the current of the river which, for some reason always is close to the shore, making it easy to see into the little towns, almost into the windows. Very picturesque they look against the green hillside. Always there would be a church spire or two and occasionally the white stones in a hillside cemetery would show in ghostly shadows as the moonlight played upon them. We would stop at the large towns such as Davenport and Redwing, but the small ones had to be content to see the big boat drift by.

Very reluctantly we left the deck for our staterooms. It seemed a pity to waste time in sleep when there was so much beauty outside. But we were up betimes in the morning and saw the sun come up behind the green hills. One of the diversions of the morning was to stand at the forward end of the boat on the first deck and throw coin down to the colored "roustabouts" congregated below. There were about 50 of them, all shades of black. Some one would toss down a coin which was the signal for every one of the 50 to try to get it. Pennies, nickels and dimes were tossed down, and sometimes a quarter of a dollar. How those black fellows would scramble for the coin! Sometimes there would be 10 or 15 of them piled up over the money like in a football rush. One and another would get his hands on it but before the coin could be grasped it would be slid out from under and a dozen hands would be after it. There was perfect good nature among the black boys. So soon as the coins ceased to fall from the deck above the boys would gather in groups and "shoot craps" which means they gambled. All along the river were house boats tied up for a while or being towed slowly along by a small motor boat.

One of the diversions of those days was steamboat racing. Accidents were of frequent occurrence in these days. There used to be collisions and bursted boilers in the effort to make more steam.

There is nothing like that now. If there chances to be a fog or a high wind the steamers tie up to shore and wait. Sometimes the drifting sand sticks them fast to the bottom for a while; nobody worries, but just wait till things loosen up. For real beauty of scenery the boat trip on the Mississippi excels either a lake trip on the great lakes or an ocean ride, because in either of the latter there is only the water to look out upon, but the shores of the river are like the unfolding of a great canvas and furnish a beautiful moving picture. After leaving the river I traveled nearly 700 miles by automobile and I will tell you next time about that ride.

To Test Oven Heat.

Do you know how to test the heat of your oven, with a piece of white paper, on baking days? asks The Christian Science Monitor. It is really quite a simple thing, but it is also a bit of knowledge which is quite well worth knowing. Suppose you are making pastry, patties or something of that sort: Light your oven and then, pretty soon, slip in the sheet of white paper to try it. If the paper burns right up, why then, naturally, you will know that the oven is too hot and must be cooled before it can be used. If, however, in a minute or two, rather, it turns a nice deep rich brown—but not black—it is all right for your tarts and patties. If, though, you wished to bake bread or meat pies or pound cake, for example, this would not do; it would be much too hot. What you would need, in this case, for a proper test, would be to have your sheet of paper turn a very light, yellowish brown, a sort of golden brown. Now, suppose you desire to bake a sponge cake or something on that order, which must be baked rapidly, but not browned very much. Put your sheet of white paper in the oven and if, after the two minutes, it is just daintily and delicately tinged with tan or yellow, the oven will be at the proper heat for your purpose.

Man, through all ages of revolving time,
Unchanging man, in every varying clime
Deems his own land of every land the pride,
Beloved by heaven, o'er all the world beside;
His home the spot of earth supremely blest,
A dearer, sweeter spot than all the rest.

—James Montgomery.

Old English Initials to Embroider

By WINIFRED WORTH.

To transfer this design, put some soap in a pint of hot water, stir and remove excess moisture by partially drying design. Place material on a hard, flat surface and lay the design, face down, upon the material, cover with two folds of newspaper and, with a tablespoon, rub, pressing hard, until the design is entirely transferred.

White embroidery floss of linen quality, or the mercerized, is the best for making letters. Always soap the fabric with white soap under the initial before embroidering. This aids one in washing the color from the finished design.

In padding these old English initials, different methods may be used. Some use the twilled cotton for the purpose, others make the chain stitch, while others let a skein of floss out at full length and embroider a strip of it under the thick parts while forming the letter, clipping the skein when the initial is finished. This is a splendid method, quickly done and is suggested, too, as a help in padding all large pieces in border or crescent outline.

Initials can be made by filling in the broad space with French knots. This is used largely on elaborate pieces, such as the laundry bag, table scarfs, and ornate gifts.

The Nation's Strength

is not only in the mailed fist but in the hand of industry—the hand of health. It behooves all of us to be strong and keep strong, in order to carry the present day burden.

As a strength-giving food product Ghirardelli's Ground Chocolate is an ideal blend of foods—cocoa and pure sugar, each full of elements that supply energy and build up worn tissues.

A tablespoonful of Ghirardelli's Ground Chocolate, 1c. worth, makes not only a delicious but an unusually nutritious beverage. Drink daily a cup of

Ghirardelli's
Ground Chocolate

Comes in ½ lb., lb. and 3 lb., sealed cans.

As a trial proposition, send us 50 cents and we will send you 1½ pounds of Northwest's Best Coffee, and after using it, if you believe it is not honestly the best coffee you ever used, we will refund the purchase price without question.

You take no chances.

This is not a package coffee, but a bulk coffee, freshly roasted and ground for you the way you want, after the order is received.

All good coffee; no tin cans to throw away, or premiums you do not need.

Coffee sent whole or ground, as ordered. If you want it ground, state whether coarse, medium, fine, for percolator, or pulverized.

Fill in the coupon below and send with 50 cents or $1.00 in stamps, coin or money order, to

NORTHWEST GROCERY COMPANY

13th and Commerce Sts.

Dear Children: What do you think we ought to do to make our Corner cozier, nicer, better and have more children read it?

I am going to ask you all. Won't you tell me what you think?

The best of the suggestions I am going to answer personally.

With lots of love for all of you.

Aunt Nellie.

We're Glad to Know Cousin Marie.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am up in the Rattlesnake Hills about 10 miles from Sunnyside, visiting my cousin, Melvin Franks. Cousin Melvin and another of my cousins, Thelma Hinkle, have written to the Children's Corner before, so I thought I would write and get acquainted with the cousins of the Corner, too. I live in Pasco. I have two brothers and one sister. My brothers' names are Carl and Alvin. Carl is eight years old and Alvin is three years old. My little sister's name is Pearl. She is two years old. In about two weeks more I am going to visit my grandma in Euclid valley. It is about two miles from Grandview and about seven miles from Prosser. I have two aunts in Prosser that I have to visit before I go home. When I came up to my cousins we were driving along the road about three miles from home and we heard a rattlesnake rattle beside the road so my cousin, Melvin, and Uncle Will got out and killed it. The snake had nine rattles and a button. Since I have been here I have learned to crochet an edge. This week I am going to learn to crochet an edge on a handkerchief. I am having just a fine time here and I know I will have a fine time at grandma's. I wonder if I have a twin? I was 13 the 27th of March. If I have a twin I wish they would write to me, please. Marie Haven, 320 Lewis street, Pasco, Wash.

What Marie Wants to Be.

Dear Aunt Nellie: My subject is what I want to be when I grow up. I want to be a school teacher and also a music teacher. I never, never want to get married and always live with papa and mama and live on a farm, for I love outdoor sport and animals. I am eight years old and will be nine February 21. I love to read the children's letters and am glad when papa gets his paper. Our school will begin next week and my teacher's name is Miss Greene. She is the same teacher that I had last year. I am in the fourth grade. This is the second time I have written to the Corner.—Marie Houk, White Bluffs, Wash.

Mabel's Vacation Has Seemed Short.

Dear Aunt Nellie: Well, September is here and school will soon be starting. This has been a good vacation, but has seemed rather short. This is the second time I have written to you. I have just been reading the letters from the Corner and liked them so well I thought I would write again. I have four nice little kittens now. One is black, one is gray and one is black and white, but the prettiest one is gray and white. Our apples are soon ripe. They are large red ones.—Mabel Irene Iverson, R. F. D. 3, Box 105, Mt. Vernon, Wash.

Schoolhouse Has a New Room.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I have three brothers and one sister. Our school will start the 10th of September. We only had one room last year, but they have built another room onto it this year. I am 12 years old and in the seventh grade. My birthday is the 27th of August. We have three horses, three cows, two heifers, two calves, one cat and 55 chickens. We have a big garden and quite a lot of potatoes planted.—Minnie Flem, R. F. D. 4, Box 323, Tacoma, Wash.

Gertrude's Trip to the Beach.

Dear Aunt Nellie: This is my second letter to the Corner. I am 12 years old. Our school will soon start. It starts next month, September 4, 1917. We will have Mrs. Anderson for our teacher. I will tell you about our trip to the beach. We got up early in the morning and packed our things. We saw lots of things on our way. We were going to Birmingham. It was 11 when he got to Birmingham. We stayed there three days. Every day we were in swimming. I enjoyed the time very much.—Gertrude Sande, Mt. Vernon, Wash.

Catherine Is a Busy Cousin.

Dear Aunt Nellie: I will write once more to the Children's Corner. I have been so busy that I do not get time to write to any one. I work in the field and I also have to get the cows up at night. I have to work in and outside of the house, as my father, my oldest brother, whose name is Edward, and my sister, whose name is Charlotte, are out camping now. I have to do their work at home. Our school was out May 18. There were eight children who graduated out of nine. They might have the ninth grade at Satsop. We have five cows, five calves, two horses, 24 geese, 24 ducks and about 75 chickens, five old canary birds and five young ones. One bird is sitting on four eggs. We had a telephone put in since I wrote to the Children's Corner. I was writing to Josephine Robinson and Velma Batie. I have five brothers and one sister. Their names are Charlotte, Edward, Charles, Delmar, Clifton and John. Charlotte is 15 years old, Edward is 11, Charles is 9, Delmar is 6, Clifton is 5 and John is 2. I am 5 feet 6 inches tall. I weigh about 98 pounds. My hair is light brown. My eyes are a grayish blue color. I am 14 years old. I will have to close for this time so that I can tend to my bread that I am making.—Catherine Borden, Satsop, Wash.

Many Animals in the Woods.

Dear Aunt Nellie: I am 12 years old and am 5 feet high and weigh 93 pounds. I am in the sixth grade next year. My school starts September 10. I have one cat, and her name is Tabby. We have two ponies, and their names are Babe and Billy. My brothers' names are William and Frank. There are wild rabbits, squirrels, bears and things like that in our woods. My birthday is April 7. Have I a twin? If I have I would like for them to please write to me.—Merna Elliott, Alpha, Wash.

Playing in the Hay Is Fun.

Dear Aunt Nellie: I have written to the Corner twice and now I am writing again because I think it is fun, and you may look for more of my letters for I will write again. My subject is Snider and Bonnie, for they are my pets. Snider can open a door, and Bonnie can open a gate and a barn door. I have lots of fun playing in the hay. I would like to hear from Ruby Johnson. I am 11 years old and in the sixth grade.—Hazel Saltmarsh, Coulee City, Wash.

Stella Has a Big White Cat.

Dear Aunt Nellie: I am 8 years old and I will be 9 December 24, 1917. I am in the third grade. This is the second time I have written to the Children's Corner. Have I a twin? I would like to correspond with one my own age. I have a big white cat and she has four little kittens. My school starts September 3 and I am glad. Gladys Rhodes is my teacher this year. —Stella Ruark, Mayview, Wash.

We All Want to Help Uncle Sam.

Dear Aunt Nellie: Hello! Here I am again. I have just been wondering who would like to be a Red Cross nurse. Of course we all would like to help Uncle Sam. If I were old enough I would be in training now. If my brother was old enough I would be willing for him to go. I am helping as much as I can by raising a garden. —Letha Dwire, Garfield, Wash.

Big Fires Make It Smoky.

Dear Aunt Nellie: We live on a 160-acre farm. We will milk 16 cows next year. I wrote before and saw my letter in print and was glad that was good. I will write again and see if it is good. My favorite book is Black Beauty. I like it very much. There are big fires here and it is very smoky around. Lilliana Strong, Curlew, Wash.

Poppies and Sweet Peas in Her Garden.

Dear Aunt Nellie: I enjoy reading the Children's Corner. We have three horses, two cows and 75 chickens. I have poppies and sweet peas in my garden. I have thre sisters and one brother. My sisters' names are Maude, Elsie and Hazel and my brother's name is George. I am 11 years old. My birthday is May 12 and I passed to the sixth grade. I wonder if I have a twin. I have to walk one mile to school. My teacher's name is Miss Holm. I can tat and sew.—Pearl Franz, Rockford, Wash.

The Country Is Cousin Ruth's Choice.

Dear Aunt Nellie: I have not writen to the Children's Corner for a long time but I am going to write again. I will be in the fourth grade next year. I was 9 the first of July. I would like for Florence Spoolman to write to me if she would. We live on a 60-acre farm. If anybody would give me my choice of the city and the country I would take the country. I ride horseback. I like to ride. I have a horse. Her name is Ribbon. My grandma was here but she has gone away to see her son. He came over after her. He wanted my brother to go along home with him and so he went along. My uncle lives over in Idaho. I don't know how soon my brother will be home.—Ruth Wagner, Gilmer, Wash.

Lydia's Summer Has Been Busy.

Dear Aunt Nellie: I have quite a lot to tell you about my summer vacation. The water was up again this year, but not quite as high as last year. My brothers, sisters and I have had a fine time since school is out. When the water was up we camped two weeks at Buris creek; papa had the cows up there for 19 days before the rest of us went up there; we had lots of fun boat riding and swimming. I have been picking cherries, planting kale and weeding garden. My sister and I went blackberry picking yesterday and got two gallons. I was 13 years old the 16th of July.—Lydia Guild, box 25, Woodland, Wash.

Call Their Little Dog Bum.

Dear Aunt Nellie: I am a little girl 9 years old. My birthday is August 30. I am in the fourth grade. I have one sister and one brother. I have two calves and one cow. The calves' names are Spotty and Midget and the cow's name is Flora. We have a little dog and its name is Bum. My brother and I get the cows every night. I wash the dishes every morning. My brother and I walk two miles and a half to school. We have 11 milch cows and 13 calves. I like to milk, but mama won't let me. I will write again to the Corner.—Ellen Selun, Wilson Creek, Wash.

Across the Lake to Pick Berries.

Dear Aunt Nellie. I think the Corner is growing fast. I went to Sunday school yesterday. I white to Evelyn Willey and she writes to the Corner, too. I had a long ride over the lake to pick berries. There was mama, papa and a man that works here, besides me. My little brother is eating his breakfast now.—Elzina Rogers, Arlington, Wash.

Welcome to Our New Cousin, Mabel.

Dear Aunt Nellie: I like to read the letters of the Children's Corner very much but I have never written before. I live on Lincoln creek, 12 miles from Centralia. I am 11 years old and will be in the seventh grade. We have 14 cows and six horses. We have quite a few chickens and pigs. I like to go swimming very much and go often.—Mabel Kosola, Rochester, Wash.

Ups and Downs of a Bunch Grass Boy

(Continued from page eighteen.)

otes, every one bred in the purple, possessing courage, fleetness, daring, cunning, and the ability to discuss their adventures and frustrated hopes in the language of human beings.

All went well till the mountain lion, gaunt, bony, starving, with long, sharp teeth and softly padding feet and yellow, glaring eyes, found his way into the hidden coyote nation, and signalized his arrival by poking his big, catlike head into the coyote den wherein lurked Moses and the younger fry of his generation, whom the mountain lion sought to devour, but could not reach because the hole was too small to admit his sinewy body.

It was the reign of terror following the arrival of this tawny interloper that ended my first chapter. My next chapter developed a cunningly laid plan which the coyote Moses laid to rid the land of the enemy. All the young, daring coyotes sped forth and returned with chickens. They piled the lurking place of the mountain lion high with chickens, being sure not to pull out any of the chicken feathers. The mountain lion ravenously gulped down one chicken after another, feathers and all; and eventually filled himself so full of feathers that his sides stuck out with the plumpness of feather beds; and the feathers made him sick.

When thus he was sick and torpid, a hundred of the coyote warriors assailed him, and with some loss of their own number, pulled him to bits, each of the warriors taking a bit of his tawny hide for a trophy. I told of this battle in terms so graphic that goose bumps tingled over me while I wrote.

Other adventures in coyote-land followed; and I adopted rather unique means of getting the "material" for these adventure stories. That summer I was in a battle with the coyotes to keep them away from the chickens I was trying to raise. Whenever a coyote raided my hen-yard and got away with a prize, I told triumphantly of it in the coyote's own boastful language. I realize now that I was influenced a good deal by Cooper's Leather Stocking Tales, several of which I had read. My coyotes spoke in the language of Cooper's Indian heroes.

That summer I adopted may expedients to outwit the coyotes, but they generally outwitted me. Back in coyote-land, at the coyote-council I had the young coyotes tell of these exploits in language flowery with eloquence of the Old South—the old-time magnolia and cotton blossom kind, which I had picked up somewhere in my boyhood readings.

A rifle came into my possession that summer; and then I began to get the better of the coyotes. Some of them I wounded and they galloped off on three legs. Once my bullet clipped a spray of fur from the back of a coyote and he made off uncertainly, with his back sagging and hind legs numb. Others I shot dead, or mortally wounded them.

These chapters of my coyote book were dark and graphic. There was an old Doctor Coyote who could set broken legs, and staunch bleeding wounds. There was a preacher Coyote who could revive failing courage, and restore waning faith in the bliss of the Happy Hunting Ground—I borrowed the Indians' idea of Heaven—to which all coyotes would go who died in battle. There was a beautiful Miss Coyote, whom all the handsome coyote warriors courted. The number of chicken feathers about a warrior-coyotes' "lodge" was the index of this coyote maiden's esteem of any of her four-footed suitors. To get more chicken feathers, saying nothing of more chicken meat, the warriors would do all kinds of daredevil tricks.

One day I rode my buckskin cayuse after a coyote till I was right at the heels of the tiring creature. Just as I had the animal nearly under my pony's hoofs, those flying hoofs went astray into a grass-screened badger hole. My flying cayuse turned a couple of somersaults and rolled over on his side. For me, all was darkness, with sprays of shooting lights in my eyes and a weight of tons on top of me for an age. Light and senses returned; and I realized that my pony had merely stepped into a badger hole and rolled over me. The coyote was gone.

That, I suppose, would have made a thrilling chapter, told from the viewpoint of the warrior-coyote who had cungingly led my pony and me into that very badger hole; but when I mounted the stool and reached under the coffee pot for my thick, 10-cent writing tablet, the tablet was gone—all because I had not heeded, when mother told me to get some kindling! So the chapter was never written, and the cooyte book was not finished.

Rewards We have some valuable prizes we are offering to our readers as rewards for securing their neighbors as subscribers to our paper. Write the Prize Editor, care of the Washington Farmer, Review building, Spokane, Wash.

For You

We are offering our readers some choice articles that we have selected as special prizes to be given ABSOLUTELY FREE for securing subscriptions to our paper.

News for Breeders

Oscar Bleckschmidt of Oakville, Wash., last spring purchased from H. C. Crandall of Michigan a young O. I. C. boar, a son of Schoolmaster, to take the place of a very fine boar, also bought from Mr. Crandall. Mr. Bleckschmidt has a good little herd. He feeds out a good many and says that at present prices if people don't want them for breeding stock there is money in them for market hogs, even with the high price of feed. For fattening he feeds mostly straight barley, with a little milk. H. A.

Registered Jersey Sale.

Owing to the fact that Ivan, son of Frank Laughary, Monmouth, Ore., has joined the army and is now in the officers' training camp at San Francisco, Mr. Laughary has decided to sell his Jersey herd. G. G. Hewitt, who is a near neighbor, will add 15 head, making close to 60 head in the sale. This makes a very important sale, both to Jersey fanciers and to dairymen desiring to improve their herds during these times of high prices of feed, when only cows of large production and low cost of maintenance are profitable.

Mr. Laughary will positively sell every animal except two cows and their offspring. Every cow in the sale belonging to both Mr. Laughary and Mr. Hewitt, that has been in milk a year, has a Register of Merit record and the young stock have Register of Merit sires and dams either with records or on test—some of them quite large records. Two very fine Register of Merit bulls will also be sold—bulls whose daughters make their records mostly with first calves. These are Octavia's Duke and Golden Fern's Noble Jr. There will surely be a strong demand for each of them.

The sale will be held on Mr. Laughary's farm, seven miles from Monmouth, October 15, with Colonel J. W. Hughes as auctioneer. Catalogues will soon be ready and announcement of means of transportation, etc., will be made in good time. H. A.

HOLSTEINS STAND TEST

J. F. Peerenboom of Roy, Ore., in July had four of his Holsteins on official test, two of them 2 year olds, one 3 year old and one a matured cow. The tests were made under ordinary conditions, with no special care. The cows were, however, milked three times a day. Lady Hengerveld Annie, one of the 2 year olds, produced 314.3 pounds of milk and 13.01 pounds of fat, or 16.26 pounds of butter, which was the best record, age considered, though not as large as Columbia Rose DeKol, the mature cow.

Last April Mr. Peerenboom purchased the fine young bull Woodmont Duke Netherland, from Woodmont farm of New York. His dam has not been tested, but outside of that he is over 30 pound breeding on both sides. Mr. Peerenboom's herd is small and all will be given official tests.

Breeders' Department

POLAND CHINA SWINE

Fruitland Stock Farm

Poland China Hogs.

Herd headed by Idaho Expansion (541305), assisted by Superba Jr. (241305) and Sammy (79833). Top for size and quality. I have for sale extra good spring pigs. Correspondence solicited.

GEORGE A. GUE, Sales Manager. North Yakima, Wash.
JOHN L. SMITH, Prop. Hazelwood Stock Farm. Route 1, Spokane, Wash.

GEORGE A. GUE AND HARRY C. CRANKE, Auctioneers.

Grain and Produce Markets

Chicago Grain.

CHICAGO, Sept. 8.—Broad demand for corn resulted today from cold weather that increased danger of crop maturity being too long delayed to escape killing frost. The market closed unsettled, 1 to 1 3-8 net higher, at $155-8 to $153-4; December and May, $113-4 to $117-8. Oats bulged 1-2 to 7-8@c, and provisions 2 to 17c.

Investors purchased corn freely and shorts also covered on a large scale.

Active call from the seaboard did a good deal to lift the value of oats.

Protests against the lowness of the basic price of wheat as fixed for the Chicago market brought an answer today from the government food administrator. President Griffin of the board of trade said the communication was being analyzed by the transportation committee of the board. Receipts here continued scanty and were absorbed by millers.

Provisions rose in response to the government report showing a reduction of more than 5,000,000 hogs on farms as compared with a year ago.

Live Stock Quotations.

At Omaha.

OMAHA, Sept. 8.—Hogs—Receipts, 1000; market 50c higher. Heavy, $16.85@17.50; mixed, $17@17.50; light, $17.35@18; pigs, $15.50@16.50; bulk of sales, $17@17.50.

Portland Market.

PORTLAND, Ore., Sept. 10.—Not until definite word comes from Washington as to the wheat price that will apply in this territory will there be any selling of wheat by farmers, according to the views of the trade here. The mills are badly in need of wheat and offers were out at the close of the week on the $1.90 basis in the country, but no wheat was forthcoming. The committee appointed at the wheat growers' meeting in this city Friday expects to start for Washington immediately, having wired asking for an appointment with the president, and they are in hope some definite agreement may be reached before the week is over. In the meantime, until the matter is settled, one way or another the mills can not buy wheat.

The oats and barley markets are as quiet as wheat, as there are practically no sellers to meet the increasing demand. There is not likely to be any speculation in these lines with the indications of a closer government supervision.

High prices have cut down the consumption of butter in this city about one-half, according to jobbers' estimates, but the supply is so short that prices are tending upward.

Eggs are also firmer in spite of reduced demand. Receipts are very small and storage stock is being used in increased quantities.

An advance in cheese was expected at the close of the week, but was staved off by the heavy rainfall, which should soon improve the pastures in all the cheese making districts.

Poultry and country dressed meats are higher owing to the very small receipts.

A short peach season is looked for by jobbers and lower prices are not expected. The current quotation is 75 cents to $1, and the supply is inadequate even at this high price.

The demand for hops is strong with no sellers of the new crop. Last year's growth is now quoted at 35 cents.

Calf skins are lower this week, at 25 cents. The hide list otherwise is unchanged.

In the following list of quotations the grain, hay, mill feed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 1, $47.50 per ton.

Mill stuffs—Bran, $37 per ton; shorts $40.

Barley—No. 1 feed, $45; brewing, $47; rolled, $55@57.

Hay—Buying prices: Timothy, eastern Oregon, $27; alfalfa, $22.50@24; grain, $20.

Eggs—Oregon ranch, case counts, 38c per dozen; candled, 40@43c.

Poultry—Hens, 16 1-2@18c; ducks, 13@18c; turkeys, live, 20@22c; geese, 10@11c.

Butter—City creamery, prints, 47@48c per pound; cubes, extras, 45c.

Cheese—Tillamook triplets, 24c; young Americas, 25c.

Dressed meats — Veal, 15 1-2@16c; pork, 22@22 1-2c.

Hops—1916, 25c; contracts, 35c.

Potatoes—New, 2 1-2@2 3-4c per pound.

Wool—Eastern Oregon, fine; 52@61c; coarse, 60c; valley, 58@60c.

Beans — California small white, 15 1-2c; large white, 15c per pound.

Spokane Market.

The wholesale prices quoted in the list below are not the prics paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer.

Potatoes—New local potatoes, $2.50 cwt; sweet potatoes, $4.25 cwt.

Apples—New Washington apples, $1 20-lb box; $1.75 50-lb box.

Butter—Blanchard cartons, 47c lb; Medo-Maid, 47c lb; Cascade, 47c lb; Gold Leaf, 47c lb; Better Butter, 47c lb; Attalia, 47c lb; Diadem, 47c lb; Hazelwood, 47c lb; Solid Pack, 47c lb.

Cheese—Wisconsin full cream, twins, 28c; triplets, 25c; Hazelwood full cream, triplets, 25@26c lb; Hazelwood Young America, 27c lb; Wisconsin limburger, 29@30c lb; brick cheese, 29c lb; domestic Swiss, 33c lb; Young Americas, 26c lb.

Eggs—Fresh local ranch eggs, $12.50; fresh eastern eggs, $12.50 case.

Live Poultry—Hens, 13c lb; broilers, 20c lb; old roosters, 8c; ducks, 12½c lb; geese, 10c; turkeys, 20@22c.

Dressed Poultry—Hens, 18c lb; broilers, 28c lb; old roosters, 12½c; ducks, 18@20c; geese, 16c; turkeys, 25@30c.

Hide Quotations.

Green Cows and Steers—25 lbs and up, 17½c; salted cured, 20c; green bulls and stags, 13c; salted cured, 16c; kip, 15 lbs to 25 lbs, 23c; calf skins up to 15 lbs, 31c; dry flint hides, 34c; dry salted, 27c; dry calf skins, under 7 lbs, 42c; dry sheep pelts, full wooled, 22@26c; dry shearlings, 10@75c each; green horse hides, $3@5 each; dry horse hides, $1@2.50 each.

Seattle Wheat.

SEATTLE, Wash., Sept. 8.—Practically refusing bids of $1.87 in the country for 58-pound graded No. 2 soft white or bluestem farmers of eastern Washington are holding out for higher prices. The unsettled condition of the market and the fact that it is not yet known what wheat is really worth, country or Coast basis, is deterring growers from showing any interest at this time. A few farmers are standing out for $3, as reported by country buyers for Puget Sound mills.

Farmers are stating that every bushel of wheat raised this year cost them $1, due to the increased cost of labor and materials, and that the 87 cents additional offered by millers is not a satisfactory margin under existing conditions.

There have been no quotations this week on the merchants exchange for wheat, due to the uncertainty of what it is worth. There is considerable difference of opinion as to how much of the Washington crop will run 58 pounds and how much 56 pounds to the bushel. The premium of 5 cents per bushel for No. 1 over No. 2, and dockage of 3 cents on No. 3 is creating much confusion. Millers and wheat buyers here estimate that 25 per cent of the Washingon crop will grade under 55 pounds to the bushel and will be sold on sample for feed. On the estimate of 45,000,000 bushels for the three northwestern states only 33,500,000 bushels will be left for milling.

Soft wheat patent flour is being quoted at $11.10 per barrel for bakers and $11.25 for domestic patents. Montana hard wheat patents today are $11.25. Eastern hard wheat flour manufacturers have stated that these quotations will stand for 30 days, and perhaps to the end of the 1917 crop year. It is generally believed that farmers in October will sell on the basis of $1.87.

Millers of Puget Sound are opposing the proposed coast terminal rate on wheat, asserting that since the all-water and Liverpool basis of normal times has gone and the all-rail haul to Chicago must be considered they would be shut out effectually from shipping any flour into eastern domestic territory. The flour and wheat trade, with the prices of each, are now regarded as more inseparably linked than ever before.

Millers are making all possible efforts to induce farmers to sell in order that they can have assurances of sufficient wheat for their season's grinding to establish the quality, [illegible] on a few scattered carloads.

Bid and asked prices on 'change for the weekend were as follows:

	Prompt.
Barley	48.00@49.50
Oats	47.00@50.00
Timothy	27.00@29.00
Alfalfa	22.00@24.00
Straw	8.00@10.00

The Wool Market.

BOSTON, Sept. 7.—The Commercial Bulletin will say tomorrow:

Trading, while irregular, has on the whole been of fair proportion in the local wool market this week, especially when government purchases of wool are considered. Prices were generally firm and particularly on good fleece wools. The mills in this country are finding civilian trade slow, but some new orders are being placed from time to time in military cloths.

Scoured basis:

Texas fine 12 months, $1.65@1.70; fine 8 months, $1.55@1.60.

California, northern, $1.70@1.75; middle county, $1.45@1.50; southern, $1.35@1.40.

Oregon, eastern No. 1 staple, $1.75@1.80; eastern clothing, $1.50@1.60; valley No. 1, $1.55@1.60.

Territory fine staple, $1.80; half blood combing, $1.70@1.75; ⅜ blood combing, $1.40@1.45; fine clothing, $1.60@1.65; fine medium clothing, $1.55@1.60.

Pulled: Extra, $1.80@1.85; AA, $1.70@1.80; A supers, $1.60@1.65.

Government Crop Report

A summary of the September crop report for the states of Oregon, Washington and Idaho, and for the United States, as compiled by the bureau of crop estimates (and transmitted through the weather bureau), U. S. department of agriculture, is as follows:

CROPS.	Oregon.	Washington.	Idaho.	United States.
Winter Wheat, bu., preliminary estimate	8,400,000	10,900,000	5,910,000	417,347,000
Production last year, December estimate..	13,340,000	18,285,000	8,256,000	481,744,000
Spring Wheat, bu., September 1 forecast	4,170,000	20,600,000	7,630,000	250,000,000
Production last year, December estimate..	6,210,000	19,350,000	6,815,000	158,142,000
Oats, bu., September 1 forecast	10,600,000	10,600,000	12,100,000	1,530,000,000
Production last year, December estimate..	17,280,000	14,300,000	13,330,000	1,251,992,000
Barley, bu., September 1 forecast	4,700,000	5,010,000	5,910,000	204,000,000
Production last year, December estimate..	5,390,000	6,814,000	7,410,000	180,927,000
Potatoes, bu., September 1 forecast	5,540,000	9,400,000	6,280,000	462,000,000
Production last year, December estimate..	8,250,000	9,900,000	4,050,000	285,437,000
All Hay, tons, preliminary estimate	1,810,000	1,810,000	2,340,000	92,000,000
Production last year, December estimate..	2,175,000	2,048,000	1,946,000	109,786,000
Apples, agricultural crop, barrels of 3 bu...				
September 1 forecast	1,110,000	.....	697,000	59,100,000
Production last year, December estimate..	1,285,000	.....	147,000	67,415,000
Apples, bu., comm'l crop, Sept. 1 forecast	.....	10,750,000	.....	63,900,000
Production last year, December estimate	.....	10,400,000	.....	77,100,000

PRICES.

The first price given below is the average on September 1 this year, and the second the average on September 1 last year.

Crops.	Oregon.	Washington.	Idaho.	United States.
Wheat, cents per bushel	214 and 113	215 and 115	196 and 113	209.7 and 131.2
Corn, cents per bushel	162 and 78	118 and	143 and 83	175.5 and 83.6
Oats, cents per bushel	74 and 43	78 and 43	74 and 44	61.7 and 43.1
Potatoes, cents per bushel	157 and 80	120 and 84	169 and 92	139.1 and 109.3
Hay, dollars per ton	15.10 and 9.80	17.10 and 11.70	15.40 and 8.60	13.68 and 10.42
Cotton, cents per pound	.....	.....	.....	33.4 and 14.6
Eggs, cents per dozen	34 and 28	41 and 30	36 and 24	33.3 and 23.3

Bumper Corn Crop

WASHINGTON, Sept. 7.—Better weather favored crops generally during August, and as a result larger yields were forecast today by the department of agriculture in its estimates based on conditions existing September 1.

In a summary of crop conditions, the crop-reporting board said:

"The great corn crop of 3,250,000,000 bushels promised on September 1, which is 123,000,000 bushels above any previous year, will be realized fully in the form of sound corn, only provided frost holds off unusually late. A good, big crop of sound corn is promised if killing frost in the main belt does not come earlier than usual. The indicated outcome results from a big acreage rather than exceptional promise of yield per acre.

"The oats crop for 1917, promised and largely realized on September 1, is 1,533,000,000 bushels, within 6,000,000 bushels of the greatest previous crop. Conditions are reported 10 per cent above normal in Iowa and Missouri. In North Dakota, however, the crop promises only two-fifths, and in Montana less than half of a normal yield, while it is less than two-thirds in Washington and Oregon.

"The spring wheat report on September 1 promises 250,000,000 bushels, 14,000,000 bushels more than on August 1, early threshings having shown heavier yield than anticipated in many sections, particularly in Minnesota, South Dakota and Iowa. The conditions in North Dakota, as well as Montana, Washington and Oregon, remain poor from the effect of drouth."

Other details of the report follow:

Spring wheat, condition 71.1 per cent of a normal; indicated yield, 13.1 bushels per acre.

All wheat, acre yield, 14.3.

Corn, condition, 76.7; yield, 26.8; estimated crop, 3,248,000,000 bushels.

Oats, condition, 90.4; yield, 35.5.

Barley, condition, 76.3; yield, 24.3.

Buckwheat, condition, 90.2; yield, 21.0.

White potatoes, condition, 82.7; yield, 106.2.

Sweet potatoes, condition, 85.7; yield, 97.5.

Tobacco, condition, 84.5; yield, 861.9.

Flax, condition, 50.2; yield, 5.7.

Rice, condition, 78.4; yield, 33.2.

Hay, yield, 1.36.

Sugar beets, condition, 91.7; yield, 10.82.

Seattle Market.

SEATTLE, Sept. 8.—Peaches are selling at 70@80c per case. Next week is to be the big week in volume and the minimum for prices. Jobbers say the market can not get much lower. Approximately one-half the peaches now on this market came on consignment.

The bottom has dropped out of the pear market, and it is manifestly a buyers' proposition. Good fruit is selling at $1, although the greens bring a little more, due to the fact that they will keep. The break in the eastern market is responsible for the decline here.

Receipts of pullet eggs, twice the number that arrived at this time last year, has pressed home to jobbers that poulterers are not going out of the business because of the high prices of feed, as threatened earlier in the season. In fact, as shown by the volume for August and September to date, poultry raising is sharply increasing. While spring chickens are pretty well cleaned up, the supply of small pullet eggs is overcoming the high records of the same month last year. Jobbers are paying 36c for "pewees," or the first lay of young chickens, and 36c for pullets.

The rains of the last two days have had the effect of easing futures of butter, although there have been no changes in quotations. The direct benefit from the moisture in increased grass feed and production will not be felt for 30 days, but the immediate effect has been to take some of the stiffness out of the market and restore in a measure the hope that the peak has been reached.

There is no activity in cheese. Jobbers are unable to recall the time when cheese was used as little as a substitute for high priced beef and pork as at present.

Indiscriminate buying by commission houses, oversupply by brokers, who have been crowded out of the trade temporarily and purchases f. o. b. by public market agencies have combined to demoralize the cantaloup market for the week-end and prices have fallen to $1.50 for good eastern Washington standards. The record number of buying and shipping avenues for this city has now been established.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 42@43c per dozen; eastern Washington, Idaho and Oregon, 40c per dozen.

Poultry—Live hens, fat, over 4 lbs., 19@20c per lb.; 2 lbs. and under, 15@17c; old roosters, 11c per lb.; squabs, large, $3.50 per dozen; geese, fat, live, 10c per lb.; springs, live, 28c per lb.

Butterfat, 49c per lb.; dairy butter, 33c.

Beef—Buying prices: Prime beef, steers, 7@8c per lb.; cows, fat, 7@8c; heifers, 6@8c per lb.

Hogs—Light, 15@17c per lb.; do heavy, 12@13c per lb.

Veal—Fancy light, 14@16c per lb.; do heavy, 9@13c per lb.

Hides—Salted, 19c per lb.; salt kip, 19c per lb.; salted calf, 30c per lb.; green hides, 16c per lb.; salted bulls, 16c per lb.; dry hides (short trim), 40c per lb.; bull and dry salts, 4c per lb. less; green bulls, 12½c per lb.; dry butcher full wool sheep pelts, 26@28c per lb.; green calf, 30c.

Interstate Fair Awards

(Continued from page sixteen.)

conner Pontiac Bess, J. H. Hulbert; 3. E. T. 124, Carnation farm; 4. Laconner Pontiac Princess, J. H. Hulbert.

Heifer, senior calf—1. Maude Walker Pieterje, Carnation farm; 2. Laconner Pontiac Winnie, J. H. Hulbert; 3. Carnation Skylark Segis, Carnation farm; 4. Laconner Pontias Netherland Girl, J. H. Hulbert; 5. Carnation Leda Hartog, Carnation farm.

Heifer, junior calf—1. Laconner Pontiac Grant, J. H. Hulbert, also junior championship; 2. Abbe Kirk Segis Pauline, Carnation farm; 3. Queen Tsussie Segis, Carnation farm; 4. Laconner Pontiac Lady Netherland, J. H. Hulbert; 5. Carnation Matador Hartog, Carnation farm.

Graded herd—1. One entry, Carnation farm; 2. One entry, J. H. Hulbert; 3. One entry, Carnation farm.

Exhibitors' young herd—1. One entry, J. H. Hulbert; 2. and 3. Two entries, Carnation farm.

Breeders' calf herd—1. One entry, J. H. Hulbert; 2. One entry, Carnation farm.

Get of sire—1. One entry, Carnation farm; 2. One entry, J. H. Hulbert; 3. One entry, Carnation farm; 4. One entry, H. Hulbert.

Produce of cow—1. One entry, Carnation farm.

Jerseys, Including Polled.

Five exhibitors won prizes with their Jerseys, the following awards being made to Clifford Reid of Portland, Ore., Silver Birch farm of Newport, Wash., Waikiki farm of Spokane, Wash., Floyd Polmeteer of Spokane, Wash., and B. E. Smead of Opportunity, Wash.:

Bull, 3 years old and over—1. Onota's Catillion Boy, Clifford Reid. 2. Violet's Noble Fern, Clifford Reid. 3. Jolly Valentine Lad, Silver Birch farm.

Bull, 1 year old and under 2—1. Model's Pilot of Waikiki, Waikiki farm. 2. Owlet's Jolly Lad, Waikiki farm. 3. Trilby's Count of Waikiki, Waikiki farm. 4. Fussy's Fern's Noble, 9, Clifford Reid. 5. Glen Tana Golden Prince, Floyd Polmeteer. 6. Fussy's Fern's Noble Boy, Clifford Reid. 7. Valentine's Oxford, Silver Birch farm.

Bull, senior calf—1. Catillion Boy's Premier, Clifford Reid. 2. Alberta's Count of Waikiki, Waikiki farm. 3. Valentine's Noble Lad, Silver Birch farm. 4. Noble Catillion of Reid farm, Clifford Reid.

Bull, junior calf—1. Fern's Carnation Fern, Clifford Reid. 2. Lucy's Sultan of Waikiki, Waikiki farm. 3. Defender Marseil, B. E. Smead.

Cow, 4 years old or over—1. Genesta's Duchess, Waikiki farm. Also senior and grand championship. 2. Lady Trilby DuVal, Waikiki farm. 3. Maitland's Noble Maid, Clifford Reid. 4. Fern Lad's Delice, Waikiki farm. 5. Lady Lecq, Clifford Reid.

Cow, 3 years old and under 4—1. Onota's Lady, Clifford Reid. 2. Cowslip's Golden Begonia, Clifford Reid. 3. Waikiki Landseer Fern, Waikiki farm. 4. Waikiki's Golden Alberta, Waikiki farm.

Heifer, 2 years old and under 3—1. Waikiki's April Winnie, Waikiki farm. 2. Eminent's Wardress, Clifford Reid. 3. Waikiki's Noble Mary, Waikiki farm. 4. Fancy Little Duchess, Waikiki farm. 5. Cowslip's Financial Maid, Clifford Reid. 6. Lady May Dauphine, Floyd Polmeteer.

Heifer, senior yearling—1. Fussy's Fern Cowslip, Clifford Reid. Also junior champion. 2. Waikiki's Countess Ella, Waikiki farm. 3. Fussy's Fern Roseleaf, Clifford Reid.

Heifer, junior yearling—1. Fussy's Fern Lucy, Clifford Reid. 2. Owlet's Duchess of Waikiki, Waikiki farm. 3. Fussy's Fern Beauty, Clifford Reid. 4. Onota's Fairy Girl, Clifford Reid.

Heifer, senior calf—1. Onota's Eminent Wardress, Clifford Reid. 2. Pilot's Golden Kate, Waikiki Farm. 3. The Owl's Delice of Waikiki, Waikiki Farm. 4. Pilot's Fern of Waikiki, Waikiki farm. 5. Pilot's Golden Lassie, Waikiki farm. 6. Goldie's Catillion Beauty, Clifford Reid. 7. Onota's Golden Cowslip, Clifford Reid. 8. Valentine's Expectation, Silver Birch farm. 9. Pilot's Francess of Waikiki, Waikiki farm. 10. Jolly Sultana, Silver Birch farm. 11. Sillbirfa Belle Second. Silver Birch farm.

Heifer, junior calf—1. Pilot's Genesta of Waikiki, Waikiki farm. 2. Goldie's Princess, Clifford Reid. 3. Waikiki's Golden Pet, Waikiki farm. 4. Goldie's Onota, Clifford Reid.

Graded herd—1. One entry, Waikiki farm. 2 and 3. Two entries, Clifford Reid.

Exhibitors' young herd—1. One entry, Clifford Reid. 2. One entry, Waikiki farm. 3. One entry, Clifford Reid.

Breeders' calf herd—1. One entry, Clifford Reid. 2. One entry, Waikiki farm.

Get of sire—1 and 2. Two entries, Waikiki farm. 3 and 4. Two entries, Clifford Reid.

Produce of cow—1 and 2. Two entries, Waikiki farm. 3. One entry, Clifford Reid.

Guernseys.

The Middledale Farms of Goshen, Ore., took everything in the Guernsey division, the following being the awards:

Bull, 1 year old and under 2—1. Sir Julian of Middledale; also senior and grand championship.

Bull, senior calf—1. Middledale Idlewise; 2. Middledale Red Raider.

Cow, 3 years old and under 4—1. Middledale Juliaetta; also senior and grand championship.

Heifer, 2 years old and under 3—1. Middledale Mabel.

Heifer, senior yearling—1. Middledale Nanna; 2. Eugenie D.

Heifer, junior yearling—1. Middledale Queen of the May; also grand championship; 2. Middledale Jewel.

Heifer, senior calf—1. Middledale September Morn; 2. Middledale Jitney.

Heifer, junior calf—1. Middledale Rosemund; also junior championship; 2. Middledale Golden May.

Ayrshires.

The Waikiki farm of Spokane was awarded all the premiums in the Ayrshire division, as follows:

Bull, 2 years old and under 3—1. Cavalier's Hover-o-Bleak.

Cow, 4 years old and over—1. Waikiki's Beauty I.; 2. Emperor's Lady Scott.

Heifer, 2 years old and under 3—1. White Muriel of South Farm; 2. Glengarry's Barcheski of Waikiki; 3. Glengarry's Lady Ellen of Waikiki.

Heifer, senior yearling—1. Glengarry's Scottish Queen.

Heifer, senior calf—1. Glengarry's Beauty of Waikiki.

Heifer, junior calf—1. Cavalier's First Lady.

FARM LANDS—FOR SALE 651

CUT-OVER-LANDS.

15 to 25 miles n. e. of Spokane; rich soil; abundance of soft spring water; good dairy and stock country; above frost; fine fruit; free lumber and use of stump puller. Price $10 and $25 per acre; 10 years' time. Write for book to owner. Consolidated Land Co., Elk, Wash., or call 109 Stevens st., Spokane.

80 ACRES FOR SALE.

30 acres cleared; new buildings; all fenced. Andrew Roppert, Winlock, Wn.

FARM LANDS—FOR SALE 651

Continued.

WRITE FOR FOLDER AND LET US SHOW YOU WHY WE CONSIDER OUR CUT-OVER LANDS BETTER THAN ONE-CROP LANDS.

We have 40's, 80's, 160's, sections, etc., improved places, raw lands—what do you want? Let us know.

We are after two good, husky farmers with families to take some little ready-made farms—we need help in our community and are willing to pay for it.

We have two places, each of 40 acres, with some land in cultivation, nice little houses—both on public roads, near school, R. F. D., and lots of other conveniences, that we are willing to sell on very easy terms to men who want to come into our community and work part of the time for us—one place is $1600, on which we would take $160 cash and balance in ten years at 6 per cent interest; the other is $1500, $150 cash and balance in ten years at 6 per cent interest. Talk fast if you are interested—we'll be glad to show them to you.

40 ACRES.

40 acres of raw cut-over land; very productive soil, with an abundance of moisture, as would be indicated by willow bush; in good locality, on public road, close to railroad; on easy terms.

160 ACRES.

25 acres cleared; on county road, rural free delivery, etc.; sandy loam soil; good subirrigation; lies fairly level; in good community. Price right and terms easy.

80 ACRES.

40 acres cleared; on state road and two county roads; very centrally located, in good community; would make an excellent home; would make some improvements for proper party. Small payment and very easy terms.

480 ACRES.

480 acres, within half mile of railroad; cordwood enough to pay for it; in dollar limit of Spokane; good soil; make stock proposition; more land could be had adjoining; $12.50 per acre, easy terms.

MILAN FARMS DEVELOPMENT COMPANY.
1322 Old National Bank Bldg.
or
ALLIN REALTY COMPANY.
"REALTORS."
408 West Sprague Ave.
Tel. Main 2750.
Spokane, Washington.

400 ACRES WINTER WHEAT FOR 1918—640 acres of the very best grain land in the northwest for raising winter or spring wheat, oats and barley; 495 acres in cultivation, not over 40 acres waste land; fine spring and good, big trout stream through the place. This district is as sure of raising a good crop of winter wheat as any district in the entire northwest, and is practically certain to pay for the entire body of land with the 1918 crop at the price of $46.50 per acre, which holds until Sept. 15. Immediate action is necessary. Good terms.
HEGE & WATKINS CO.
715-16-17 Paulsen Bldg., Spokane, Wn.

YOUR CHANCE IS IN CANADA—RICH lands and business opportunities offer you independence. Farm lands, $11 to $30 acre; irrigated lands, $35 to $50; 20 years to pay. $2000 loan in improvements, or ready-made farms. Loans of live stock; taxes average under 20c an acre; no taxes on improvements, personal property or live stock. Good markets, churches, schools, roads, telephones; excellent climate; crops and live stock prove it. Special homeseekers' fare certificates. Write for free booklets. Alan Cameron, Gen'l Supt. Land Branch, Canadian Pacific Ry., 93 Ninth ave., Calgary, Alberta.

FOR SALE BY OWNER—20-ACRE, WELLimproved ranch, near Poulsbo, Wash. A snap. Write for description and price. C. E. Nelson, Pilchuck, Wash.

BOISE VALLEY—40 ACRES; GOOD WAter right; woven wire fences; alfalfa, clover, grain, pasture and family orchard; new bungalow; fair barn. Price $7500. Day Realty Co., Boise, Idaho.

IRRIGATED LANDS—For Sale 663

IRRIGATED FARM LANDS.

ALFALFA LANDS, under government irrigation; abundant water; low altitude; rail and water transportation to coast markets; good schools, good roads; products alfalfa, corn, cream, hogs, honey, fruits, vegetables; long growing season; unimproved land $30 to $60 per acre; improved $100 to $250. Write for further information and literature. Dodd & Knapp, Hermiston, Ore.

TO EXCHANGE—REAL EST. 705

FOR EXCHANGE—2-STORY PRESSED brick building, 50x150; steam heat; good condition; 3 store rooms below, 20 office rooms above; cost $26,000; in Cripple Creek, Col. Exchange for good ranch, plenty water. Address H. J. Chambers, Carson, Ore.

Overland

TRADE MARK REG.

Model Eighty-five-Four

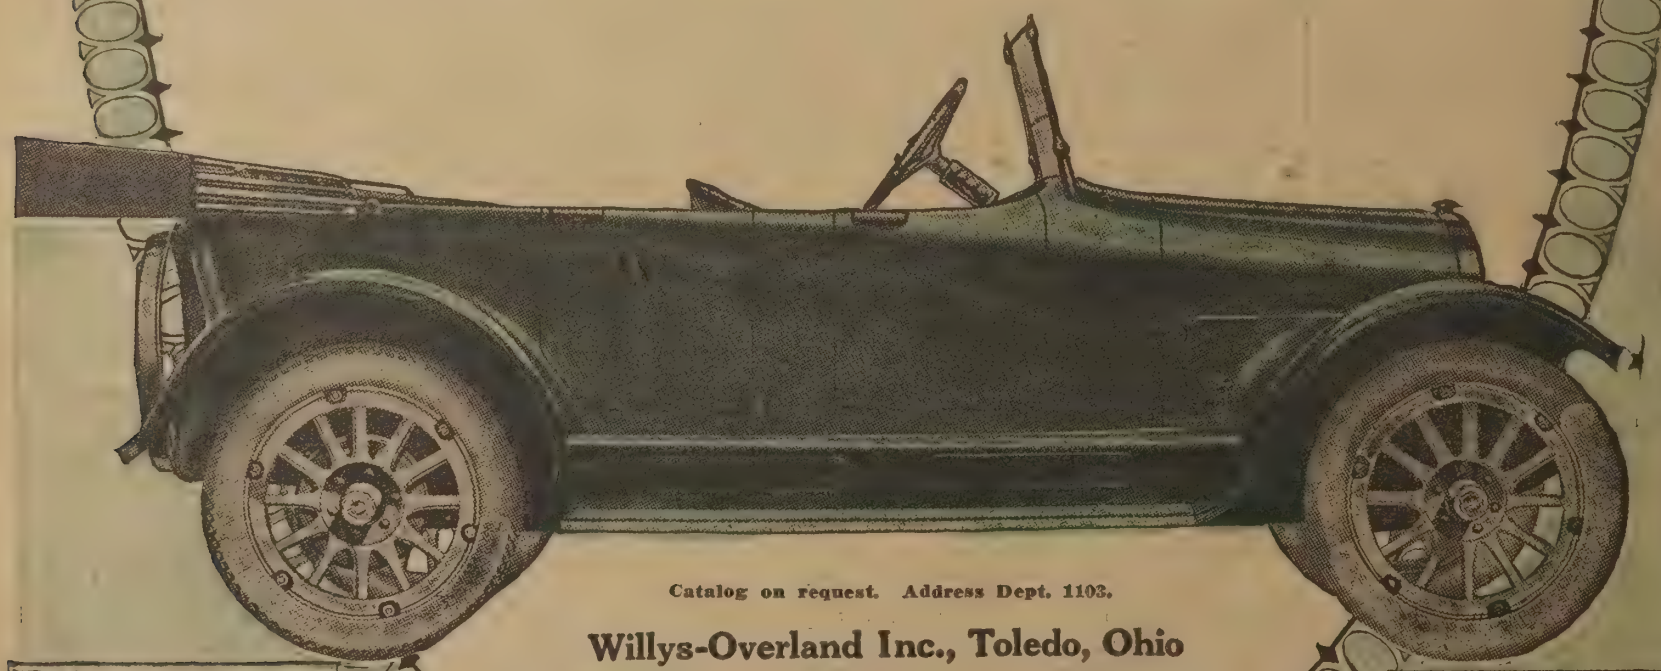
$895

f. o. b. Toledo. Subject to change without notice

An Unmatched Success

Year after year for many years the thirty-five horsepower Overland has outsold, by a wide margin, all cars of such comfortable size.

An unequalled combination of power, comfort and economy, it has naturally been an unmatched success.



The thirty-five horsepower motor is not only unusually powerful—it is unusually economical.

The wheelbase is 112 inches—unusually long—permitting unusual roominess.

Thirty five horsepower! —112 inch wheelbase!! —$895!!!

Also unusual at the price—cantilever rear springs that ease the car over rough spots—permit speed with comfort on poor roads.

No car of such comfortable size has ever approached its success, because none has ever combined such power, comfort and economy.

Catalog on request. Address Dept. 1103.

VOL. XL. NO. 38. SEPTEMBER 20, 1917. ** WEEKLY.

What Is a Principal Interior Primary Market?

Will Next Year's Two Dollar Minimum for Wheat Apply in Northwest or at Chicago? Now the Time for Farmers to Exert Their Influence.

It is not too early for farmers to begin to inquire what construction the national food administration will put upon the wording of the 1918 wheat price guarantee of the food control law. Will the guaranteed price be $2 a bushel here in the Pacific northwest, or only $2 for Chicago delivery, the growers here to be docked 30 cents for freight rate?

The wording of the law is somewhat vague, or at least it leaves much to the discretion of the food administration. Section 16 authorizes the president to fix the guaranteed prices and to prescribe regulations "in particular governing conditions of delivery and payment, and differences in price for the several standard grades in the principal primary markets of the United States, adopting No. 1 northern spring or its equivalent at the PRINCIPAL INTERIOR PRIMARY MARKETS as the basis." And—

"Thereupon, the government of the United States hereby guarantees every producer of wheat produced within the United States that, upon compliance by him with the regulations prescribed, he shall receive for any wheat produced in reliance upon this guarantee within the period, not exceeding 18 months, prescribed in the notice, a price not less than the guaranteed price therefor as fixed pursuant to this section. In such regulations the president shall prescribe the terms and conditions upon which any such producer shall be entitled to the benefits of such guarantee.

"The guaranteed prices for the several standard grades of wheat for the crop of 1918 shall be based upon No. 1 northern spring or its equivalent at not less than $2 per bushel at the PRINCIPAL INTERIOR PRIMARY MARKETS. This guarantee shall not be dependent upon the action of the president or said board under the first part of this section, but is hereby made absolute and shall be binding until May 1, 1919."

What is meant by the phrase: "Principal interior primary markets"? One would naturally suppose that such towns as Colfax, Davenport, Ritzville and Walla Walla in Washington; Moscow, Grangeville and Lewiston, Idaho, and Pendleton, Heppner, Eugene and Salem, Oregon, would fall within that classification. They are primary markets. Chicago is not a primary market, for primary means first or initial market. But the question is, what construction will the food administration put upon that term?

The price may not be less than $2. The president, under the law, may set the price at more than $2, but he can not set it at less. What will be his policy?

In Great Britain the government has just fixed grain prices for the 1917 harvest that are considerably above the government guarantee.

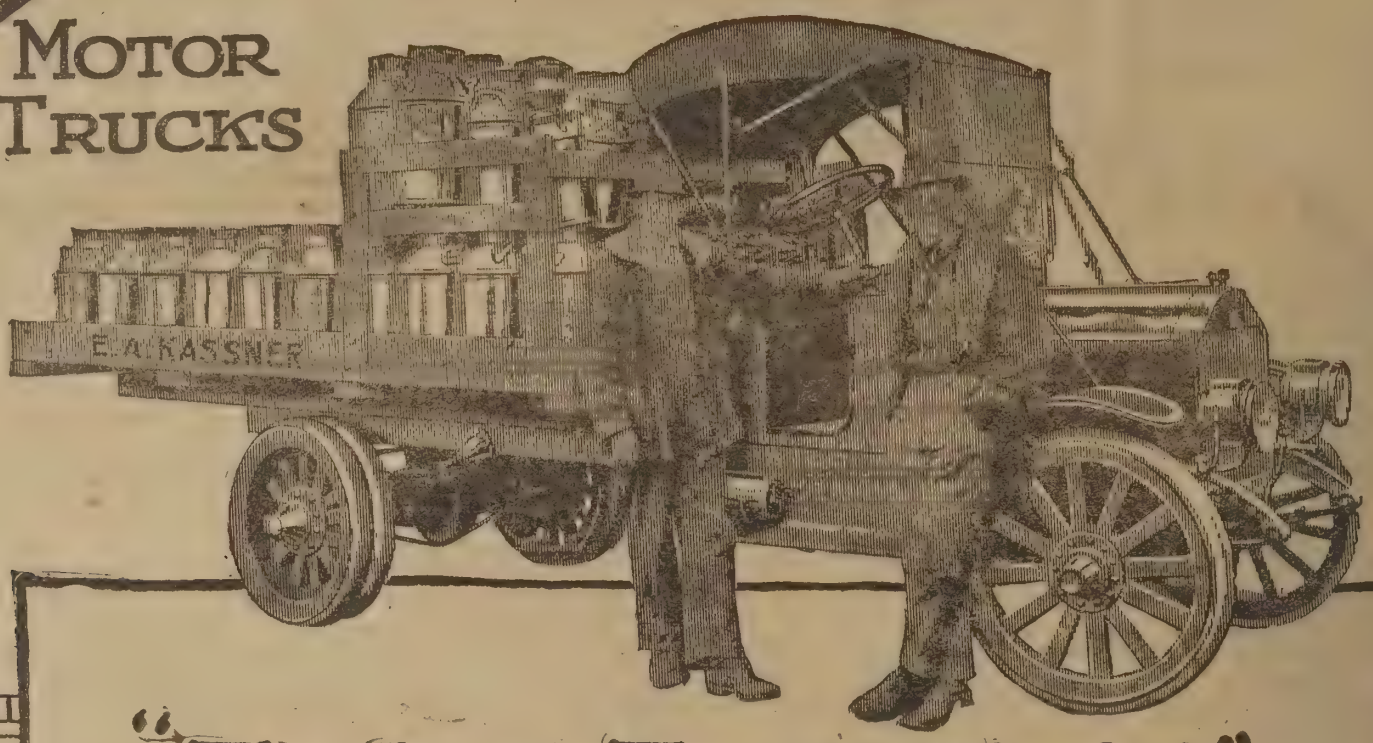
"Farmers generally will regard the new schedule of prices with satisfaction," says the Glasgow Herald, "although the balance of the scale may not be regarded as accurate, oats being, according to Scottish opinion at least, rather underpriced in proportion to wheat. The farmer's view of the new prices may be gathered from the fact that whereas he grew his wheat and oats under guarantees of 60s and 38s 6d respectively, on the weights specified, he may now receive 73s 6d and 44s 3d instead, with a slightly higher maximum arranged presumably for oats of a particularly good sample and a deduction prescribed for both wheat and oats not of the best class."

The British prices are based on measures of a "quarter," a quarter of wheat being fixed by law as 504 pounds, and of oats as 336 pounds. The British wheat grower is to receive $2.10 a bushel, 37 cents a bushel more for his wheat than the government had guaranteed him, and about $1.38 more per quarter of 336 pounds of oats.

Evidently the British policy aims at fair and liberal treatment of the farmer. His government finds it wise, from the national viewpoint, to give him a well rounded measure, thus expecting that he will be stimulated to renewed and extraordinary effort to increase the country's supplies of foodstuffs.

These facts should be drawn to the attention of the president by our northwestern senators and representatives, and they should be used now, in good season, against a possible repetition of the injustice laid upon our growers when they were deprived of base ports and basic markets for the wheat harvest of 1917.

Food Commission Will Fix No Meat Price



F. M. Rothrock Will Be Member of Committee to Increase Production of Meats.

It is not the intention of the national food administration to fix a price on meats. This is the word brought back to the northwest by Frank M. Rothrock, who has just returned from Washington, D. C., where he attended a meeting of representative live stock men called together by Herbert C. Hoover to discuss the production and conservation of meat animals. Mr. Rothrock has been appointed by Commissioner Hoover as one of five men to represent the sheep industry on a national committee of 25 who will work together for the increase of the country's meat production.

There is a serious live stock shortage, says Mr. Rothrock, after receiving the information available at the offices of the food commission in Washington, D. C. This is especially true in the case of hogs, but is true to some degree in all classes of stock. Strenuous effort will be made to increase the output as rapidly as possible.

In an Early Issue The Farmer Will Begin a Series of Articles by President O'Shea of the Spokane Farm Loan Bank. Watch for Them. They Will Be Instructive

Garford MOTOR TRUCKS

"The Best Truck Made!" —says E. A. Kassner

"Our 2-ton Garford Motor Truck has operated steadily for the last ten months, hauling milk to the Carnation Milk Company, at Kent, Washington.

"The distance covered by the truck each day is forty-one miles—handling about twelve tons of milk.

"IT TOOK SIX TEAMS TO ACCOMPLISH WHAT THIS TRUCK IS NOW DOING.

"I am extremely well pleased. It is my belief that anyone who contemplates buying a truck should give the Garford very serious consideration, as I consider it THE BEST TRUCK MADE IN THE UNITED STATES.

"The hauling is done over rough country roads. During certain periods of the year they are very bad—but at no time has our Garford been unable to cope with the situation."

— (Letter from E. A. Kassner, owner of the truck.)

That is not an isolated example of what *one* Garford Motor Truck is doing.

It's typical of what thousands of them are accomplishing. It's an index of what *you* may expect if *you* own one.

Your neighbors are using motor trucks at a *profit*. They are keeping their hauling systems up to the *same intensive standards* that they are following in the rest of their work.

And it is significant that in so many cases Garford Motor Trucks have been chosen for the hard, grinding, continuous work required of the modern farm truck.

A little study into Garford manufacturing methods and Garford specifications will show you *why* a Garford Motor Truck is the logical "buy" for *you*. We can fit your requirements with *just the right model.*

War's Call on Women

Importance of Efforts for Soldiers' Welfare

By N. W. DURHAM

Next to Chairman Suzzallo of the Washington state council of defense, Mrs. Ruth Karr McKee, in charge of women's work, is probably the most active member of that organization. She is giving a great deal of time, thought and work to her duties, and is trying to organize all the mothers and daughters of the state.

Many wives and daughters of farmers are moved by a desire to help their country, but from lack of organization and guidance are at a loss to know how to proceed and what to do. A recent letter from Mrs. McKee to the women members of the various county councils of defense will give a clearer understanding of the work.

Mrs. McKee urges the importance of efforts for the soldiers' welfare. "Proper recognition of the young men who are leaving their homes to enter the army training camps is of the utmost importance," she says, and then points out ways in which this may be done:

"Is any organization or club of women preparing to furnish comfort bags and 'housewives' for the men who are going from each town?

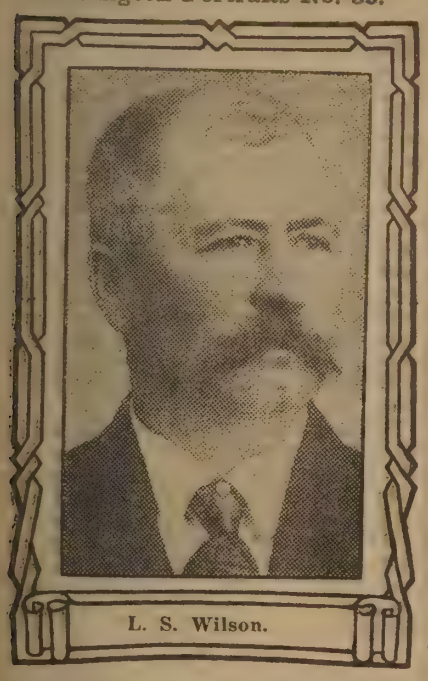
"Is there any organization, committee or club of women preparing to see that every soldier from each town will receive news from his home town, by personal letter or otherwise?

"What steps are being taken to carry out a program as a 'send-off' for each group as it starts for American Lake? These young men should be made to feel that the whole community is interested in them, is back of them and will fight them through.

"Is there any organization, aside from the Red Cross, which is preparing to investigate conditions and secure assistance for families needing it for their support? If so, is this organization cooperating with the Red Cross and thereby avoiding duplicate investigations and labor.

"Begin to plan now to secure clubs and groups of women who will knit outfits in gray for boys in the navy and outfits in khaki color for those in the army. These can be sent after the men are gone, but the preliminary work should be under way now. Do not attempt to form new organizations if the work is already being done.

"It is none too early to delegate to some one in each community the whole question of Christmas parcels. This work is in charge of the woman's section of the Navy league. The chairman for Washington is Mrs. John McFadon, 415 North Sixth street, Tacoma. Write to her yourself, or have some one to whom you delegate this duty, and carefully consider her directions and suggestions. If you wish to reach the men by Christmas, it will be necessary for the parcels to be in Washington early in October.



"With the need of knitting many thousands of socks for the men who do trench work, it becomes necessary to save both time and labor. To this end a knitting machine is very desirable. In many communities a number of women go in together for the purchase of a machine. The legs of the socks are knitted on the machine and the feet finished by hand. The price is $17. A 72-needle machine is recommended."

While these suggestions are to the women representatives on the various county councils, they will be helpful to all others who want to do their part. Here is a special suggestion that can be readily followed by any woman:

"Good reading matter is one of the most acceptable things that can be sent to our soldiers. For that reason the government has made it very easy to reach them. All that is necessary is to place a one-cent stamp on a magazine, take it to the postoffice, tell the postmaster that it is for the soldiers, and the government will see that it reaches some soldier or sailor in the service. No address is necessary. When you have finished with your magzaines, send them on to bring recreation or instruction to the soldiers."

Women who may desire more definite information regarding relief work and patriotic service to their country may write to Mrs. McKee, care of the State Council of Defense, Olympia, Wash.

Washington Portraits No. 30.

L. S. Wilson.

One of the pioneer stump burners of western Washington is L. S. Wilson of Vader, Lewis county. Mr. Wilson has had considerable experience working in shingle camps and sawmills, and has also had experience in making farms out of logged-off lands by burning the stumps. He tells us of his method as follows:

"I first dig a hole by the side of the stump and a little under it if possible. I peel the bark off the stump where I dig the hole then take an armload of wood or dry bark and make a fire in the hole by the side of the stump. When the wood gets well burnt down and plenty of coals I cover the fire with dirt, not covering it too deep, and leaving room for the smoke to escape. I visit the stumps three times a day for the first few days until I get the fires well started, after that twice a day will do. I always keep the fire well covered, never allowing it to burn out through the dirt so that it will blaze or it will soon go out. The length of time it takes to burn out a stump can not be definitely answered as some stumps burn much faster than others. Some stumps from two to three feet in diameter may burn out in one week, while others the same size may take three or four times as long. The fire generally follows all of the roots deep in the ground leaving but very little if any grubbing to remove what roots are left. If the hole is dug by the stump and the bark peeled off a year ahead they fire a great deal easier. This is what we call charring them out."

Community Cooperation

Some Pleasing Results in a Western Washington Town

By CARL J. MENZ, Ferndale, Wash.

The Washington Farmer offered a prize of $5 for the best answer to the two questions, "What Is the Best Home Town in the State of Washington?" "Why?" The prize has been awarded to Carl J. Menz of Ferndale, Wash.

In the first place, I can not write about Ferndale without mentioning the surrounding country. They both depend to a certain extent for their success on each other. The business men depend on dealing with the farmers. The farmers depend on selling their products and buying their supplies in Ferndale. If it were not for the condensery, creamery and fruit cannery, the farmers could not market their products to an advantage. And if it were not for the farmers, there would be no industries and no town to speak of.

Therefore, to further the welfare of all concerned, the business men and farmers, after much discouragement, have built and equipped a fruit cannery that provides a market for all perishable fruit products that formerly went to waste. This cannery has been a great help to city and country alike.

The local condensery and creamery, and business men as well, are interested in the upbuilding of the country as well as city. They are interested in good dairy herds, in good farming methods and in the reclamation of uncleared land for agricultural purposes. They realize that the farmers need good roads to market their products; therefore they are enthusiastic over the building of cement roads to tap the farming districts. The businessmen realize that buying from mail order houses in a distant city is detrimental to the welfare of city and country alike, and consequently they offer as good service as is consistent with good business management. They offer only standard advertised merchandise because they and the manufacturer stand back of it.

Ferndale and adjacent country are closely united by a consolidated school district—five small districts being consolidated into one large district. This is merely a progressive step in the unionization and coordination of educational affairs. Consolidation also helps to instill the spirit of mutual cooperation between city and country.

But what makes Ferndale and surrounding country what it is? There is only one answer—the people. If it were not for the people the country would still be a virginal forest, and the home of wandering animals. Although of many nationalities, the people are gradually blending into a new race—Americans. They are striving to form the integral part of a nation that shall eventually be foremost in the world. Passing events are verifying this claim.

The imaginary economic barrier that so often exists between city and country has long since vanished from Ferndale and vicinity. The people realize that the day of individuality has passed, and gradually knowing that the only path for them to follow is the path of prograss, they are changing to the inevitable—cooperation; not destructive cooperation, but constructive cooperation; cooperation that serves a useful purpose, conducted by men of honesty and integrity of character who will not forsake principle for principal; cooperation that develops the city and country alike; in short, cooperation that means help yourself at the same time helping your fellowmen.

Postpone Creamery Combine Case

Anti-Trust Case Put Over Till February Court Term

Announcement has been made at Boise, Idaho, that the hearing in the case in which several big creamery concerns were charged with violation of the Sherman anti-trust law has been postponed until February term of court at Boise. The hearing was to have been held at the fall term of court, but was put over by mutual agreement, owing to the fact that the war situation has made it impossible for the special government investigators who brought about the indictments to complete their case for presentation at this time.

The case came up a few months ago, when indictments were made in the federal court charging that the big creamery concerns had combined to control the dairy products business, and that the alleged combine was working great injustice on 172 independent firms. The case is one affecting not only the four northwestern state, but Utah, California, Wyoming and Nevada as well.

The following corporations are named in the charges: Jensen Creamery company, Salt Lake; Mutual Creamery company, Salt Lake; Henningsen Produce company, Butte; Schallinger Produce company, Spokane; Commercial Creamery company, Spokane; Hazelwood company, Portland; Hazelwood company, Ltd., Spokane; Klock Produce company, Seattle.

Plenty of Boxes.

In a report to Charles Hebbard of the state council of defense, E. D. Rowley of the Western Pine Manufacturers, says that the fruit box factories will be able to supply all the boxes required for fruit in this state this season. Contracts call for about 9,000,000 boxes.

What Is the National Non-Partizan League?

Rapid Growth of the Farmers' Movement Started in North Dakota; Other States Feel Interest

By E. B. FUSSELL of the Editorial Staff of Non-Partizan Leader

A year ago, outside of the state of North Dakota, practically no one had heard of the Farmers' Nonpartizan Political league. Inside the state professional politicians knew the league members had been able to nominate their candidates for state offices at the primaries, but it remained to be seen what luck they would have at the ensuing general election.

Today it is the National Nonpartizan league. Instead of having a state office only for the state of North Dakota it has national offices at St. Paul from which point general direction is given the work of organization in a dozen states. The league has 100,000 members and is adding to its membership at the rate of 3000 a week.

The league has elected its own governor and every other state officer but one in North Dakota and has made its entrance into national politics by electing to congress, at a special election in the First North Dakota district July

Governor Lynn J. Frazier.

10, John M. Baer, running as a nonpartizan against republican and democratic opposition.

The center of the league's activity is still North Dakota, that state having the largest membership, about 40,000, at the present time. Minnesota, however, is pressing closely, adding about 1000 members a week, and as it is a larger state, may yet pass North Dakota. The next states, in the line of progress of organization, are Montana and South Dakota. In these four states work was started last year.

The league has stretched out this year, however, into a number of other states, extending its territory south, east and west. Of the new states, in which organization work has been started during the spring and summer of 1917, Idaho is coming to the front as one of the most active. Organization work with a crew of no less than 20 men has been under way for a few months under the direction of Ray McKaig, a North Dakota farmer, prominent in past years as a leading fighter for the farmers in the North Dakota legislature. Although a smaller number of organizers has been working in the Gem state than in many others, results have been astonishing, even to the league leaders with experience in North Dakota, and Idaho promises to become one of the leading league states.

Other states in which the league has organization work under way in force are Colorado, Nebraska and Wisconsin. Preliminary work has also been done in Texas, Oklahoma and other southern states and as winter closes down and interferes with organization work in the blizzard-swept prairies of the north, organizers will be put to work in greater numbers in the south and west where roads will still be passable.

Any one interested in learning why the movement in North Dakota came to be started must consider three things. One is the 10-year fight of the farmers for a state-owned terminal elevator. In 1907 they started their fight and kept it up, year after year. The farmers had seen the market at Minneapolis manipulated every fall so that prices were at the lowest level when they came to dispose of their grain, and as soon as their grain was sold, they saw the price jacked up 10 or 20 points. They decided that paying attention to growing grain wasn't enough; they must have a hand in marketing, and this involved operation of their own terminal elevator. It was necesary to pass a constitutional amendment. This went before two successive legislatures, was submitted to the people and adopted with a whoop. The business of arranging for the building of the elevator was turned over to the state board of control. Instead of making arrangements to build the board of control reported back to the 1915 legislature that the project was not feasible and the legislature decided to accept the board's advice.

That was one condition that existed in North Dakota. Another condition was connected with the 1916 wheat crop, which was stricken with rust as it approached maturity. Instead of a normal crop of 100,000,000 bushels there were only 39,000,000 bushels and this was grain with light, shriveled berries. Under the Minnesota laws, under which Dakota wheat is sold, certain legal grades are established. The Minneapolis Chamber of Commerce, however, established an additional extra-legal series of "feed grades," A, B, C and D, so arranged that practically the entire North Dakota crop graded as Feed D and brought a price considerably less than $1 a bushel. The buyers claimed it was fit only for feed.

Meanwhile, however, it began to be learned that much of this wheat, probably most of it, was being mixed with light western wheat and was going into high grade flour. A series of investigations made at the North Dakota agricultural college showed that flour made from the Feed D wheat, sold at less than $1, made bread better in some respects and practically as good in others as bread made from No. 1 Northern wheat flour. The reason was that while the berries were shriveled the gluten, which forms first in a wheat berry, was all there. The shriveled wheat actually had a much higher percentage of gluten, the most valuable flour material, than No. 1 Northern wheat, lacking only in starch, and by mixing with western and southern wheat, rich in starch, made an excellent flour.

The third condition that resulted in the organization of the league was the presence in the state of a young farmer named A. C. Townley. Townley, a few years before, had attempted flax farming on a bonanza scale. Bad weather partly destroyed what looked like a bumper crop, but Townley still would have cashed in if the market had not been tilted sharply downward just as his crop came in and had to be marketed, the same thing that had happened to the wheat farmers year after year. The result was that Townley, instead of getting rich, went broke.

Townley spent a good deal of time in the next year or two studying what was the matter with the farmer and why the average farmer of Dakota couldn't farm at a profit. He was struck with the idea that if the farmers could get hold of the marketing machinery, own terminal elevators, cold storage warehouses, flour mills and packing plants, they could have something to say about fixing the market prices on what they had to sell instead of taking whatever prices the chamber of commerce at Minneapolis and the Chicago packers happened to fix at the time. Townley's idea was that the way to obtain these things was by state ownership. He saw that the farmers could control the state government and get state ownership if they voted in a body, but not if half were in one political party and half in another. He saw that a political organization would be necessary. He also saw that no large financial interests would be likely to contribute finances for such a movement—that it would be necessary for the farmers to provide the money for organization and campaigning. He talked the idea over with a number of friends, most of whom said he was foolish to think that the farmers could be induced to give him money to be used in building up a political organization when they had hardly enough for themselves. But Townley started out, just for an experiment, one day early in 1915, to see what could be done. The first farmer he talked to was told the plan to organize the farmers and was asked for $6 to help the work along. He gave it. So did the next farmer and the next and the next. When a farmer was struck who was doubtful about the chances for success, or who didn't have the cash, Townley took a post dated check, which would not have to be paid for some months.

It would take too long to tell how enough money was obtained to make the first payment on a cheap automobile, how other organizers were put to work, how, when 20,000 members had been secured, a state paper was established and the people in the towns and cities heard about the movement for the first time.

On Washington's birthday, 1916, the league held a convention in every township in the state. The township conventions elected delegates to legislative district conventions which selected candidates for the legislature who indorsed the farmers' program and also elected delegates to a state convention, which selected candidates for state offices. For governor they selected a farmer who had never been heard of in state politics before, Lynn J. Frazier, nominated him against one of the most popular farmer-politicians the state has ever produced, and elected him with the largest majority ever given any candidate. Other candidates were selected in the same way. The league elected every state officer but one, the state treasurer, three members of the supreme court, a majority, 85 out of 113 members of the lower house of the legislature, and 18 of 25 members of the state senate who were elected last year.

But here came the rub. There were

John M. Baer.

24 holdover senators, and these were lined up practically solidly against the league. This prevented the enactment of most of the measures passed by the house. As soon as they struck the senate their doom was sealed. The league's principal measure was a bill submitting a proposed new constitution, it appearing impossible to make the sweeping changes necessary to carry out the farmers' program without general constitutional changes. The Feed D wheat situation made a flour mill seem necessary in conjunction with the state elevator and while a small elevator, without a flour mill, could have been provided under the previous constitutional amendment, it would not have served to compete with the terminal facilities offered by private Minneapolis concerns. But the new constitution went down to defeat.

The league did get some of its legislation through. One measure passed in spite of senate opposition was a state grain inspection law. This provides for state weighing and grading of grain to eliminate abuses of private weighing and grading at line elevators. Many of these elevators in past years, according to their own reports, finished the season hundreds of bushels "long," that is, selling more wheat than they bought.

Another measure provides for a sweeping tax reform, largely doing away with taxes on farm improvements and personal property by decreasing the rate of assessment for such property as compared with real estate. The penalty of taxation of farm improvements, it was found, had held back much progress toward better farming.

The league program in other states is much the same as that for North Dakota. In every state the demand is for state ownership of the machinery of marketing, such as terminal elevators, warehouses, flour mills and packing plants. There is also a demand for exemption of farm improvements, a nonpartisan election law and for state hail insurance. In other matters the programs differ according to differing needs. In Minnesota there is a demand for a tonnage tax on iron ore, which is paying only a small portion of the cost of state government. In Montana, where a constitutional provision virtually exempts all mines from taxation, there is demand for reform on this line. Farmers of Nebraska are out with a demand for a state-owned beet sugar factory.

The league made its first step into national politics in the special election in North Dakota last July. John M. Baer, a young farmer who had been the cartoonist for the Nonpartisan Leader, the official organ of the league, was elected, receiving more votes than the combined votes of his republican and democratic opponents. Last year in North Dakota the league took no part in the congressional or senatorial campaigns, but hereafter it is committed to the policy of interest in national affairs.

The league's national program calls for closer government supervision of the machinery of food supply to eliminate speculation, conscription of profits by heavy war profits taxes, as a means of financing the war in preference to placing chief reliance upon bond issues, and an early statement by the United States and its allies of definite peace terms.

Profiteering

A contributor to the London Times says: May I remind your readers that this novel name for buying and reselling at prices detrimental to the public describes practices formerly known as forestalling, ingrossing and regrating, made punishable by several statutes, which were repealed by 12 George III., chapter 71? It would seem, however that apart from acts of parliament, these practices are crimes at common law, and that the offenses consist in unjustifiably enhancing prices to the injury of the public. Forestalling is a general word signifying any maneuver or artifice intended unduly to enhance prices. Ingrossing was the word in use to signify what is now meant by cornering, i. e., the buying of a considerable quantity of a commodity, sufficient injuriously to affect prices; while regrating is the offense of buying and selling a commodity, especially foodstuffs in the same market. I think this is called "scalping" in America. It is this latter practice indulged in by traders whose only intention is to snatch a quick profit, which seems chiefly suspected of causing prices to rise to unjustifiable heights in some commodities, while it may very well be that scarcity has encouraged the ingrossers or cornerers. Although prosecutions for these offenses have fallen into disuse the offenses will surely remain crimes, and, if so, it would seem that our law officers might well consider the revival of this class of prosecution.

Loganberry Juice.

A cannery at Forest Grove has contracted for 20,000 gallons of Loganberry juice.

Why Farmers Object

One Rule for East and Another for the West

One foolish farmer somewhere in the broad Inland Empire unpatriotically declared that rather than sell his wheat at $1.80 a bushel he would burn the crop. A number of consumers and I. W. W. sympathizers have seized on that reprehensibe threat, and in communications to the newspapers are harping on it as evidence that farmers generally are unpatriotic. Their efforts in that direction are ridiculous. No wheat will be burned in the Inland Empire. If any farmer were foolish enough to make the attempt, his farmer neighbors would promptly take steps to send him to the asylum, if he were found to be insane, or to prison if he proved to be criminally responsible.

The new food control law expressly guards against crimes of that nature. Section 8 provides—

"That any person who willfuly destroys any necessity for the purpose of enhancing the price or restricting the supply thereof, shall, upon conviction thereof, be fined not exceeding $5000 or imprisoned for not more than two years, or both."

Unfair critics entirely miss the point of the farmers' objections to the prices fixed on Pacific northwestern wheat by the food administration. Our farmers are only objecting to the injustice of discrimination—against the application of one rule for the east and another rule for the west. They object to an arbitrary order requiring them to pay 30 cents a bushel on fictitious shipments of wheat from this region to Chicago.

They are demanding that the government names basic ports in the Pacific northwest and let their grain go to Europe over its natural route.

The surplus yield of the Pacific coast should be shipped to Europe through the Panama canal in ships the government is now building at Pacific ports, and the allied and neutral buyers should be required to absorb the cost of water transportation, as they will be required to absorb and bear the freight charges on grain shipped from gulf and Atlantic ports.

The government is building large fleets of vessels on the Pacific coast—building them for the express purpose of transporting to our allies the surplus food products of the Pacific slope—our wheat and other cereals, our salmon and other fish food, our metals and our lumber.

The allies must have this surplus wheat, and the government is going far on the road to generosity when it arbitrarily steps in and knocks down the normal price for their benefit. In taking that action it should not discriminate against the growers of the Pacific northwest.

Grange Awards

Green Bluff Captures the First

Agricultural day at the Interstate fair Thursday was featured by the awarding of prizes for farmers' union and grange exhibits in agricultural hall. Green Bluff won first prize, $50 in cash, for the best display by any grange, and also won first prize on display of vegetables, despite stiff competition.

Other granges that won prizes were: Mount Spokane, third prize for the best display of fruits and fifth place for grange display. Foot Hills grange took fourth place for fruits. Half Moon grange took second prize for fruits, third prize for best display of sheaf and shelled grains and favorable mention for attractiveness of exhibit. Glenrose grange got fourth place for display of grange and fifth for display of fruit. Elk Mountain farmers' union got second for best display by farmers' union, second for attractiveness of exhibit, fourth for sheaf and shelled grains and fifth for grasses and forage crops.

Oregon carried off the palm for best individual exhibit from one farm. Leonard Gilkey of Linn county captured four firsts and two seconds. Mr. Gilkey was awarded first for display by individual, first for display of sheaf and shelled grain, first for attractiveness of exhibit, first for best 10 ears of corn shown at the fair, second for display of vegetables and second for grasses and forage crops.

Spokane county took second place in the individual contest. J. R. Orrock of Sharon got first on grasses and forage plants, first on alfalfa, first on sheaf of vetch, first on timothy, first on not less than 10 bunches of forage crops shown by one man, second on bluegrass, oats and wheat, third on Sudan grass and fourth individual display.

W. A. Hughes, Colville, carried off a number of prizes for individual farm exhibits, taking second for best exhibit by individual, second for display of sheaf and shelled grains, third for attractiveness of exhibit, third for display of forage crops and fourth for display of vegetables.

Mountain View farm, of Elk, was awarded third place for display by individual, third for best display of sheaf and shelled grains, fourth for grasses and forage crops and fifth for best display of vegetables.

Record Crowd

State Fair Opens With a Rush

All records for attendance for the first day at the Washington state fair were broken Monday by the crowd that thronged the grounds and filled the new $20,000 grandstand to capacity.

The new stand seats 3500 and the bleachers 1000. The first day's crowd was estimated at 5000.

Five high schools have entered teams for the stock judging contest, and began work late this afternoon under the supervision of Professor Krantz of Washington State college. Teams were entered from North Yakima, Ellensburg, Kittitas, Sunnyside and Wapato.

About 90 boys and girls, representing the teams sent to compete in the industrial contests, arrived on the grounds early, and under the general supervision of Superintendent Rodney Ackley were soon engaged in canning, cooking and manual training. The stock judging teams will begin their work tomorrow.

By arrangements made by Superintendent Ackley the boys and girls will be given a free automobile ride through the orchards tomorrow morning, with visits to the beet sugar factory, cannery and other industrial plants. This trip will be repeated Thursday when the second group of clubs come on for their work.

Herefords Are Sold.

Charles Bull of Mabton purchased most of the herd of Hereford cattle sold recently at auction by Dr. H. H. Hartley of Goldendale. The herd sold for approximately $10,000. One purecred heifer sold for $180. Calves sold for an average of about $40. Dr. Hartley will go into the sheep business. Mr. Bull is a breeder of Herefords at Mabton.

Cooperate on Tuberculin Test.

The Washington state department of agriculture, of which E. F. Benson is commissioner, has recently signed an agreement with the United States bureau of animal industry to cooperate on the tuberculin test. Dr. Sam B. Foster is in charge of the federal work at Portland, and Dr. R. J. Donahue of the state work. Breeders will now get certificates that give them shipment into any state, which is a distinct advantage. The state department has tested about 22,000 cattle in the last year and has found a light percentage of tuberculosis.

Farmers Get a Million a Month

Farm Loan Bank Distributes Money for Land Development

The northwest district farm loan bank, with headquarters at Spokane, has its operation speeded up now so that it is making loans to the farmers of Oregon, Washington, Idaho and Montana at the rate of more than $1,000,000 a month, and President D. G. O'Shea says that this amount will gradually increase from this time on. This means that money is being sent out from the bank at the rate of nearly $5000 an hour for 10 hours every day except Sunday.

As President O'Shea looked over the long list of new charters granted and loans approved he remarked: "That ought to convince the people that we are getting something done, except possibly the fellow that we can't get to. The more we get done the worse he feels.

"If the farmers who are seeking loans, but whom we have not yet been able to reach, will appreciate the situation and realize that the bank is doing everything possible to complete their loans, and will have patience and courage, they can be assured all will be reached in the near future," continued President O'Shea.

"The land bank law is intended to serve the farmers, and no one else, and it should be expected of them that they be loyal to the movement and assist it, and, above all, to see that the values are not inflated."

New Associations Chartered.

The following are now associations chartered, together with the loans approved for each, since the last list published in The Farmer:

Oregon.

Ashland, Jackson county	$ 90,500
Hood River, Hood River county	73,800
Gold Beach, Curry county	47,750
Ione, Morrow county	77,100
Hardman, Morrow county	40,500
South Prairie, Tillamook county	138,700
Gold Hill, Jackson county	29,175
Williams, Josephine county	31,315
Hamilton, Grant county	28,550
Ontario, Malheur	57,800
Klamath Falls, Klamath county	36,900
Corbett, Multnomah county	31,400
Macksburg, Clackamas county	62,600
Additional loans to associations previously chartered	119,100

Idaho.

Sterling, Bingham county	$ 43,450
Cambridge, Washington county	54,170
Bonners Ferry, Boundary county	85,650
Granite, Bonner county	36,750
Archer, Madison county	28,000
Medimont, Kootenai county	20,725
Priest River, Bonner county	26,500
Rigby, Jefferson county	24,100
Additional loans to associations previously chartered	104,400

Washington.

Sunnyside, Yakima county	$ 87,600
Silver Creek, Lewis county	27,650
Naches, Yakima county	32,150
Newport, Pend Oreille county	20,900
Chattaroy, Spokane county	27,600
Okanogan, Okanogan county	52,700
Burton, King county	25,600
Kitsap, Kitsap county	57,900
Malaga, Chelan county	74,800
Kettle Falls, Stevens county	35,850
Hunters, Stevens county	37,850
Satsop, Grays Harbor county	62,500
Warden, Grant county	31,750
Orin, Stevens county	27,250
Cheney, Spokane county	55,600
Touchet, Walla Walla county	30,800
Leavenworth, Chelan county	27,025
Monroe, Snohomish county	33,600
Manson, Chelan county	34,250
Chesaw, Okanogan county	59,150
Grandview, Yakima county	22,400
Granger, Yakima county	36,200
Elk, Spokane county	21,350
Centralia, Lewis county	37,800
Oso, Snohomish county	42,200
Moxee, Yakima county	34,150
Additional loans to associations previously chartered	136,605

Montana.

Sidney, Richland county	$ 32,400
Hamilton, Valley county	96,850
Darbey, Valley county	26,900
Stevensville, Valley county	71,900
Richey, Dawson county	34,100
Mizpah, Custer county	38,200
Snowbelt, Dawson county	20,100
Perma, Sanders county	52,000
Crowley, Prairie county	25,300
Glendive, Dawson county	30,700
Joliet, Carbon county	37,800
Circle, Dawson county	45,500
Additional loans to associations previously chartered	320,950

Secure Dried Beet Pulp.

In order to help out with the feed question this winter the office of County Agriculturist M. J. Newhouse, Pend Oreille county, is taking steps to secure carload lots of dried beet pulp and skimmings.

Lady Washington

Handsome is as handsome does. That is why Lady Washington won the silver trophy cup offered by the Pacific Northwest Farm Trio for the best dual purpose cow exhibited at the Interstate fair at Spokane this season. Lady Washington was shown by A. V. Bradrick & Sons of Palouse, Wash. She is a wiuner among cattle that can make good both as beef and milk producers. She is three years old, with her life of dual usefulness before her. Her male calves will not have to be vealed to prevent waste of feed, as is too often the case with the purely dairy breeds. They will grow up to an age of 15 to 18 months and go onto the market as baby beeves only a little below the standard of the single purpose beef animal. Her heifer calves will grow up into animals capable of producing profit from either of two directions as most suits the needs and the convenience of their owner. Hats off to Lady Washington and her kind!

Breeders Will Show at Portland

Pacific International Reconsiders Former Action

"We are going to have the show."

This is what President William H. Daughtrey of the Portland Union Stock Yards said to a representative of The Farmer after he had received telegrams and letters galore protesting against the cancelation of the breeding animals' exposition at the Pacific International Live Stock show this winter. The cancelation had been made owing to inadequate buildings, but the breeders rallied in their protests, with promises to show under canvas, as last year.

"The mistake that many have made," said Mr. Daughtrey, "was in thinking that the Pacific International Live Stock show belonged to the stockyards. We did start the show, and we did pay the necessary expenses through last last year, not because it benefited us, but because we felt that Portland should have such an exposition. As a matter of fact, it never brought us any money, except in the indirect way of improving breeds and gradually bringing better animals to the yards. We have had to bear the dead weight of expense.

"Last year it was decided that buildings to house the show adequately must be erected. These, it was estimated, would cost in the vicinity of $200,000. Committees set to work, but the war and other things came on and the work was dropped. It was hard to raise the money.

"Heretofore, with the exposition, it has been 'let George do it,' and the time had come when 'George' couldn't do it alone any more. So we decided to drop the purebred show feature and hold a fat stock show only. As soon as this was announced we began to receive protests from all over the northwest. The first came by mail. Of late, from the gatherings of live stock men, wire protests have come.

"The Portland Chamber of Commerce has decided to back the purebred live stock show, and I feel assured that we will have the purebred show. Committees have been formed to secure the funds, and I am sure the success of this great show is assured again.

"Of course, it will have to be a tent show again, but I believe that it will result in permanent buildings for next year. Portland realizes that it is a Portland show, and an important one. We shall do all in our power to help.

"In some ways this may have been a good thing. If the breeders and the people realize that this is their exposition, and that it will grow only with their interest and attention, then it will be all the better."

Dr. Ernest C. Wheeler of Tacoma, chosen to represent the medical profession on the state council of defense, has written a special article for The Farmer on "The Physician's Part in the War." Remarkable facts are brought out in this article, bearing on the vastly increased danger line for the army surgeons in this war, as well as the vastly lessened danger of pestilence and plague, which in former wars have killed more soldiers than the tax of the enemy. This article will appear in next week's issue of The Farmer.

Subscription price: $1.00 a year—special 3-year rate $1.50. Canada and foreign, 1 year $1.50.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Whisky Is in Full Retreat.

The forces of efficient and morally upright manhood and womanhood have long been in conflict with whisky and other intoxicants. They fought a winning battle, though progress was made somewhat slowly. Now strong reenforcements in the form of world war have come up and whisky is in full retreat.

One of the first things the European governments did when their countries became involved in this war was to prohibit the use of intoxicants and prevent the use of foodstuffs in the manufacture of liquors. Long, long ago it became a settled fact that armies could not maintain the desired standard of efficiency unless liquors were denied the soldiers. Now there is sweeping over the entire world a recognition of the fact that neither soldiers nor civilians can maintain themselves efficiently if intoxicating drinks are used.

The United States has taken a great forward step in prohibiting the use of grains in the manufacture of whisky, but the distillers are already looking forward to the end of the war, when the prohibition will be taken off—they hope. Let us hope the manufacture of distilled liquors will never again be permitted in our country. If a country is more efficient in time of war under a prohibition law than under a license law, it stands to reason that it will be more efficient in time of peace under prohibition. Industry as well as war demands the best powers of men. Prohibition now is a war measure, but it must be continued as a peace measure. The present terrible conflict should mean the utter banishment of the world's two great scourges, war and intoxicating liquor.

The Belgian Hare

At this time of food conservation more attention is being called to the Belgian hare and other hares of the race as a source of food. A number of years ago the hare fad was introduced in this country, ran wild and died out. Those who kept them grew disgusted with them and quit. Now it would seem that the animal is coming back into his own. Probably the reason for the reaction was that it was run as a fancy stock rather than on a business basis.

The hobbies of live stock fanciers have done far more harm than good. They have injured practically every breed of stock at one time or another. But gradually every line which has real worth overcomes the handicaps imposed by those who want style and who will sacrifice everything else for it.

The hare bred for meat is worthy of attention. Its feed is as inexpensive as any animal's, and the meat is excellent when properly prepared. It can be raised in small quarters. Surely it deserves the notice of food conservationists.

Young Man! Young Woman! Don't Neglect Your Education!

Dr. E. A. Bryan, now commissioner of education in Idaho, but formerly president of the State College of Washington, said the other day: "It is assumed as a matter of course everywhere that there will be a decrease in the number of college, university and high school students this year. Instead, there should be an actual increase. The young man went to college before for his own sake; now he should go for the nation's sake."

Commissioner Bryan is emphatically right. There never was a time when the young people of this counfry were so urgently called by their country into the high schools and colleges. There are great needs for immediate service in many lines, but there will be greater need for trained service one year, two years or five years hence. Leaders everywhere see the danger the country faces in the withdrawal of its young men and women from the educational institutions.

"If the war is long," says Commissioner Claxton of the United States department of education, "the country will need trained men and women beyond all possible supply, unless our colleges and technical schools increase their attendance."

General Leonard Wood of the army writes: "The war promises to be long. Urge young men to finish their education."

Secretary of War Baker says: "When the war is over, there will be made upon us such demands for men and women of knowledge and training as have never before come to any country. The colleges of Europe are now almost empty. Their older students, graduates and professors are fighting in the trenches or are already dead, as are many scientific and literary men whose work is necessary for the enlargement of cultural life. For many years after the war some of these countries will be unable to support their colleges. America must come to the rescue. How well we can do this will depend upon you young men and women who are this year graduating from our high schools. Therefore, a right conception of patriotism should induce all students who can not render some immediate service of great value to remain in college, and thus be all the more fit when their services may be needed."

There is no more patriotic service the young man and the young woman on the farm or elsewhere can render to his or her country than to begin or complete a thorough course of higher education.

The Foundation of Agriculture

At the Interstate fair at Spokane this year, prominent men more than once referred to the live stock industry as the foundation of agriculture. Time after time various speakers pleaded with their hearers to make every effort consistent with reason to conserve their own or their neighbors' animals instead of throwing them on the market for slaughter because of the scarcity and high cost of feed.

Live stock may almost properly be called the foundation of agriculture, and at this particular time the foundation is being shaken. There is urgent need for the greatest possible conservation of stock.

Conservation of stock does not always mean the holding over the winter of animals, even though they might be of considerably more value for food purposes than in the fall. There are times when it would be extremely unwise for the owner of a steer or a pig to hold him. While patriotism enters into the problem, it is fairly safe to assume that it is unwise (and therefore unpatriotic) to keep an animal over when its keep is sure to cost more than the increase in food value will be.

But sometimes when one person has not the facilities to feed such animal, a neighbor, near or more distant, may have them, and the patriotic thing for the owner to do is to sell such animal to such neighbor rather than to the slaughter yards. And on the other hand, it is the part of patriotism for such neighbor to purchase animals that would otherwise be slaughtered, if by so doing he can conserve food supplies.

We do not want sentimental patriotism. We want merely good, sound business patriotism. Business and patriotism are not opposites. They are coworkers. The one does not interfere with the other if both are genuine. There is room and need for both in their most practical form in the live stock industry today.

Good Material Available

The federal department of agriculture and its allied departments and the various agricultural school over the country have never been more active in producing bulletins than they are today. And a reading of them leads to the conclusion that nearly all of them are practical and suited to the needs of the people.

The government stands ready to supply them where there is need of them. They are particularly strong on food conservation.

Washington Gleanings

The annual reunion of the Stillaguamish valley pioneers was held in Arlington recently.

J. S. Meador disposed of 1200 acres near Cloverland to F. A. Boozer for $30,500. The deal gives the crop to Mr. Boozer.

Work has been started on the new Colfax park. It is planned to have a triumphal arch at the entrance in honor of L. Schmuck, the donor of the 11 acres for the park site.

Game Warden Van Ausdale, accompanied by Louis Stenger, superintendent of the fish hatchery at Walla Walla, has brought from the hatchery 12,000 rainbow trout fry and planted them in the Touchet.

The state fisheries department is preparing to install a fish rack on Jim creek near its confluence with the South Fork just above the Snohomish county bridge. This plant takes the place of the hatchery further up the creek, the location of which has been found unfavorable.

Under direction of Game Warden D. C. Holmes, 58,000 trout were planted in streams tributary to the Washington Central railway lately. Hawk creek, Crab creek, Wilson creek and the Spokane river received liberal allotments. More than a half million trout have been planted in Lincoln county waters this season.

Fire of uncertain origin, presumably starting in the dynamo room, destroyed the Chelan Falls flour mill a few days ago. About 3000 bushels of wheat are reported to have been destroyed as well as a large supply of flour. The government had just awarded a contract to the mill for a large quantity of flour to be used in feeding the soldiers.

In an effort to restore the old-fashioned potato seed, an experiment is being made in the garden of the University of Washington. The white fruiting berry of the potato, which was found everywhere a generation ago and has now almost disappeared, was used to plant a patch, and the fruiting potato plants are being raised. The experiment is being conducted under the direction of Assistant Professor John W. Hotson of the department of botany.

What Others Say

Green's Fruit Grower: More and larger horses in a team is one way to meet the scarcity of farm labor.

Southern Ruralist: Barley is one of the great fattening and feeding grains of the world where corn is not grown.

National Stockman and Farmer: Idleness, total or partial, is not a good thing for the boys or for their neighbors.

Iowa Homestead: Where fields are fenced hog tight there is always considerable good picking in stubble field.

Country Gentleman: It may not be the best policy, but the individual can not decide his own case. It's tough, but it's war!

Hoard's Dairyman: There is nothing alarming in selling the unprofitable cow; in fact, it is an encouraging sign of better dairying.

Shorthorn World: The idea of breeding pure bred cattle is to grow more beef for the butcher with the same amount of feed and in a shorter space of time.

Your Lifetime Car

These Mitchell standards are essential in the car you buy to keep. Some may not seem vital when the cars are new. But 14 years have taught us that they are.

Where the Mitchells differ from most fine cars is in standards some call extreme.

Instead of usual margins of safety —50 per cent—the Mitchells are built to the standard of 100 per cent over-strength.

In addition to all the usual attractions, there are 31 features in Mitchells which nearly all cars omit.

We use heat-fixed finish to be long-enduring. We use extra-grade leather to last. We use shock-absorbing rear springs which never yet have broken. Thus the Mitchell excels in scores of ways which you will find important.

A 200,000-Mile Car

What we aim at is 200,000 miles of satisfactory service. Two Mitchells have exceeded that already.

We also aim at dependability under difficult road conditions. The Mitchell has won great fame in South America, in Australia, in Russia—where few cars prove enduring. In the rough-road sections of America our sales have multiplied of late.

The reason lies in our 100 per cent over-strength. Every vital part is built and tested for twice the expected strain. Part by part, our safety margins have been doubled in three years.

Over 440 parts in the latest Mitchells are built of toughened steel. Castings are almost eliminated. Safety parts, like steering parts and axles, are all vastly oversize. Parts which get a major strain are built of Chrome-Vanadium.

Nothing Omitted

We study to include in Mitchells all the known attractions. There are 31 features rarely found in cars. These include a power tire pump, reversible headlights, dashboard engine primer, shock-absorbing springs, etc.

Our experts examined 257 show models before designing the latest Mitchells. And all their best attractions are combined in these new cars.

Mitchell SIXES

TWO SIZES

Mitchell—a roomy 7-passenger Six, with 127-inch wheelbase and a highly-developed 48-horsepower motor.

$1525

Three-passenger Roadster, $1490.
Club Roadster, $1560. Sedan, $2275.
Coupe, $2135. Cabriolet, $1960.
Club Sedan, $2185.
Also Town Car and Limousine.

Mitchell Junior—a 2 or 5 passenger Six on similar lines, with 120-inch wheelbase and a 40-horsepower motor, ¼-inch smaller bore—

$1250

Club Roadster, $1280.
Sedan, $1950. Coupe, $1850.
All Prices f. o. b. Racine.

In these new models we have also added 24 per cent to the cost of finish and upholstery. That to give unique endurance, beauty, luxury and comfort.

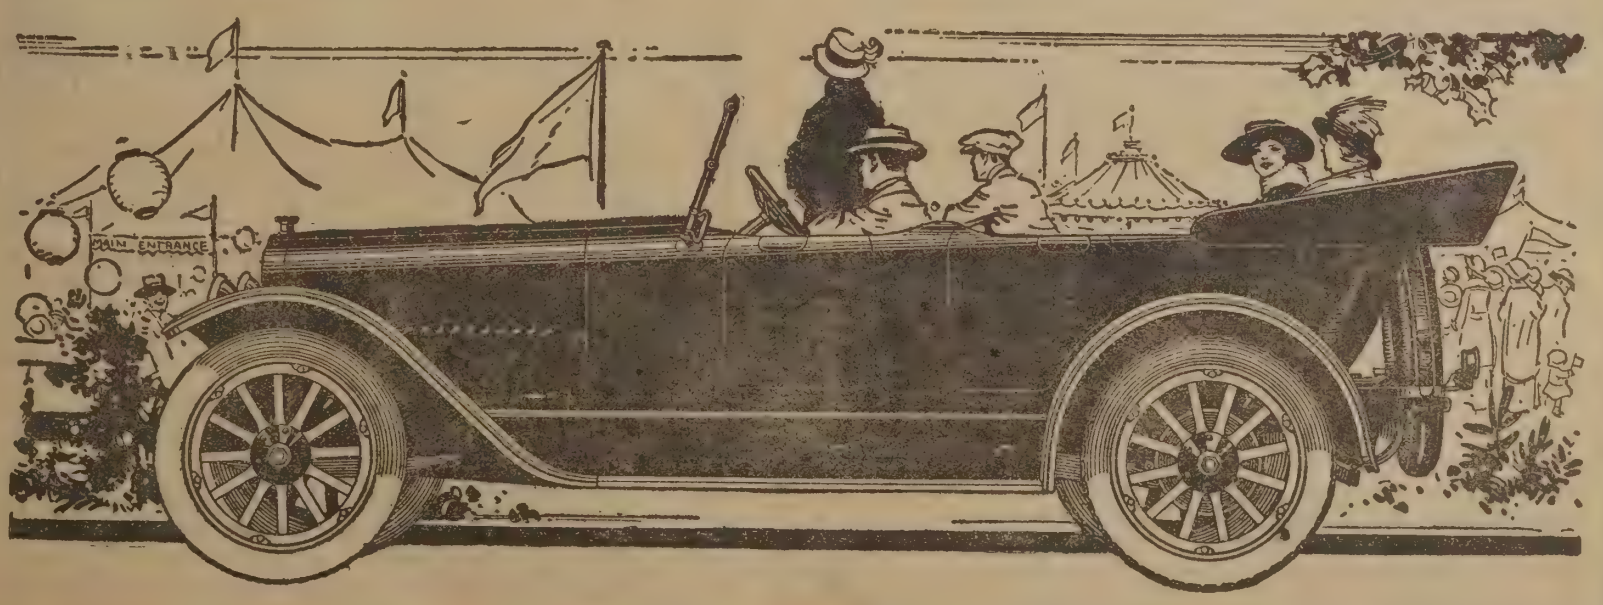
Yet An Under-Price

Despite all these extras, both sizes of the Mitchell Six undersell cars of like class and size and power. The reason lies in our factory efficiency.

John W. Bate, the great efficiency expert, built and equipped this mammoth plant to produce this one type economically. He has spent millions of dollars to reduce labor cost to minimum.

We build the complete car—chassis and body—under these up-to-date methods. They have cut our factory costs in two. And those vast savings pay for this over-strength, these extra features and this added luxury.

See these new Mitchells. Compare them with ordinary Sixes. See at your dealer's the list of noted engineers who have chosen the Mitchell for their personal car. See its endurance records.



When you buy a fine car for life-time service, you will want this car. You will save much money if you get it now. You will save in upkeep and repairs. You will save by having an ideal car which you never will outgrow.

If you don't know our nearest dealer, ask us for his name.

Whatcomb Crops Good Despite Drouth

Harvest Conditions Very Abnormal, but Production Is Satisfactory; Labor Shortage Is Felt but Not Seriously

FERNDALE, Whatcom County, Wash., Sept. 8.—Threshing, silo filling, and the oat hay harvest all came at once this year, and while labor is scarce it is not alarmingly so. The crops are up to the general average in spite of the continued dry weather. Oats and wheat ripened a little earlier than usual on most places. On the river bottom some crops were drowned out during the heavy rains last spring and had to be replanted. They' of course, will be very late and will not mature at all unless the fall rains hold off later than usual. Only a few years ago the straw was all burned as soon as the rain threatened, but this year it is cared for as one of our most valuable possessions. Oats are bound and shocked, then left to cure for several days and threshed from the shock. Instead of hiring a crew, farmers exchange help. This is possible because the places are all small, but more land is being seeded every year. Pasture is short though the heavy dews that we always have in the fall prevents the grass from burning and the meadows are still green. Weeds have been more troublesome this year than ever before. The milk thistle seems to have made an affinity of our gardens. No live stock of any value as milk producers are being butchered. All dairymen are gradually exterminating culls from their herds and heading the herds with registered sires of the breed they prefer, usually Holsteins, Guernseys or Jerseys. No beef stock is raised at all. MRS. JACK PLASTER.

Rain Helps Late Stuff.

RAINIER, Thurston County, Wash., Sept. 10.—Rain has come after over two months of dry weather, which will help late vegetables and potatoes. A good supply of hay was put up here and quite a lot of grain has been threhed but the straw is rather short. No straw is burned, but is used up on the farms where raised, except a few loads sold to neighbors. The potato crop at the present time is about a half a crop, but if the weather keeps warm and moist until October 1 without frost, the very late potatoes will make a crop. To make larger acreage of crops next season, the land has to be cleared of brush and logs. The last month has been ideal weather for that and some have taken advantage of it. L. F. DAVIS.

Prepare for Winter Feeding.

PORT ANGELES, Clallam County, Wash., Aug. 25.—The dairying interests are preparing for winter feed on a far better scale than the previous winter and this is natural for the severe winter of the past, combined with the high prices, have made the local farmers very provident. A considerable quantity of straw is shipped into the county annually and there is very little barter in that commodity. The potato crop is larger than for many years and our farmers are scanning the market lists with some anxiety for quotations; it is also absorbing a goodly portion of the conversation when the producers gather at picnic grounds. I should judge that the increased tillable land for 1918 crop will be about 10 per cent, for there is much activity in burning over brush and grubbing out stumps in logged-off land. J. P. CHRISTENSEN.

Hog and Sheep Awards, Interstate Fair

The following are the swine and sheep awards at the recent Interstate fair at Spokane, the horse and cattle awards having been given last week:

SWINE.

Duroc Jerseys.

There were eight Duroc owners who shared in the premium awards. They were: R. P. Camp, Ione, Wash.; A. H. Poston, Spokane, Wash.; Robert Nelson, Yakima, Wash.; B. E. Smead, Opportunity, Wash.; David Brown, Spokane, Wash.; Emery Donohue, Colbert, Wash.; Bellwood farm, Spring Valley, Wash., and S. W. Shoemaker, Garfield, Wash. The awards were as follows:

Boar, 2 years old or over—First, R. P. Camp; second, A. H. Poston; third, Robert Nelson; fourth, A. H. Poston; fifth, Robert Nelson.

Boar, 18 months old and under 2 years—First, Robert Nelson; second, B. E. Smead.

Boar, 1 year and under 18 months—First, A. H. Poston; second, Robert Nelson; third, Robert Nelson; fourth, David Brown; fifth, Emery Donohue.

Boar, 6 months and under 1 year—First, David Brown; second, David Brown; third, Bellwood farm; fourth, B. E. Smead; fifth, A. H. Poston.

Boar, under 6 months—First, S. W. Shoemaker; second, David Brown; third, Robert Nelson; fourth, A. H. Poston; fifth, A. H. Poston; sixth, David Brown; seventh, B. E. Smead.

Sow, 2 years old or over—First, B. E. Smead; second, Robert Nelson; third, A. H. Poston; fourth, A. H. Poston; fifth, David Brown; sixth, David Brown.

Sow, 18 months and under 2 years—First, B. E. Smead; second, Robert Nelson; third, A. H. Poston; fourth, Robert Nelson.

Sow, 1 year old and under 18 months—First, Robert Nelson; second, Robert Nelson; third, David Brown; fourth, A. H. Poston; fifth, Bellwood farm; sixth, David Brown.

Sow, 6 months and under 1 year—First, David Brown; second, David Brown; third, A. H. Poston; fourth, A. H. Poston; fifth, R. P. Camp.

Sow, under 6 months—First, A. H. Poston; second, A. H. Poston; third, David Brown; fourth, David Brown; fifth, Bellwood farm; sixth, Robert Nelson; seventh, Robert Nelson; eighth, B. E. Smead.

Boar and three sows, 1 year old or over—First, Robert Nelson; second, David Brown; third, A. H. Poston; fourth, Robert Nelson.

Boar and three sows, under 1 year—First, David Brown; second, A. H. Poston; third, A. H. Poston; fourth, Robert Nelson.

Boar and three sows, over 1 year, bred by exhibitor—First, David Brown; second, A. H. Poston; third, A. H. Poston.

Boar and three sows, under 1 year, bred by exhibitor—First, David Brown; second, A. H. Poston; third, A. H. Poston; fourth, Robert Nelson.

Get of one boar—First, Robert Nelson.

Produce of one sow—First, David Brown.

Champion boar, 1 year or over—First, A. H. Poston.

Champion boar, under 1 year—First, S. W. Shoemaker.

Champion sow, 1 year or over—First, B. E. Smead.

Champion sow, under 1 year—First, A. H. Poston.

Grand champion boar—First, A. H. Poston.

Grand champion sow—First, B. E. Smead.

Poland Chinas.

Only three breeders divided the premiums in the Poland China competitions. The winners were Ray J. Fox, Lyons, Ore.; P. L. Sain, Oakesdale, Wash., and Frank Donison, Lyons, Ore. Their winnings were as follows:

Boar, 2 years old or over—First, Ray J. Fox; second, P. L. Sain.

Boar, 18 months and under 2 years—First, Ray J. Fox; second, Ray J. Fox.

Boar, 1 year and under 1½—First, Ray J. Fox.

Boar, 6 months and under 1 year—First, Ray J. Fox; second, Ray J. Fox; third, P. L. Sain.

Boar, under 6 months—First, Ray J. Fox; second, Ray J. Fox; third, Frank Donison.

Sow, 2 years old or over—First, Ray J. Fox; second, P. L. Sain; third, Ray J. Fox.

Sow, 1½ years and under 2—First and second, Ray J. Fox, one entry.

Sow, 1 year and under 1½—First, Ray J. Fox; second, Ray J. Fox.

Sow, 6 months and under 1 year—First, Ray J. Fox; second, P. L. Sain; third, Ray J. Fox.

Sow, under 6 months—First, Ray J. Fox; second, Ray J. Fox; third, Frank Donison.

Boar and three sows, over 1 year—First, Ray J. Fox; second, Ray J. Fox.

Boar and three sows, under 1 year—First, Ray J. Fox; second, Ray J. Fox; third, P. L. Sain.

Boar and three sows, over 1 year. Bred—First, Ray J. Fox.

Boar and three sows, under 1 year. Bred—First, Ray J. Fox; second, Ray J. Fox; third, P. L. Sain.

Get of one boar—First, Ray J. Fox; second, Ray J. Fox; third, P. L. Sain.

Produce of one sow—First, Ray J. Fox; second, Ray J. Fox; third, P. L. Sain.

Champion boar, 1 year or over—First, Ray J. Fox.

Champion boar, under 1 year—First, Ray J. Fox.

Champion sow, 1 year or over—First, Ray J. Rox.

Champion sow, under 1 year—First, Ray J. Fox.

Grand champion boar—First, Ray J. Fox.

Grand champion sow—First, Ray J. Fox.

Berkshires.

C. M. Payne, Spokane, Wash., Silver Birch farm, Newport, Wash., and J. B. Tarbett, Newport, Wash., were given all the awards for Berkshires, the winnings being as follows:

Boar, 2 years old or over—C. M. Payne, first; Silver Birch farm, second; C. M. Payne, third.

Boar, 1 1-2 years old and under 2—Silver Birch farm, first.

Board, 1 and under 1 1-2—Silver Birch farm, first; C. M. Payne, second; Silver Birch farm, third.

Boar, 6 months and under 1 year—Silver Birch farm, first.

Boar, under 6 months—C. M. Payne, first and second; Silver Birch farm, third and fourth; J. B. Tarbet, fifth.

Sow, 2 years old or over—Silver Birch farm, first and second.

Sow, 18 months and under 2 years—J. B. Tarbett, first; Silver Birch farm, second and third.

Sow, 1 year old and under 18 months—Silver Birch farm, first and second; C. M. Payne, third.

Sow, 6 months and under 1 year—Silver Birch farm, first and second.

Sow, under 6 months—Silver Birch farm, first; C. M. Payne, second, third and fourth; J. B. Tarbet, fifth.

Boar and three sows, over 1 year—Silver Birch farm, first and second.

Boar and three sows, under 1 year—Silver Birch farm, first and second.

Boar and three sows, over 1 year (bred)—Silver Birch farm, first.

Boar and three sows, under 1 year (bred)—Silver Birch farm, first and second.

Get of one boar—Silver Birch farm, first and second.

Produce of one sow—Silver Birch farm, first; J. B. Tarbet, second; Silver Birch farm, third.

Champion boar, 1 year or over—C. M. Payne, first.

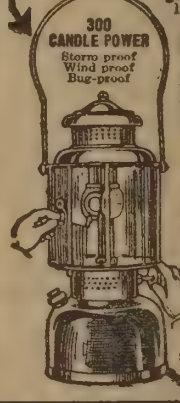
$1.00 Puts It On Your Farm

SIMPLEX "2 in 1" Double Duty—STRAW and Manure SPREADER

Here is positively the only machine that actually spreads straw and manure perfectly. Shreds hardest lumps of manure or bright straw into fine pieces and spreads it 21 ft. at a time—20 acres a day! Greatest invention of the day. Thousands of farmers using it to insure big crops this year.

Save Your Wheat From "Winter Kill"

Don't risk $2.00 seed this winter. A straw mulch will save it from Winter Kill—insure big yields. Spread straw and manure for fertilizer. My machine does both. Add 5 to 10 bushels to your crops. Fits any wagon! Has double drive and differential! Will last a lifetime. Costs half the price of a good manure spreader. Write for big catalog, low price, long credit and details of my amazing "Dollar Installing Terms," which puts it on your farm for 30 day trial. Do it now.



Manson Campbell, Pres.
Simplex Spreader Mfg. Co.
832 Traders Building Kansas City, Mo.

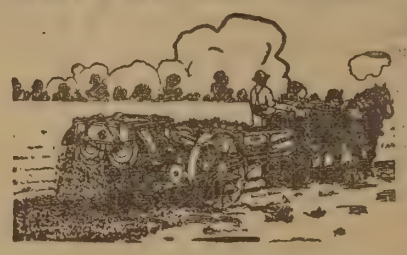
30 Days Free TRIAL

A Match-Lighting Gasoline Lantern!

No torch needed. Lights with a match like the old time oil lantern but makes and burns its own gas from common gasoline, giving a brilliant, steady, white light of 300 candle power.

300 CANDLE POWER
Storm proof
Wind proof
Bug-proof

Most Brilliant Light Made



Brighter than the brightest electric bulb. More light than 20 oil lanterns. Cheapest and best light made. Costs less than one-third of a cent per hour. Safer than the safest oil lantern. The

Coleman Quick-Lite

No wicks to trim—No globes to wash. No dirt or grease, no glare or flicker. Absolutely safe. Fuel can't spill—no danger if tipped over in straw. Guaranteed Five Years—will last a lifetime.

If your dealer can't supply, address our nearest office for Catalog No. 69
COLEMAN LAMP CO.
St. Paul, Wichita, Toledo, Dallas, Chicago.

Invest in One of These!

WHEN corn was selling for 50 cents a bushel, one of our dealers made this offer to a skeptical farmer: "Use this manure spreader to top-dress 20 acres of your 40-acre corn field, putting on eight loads to the acre. Leave the other 20 unmanured as you meant to do with the whole 40. I will take the difference in the yield between the two 20's for the spreader." The farmer agreed, thinking to get his spreader at a low price.

The 20 on which he used the machine produced 512 bushels more than the other 20. He paid the dealer $256.00 for the spreader—a great deal more than its present selling price. Today, higher prices would make that difference about three times $256.00!

You simply cannot afford to be without a spreader when it will pay for itself like that. Hand spreading is out of the question. You want the manure pulverized and spread evenly, not dumped out in big lumps unevenly.

Now that we have added the New No. 8 Spiral Wide Spreader to the Low Corn King and Low Cloverleaf lines, we are in a position to suit any farmer. The No. 8 machines are for the average small farm, very light draft, narrow boxes, spiral wide spread (regular). Our big No. 6 machines—Corn King, Cloverleaf and 20th Century—are "whales for work", easy handling and loading, steel construction, light draft. With the No. 6 spreaders you may have the efficient disk wide spread (regular) or the new spiral wide spread (special).

Here is a spreader for every farm. This year, of all years, you need one. Write us for full information.

Ten Billions for War

Stupendous Annual Cost Estimated

The treasury department of the United States has coldly calculated that it will take $10,735,807,000 to pay the running expenses of the government for this first year of the war. This does not include the money that is being lent and will be lent in huge sums to the allies of Europe. It covers only the maintenance of the government, the maintenance of the army and navy, the building of vessels, the construction of airships and all the other incidentals of war, including munitions. It is calculated that the revenues to be collected by the government under existing laws to go toward these expenditures will total about $1,333,000,000, leaving about $9,400,000,000 to be raised by other means. This is the cause of the great financial problems with which congress has been wrestling, of which the enactment during the last few days of the eleven billion dollar credits measure.

The money to be expended by the government during the first year of the war will be approximately ten times that ever spent by the government in one year. Only twice in the history of the country has the government expense exceeded one billion dollars a year. Last year it was about $1,040,000,000, or something less than one-tenth what it is estimated to be for this first year of the war.

U-Boats Raid America?

Reports for several days have been prevalent that a submarine, or perhaps more than one, was approaching the American coast and was attacking ships within 100 miles of the Atlantic coast. Ships brought in reports of hearing distress calls from other vessels that claimed to be endangered by submarine attack. It appeared finally, however, that the reports were erroneous, as proof of the presence of submarines could not be had. It is a new rule of the sea that one vessel must not go to the aid of another that is being attacked by a submarine, owing to the danger it would have to face.

Russia Still Struggles.

Russia is still struggling with herself in an attempt to set up a modern, popular government in the place of the old regime which collapsed with the abdication of Czar Nicholas a few months ago. After successfully quelling, for a time at least, a rebellion by a considerable portion of the army under the leadership of General Korniloff, Minister Kerensky has issued a formal proclamation of the establishment of a republican form of government. Pending the formation of a republican cabinet as the first step in setting up the republican form of government, he has called together four leading men of the nation to act with him as a cabinet to conduct the affairs of government. It is his expressed hope that this action will coordinate the opposing elements and enable Russia to unite solidly for the conduct of the war against Germany.

"Reconstruct" Wounded.

That the United States government is not underestimating the dangers that it is calling upon its soldiers to face is indicated by the fact that a far-reaching hospital system is planned and announced for caring for wounded soldiers who are brought back from the battle fields of Europe. Major General Gorgas, surgeon general of the army, has announced the selection of sites for 19 hospitals in 19 of the largest cities of the United States, and it is the plan to equip hospitals on them for the sole purpose of "reconstructing" maimed soldiers so as to fit them for earning a livelihood. Special studies are being directed to fit surgeons for the work of preventing deformities, and an enormous hospital force will have to be trained and enlisted in the service.

Sweden Caught Napping.

The government of Sweden says that if it had realized the serious possibilities of acting as Germany's messenger in transmitting messages for the German embassy in Buenos Aires, Argentina, it would not have agreed to perform this service. This disclaimer is made as a result of the disclosure by the United States of gross violations of international law by the Swedish representatives in the South American republic. In messages transmitted by these representatives in Buenos Aires, instructions were being given to German agencies to destroy Argentine shipping, notwithstading the repeated pledges of friendship for the Argentine republic. Violent anti-German and anti-Swedish demonstrations have taken place in Argentina, and it is still highly probable that a severance of diplomatic relations, followed by possible declaration of war, will resut.

Ship Builders Strike.

Most of the ship building yards on the Pacific coast have been tied up temporarily by a general strike of certain unions affiliated with the iron workers' union. More than 25,000 workmen on the Coast have walked out, their claim being that they are underpaid. They ask $6 a day. The ship building in Puget sound yards, Portland yards and San Francisco yards has been practically completely tied up. Contracts for more than $150,000,000 construction are stopped.

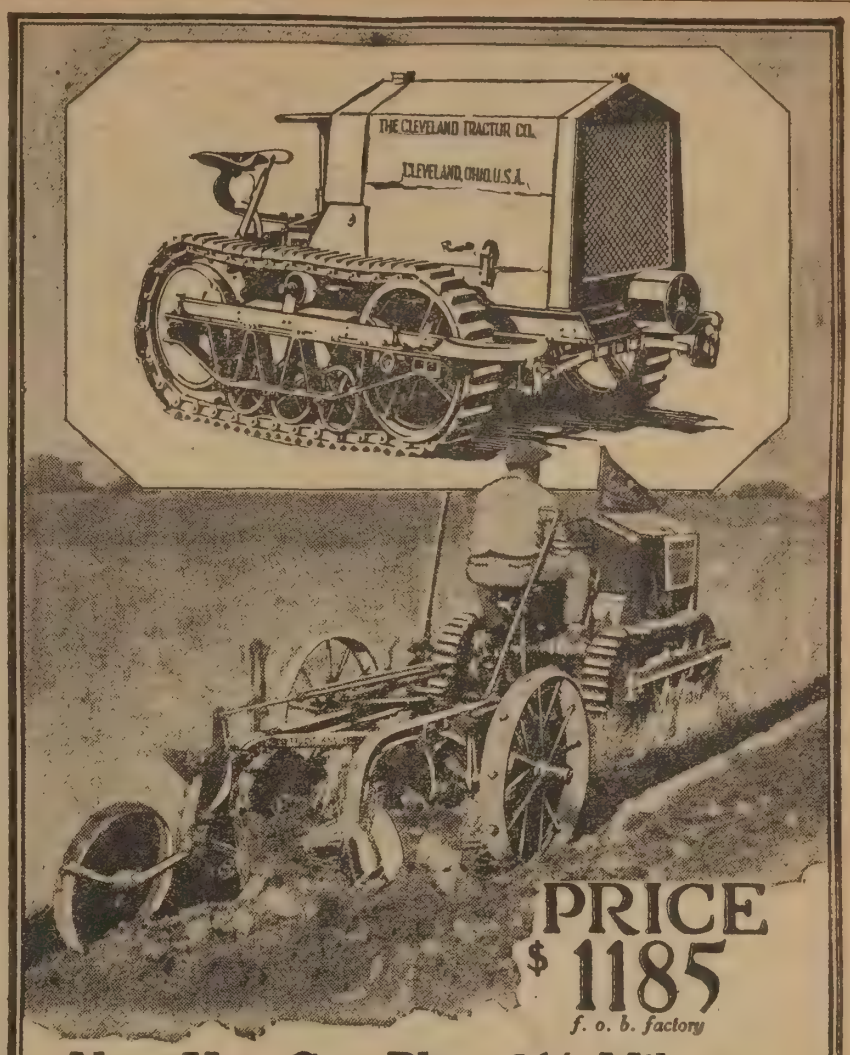
The Motor Car
On the Farm

"Gum" Blow-Out.

By W. D. ALBRIGHT.

The cut herewith shows a tire that has been a victim of a slow leak which caused a surface of "gum" blowout.

Very frequently "slow leaks" are caused by picking up loose nails or tacks. The head of the nail or tack prevents the air from coming out of the casing at the punctured spot, but not so of the tube. Possibly before the slow leak is noticed the head of the nail or tack has been worn off so that it can not be located from the outside. This happens every day and generally the motorist will put several tubes in the casing with the result that they are punctured by the concealed nail or tack. Take the precaution, always in changing a tire, to run your hand carefully around the inside of the casing in search of these sharp objects which puncture your tubes. This casing was originally punctured in the center of its tread. While, usually, the air would escape through the puncture, in this case it has followed the fabric plies and come out between the outer ply and the rubber tread. In seeking the point of least resistance it has accumulated where the rubber was thinnest and formed an air pocket. The thin rubber soon gave way to a blowout. This casing could have been easily repaired. A new tube should have been put in the casing and at the earliest opportunity the loose rubber should have been vulcanized to the carcass of the casing where it had become loose.



Low-Gear Performance.

What is your opinion about using a motor car for work that requires hard pulling in low gear? And is there any way of telling whether any parts of a car have been strained? These questions come from an Oregon reader who apparently thinks he has abused his car.

The use of a motor car for pulling heavy loads that require it to be in low gear is not particularly injurious if the amount of such work is limited. Naturally, a great deal depends on the skill of the driver in handling his clutch and throttle. However, continual low-gear performance is likely to make the water in the radiator boil and also cause considerable carbon in the cylinders. Do not let the water in the radiator get below the upper hose connection. And if the water boils violently and continuously, that is a warning to stop.

To Make Pickles Crisp.

Add fresh grated horseradish to every jar of pickles and they will be not only crisp, but extremely well flavored.

Now You Can Plow 3½ Miles an Hour—Even Faster

Such plowing speed used to be considered impracticable — even impossible.

But the Cleveland Tractor has proved that it can not only plow at that rate—*but plow in a way that cannot be approached by horses.*

The Cleveland Tractor has proved that it can plow—and plow well—at 3½ miles an hour.

At the Fremont Tractor Demonstration, *over land that was literally muck*, it pulled two 14-inch bottoms running 8 inches deep at an average speed of 3½ miles an hour.

The thousands who saw the performance pronounced it the finest job of tillage they had ever seen.

Small and light, and hauling two bottoms instead of three the Cleveland Tractor is remarkably easy to handle. It works with such speed that it does as much and in some cases more than 3-plow tractors—*and more economically.* At plowing the Cleveland Tractor actually does the work of three 3-horse teams and three men. Its speed can be applied not only to plowing—but to any one of a wide variety of tasks—even to riding in to dinner or home when work is through.

It crawls on its own tracks. It can go anywhere—through sand or mud, up hill or down dale—even over ditches and gullies.

Because it has 600 square inches of continuous traction surface it does not slip, mire or pack the soil.

The Cleveland gives 12 h. p. at the drawbar and 20 at the pulley—plenty of power to meet the requirements of any farm.

It only costs $1185, yet it is constructed of the best materials.

It is built by Rollin H. White, one of the country's greatest motor truck engineers. All gears are identical with those used in the finest trucks and all are protected by dirtproof, dustproof cases.

The Cleveland will enable you to plow when and where needed—without a moment's loss of time. It will help you increase the yield of your acres as it is doing for many others.

We are crowded with orders from all sections of the country. We advise ordering early if you want your Cleveland in time for early spring work.

Wellsville Tests

Though August is perhaps the worst month of the year for the dairy cow, the Wellville Cow Testing association, according to the report of LeRoy W. Hillam, tester, made a very creditable showing in the Cache valley of Utah. The association average for the month was 731 lbs. of milk and 29.2 lbs. of butter fat, .6 of a lb. of fat lower than the average of last month. Considering the oppresion of heat and the large number of flies and the drying up of the pastures, this is a very good showing for the month. This month 64 cows are on the "honor roll" each having produced over 40 lbs. of butter fat for the 31 days testing period. This is a decrease of six over last month; 73 cows made over 1000 lbs. of milk.

The leading cow this month is a grade Holstein, "Beauty," belonging to C. W. Perkinson, she having produced 1240 lbs. of milk testing 6.1 per cent, making 63.2 lbs. of fat. Second place for the month is a native cow owned by LeRoy W. Hall. Her production was 1566 lbs. of 4 per cent milk making 62.6 lbs. of fat. Next to this and third place is John Stuart's "Rosie" with 1420 lbs. of milk testing 4.4 per cent, making 62.5 lbs. of fat. During the lat four months this cow has led the association twice and has been second place twice, a remarkable showing for this time of the year. Fourth place goes to D. A. Leishman's Shorthorn cow "Wart." She produced 1369 lbs. of milk testing 4.4 per cent making 56.2 lbs. of fat.

The high herd average again goes to John Darley's Jerseys. These 21 cows averaged 970 lbs. of milk and 44.6 lbs. of fat.

White River Valley Figures.

In his August report Robert Cowan, tester in the White River Valley Cow Testing association, in western Washintgon, says there has been a decrease in milk flow and an increase in feed cost. The average milk yield per cow was 818 pounds; the average butterfat, 29.62 pounds; the average feed cost, $5.24. Of the 601 cows tested, 152 gave over 1000 pounds of milk. Seventy-six gave over 40 pounds of butterfat, 24 over 50 pounds, and 12 over 55 pounds. During the last six months 18 cows have given over 240 pounds of fat. A cow from John Steele's herd heads the list for the month, having produced 74.78 pounds of butterfat.

Figures From Tests.

The following table gives the names and records of the cows in the Coquille-Myrtle Point Cow Testing association, which have produced more than 45 pounds of butterfat during the period of 30 days ended August 31, according to the report of C. H. Bryant, the official tester:

Owner.	Breed.	Age.	Lbs. Fat.
Herman Peterson	Jers.	7	50.0
Alb. Schroeder	Jers.	5	49.3
John Strong	Jers.	6	48.1
Martin Schmidt	Jers.		48.0
S. S. Reed	Jers.	7	47.7
Alb. Schroeder	Jers.	14	45.3
John Strong	Jers.		45.3

Two-Year-Old Guernsey.

Follyland Nancy 52,457, a 2-year-old Guernsey heifer, bred and owned by I. C. Blandy of Greenwich, N. Y., recently completed an official year's record of 12,270.9 pounds of milk and 712.60 pounds of butterfat, her average test being 5.81 per cent. Three weeks after finishing her record she dropped a fine heifer calf, which is now growing well. Follyland Naney ranks third in butterfat production among 2-year-old Guernseys.

Investigate Milk Conditions.

Mayor Baker of Portland has appointed a milk investigation committee, composed of Henry E. Reed, W. L. Brewster and Mrs. W. B. Ayer.

The commission expects to make a study of present milk conditions in the city and through the district serving it. About 60 dairymen have gone out of business already, according to report. Help is scarce, feed is high and distributing conditions are not good.

It's Natural for a Hog to Wallow

Here's a good thing to do: Provide a wallow close to the feeding grounds to which add Dr. Hess Dip and Disinfectant. As the hogs pass back and forth from the wallow to the feed trough, the **DIP** will kill the lice and cleanse the skin, while the **DRIP** will destroy the disease germs and the worms that pollute the ground. That will mean a clean, healthy skin, freedom from lice, a safeguard against disease and larger, better porkers.

Dr. HESS & CLARK
Ashland Ohio

DR. HESS DIP and DISINFECTANT

Feed the Fighters! Win the War!

Harvest the Crops! Save the Yields!

On the battlefields of France and Flanders the United States boys and the Canadian boys are fighting side by side to win for the World the freedom that Prussianism would destroy.

While doing this they must be fed and every ounce of muscle that can be requisitioned must go into use to save this year's crop. A short harvest period requires the combined forces of the two countries in team work, such as the soldier boys in France and Flanders are demonstrating.

THE COMBINED FIGHTERS IN FRANCE AND FLANDERS AND THE COMBINED HARVESTERS IN AMERICA WILL BRING THE ALLIED VICTORY NEARER.

A reciprocal arrangement for the use of farm workers has been perfected between the Department of the Interior of Canada and the Departments of Labor and Agriculture of the United States, under which it is proposed to permit the harvesters that are now engaged in the wheat fields of Oklahoma, Kansas, Iowa, North Dakota, South Dakota, Nebraska, Minnesota and Wisconsin to move over into Canada, with the privilege of later returning to the United States when the crops in the United States have been conserved, and help to save the enormous crops in Canada which by that time will be ready for harvesting.

HELP YOUR CANADIAN NEIGHBORS WHEN YOUR OWN CROP IS HARVESTED.
Canada wants 40,000 Harvest Hands to take care of its 13 Million Acre Wheat Field.

One cent a mile railway fare from the International Boundary line to destination and the same rate returning to the International Boundary. High wages, good board, comfortable lodgings.

An Identification Card issued at the boundary by a Canadian Immigration Officer will guarantee no trouble in returning to the United States.

AS SOON AS YOUR OWN HARVEST IS SAVED, move northward and assist your Canadian neighbor in harvesting his; in this way do your bit in helping "Win the War."

For particulars as to routes, identification cards and place where employment may be had, apply to Superintendent of Immigration, Ottawa, Canada, or to

J. N. GRIEVE, Cor. First and Post Sts., Spokane, Wash.
Canadian Government Agent.

Shall We Chop Hay?

By E. L. POTTER.

Chopping hay is a practice that deserves most serious attention in times like these when feed is so scarce and high priced. Chopping hay may have two advantages; first, the waste of stems and coarse portions is largely prevented, and second there may be some slight increase in digestibility so that each pound actually eaten will produce greater gain. The latter point, however, is not well proved and in case of wintering stock is rather doubtful. There can be, however, no question as to the waste. Unless the hay is exceptionally good or the stock kept very hungry the waste will run around 10 per cent and sometimes as high as 15 per cent.

The cost of cutting depends largely upon the cost of the machinery and power. The labor cost of cutting hay from the stack or mow runs slightly under $1 per ton with small cutters, say 12 to 14 inch. With cutters 24 inches or larger the cost should not exceed 75 cents per ton. To this must be added the cost of the machine and the power. A 12-inch cutter will require 15 horsepower or more and will cut about one ton of dry hay per hour. The larger cutter will do a little more work per inch capacity than the smaller one. From experience as a stockman rather than as a machinery expert I would consider one-half to three-fourths ton of dry hay per working day per horsepower as about what can be expected.

In previous years $1.50 per ton has been a common contract price for cutting. With hay worth $6 in the stack this increased the cost 25 per cent and it is very doubtful if the gain from cutting was this great unless with fattening cattle on alfalfa alone. With hay at $20 the cost of cutting may be $2 per ton without increasing the cost but 10 per cent, an amount which cutting may be reasonably expected to save. Then in many cases there is not enough hay to feed the stock regardless of the price. Cutting will in this case serve to increase the amount of hay not less than 10 per cent.

Cutting hay has become almost a fad during the last few years, and we have hesitated to recommend it except under unusually favorable circumstances, but now with hay so high and scarce we feel that every stockman should cut his hay providing he is in a position to do so at a reasonable expense since by so doing he will not only work to his own profit, but will help the feed situation by the saving of that much waste.

National Dairy Show

The National Dairy show and horse sale will be held at Columbus, Ohio, October 18-27, inclusive. One of the continuing features of the dairy program will be cattle demonstrations and demonstrations of manufacturing various dairy products by the United Staets department of agriculture and agricultural colleges.

On Monday morning, October 22, there will be a massmeeting of the American dairy industry in which the leading men of the country will discuss with the dairymen the great importance of production of dairy products, that the world may be properly fed. The convention of the American Jersey Cattle club will also be held on this day. The American Guernsey Cattle club convention will be held October 23; convention of the Holstein-Friesian association of America, October 24; the horse sale and cattle parade will be features of the evening sessions. Cattle judging will also be an important part of the program.

Veterinary

Dr. S. B. Nelson

Sores on dog's back.—I have a dog that scratches himself most of the time. Have washed him with sheep dip and soap suds, but it does not do any good. He has sores along his back.

F. S., Albany, Ore.

Answer.—Try obtaining the services of a veterinarian. There are parasites affecting dogs that create the condition that you mention, and I think that you really ought to have the services of a veterinarian to overcome this trouble. In the meantime, try applying to the sores a little of the 1 per cent solution of picric acid.

Scours—I have a cow that gets scours as soon as she is put on green feed in the spring. She seems to be perfectly well otherwise, and gives a large amount of milk, but does not get fat. W. J. C., Nampa, Idaho.

Answer—Try giving your cow a feed of dry fodder hay before you put her on pasture, and that may overcome the trouble.

Teat is injured—I have a heifer that I can only milk by stripping. The udder is soft and has not been sore at any time, but there is a lump at the top of the teat about the size of a pea.

D. S., Santa, Idaho.

Answer—The little valve at the top of the teat has been injured and has formed a lump there. The proper way to do would be to have your local veterinarian, if you have one, operate on the teat and remove the lump. This may be done by an external operation, or it may be done by inserting into the teat the special cutting knife which slashes the tumor so that it can be milked out. If you do not have a veterinarian in your neighborhood I would recommend that you apply tincture of iodine around the base of the teat morning and evening after milking, and keep on stripping the heifer. This may be of value. It has been in some instances.

Fails in breeding—I have a 2-year-old heifer that seems perfectly healthy that I can not get with calf. Also what can be done for pink eye in cattle? H. L. S., Banks, Idaho.

Answer—It is most difficult to say just what is the trouble that is causing your heifer to fail in breeding. I am going to advise two treatments. You can try first one and then the other if the first fails. Put a teaspoonful of sodium bicarbonate into a quart of warm water. Wash out the vagina with this solution two or three days prior to breeding. The second treatment is known as the yeast treatment. Put a cake of yeast in a quart of water and place it on the back of the stove and allow it to ferment. Use this as a vaginal injection the first and second day prior to breeding. Regarding the pink eye in your cattle, I would refer you to the article in this paper on "Contagious Keratitis."

Need more lime.—This summer I have noticed my cows pick up small weather beaten bones they find on the prairie. They seem to suck the lime from them. They have plenty of pasture and salt.

H. L. M., Lothair, Mont.

Answer.—I think if you would mix one part of precipitated calcium phosphate with 50 parts of salt the picking up of the bones would stop. I am quite sure that you are correct in the supposition that it is the lime that they want.

Jerseys for Net Profits

You're in the dairy business for profit—the *net* profit that your herd has made you at the end of the year will determine the size of your bank account. Jerseys yield the largest returns from every ounce of feed—proved by tests at two great expositions. Jersey milk averages 5.3% butter fat, 9.1% solids not fat—highest of all breeds. Buy a Jersey bull. Write the breeders advertised below for prices, pedigrees, etc.

The American Jersey Cattle Club, 314 West 23rd Street, New York City

Jersey Isle Stock Ranch

Herd headed by Bright Light's Knight 103741, a line-bred Gamboge Knight-Combination. Castilian Lady 26628 made 603.3 lbs. fat (715.3 lbs. butter) and 11,530 lbs. milk in 11½ mos., and my herd has highest average test of 399.8 lbs. fat in Buhl Cow Testing association. Young stock for sale.

C. E. LONG, Buhl, Idaho.

Two Choice Bull Calves

From cows with official records of 914 and 663 lbs. butter in a year. Prices in proportion to production and quality.

ED CARY, P. O. Carlton, Oregon. Station, Lafayette, Ore.

Pearl Riga 206648

dropped bull calf July 10, 1917. Her record 458 lbs. butter in 297 days. Sire, Upright's Chief, sire of 6 in R. of M.; half bro. to Golden Glows Chief, sire of 31. Calf's sire, Dominus, out of 817-lb. cow and by bull out of 853-lb. cow. $75 if taken soon.

JOHN B. STUMP & SON, Monmouth, Ore.

1120 Pounds of Butter in a Year

by St. Mawes Poppy is the sixth highest official record of a Jersey cow in the world. She is dam of my herd bull, and his first heifers in milk are heavy producers. Write for prices on young bulls by him out of register of merit dams.

F. E. LYNN. Perrydale, Ore.

Every Cow a Record

Fifty per cent of our cows that have dropped more than one calf have records above 700 lbs. butter, 85 per cent fat. Golden Glow's Chief and Adelaide of Beechlands blood predominates. Special prices on bull calves under 9 months old.

LADD FARM. Oswego, Ore.

Green Meadows Farm Jerseys

Young bull out of dam on official test making good record. Sire a grandson of Golden Glow's Chief, out of dam with official test of over 700 lbs. butter in a year. Other bull calves from register of merit dams. Also cows and heifers.

HENRY STEWART, Prop., Albany, Ore.

Fit for Herd Headers

Young bulls of good individuality, ready for service, sired by Landseer's Tormentor Boy, a strongly bred Tormentor bull, with high-producing cows in his pedigree. Dams of Brown Bessie and Tormentor breeding, with register of merit records. Price reasonable.

J. C. BROWN & SON. Shedd, Ore.

Wynoochee Home Farm

Home of
The Gold Medal Jerseys.

Young stock whose dams or granddams in my herd have won gold medals from the A. J. C. C.

JOHN H. TAYLOR, Montesano, Wash. Box 426.

MAPLE LAWN PLACE, ALBANY, ORE., Home of
Register of Merit Jersey Cattle.

Herd headed by a double grandson of Spermfield Owl—"Moose o' Fernwood" No. 137024, whose dam has an official record of 916 lbs. butter.

We are offering young stock from this rich butter inheritance whose dams are now on official test.

ROBT. L. BURKHART, Albany, Oregon.

Waikiki Farm

Register of Merit Jerseys. Largest Jersey herd in the northwest. Young stock for sale.

IRA P. WHITNEY, Manager.
ROUTE 7, SPOKANE, WASH.

Meet Me at the Fair

where I will show a few bull calves from some of my best cows. For 8 months my herd has had highest average in Marion County Cow Testing association. For 8 months the whole herd averaged almost 60 lbs. of fat per month, per cow.

F. A. DOERFLER, Silverton, Ore.

$100 to $250

Young Jersey bulls, ready for service, sired by St. Mawes Golden Poppy, whose dam has official record of 1120 lbs. butter in a year. Some out of Register of Merit dams, priced according to quality of dam.

M. H. JONES, Perrydale, Ore.

Bull Calf, 8 Months Old

Dam — 10,851 pounds milk, 710.38 pounds butter in 365 days, at three years and eight months.

Sire's dam—535 pounds 5 ounces butter in 365 days.

H. THIESSEN & SON, Milwaukie, Ore.

Bull From Gold Medal Dam

Out of Brown Bessie Alphena's Gem, 827 lbs. butter in year. Sire, Engineer's Bluster, whose dam, Mabel's Bluster, once held world's record for 3-year-old production. His first daughter on test, in this herd, beginning under 2 years old, will make over 500 lbs. butter. Other bulls from Register of Merit dams.

N. H. SMITH, R. D. 2, Oregon City, Ore.

Ashburn Farm Register of Merit Jerseys

Offering of the great butter sire Valentine's Ashburn Baronet, from dams carrying the blood of St. Mawes and Golden Glow's Chief. Real foundation heifer calves for sale.

J. M. DICKSON & SON. Shedd, Ore.

Oak Ridge Jersey Farm Register of Merit Cattle

Twenty-nine years breeding Jersey cattle. Write us for prices and pedigrees. For information address

RILEY E. HULBURT, Albany, Ore.

Ashwood Farm Jerseys

Herd headed by the great sire, HOLGER, and the young bull, ST. MAWES OF ASHWOOD (son of Poppy's St. Mawes and Gertie's Fern Princess). Nothing for sale at present.

McARTHUR & STAUFF, Rickreall, Ore.

POULTRY

Write to the Editor

JAMES DRYDEN
Editorial Contributor

About the only green thing in western Oregon and Washington at the end of this unprecedentedly dry summer are the patches of kale here and there, and the poultryman who has a patch of it for his fowls is fortunate. In spite of the dry weather the kale keeps growing. Those who took our advice to plant kale will I am sure have no regrets that they did so.

If kale is planted on good rich soil it will grow and thrive in spite of the summer drouth and the heat. Give the chickens all they will eat of it.

J. D.

Is a Critical Time

The pullets should be laying soon, those hatched in March and April. Very often, however, owing to crowding in small houses or coops the pullets make very slow development. Their development often receives such a check that they will not begin to lay till midwinter, and they will be permanently injured as egg producers. It is a hard lesson to learn the necessity of furnishing the growing pullets with housing room enough or with fresh air enough, which is the same thing. If there is not house room enough the door of the house should be shut and the pullets allowed to roost outdoors—in the tree or on the top rail of the fence. When the wet weather or the cold weather comes, of course, they should have shelter.

It is surprising how the pullets thrive on fresh air. It is no use feeding wheat or corn or oats to pullets that are starved on fresh air. An open shed house, one with one side altogether open, with roost perches not less than 18 inches apart, is all the housing that is necessary or desirable. It is a waste of valuable feed to give chickens all they will eat and then allow them to crowd themselves together like sardines on perches six, eight or 10 inches apart in a close house. Cut out half of the perches and all of one side of the house and they will return value for the feed they eat.

J. D.

Vigor or Physical Fitness

Strong and weak constitution cockerels.

The accompanying photograph of two barred Plymouth Rock cockerels, which was taken at the Oregon station, shows a very striking case of difference in vigor. One shows very high vigor, the other low. The difference in size and development was not due to age, for the cockerels were both of about the same age. It was not due to feed, for they were both fed alike.

Unfortunately the data are not available to make a positive statement as to the cause of this difference. The most reasonable explanation that can be given of the high vigor in the one case and the low vigor in the other is that they came into the world on an unequal footing, that the vigor or lack of it was inherited from the parent stock. It was not a question of environment, or feeding and care. Environment will not overcome the handicap of an inherited weak constitution. The environment of the parent stock, however, may be responsible for the lack of breeding quality, which will affect the vitality of the offspring.

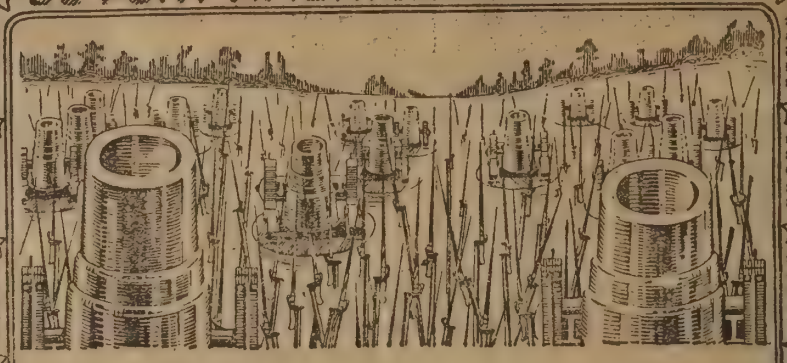
It is important, therefore, that the breeding stock be kept under conditions that will preserve vitality and breeding quality. Improper feeding and housing will lower the vitality of the breeding stock. Persistent inbreeding will result in lower vigor. This, however, was not the case with the cockerel shown in illustration.

It should also be remembered that in a flock of chickens, especially in large flocks, the old evolutionary law of the survival of the fittest operates to a considerable extent. The chick that is hatched weak gets no more consideration from the majority than the strong. It is pushed aside at the feeding trough. In the race after the grasshopper or bug the vigorous gets there first. He takes more exercise, ranges farther and scratches more, develops a better appetite and eats more and consequently grows faster. The larger the flock the poorer the show for the weak. It may happen, of course, that in large flocks, under crowded conditions of brooding and housing, chicks hatched with good vitality develop weak constitutions. That is true. But inherited weakness is the serious problem.

Vigor or physical fitness, however, is not always evident to the eye. It is not measurable. The camera can not always show vigor or lack of it in the photograph, as it has done in the case of the illustration given herewith. It would be an easy matter if, by a glance at a chicken, we could always tell whether it had vigor or not; I mean vigor in all of its parts or functions. It may have a vigorous crow or cackle; it may have a beautiful plumage and a bright red comb. It may have good size and form, and yet have a weakness in some other vital part. The chickens may look vigorous and healthy, and yet fail to do well in production or in breeding. When it comes to reproduction or the laying of eggs it shows a lack of vigor. It may not lay well, or it may lay well and the chicks hatched from the eggs may not grow well.

Production rather than form should be the measure of vigor of the egg layer, and the growth and vigor of the chick should be the final test of the vigor of the breeding hen.

J. D.



Wheat Milling in Italy.

The foodstuffs commissioner of Italy announces the government regulation that the taking from the flour of any other substance than bran is forbidden. This ruling also applies to milling by private individuals. It requires a fixed yield of 85 kilos of flour from every quintal (100 kilos or 220.46 pounds) of wheat for bread making. The regulation forbids any person to prepare, cook, keep for sale or deliver bread made otherwise than according to the percentage indicated.

Ship by Inland Waterways.

Experiments are being made as to the advisability of reviving transportation by inland waterways. One of these experiments has been successfully carried out by the Steel and Wire company of Peoria, Ill., in a recent shipment of pig iron from Sheffield, Alabama, to Peoria, via the Tennessee, Ohio, Mississippi and Illinois rivers, covering a total distance of about 681 miles. The pig iron, consisting of 1200 tons, was loaded upon three barges. The steamer with these barges in toll left Sheffield on July 21 and arrived in Peoria August 1. The shipment was successful financially as well as otherwise and the company has made plans for further transportation of its pig iron in this way.

DU PONT AMERICAN INDUSTRIES

Is the Enemy on Your Farm?

This is a war of endurance. Men and money are important but—*food counts most.* Soldiers who fight must eat. So must their dependents at home. The world must be fed.

Every idle acre of reclaimable land on your farm aids the enemy. Every acre of untilled soil deprives many needy mouths of food.

The sinking of each food ship is a disaster, but the idle acres of America could grow more food per year than all of the enemy's submarines can destroy. Fight the enemy now, with

DU PONT and Repauno Stumping Powders

They are the most efficient reclaimers of cut over, boulder strewn or swamp land. They help to solve the labor problem, enable one man to do the work of many and do it better and quicker.

GRANVILLE LOWTHER
Editorial Contributor

ORCHARDING IS ART.

Success Requires Real Application

By GRANVILLE LOWTHER.

Commercial fruit growing, for the best markets, is as much an art as sculpture, painting, music, literature or poetry. In order to excel it will require as much skill as to chisel a statue; as much taste for esthetic beauty, as to paint a picture; as much knowledge of science, as to fill a professor's chair in college, and more technical study than to prepare for the professions of journalism, law or medicine. The idea that anybody with or without preparation or study can grow fruit, is true if there is no standard of quality requirement. In that case if the trees are planted and live to the bearing age, the fruit will grow itself. Then, all the consumer has to do is to pick it off the trees and eat it. But, if the best is to be grown, there must be a knowledge of ecology; that is, the adaptation of varieties to environment. In order to illustrate that, it is only necessary to know that the Baldwin is one of the best apples for New York, and one of the porest for the Pacific northwest. The Newtown and Belleflower are the best apples for California, but the Belleflower grown in the state of Washington, will not pay expenses. The Jonathan is the best apple for Colorado, but not good for the lower warmer altitudes of the Gulf states. The Ben Davis is one of the best for the Ozark mountains, but one of the poorest for the Pacific and Rocky mountain states. The Wagener is a good apple for the Spokane district, but in the Yakima country, we are digging them out and planting better varieties. I mean, varieties better adapted to our conditions. This illustrates what I mean by the study of ecology.

If a man would know what to do under the varied conditions that confront him in orchard work, he must know the laws of biology, plants and plant physiology. I think I will be pardoned the apparent egotism of saying, that it was by this means I discovered the causes of "apple rosette," and published my opinions, amidst a dozen or more conflicting theories, demonstrated that I was right by a cure of my own orchard, and have the pleasure of seeing hundreds of orchards cured by the same process. The orchardist should know how the plant gets its food, and what varieties of food it needs. The stock man knows what to feed his cattle, horses, sheep, hogs and chickens; the fruit grower should know equally well what to feed his trees.

In a further article on the art of fruit growing Dr. Lowther enumerates a long list of the necessities of successful orcharding, showing that each of them is in itself a fine art. —Editor.

Prices of Fruits.

It now seems that growers will get good prices for apples. Reports from Canada show that they are paying $7 to $8 per barrel, and for boxed apples $2 to $2.50 per box. If the growers on this side of the line can get prices equal to those they will even up for some of the struggles they have had for the past few years against small profits and losses.

Pears are now selling for $35 to $40 per ton, and peaches 40 cents to 50 cents per box. This seems like old times when we used to get similar prices and sold for cash.

However, this is not at all out of proportion to the prices of other food products, and of other commodities. Even at these prices the fruit grower will not receive more in proportion than the hay grower. Neither will he receive profits equal to the advance in manufactured articles. Considering the higher cost of labor, boxes, paper and other materials, he will make a decent profit. G. L.

Apple Outlook Good.

"While apples have advanced less in value than any other food articles," writes H. F. Davidson, who recently left Hood River, Ore., for New York city to attend the annual convention of the International Apple Shippers' association and to open his eastern and export office for the season, "the advance of approximately 25 cents per box at the present time as compared with last season will take the apple growers out of a class of business men who have been doing business at a loss. Further advances will bring profit to the growers."

Pig Club Members.

Agriculturist A. R. Hahner of Stevens county, Wash., reports visiting the Hunters Boys' and Girls' Pig club and finding eight active members, two of which have purebred Poland China pigs. A daily record of the feed eaten by the animals is kept. Elias Nelson calls the club together bi-weekly to discuss the various phases of hog raising.

After Yakima Hay.

Montaan stockmen and dairymen are seeking to buy Yakima hay in car lots and through associations.

Offers Lot for Condensery.

The Grand Hotel, Sumas, Wash.—To the Editor of The Washington Farmer: I have got a plot of land in Sumas, 150 by 100 feet, which I will present to a first class milk condensery. It is situated in the center of the city and adjoins the railroad.

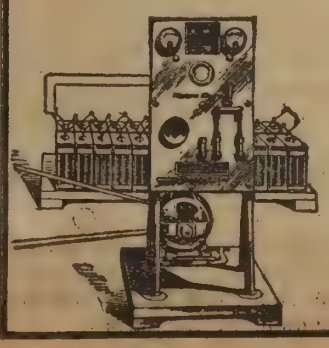
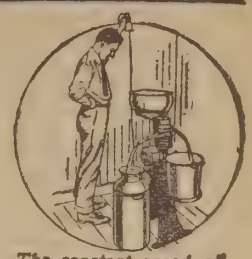
Western Electric
Labor Saving
Farm Light and Power Plant



YOU are considering electric lights for your farm—every progressive farmer is. Don't overlook this: electricity on the farm brings more than safe, bright lights; it brings a farm hand that never sulks or grumbles, one that will work 24 hours a day, every day in the year—a hired man that will never quit.

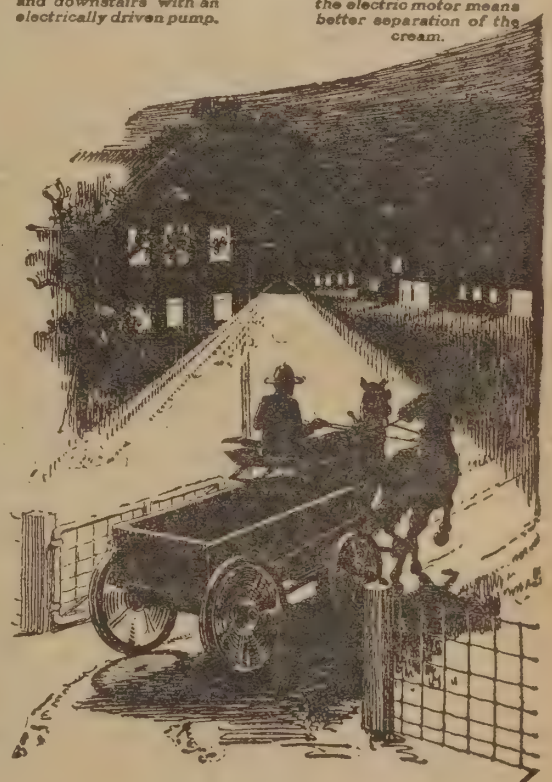
You talk about the scarcity of good farm labor. Consider this: electricity will turn the grindstone, the cream separator and the churn, without a pause for dinner or a stop for sleep. It will clean the house, wash and iron the clothes, wash the dishes, cool the home, and do a score of other irksome household tasks. It needs no humoring—it asks no pay. *It's better than the best hired help you ever had!*

And you can get electricity easily. You can buy a Western Electric plant and use your own gas engine to run it. You certainly can run a gas engine! Well, then, you can run a Western Electric plant.



It's as easy to take care of as the Western Electric farm telephone in your home. Back of it is 40 years of electrical experience, a national distributing organization with stocks in 35 cities, and an agent in your territory.

When you buy a Western Electric Plant you can get Western Electric lamps, motors, pump, cream separator, iron, washing machine, vacuum cleaner—in fact, almost every kind of electrical appliance built especially for this service. Have your whole electrical outfit a Western Electric.



Running water upstairs and downstairs with an electrically driven pump.

The constant speed of the electric motor means better separation of the cream.

Grand champion boar—C. M. Payne, first.
Grand champion sow—Silver Birch farm, first.

Chester Whites.

The Chester White awards were distributed between Ed Schoel, Tangent, Ore.; Wood Lower, Colbert, Wash., and C. M. Meenach, Kiesling, Wash. They were as follows:

Boar, two years old or over—First, Wood Lower; second, Ed Schoel.
Boar, one and one-half years and under two—First, Ed Schoel.
Boar, one year old and under one and a one-half—First, Ed Schoel; second, C. M. Meenach; third, Wood Lower.
Boar, six months and under one year—First, Ed Schoel; second, Wood Lower; third, Wood Lower.
Boar, under six months—First, C. M. Meenach; second, C. M. Meenach; third, Ed Schoel.
Sow, two years old or over—First, Ed Schoel; second, Ed Schoel; third, C. M. Meenach.
Sow, one and one-half years and under two—First, Ed Schoel; second, Ed Schoel.
Sow, one year old and under one and one-half—First, Ed Schoel; second, Ed Schoel.
Sow, six months and under one year—First, Wood Lower; second, Ed Schoel; third, Wood Lower; fourth, C. M. Meenach.
Sow, under six months—First, C. M. Meenach; second, Ed Schoel; third, C. M. Meenach.
Boar and three sows, one year old or over—First, Ed Schoel; second, Ed Schoel.
Boar and three sows, under one year—First, Ed Schoel; second, C. M. Meenach; third, Wood Lover.
Boar and three sows over one year—First, Ed Schoel; second, C. M. Meenach; third, Wood Lower.
Boar and three sows, under one year (bred)—First, Ed Schoel; second, C. M. Meenach; third, Wood Lower.
Get of one boar—First, Ed Schoel; third, C. M. Meenach; third, Wood Lower.
Produce of one sow—First, C. M. Meenach; second, Wood Lower; third, Ed Schoel.
Champion boar, one year or over—First, Wood Lower.
Champion boar, under one year—First, Ed Schoel.
Champion sow, one year or over—First, Ed Schoel.
Champion sow, under one year—First, Wood Lower.
Grand champion boar—First, Wood Lower.
Grand champion sow—First, Ed Schoel.

Hampshires.

J. M. Fruits of Enterprise, Ore., won everything in the Hampshire class with a very complete exhibit of excellent representatives of the breed.

Fat Hogs.

The premiums in the fat hog division went to Robert Nelson, North Yakima, Wash.; Ray J. Fox, Lyons, Ore.; J. M. Fruits, Enterprise, Ore., and Edward Schoel, Tangent, Ore. The awards follow:

Barrow, 250 to 300 pounds—First, Robert Nelson; second, Ray J. Fox; third, J. M. Fruits.
Barrow, 200 to 250 pounds—First, J. M. Fruits; second, Robert Nelson; third, Robert Nelson.
Barrow, 150 to 200 pounds—First, Edward Schoel; second, Edward Schoel.
Best pen of three barrows—First, Ray J. Fox; second, Robert Nelson; third, Edward Schoel.

Special Awards.

Sow, largest litter pigs, 2 months or under—First, A. H. Poston, Spokane, Wash.
One boar and three sows, amateur breeder (Hemmenway & Moser Cigar company)—First, R. P. Camp, Ione, Wash.

SHEEP.

Hampshires.

In the Hampshire sheep two Oregon men, J. G. S. Hubbard of Monroe and Edward Schoel of Tangen, divided the honors as follows:

Ram, 1 year old and under 2—First, J. G. S. Hubbard; second, J. G. S. Hubbard; third, Edward Schoel.
Ram lamb, under 1 year—First, J. G. S. Hubbard; second, J. G. S. Hubbard; third, Edward Schoel.
Ewe, 1 year old and under 2—First, J. G. S. Hubbard; second, J. G. S. Hubbard; third, Edward Schoel.
Ewe, under 1 year—First, J. G. S. Hubbard; second, J. G. S. Hubbard; third, Edward Schoel.
Flock—First, J. G. S. Hubbard; second, J. G. S. Hubbard; third, Edward Schoel.
Pen—First, J. G. S. Hubbard; second, J. G. S. Hubbard; third, Edward Schoel.
Champion ram—First, J. G. S. Hubbard.
Champion ewe—First, J. G. S. Hubbard.
Best showing, ram 2 years old or over; ewe, under 1 year—First, J. G. S. Hubbard.
Best showing, ram, 1 year old and under 2; ewe, under 1 year—First, J. G. S. Hubbard.
Flock of two yearling ewes, two ewe lambs and one ram (American Hampshire Sheep association special)—First, J. G. S. Hubbard; second, J. G. S. Hubbard; third, Edward Schoel.
Flock, ewe, 2 years old or over; ram, any age, two yearling ewes and two lambs—First, J. G. S. Hubbard; second, J. G. S. Hubbard; third, Edward Schoel.

Southdowns.

J. G. S. Hubbard of Oregon was given all the awards in the Southdown divisions, winning all the prizes for the following:

Ram, 2 years old or over; ram, 1 year old and under 2; ram lamb, under 1; ewe, 1 year old and under 2; ewe, under 1 year; pen; flock; champion ram; champion ewe; best showing by breeder; best showing by exhibitor; ewe, 2 years old or over.

Lincolns.

Mr. Hubbard also won with his Lincolns, the only prizes awarded being on his entries of ram one year old and under two and champion ram.

Shropshires.

Oregon sheep men captured all the honors in the Shropshire exhibition, being Vaughn & Fox of Lyons, Francis Kizer of Harrisburg, Pelzer Brothers of Tangent and Frank Donison of Lyons. The awards were as follows:

Ram, two years old or over—First, Vaughn & Fox; secnd, Vaughn & Fox; third, Francis Kizer.
Ram, one year old and under—First,

HELPING HENRY

THE LITTLE GIANT FOR WORK.

Saws wood, pumps water, runs silo filler, grinds feed—in short, does a hundred and one jobs in a jiffy. Develops up to 10 horsepower.

Your Automobile Supplies the Power

To put Helping Henry to work, you merely run it under your car, press a lever, which brings the drive wheels firmly into contact with the rear wheels of your car, start your engine, and Helping Henry goes to work.

EXHIBITED AT MOST ALL FAIRS.
Look For It.

Handiest, cheapest little helper in the world for the farmer who has a car.

Write for folder and special agents' offer.

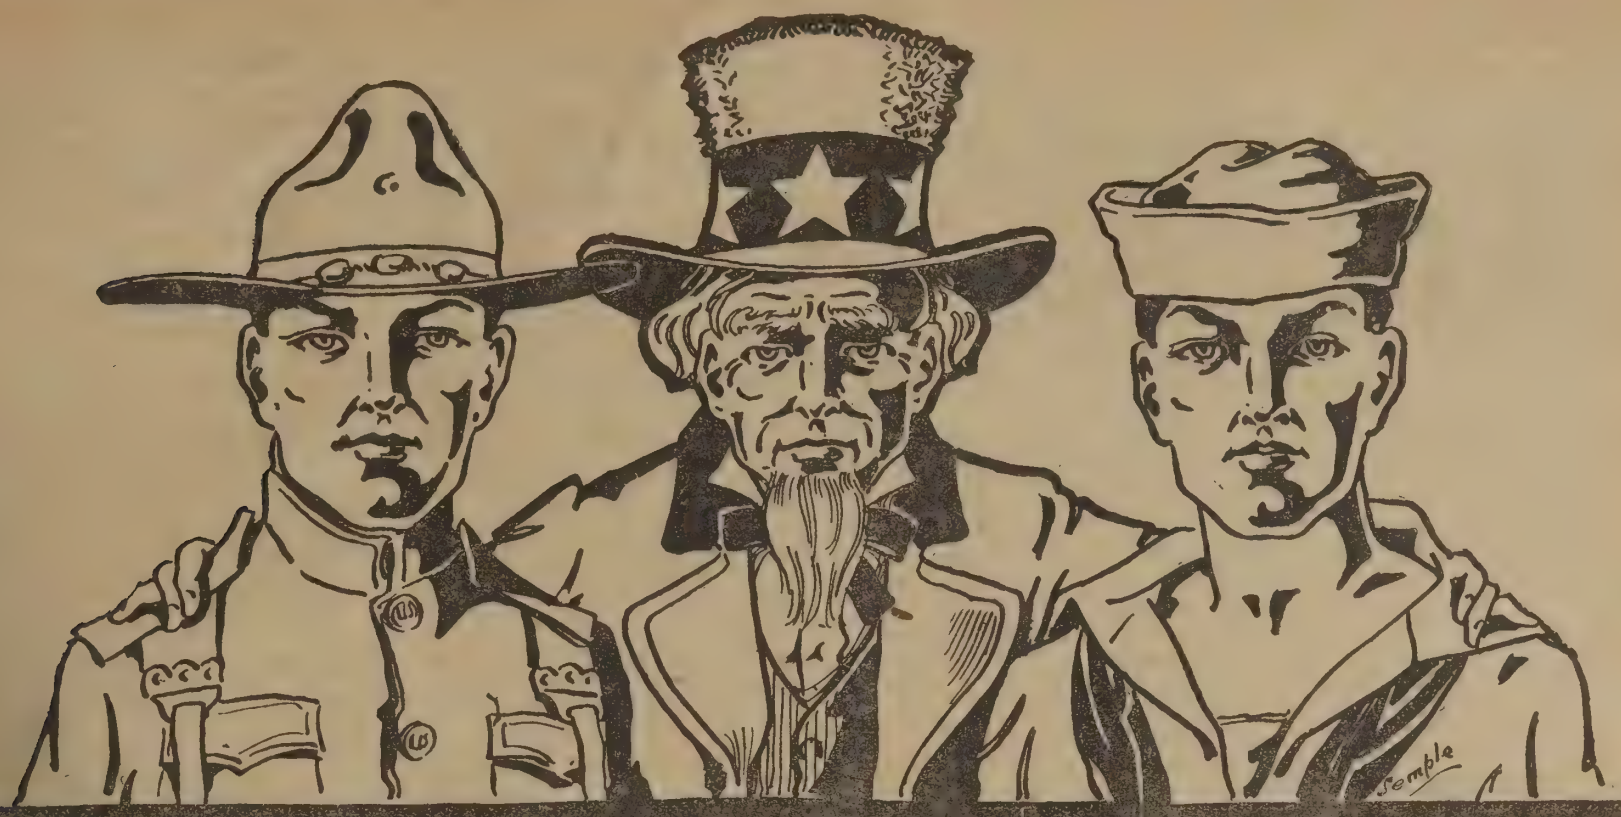
The U. S. Government Adopts

KING EIGHT CYLINDER

For Light Armored Motor Cars

Because this stock Chassis is Durable, Economical, Accessible



YOU may never need to take *your* car to the front; you may never want to ride over Lookout Mountain on high gear; you may never care to make a fuel economy test like the one from Pittsburg to Milwaukee. You want your car for pleasure, business or both. Your car should have the efficiency that made these unbroken KING records possible. With an eight cylinder KING you'll feel secure. It will be victorious in every test that you put it to.

Help me Feed these Boys!

I AM DEPENDING UPON YOU, MR. NORTHWEST FARMER, TO WIN MY FIGHT FOR HUMANITY IN THE WORLD'S GREATEST WAR.

Your part is just as important as the part these boys play in France and on the high seas. I want you on the firing line with your food----produced as economically and with as little labor as possible.

You can do yourself and your nation a service by equipping your farm with a Bull Tractor.

BIG BULL TRACTOR

Burns Kerosene or Gasoline

It will save you money from the start by plowing land cheaper for you than by any other method.

SUB-SOILING MEANS MORE CROPS

The Big Bull Tractor breaks the soil from three to five inches below plow depth. This is done by five-inch lugs on the Big Bull wheel which runs in the furrow, loosens the sub-soil and breaks the hard pan. This exclusive patented feature will increase crop yield from 10% to 30%.

EXCLUSIVE FEATURES OF THE BULL TRACTOR

1. The Bull Wheel runs in the furrow, and does not pack the land. This principle is covered by patent.
2. The Patent STEERING WHEEL, also running in the furrow in line with the Bull wheel, makes the tractor positively and automatically self-steering.
3. Patent leveling device by which the tractor is quickly and easily adjusted to side hills or deep furrows.
4. Direct drive with only four gears. All complicated transmission and compensating gears absolutely eliminated.
5. Special Gear-shifting device.
6. Electric welded gasoline tank and brass tube radiator.
7. Extra large crank shaft and connecting rod bearings.
8. Extra large inspection plate on top of motor; affording easy examination of bearings without disturbing

The Ups and Downs of the Bunchgrass Boy

For $10 Buys a Pony With an Evil Reputation

PART I.

By JOE L. ASHLOCK

(Copyright, 1917, Joe Ashlock.)

Most people know that if you wish to lose a man's friendship, just kick his dog. It is the same with a boy and his pony.

Rover is a dog's name, generally speaking; in fact, a loved playmate of mine on the eastern Washington bunchgrass of long ago was a pup named Rover. Rover was a lovely, brown-eyed, kind and playful pup, and would follow at my heels all day on the chance of a kind word or look. He died young. He ate a poisoned squirrel.

The next Rover I owned also had gentle brown eyes, a glossy brown coat and nimble feet. Down somewhere inside, he also had a kind, though sadly misunderstood heart. This Rover was a broncho cayuse—thick, powerful neck, deep chest, slender legs corded with muscles of steel, and small, black hoofs which, when whipped all day by the bunchgrass, gleamed like the ebony fingerboard of a new fiddle.

He had a light, supple, velvety tread; just the same, when you were in the saddle on his back you could feel the power and lightning in his chunky, muscular body; and knew that he could jump out from under you quick as wink. Looking back, I think of my broncho Rover as a high-power dynamo, ready to sparkle with electrical energy if touched or brushed in the right spot.

I was told that Elam Rice touched Rover in a way that produced an electrical discharge once—and, in consequence, good rider though he was, Elam sailed from Rover's back all spread out like a flying squirrel.

Elam was riding Rover through the wheat stubble, carrying a babbitt metal spoon. Rover was glancing at the babbitt spoon with the white of his eye showing. Just for fun, Elam poked the spoon at his nose and said, "Boo!"

Elam does not know yet just what happened. He thinks maybe Rover turned a couple of back somersaults. In a flash Elam found himself astride the empty air and descending. He came down head first, face downward, in the deep dust of the field. When he got up, spat the dust from his mouth and rubbed it from his eyes and dug it out of his ears and collar, Rover was 20 feet away biting at stray wheat heads and keeping a bright, white-rimmed eye on the babbitt spoon.

A while after that, Rover was tied to the derrick rope of a horsepower threshing machine—just beyond reach of the wheat stack, into which he much desired to shove his velvety nose. He pulled and twisted and squirmed with this object in view. He persisted till he got the saddle-horn caught against the derrick rope, which, by and by, gave a powerful jerk against the saddle horn, caused by the starting of a big forkful up toward the derrick table.

The jerk against the saddle-horn excited Rover. He gave a lightning surge against the taut derrick rope, and up came the steel derrick pin, letting the derrick rope jerk loose when two horses and a big forkful of grain were pulling against it—and in consequence, nearly upsetting the derrick table. The hoe-down men yelled and jumped for their lives. The driver of the derrick team was standing on the double-trees and riding—and suddenly collapsed into the dust. The forker saw the big derrick tripod tipping down onto the haystack toward him and he yelled "What's the matter?" and then beat it off the stack without waiting for an answer.

Meanwhile, Rover was having a time all by himself. His rawhide halter rope had been tied to the derrick rope, and the man who tied it, meant for it to stay tied. It did. As the heavy rope fell, the steel derrick pin was banged against Rover's side and raked him on the back. His snort was like the crack of a rifle, and he moved out of there like a highpower skyrocket.

So many things happened in the next few minutes that no one can tell them all. Rover charged like a thunderbolt as far as the big derrick rope tied to his halter would let him, and then was yanked backward. If his neck had not been a good combination of steel and rubber, it would have been broken. He did this thing perhaps half a dozen times, each time going to the end of the big derrick rope harder than before, and each time in a different direction. Pandemonium reigned.

He presently, in one of his wild charges, went through and over the 12 or 16 horses that were hitched to the power. This created some confusion. He added to the confusion by dragging the big derrick rope over the backs of all the horses, and under the feet of three whom he tripped and threw down. Also, the rope knocked the power driver off his platform; and then the power horses got rattled and reared, plunged, twisted the coupling rod to the separator and broke one of the connections, letting the horsepower go wild with all the horses hitched to it and plunging in all directions.

There was real danger in the situation, you see; for no one knew when Rover would plunge into the mess again and knock everybody and the horses down with the big rope that was trailed in his rear.

Luck ended the mixup without fatalities. Going like an express train, Rover struck the wheat-stack head on, partly burying and partly stunning him. Half a dozen nervy men laid rude hands on him then, and one of them, an ex-cowpuncher, expertly cast a rope about his feet, threw him and had all four feet yanked together in a hard knot in a second or two. Then they unsaddled him, haltered him, untied him, and led him a safe distance from the machine and tied him to a wagon wheel. At noon the next day, threshing was resumed. I believe Rover, unfed and without water, but cussed many times, stayed tied to the wagon wheel all that time.

So Rover, for the price of $10, came into my hands with a most evil reputation. I looked him over. His softly brown, velvety eyes belied his reputation. I decided that he had been mistreated and misunderstood. Right from the start I loved him just as much as I had Rover the pup; and I never ceased loving and admiring him, notwithstanding the battles I had with him.

The broncho and I got on quite well, however. Maybe this was because I knew beforehand what he would do, and tried no experiments. People who have handled horses only now and then, a livery team, maybe, or a saddle horse taken care of by some one else, do not realize the depth of understanding that can spring up between a boy and his horse when they are in constant association with each other. I could tell by Rover's glance or action, the white of his eye, the poise of his ears, the shifting of his feet, or the tenseness of his posture, just about what he was thinking about doing—and stood away, or came close, according to my reading.

"Morning Stars"

By PAUL E. TRIEM.

As the door closed on the departing visitors, Mildred Stirling threw herself back in her chair with an exclamation of utter weariness.

"Grandma," she said, "I don't see how you stand that kind of people around you all the time! I didn't used to mind them when I was a little girl, but now—I think you must be a saint!"

Grandma King looked at the pretty girl in the high-backed, chintz-covered arm-chair with gentle deprecation. "They're my neighbors, you know, Milly," she replied. "And they're—well, they're human, just like the rest of us. I'll own they gossip a wee mite too much, and they aren't always careful to modulate their voices and to use good grammar. But when any one's in trouble, the Jensens are the first to do something practical to help. That's what I look at, more than the surface things."

Mildred sat up very straight, her eyes bright and a little touch of color flaring suddenly into each cheek. "Surface things—why, that's one of the principal aims of education, Grandma! It's the 'finish' which enables one always to recognize and to respect the niceties of life which distinguishes the educated person from the boor! I could respect these people if they simply were ignorant of the facts of Roman history. It's their crudities of manner which make them impossible."

"Well, well, dearie, I guess I must be used to them. I never notice these things you complain of, anyhow."

Mrs. King smiled the gentle, kindly smile which was habitual to her. Then she went out into the hot morning sunshine and began to "potter" with her flowers.

Mildred followed her presently and found her hanging lovingly over some little pails filled with leaf mold and garden loam, from which grew slender sheafs of lily-like flowers. The little pails were standing in the shade of the north wall.

"Why, what wonderful flowers!" the girl exclaimed as she stooped to catch the evasive fragrance of the star-shaped blossoms. "What are they, Grandma? And why are they standing here behind the house—I should think you'd have them out in the front garden, with the others!"

"I don't know what the right name for them is," Grandma replied musingly. "Your grandpa and I brought them from the woods, 20 miles north of here, a good many years ago. We call them 'Morning Stars.'" She paused to look thoughtfully from the flowers to the pretty face bending over them. "You can take a couple of pots out into the front garden, if you like," she added indulgently.

Mildred hastened to avail herself of this permission. She carried two large clusters of grandma's "Morning Stars" into the sunny front garden and set them in the warmest, brightest corner.

"There," she commented, "now they'll have a chance to show themselves and to get all the sunlight they want!"

Mrs. King nodded approval. "They'll get plenty of sunlight there," she agreed.

Grandma was bustling about clearing up the breakfast things, next morning, when Milly came running in from the garden.

"Oh, Grandma!" she cried, "something must have happened to those 'Morning Stars—' they look as if they had been frosted! They're all black and wilted!"

Mrs. King stood looking sympathetically at the girl. "Well, now, that's too bad," she said gently. "But—I knew they would be that way, dearie. Maybe I should have warned you—but you see—"

She paused, a little wrinkle of deprecating pity on her usually serene forehead.

"Yes?" Milly said. "You knew it—and still you let me do it! I feel like a murderer!"

Grandma sat down beside her. "You didn't kill them," she said. "It was the sun. You see, dear, those Morning Stars aren't like other flowers—they have to be protected from the sunlight, and do well only in the deep, cool shade. I suppose they've grown in the forest so many hundreds of years, that they've become educated to shadow, as you might say. Sunlight and the beat of the wind and the rain are the normal, natural surroundings for other flowers and plants, but these Morning Stars have been shielded so long that they've lost their power of resistance. There's always the danger of that sort of education, you know—the kind that makes plants or animals or men narrow and exclusive. It needn't do that, and of course real education has just the opposite effect: it broadens the mind and develops tolerance and sympathy; teaches its possessor to see the good and to understand the bad; teaches him above all, I think, to distinguish mannerisms and peculiarities which are merely personally unpleasant from greater foults and flaws of character

(Continued on page eighteen.)

SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

Why a Twinkling Eye Is Said to Denote Good Humor

Dr. Hirshberg.

AS the eyes sparkle, so shines the intellect. There may not always be a quantitative relationship between the mind and the eyes, but the quality of the one seems often to reflect that of the others.

A twinkling eye is correctly considered to denote great good humor and harmless mischief. The dull, cavelike eye seems properly to mirror a clinging, dependent soul.

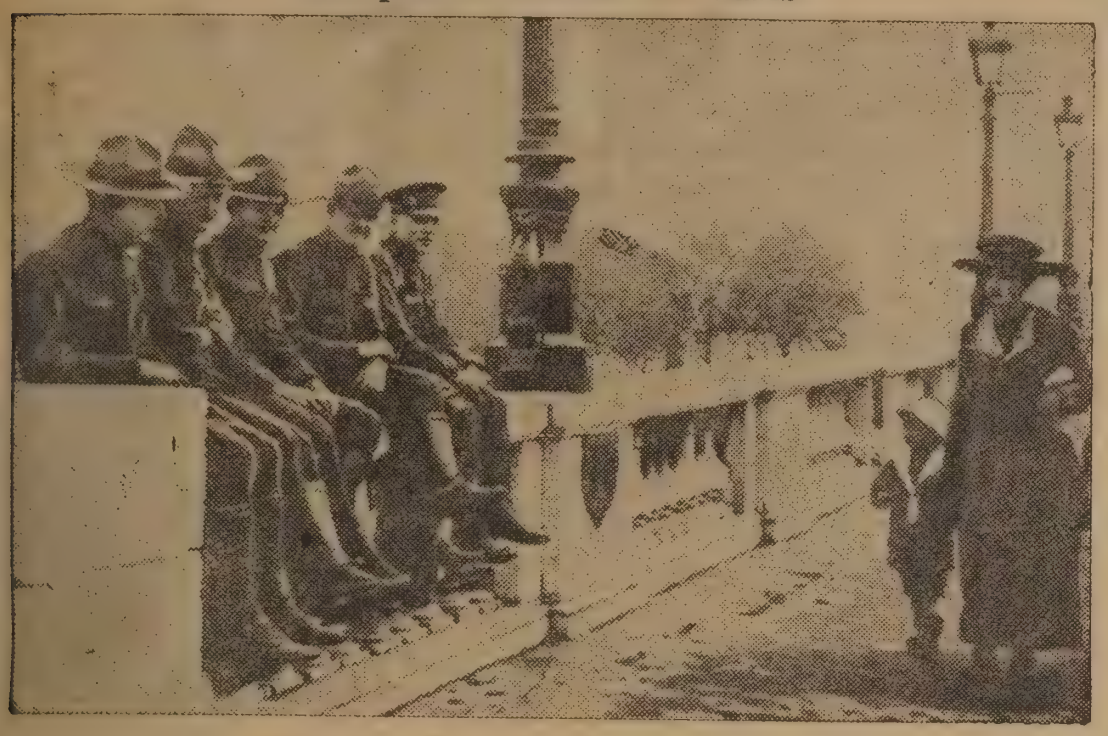
Friar Laurence in "Romeo and Juliet" wisely says: "Young men's love then lies not truly in their hearts, but in their eyes." What he really meant was that hearts were window-paned through the eyes.

The eye is not satisfied with seeing. It must show something itself. That something may be exhibited in its color or in its loveliness. The eyes may be homes of silent prayer or lodestones of fidelity, power and strength. The clearness and color of the eyes may point to a character for genius or one of bigotry. A colorless, prominent eye with a very small pupil, scarcely a dot of color, sometimes means a cold, mercenary nature or a narrow, superficial intellect.

Gerald Elton Fosbroke, who has written a book on character-reading, holds that very dark blue eyes, dilated and transparent, indicate large qualities of soul, clear-mindedness, a good intellect, enthusiasm and constancy.

Gray eyes seem to be distinguished representations of a fine intellect, keen sensibilities, calmness, a careful and deliberate nature and self-control.

Large, bold, black eyes are somehow associated with temperaments which show deep feeling. There is a depth of emotion frequently in those whose eyes are a deep dark shade, which can not be found commonly in light-eyed individuals.

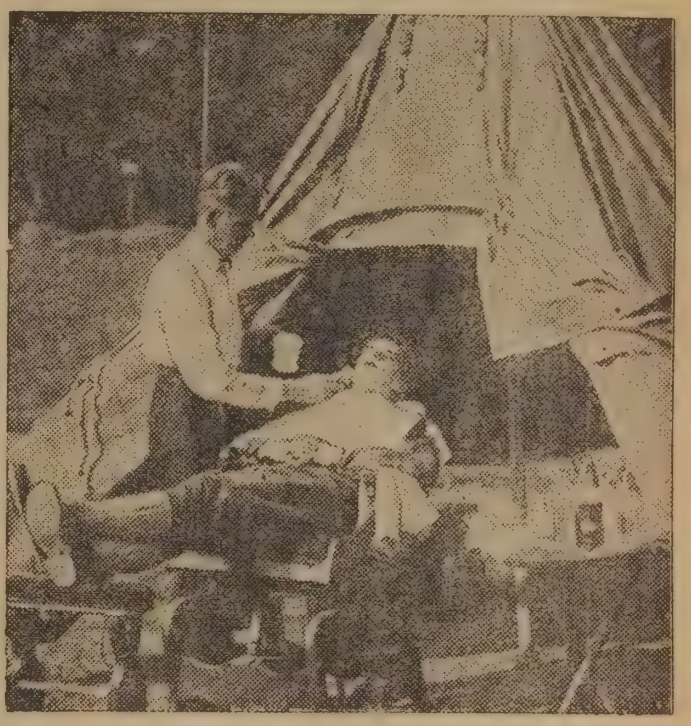


Brown-eyed persons are of the optimistic, cheerful, sanguine type. True enough, like other dark-eyed people, they may hide uncontrollable passions and temper, but they also point to faith and sentiment, qualities sometimes wofully wanting in the gray and blue-eyed.

Independent of their color, the eyes are a telltale language to those who are observant. The brilliant, sparkling eye, generally dark, drawn upward enough to show something of the white, makes the student think of unchecked feelings and wilful disregard of the usually fine mind which accompanies them. Full, dark eyes of this sort delight in action and are seldom content to live a reflective, contemplative life.

Big dark eyes mean love, devotion, action, animation, ambition and often great impulsiveness and impetuosity. The darker the eyes, the greater the quantity of these qualities; the lighter the eyes, the less of such qualities.

All the World's a Stage, and All the Men and Women Merely Players



Troopers at Home in Paris

Copyright by International.

Some of Major General Pershing's doughboys enjoying short leave in Paris. The old sight-seeing bug has followed our American boys abroad and so when they are off duty they train it to the nearest big city and "do" it from the Hotel de Ville to the last farm on the outskirts of the town. The photograph shows a group of our American soldier boys making themselves at home on the bridge of La Concorde, viewing passing Paris with intense interest.

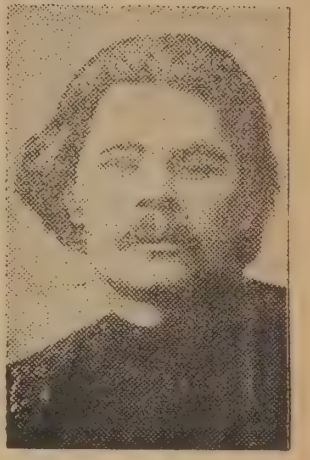
Regimental Barber at Work

Copyright by International.

The members of the Twenty-third regiment, New York National Guard, now in camp at Van Cortlandt park, New York city, won't go unshaved when they reach France. They probably won't be strong on the massage and shampoo stuff, but the regimental barber will keep his razor busy.

What Are You Doing?

—Rip, in Boston Globe.



American Indians Volunteer for War

Copyright by International.

American Indians are not behind in their obligations. Many of them have already volunteered for the regular army and in guard regiments. Especially eager to serve are graduates from Uncle Sam's school at Carlisle and other government institutions. Company F, Sixth Nebraskan infantry, organized less than five weeks, carried off the honors at the military tournament at Walthill, Neb., recently. The Winebago, Omaha, Santee, Sioux and Yankton tribes of the Sioux are represented in the company.

Accuses Maxim Gorky.

The famous Russian writer has been accused of unintentionally being the agent of the kaiser by Vladimir Bourtzeff, the Russian revolutionist. He has worked recently in accord with Lemine.

The Awakening

—Aymond, in New Orleans Daily States.

English Women Assume Hard Tasks

Copyright by International.

Another field has been found in which English women are successfully replacing men. In the above picture are shown two of the women foresters who are taking the place of men in this difficult work in England and whose saws and axes are ringing through many a wood in the tight little isle these days. Women in England are doing almost all sorts of work nowadays, not stopping at even the heavier kinds of manual labor, as the photograph shows.

Must Not Make Whisky or Brandy

Uncle Sam Clapped the Lid Down Tight on Night of September 9

For the first time since America was settled the manufacture of whisky and brandy has come to a full stop. The prohibition clause of the food control law did the business, and Uncle Sam clapped down the lid at 11 o'clock on the night of September 9. This action was taken under section 15 of the law, which provides:

"That from and after 30 days from the date of approval of this act no foods, fruits, food materials or feeds shall be used in the production of distilled spirits for beverage purposes. Provided, that under such rules, regulations and bonds as the president may prescribe, such materials may be used in the production of distilled spirits exclusively for other than beverage purposes, or for the fortification of pure, sweet wines."

That is, the distilleries can manufacture alcohol, but they must not make whisky or brandy.

Under the law as it now stands, the making of beer and other malt drinks and of wines is permitted in those states that do not prohibit their manufacture. The law, however, gives the president authority, whenever his judgment so descrees, to prohibit also the manufacture of malt beverages and wines. This optional authority is conferred in the following provision of the law:

"Whenever the president shall find that limitation, regulation or prohibition of the use of foods, fruits, food materials or feeds in the production of malt of vinous liquors for beverage purposes, or that reduction of the alcoholic content of any such malt or vinous liquor is essential, in order to assure an adequate and continuous supply of food, or that the national security and defense will be subserved thereby, he is authorized, from time to time, to prescribe and give public notice of the limitation, regulation, prohibition or reduction so necessitated."

The penalties for violation of this law are a fine not exceeding $5000, or by imprisonment for not more than two years, or both. The law has sharp teeth.

Here are some timely and important facts in this connection:

Approximately 116,000,000 gallons of whisky are produced each year by American distilleries. Production of alcohol by the same distilleries for commercial and medicinal uses other than beverages approximates 146,000,000 gallons. The manufacture of alcohol for the latter purposes will continue as usual, probably in greater volume, and few of the larger distilleries, if any, will have to shut down, according to government authorities.

The class of distilleries which will be put out of business is composed almost wholly of small plants operated by from one man to half a dozen men, located in California, Ohio and New Jersy and producing brandy from grapes, apples and peaches. These produce approximately 2,600,000 gallons a year. Those in New Jersey and Ohio, officials believe, will suspend business. The California distilleries, it is thought, will continue to operate in part for the manufacture of spirits for fortifying sweet wines.

Stopping whisky manufacture, instead of curtailing the government's revenues, will increase them for the next two years, officials, believe. Coupled with the pending revenue bill, the withdrawal of whisky from bond will probably treble the revenues within the next 12 months, as the present law imposes a tax of $1.10 and the revenue bill contemplates a tax of $3.20 a gallon. A stock of approximately 230,000,000 gallons has accumulated in the bonded warehouses and on the shelves of wholesale and retail liquor dealers. Approximately 190,000,000 gallons are in warehouses, and upon that quantity the government will collect taxes upon alcohol for commercial purposes, except alcohol for denaturization. The revenue bill would impose a tax of $2.20, doubling the present income.

There are approximately 700 distilleries in the country, of which more than half are small fruit brandy plants. The amount of capital invested in the latter class is not great in the aggregate. The capital invested in the big producing plants mounts high into the millions. Officials here believe that losses will be more than wiped out by the prices distillers will obtain for product already manufactured. In the opinion of some officials, whisky will be selling at $15 a gallon within 12 months, affording distillers enormous profits.

Free Yourself From Food Prejudice

The following thrift program was prepared by Helen Knowlton, dean of women, New Hampshire college and experiment station, and published as a press bulletin by the college:

TACKLE your job as a patriotic duty. The world needs food. Are you using more than you need? Are you wasting any food by throwing away left-overs? Do you store your food in such a way that it never spoils? Are you using some cheap substitutes for expensive foods? Do you ever waste food by careless cooking?

HELP train yourself. Tell others of your successes in thrift. Teach those who know less than you do. Take food saving seriously. Enlist at once in the army for food conservation.

RESOLVE to save on food expenditures: by using less meat and cheaper cuts, and more milk, cheese, fish and nuts in place of meats; by using more cereals, especially corn products, oatmeal and rice; by using some dried fruits; by using the cheaper vegetables such as turnips, carrots and greens; by omitting some luxuries.

INQUIRE diligently as to the best and wisest ways of economizing. Do not, for example, if you omit meat on some days, expect starch to replace it. Use milk, cheese, beans or peas, eggs, or fish.

FREE yourself from food prejudice. Sirloin steak may taste good, but it must be as cheap as 19 cents a pound if it is to supply body-building food (protein) as cheaply as milk at 8 cents a quart. One quart of milk builds as much body tissue as 7 ounces of sirloin steak. Cease to say "don't like" or "can't eat."

TRY definitely to eliminate waste.

MILK: Do you use even the last quarter cup? Do you use buttermilk, sour milk, and skimmed milk? Do you make cottage cheese out of left-over milk?

FATS: Do you save every bit of bacon fat, beef fat and other fats? Do you know how to use mutton fat?

BREADSTUFFS: Do you store cereals and flour so that insects cannot get into them? Do you use left-over crusts and stale bread? Is your bread always good? If not, do you know why not? Do you scrape out your mixing bowls thoroughly?

FRUITS: Do you let any spoil? Do you know how to can all kinds?

VEGETABLES: Do you know how to store them? Do you buy more than you care to use so that some wither or spoil? Do you throw away the water in which they are cooked instead of using it for soups? Do you let cooked left-overs spoil? Do you pare carefully so as not to waste? Do you know how to can vegetables?

MEATS: Do you store carefully to prevent spoiling? Do you ever over-cook meat and so waste it by making it inedible? Do you use more than you need? Do you save and use all trimmings, bones and fat? If your family numbers five, do you buy 3 quarts of milk before you buy 1 pound of meat?

Sidelights

Disavowal.

Private Biggs (whose period of training is over)—See here, Cap'n Miggs, now that I am a civilian again, I want you to understand that I take back all the salutes I've given you since I came here.—Life.

The Wonders of Science.

A camera man, working for the educational department of a film company, met an old farmer coming out of a house in the town where he was working, and explained his presence in these words:

"I have just been taking some moving pictures of life out on your farm."

"Did you catch any of my laborers in motion?" asked the old man curiously.

"Sure, I did."

The farmer shook his head reflectively, then said: "Science is a wonderful thing."

Has a Fascination.

"You seem to spend a lot of time at the aquarium."

"Yes, it has a fascination for me since coming back from vacation. I went to so many places where there were no fish."—Louisville Courier-Journal.

Girls of Other Days.

"Speaking of the peaches we knew 20 years ago—"

"Yes."

"Some of them seem to be pretty well preserved."

"Morning Star"

(Continued from page sixteen.)

which often enough are not repellant in themselves, but which indicate real spiritual sickness."

She paused to lay her hand comfortingly on the girl's. Mildred had been looking out through the open window to where, in the sunny corner of the old fashioned garden, the clusters of Morning Stars drooped their disspirited heads.

"Yes," she said huskily. Then she cleared her throat and turned a bravely smiling face toward Grandma King. "You're right," she said. "And I'm not going to tolerate any symptoms of the 'Morning Star' sort of education in myself. I want to be broad, and kindly, and gentle; to be able to live in the everyday world, with everyday people, and to radiate cheerfulness rather than disparagement and gloom. After all, I think mignonette and sweet alyssum and hollyhock and wall flowers are more practical than Morning Stars"

Women's Military-Heel Walking Boots

The vogue for trim, military lines in women's footwear is well exampled in the smart new Autumn model pictured, built of

FINE NUT-BROWN RUSSIA CALFSKIN

with blind eyelets, perforated vamp and tip, flexible overweight welt sole and 1⅝-inch military heel. Exceptionally smooth fitting and comfortable. Sizes 3 to 8; widths AA to D. Your money back if not satisfactory.

Grange Picnic at Valley Prairie

By C. V. REECE

Northwest of Spokane, about 30 miles, as the crow flies, one comes into a farming community called Valley prairie. Perhaps the spirit of friendly, constructive cooperation is no greater in the Valley prairie community than it is in many other communities. It is quite likely, too, that in some longer settled sections of Washington more evidence of farming progress is apparent. But in no farming community that we have visited are there more promising indications of permanent future development along the right lines.

A week or so ago we were invited to attend a basket picnic and fair held at the Valley prairie schoolhouse. It was an informal affair, but every one of the 20 or 30 families present was frankly and thoroughly interested in helping to bring home to each other and to all visitors who attended a fuller appreciation of the farming possibilities of the section.

The fair was held under the auspices of the Valley Prairie grange. In the basement of the schoolhouse was arranged a display of grains, hay, fruits and vegetables that would have been a credit to any community during a season of normal rainfall; but which, in this season of unusual drouth, were of a quality to cause downright admiring wonder.

There was an exhibit of winter rye grown by W. M. Fisher which spoke eloquently of what can be done with this profitable crop on Valley prairie soil. We believe it can be pretty safely predicted that winter rye will be grown quite generally in that section in years to come. Although not a wheat section, from the standpoint of extensive production, the exhibits of bluestem grown by T. L. Donaho and M. A. Slinkard were especially good. The pea crop of the valley, too, judging from the samples displayed, was much better than that in most other parts of Spokane county. Corn—big, heavy-stalked corn carrying good ears—was shown by Peter Darcy. It had grown lustily and the leaves were of darkest green—this, mind you, without a drop of rain all summer. This corn and rye and peas and the many evidences of heavy yields of root crops, brought visions of a day when Valley prairie will be known as a favorite section for hog raising.

In fact, some very good purebred Durocs were exhibited by W. M. Fisher, C. C. Nelson and others—an example of what may be expected in future.

There were 16 entries of potatoes grown by the Valley prairie boys and girls' potato club, organized by O. S. Fletcher, assistant county agriculturist. Maude Nelson won the first prize with a plate of Earliest of All. Thomas Darcey took the second prize with Early Ohios, and the third prize went to Emory Donaho for White Minister.

It is pleasing now to announce that these same potatoes were awarded first and second prizes at the Interstate fair at Spokane. Also that first prize for all boys and girls' potato clubs was awarded the Valley prairie potato club by the Interstate judges.

Live stock prizes were awarded to Edward Fisher for a Duroc brood sow over 1 year and Duroc pigs under 6 months and to Edward Kerr for a Shorthorn heifer over 1 year.

Everything considered, we feel, in reviewing our acquaintance with the folks of Valley prairie, that we like their optimism, their practice of sensible community cooperation, their broad-gage ideas about farming and their hospitality. Their fair and picnic was in every way a success. More than 150 Valley prairie granges were present. T. L. Donaho, chairman of the program committee, had arranged for addresses from D. G. O'Shay, president of the Northwest Federal Land bank; J. R. Shinn, county agricultural agent for Spokane county, and others. Music was furnished by W. W. V. Winans and his two sons. Mr. Winans also gave a short talk on the advantages of establishing young people's bands and orchestras as a pleasing and effective means of promoting neighborhood interest and for cementing the home ties that the call of the city can not break.

Those of the Valley Prairie grange who were in attendance at the community fair were: T. L. Donaho and family, W. M. Fisher and family, M. A. Slinkard, P. J. Darcy, J. G. Mihm, F. H. Wilson, W. H. McVey, A. Beaton, R. Green, C. C. Nelson, M. F. Magner, J. C. Rice, M. C. Dean, John Walker, their families, and others.

Home Canned Tomatoes.

Don't miss any of the following steps in canning tomatoes, is the injunction of the United States department of agriculture:

Wash your jars; wash rubbers; test rubbers for quality.

Set empty jars and rubbers in pan of water to heat, and keep hot.

Fill washboiler to cover jars two inches with water.

Heat water in washboiler.

Use only sound, fresh fruit.

Place tomatoes in a colander; scald by setting over a vessel of boiling water, covered tight, or plunging into boiling water 1 1-2 minutes.

Dip quickly into cold clean water.

Remove skins and cores.

Pack quickly into hot jars.

Press down with tablespoon; add no water.

Add level teaspoonful salt per quart.

Put rubbers and caps in position; not tight.

Place jars on false bottom of washboiler.

Submerge jars two inches.

Let boil for 22 minutes.

Start counting when water begins to boil.

Remove jars.

Tighten covers.

Invert to cool and examine for leaks.

If leaks are found, change rubbers and boil again for 10 minutes.

Wrap in paper.

Store in cool, dry place.

The Real Aristocrat

The Farmer Coming Into His Own

"Once the people realize that the farmer is the true aristocrat, and that will come only when they realize the need of food, then we will have a 'back to the land' movement that will amount to something," said E. F. Benson, state commissioner of agriculture in discussing the food price situation in this state. "Washington has the greatest natural advantages for dairying of any state in the union," he says, "and yet milk and butetr are high now and are going higher, although not so high perhaps as some fear."

He made the foregoing remarks when questioned as to the accuracy of the statement that as a result of the establishment of the big army post at American Lake eggs would go to a a dollar a dozen, milk to from 15 to 25 cents a quart, and butetr $1 a pound or better while cream may vanish from the market.

The advent of the army post has upset all calculations in the southwestern part of the state. Never before have the prices for foodstuffs been so high for the farmer.

Commissioner Benson is inclined to think some of the prices are a little high. But he says the people will only begin to produce their own food in some measure or other when they begin to get hungry.

"For some time past the teaching has been in the wrong direction. Many a boy has been raised by fond parents to think that it is not proper for him to have callouses on his hands or tan on his cheek. The family would not like to have a producer in the family who produced in such a manner. But all that is going to change.

"Many youth have been trained to believe that it is necessary to wear a white collar while at work to be a gentleman. The country has not awakened to the value of the farm producer. He is now coming into his own. Once the people get to raising a part of their own food supply, learn to conserve what they have and to waste nothing, to utilize the resources about their premises, then relief will come from high prices. But they must all help.

English Thoroughbred Horse.

In view of the demand that this war is making on the world's supply of horses, and the many that are being killed or rendered well nigh useless for any purpose, even agricultural, a correspondent of the Manchester Guardian has recently made an interesting study of the nation's horses, and has written a report on the subject. The facts shown indicate that every possible encouragement will be given after the war to the continued breeding of the English thoroughbred horse. The correspondent says: The national value of the thoroughbred horse extends far beyond the limits of the race course. It is indispensable to the production of useful half-bred stock and army mounts. After the war every nation will find its stock of horses seriously depleted by the constant drain of the last three years.

SNAPS in ALBERTA and MANITOBA FARM LANDS

The undersigned have for sale, as administrators, the following parcels, which must be realized on to enable them to close up the estates under their care, and the beneficiaries are prepared to accept, for a quick turn, reasonably low figures for the properties compared with their actual values.

Parcel 1 5066 acres south of Lethbridge, Alberta, on the famous Milk River ridge, with the Milk river running through it, fenced and cross fenced; A1 for mixed farming and stock. Excellent buildings, outbuildings, corrals, etc. Large area under cultivation, magnificent pasturages and hay lands, 400 acres in summerfallow. Price for the whole only $15 per acre. Easy terms.

Parcel 2 6 sections open undulating prairie near Cardstone, Alberta, a large proportion of which has already been broken and cultivated; soil of the best, elevator close at hand. Acquired at $25 per acre. Will sell for quick turn-over at $17.50.

Parcel 3 2400 acres with large summerfallow, about 800 acres crop land, excellent buildings, close to the famous wheat city of Brandon, Manitoba. Location to market and elevator quite convenient. Soil of the best. Our close valuation $35 an acre. For quick sale will sell for $25.

Parcel 4 640 acres near Otterburn in the famous Red River valley. Splendid house and barn. All the cultivated land summerfallowed and ready for 1918. Soil black clay loam of the best. Our close valuation $25 an acre. For quick turnover will sell for $18.

Parcel 5 26,000 acres suitable for colonization, convenient to Winnipeg. A decided snap. $20 per acre. Another 7000 acres near Raymond, Alberta, at $16.50 per acre.

Further details of all or any of these properties forwarded on application.

THE STANDARD TRUSTS Co.

346 Main Street. Winnipeg, Manitoba.

Editorial Contributor

Ways to Save Food

To the Editor of The Farmer: I received your letter some time ago, in which you request me to answer and let you know how I manage to save food, etc., and prepare wholesome dishes on the farm. I will tell of a few ways I try to save.

In the first place, I think any housewife can soon easily tell how much to cook for the number she has to do for every day. Then I think there is much less wasted if everything is nicely cooked, well seasoned and nicely served. I do know that much depends on the way food is put on the table.

I always use a clean white tablecloth and freshly washed dishes and cleanly scoured cutlery and silverware. I think men like to sit down to a clean table. If I have anything left from a meal I always save it and fix it over some other way to go on the table next time. If I have vegetables left over I generally make them into soup for the next meal. Almost any cooked vegetables make a delicious soup if mixed together and cream, milk and butter added and salt and pepper to taste.

It seems a "snap" to me to get up a good meal on the farm when one has all kinds of vegetables and cream, milk, butter and eggs. We don't always have meat, but when we don't we don't miss it very much, for I just add a couple of dishes more of vegetables, and we get along nicely without meat. I make a dish of canned salmon that everyone likes, and it is not expensive.

To a tall can of pink canned salmon I make a nice, rich dressing like for roast pork. I take a large onion and fry light brown in a baking spoonful of butter or other shortening. I take about the amount of one-half loaf of bread or cold biscuit and wet them thoroughly in cold sweet milk. Then I put them in the frying pan with the opion and season to taste with sage, salt and pepper. Then I put in the salmon and mix all together into a nice loaf, take out and put in a baking pan with more butter or shortening around and put in the oven and bake to a nice light brown. When done I take it from the baking dish and make a nice gravy in the pan with a tablespoon of flour and sweet milk. One can of salmon so fixed up will quite nicely serve seven or eight people.

A very nice cake is made with one tablespoon well rounded up of butter or other shortening, one and one-fourth cups of sugar rubbed well together and one-fourth teaspoon of salt (if you don't use butter), one cup of buttermilk or sour milk, one-half cup of black cooking molasses, into which stir two-thirds teaspoonful of soda till it foams up and fills the cup, then add to above one-half teaspoon cinnamon, one-fourth of nutmeg, one of ginger, one-fourth of cloves and one-fourth of allspice and two and one-half cups of flour, into which add one rounding teaspoon of baking powder. This can be baked in a loaf, or, if baked in gem pans, can be served as pudding while warm, with either whipped cream or some nice sauce made with fruit juice or vinegar.

One thing more I would like to tell some of the women is that I found out last summer that ants can be got rid of by sprinkling concentrated lye around where they are bothering and around on the floor where they come in. I was so glad I made the discovery, for I do think thtey are such a nasty nuisance. MRS. WILL LLOYD.
Cabinet, Idaho.

Hominy Grits.

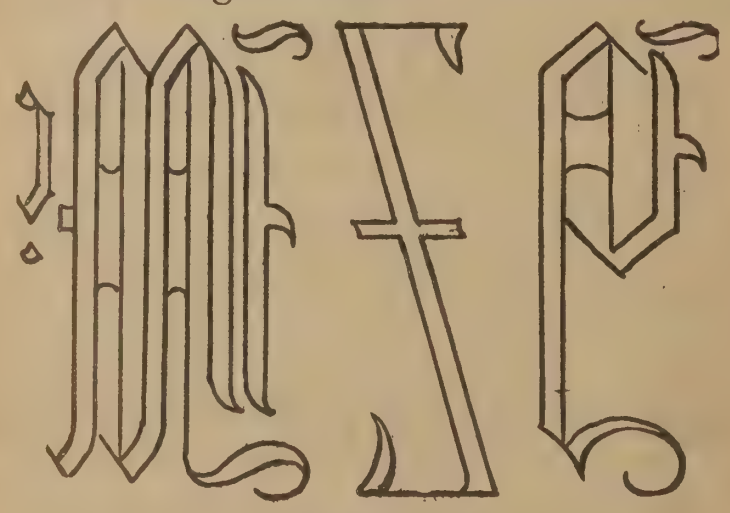
In the far south hominy grits is a breakfast dish, a dinner dish or a supper dish. It goes well and quickly with bacon or hash for breakfast. Sometimes a southern child will stir into his grits a soft-boiled egg, making a complete meal. Usually it is eaten with gravy or butter.

To cook hominy grits. Wash thoroughly; allow 3 cups of water to 1 cup of hominy; salt to taste. Cook in single boiler until hominy begins to thicken. Then set on back of stove or on asbestos mat and cook slowly until done. Hominy needs about an hour's cooking. It burns very easily. It is much improved by beating in half a cup of milk just before dishing up. The pan in which hominy has been cooked should be put to soak in cold water at once. If hot hominy is poured into a deep dish it can be turned out when cold, cut in slices and browned under the blazer or fried like mush. Fried hominy is usually served with duck. It is also an appreciated addition for breakfast.

Those who wish to try out hominy are advised not to serve it as a breakfast food with milk and sugar. It is too starchy to be satisfactory; it needs the flavor of the meat or egg. Serving it as a breakfast food will only prejudice the family against a really valuable food product.

To Mold Rice and Potatoes.

Women who know are using the nickel plated ice cream servers for molding rice, making potato borders for the roast, and for cutting fruit in balls for compotes. This little implement is substantially made. A thumb lever automatically releases the substance molded in a perfectly round ball.

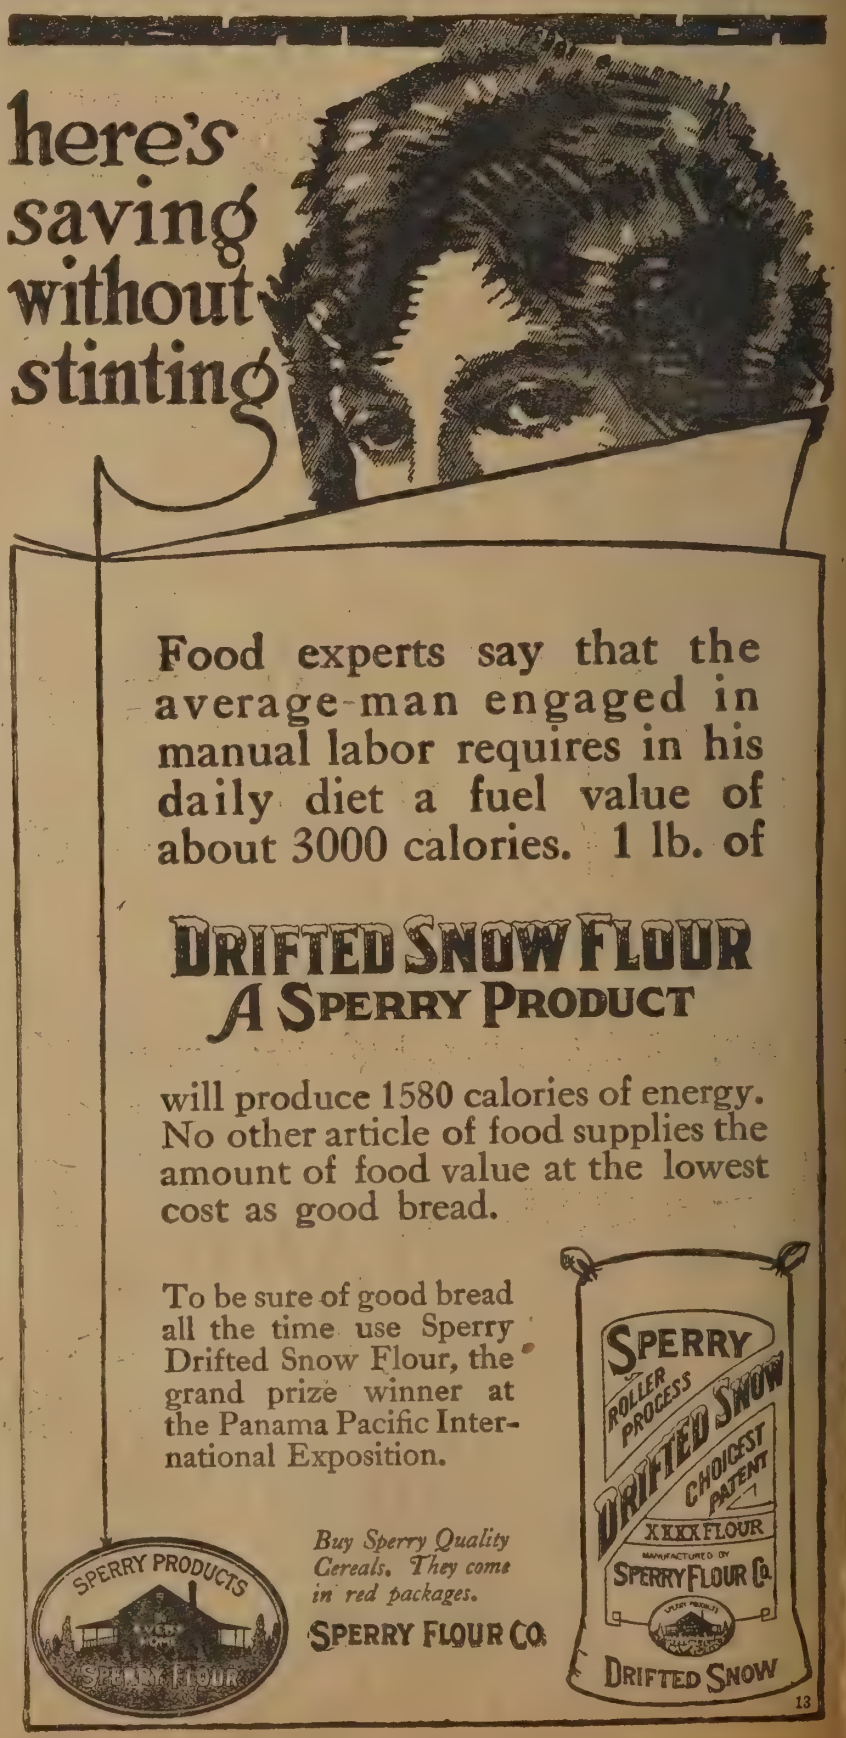


Who has not dreamed a world of bliss
On a bright sunny noon like this,
Couched by his native brook's green maze,
With comrades of his boyish days,
While all around them seemed to be
Just as in joyous infancy?
Who has not loved at such an hour,
Upon that heath, in birchen bower,
Lulled in the poet's dreamy mood,
Its wild and sunny solitude?
—William Howitt.

New Potato Stuffing.

Take large baked potatoes, cut a slice off the top of each and scoop out the insides, taking care not to break the shell. Mix the potato with chopped meat (any leftover will do) seasoned with salt paprika and horseradish or Worcestershire. Moisten with stock or gravy, or a little hot water. Fill potato shells with this mixture, place a small bit of butter on top of each and brown in the oven.

Old English Initials to Embroider



By WINIFRED WORTH.

To transfer this design, put some soap in a pint of hot water, stir and remove excess moisture by partially drying design. Place material on a hard flat surface and lay the design, face down, upon the material, cover with two folds of newspaper and, with a tablespoon, rub, pressing hard, until the design is entirely transferred.

White embroidery floss of linen quality, or the mercerized, is the best for making letters. Always soap the fabric with white soap under the initial before embroidering. This aids one in washing the color from the finished design.

In padding these old English initials, different methods may be used. Some use the twilled cotton for the purpose, others make the chain stitch, while others let a skein of floss out at full length and embroider a strip of it under the thick part while forming the letter, clipping the skein when the initial is finished. This is a splendid method, quickly done, and is suggested, too, as a help in padding all large pieces in border or crescent outline.

Initials can be made by filling in the broad space with French knots. This is used largely on elaborate pieces, such as the laundry bag, table scarfs and ornate gifts.

Patterns

2220—Girls' dress. Cut in four sizes: 6, 8, 10 and 12 years. Size 10 years requires 3 1-4 yards of 44-inch material. Price, 10 cents.

2225—Ladies' dress. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 36 requires 6 1-8 yards of 44-inch material. The dress measures about 2 7-8 yards at the lower edge, with plaits drawn out. Price, 10 cents.

2217-2218—Ladies' costume. Waist 2217 cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt 2218 cut in six sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. It requires 3 yards of 27-inch material for a medium size for the entire dress. The skirt measures 2 1-8 yards at the foot. Two separate patterns, 10 cents for each pattern.

2226—Girls' dress. Cut in four sizes: 8, 10, 12 and 14 years. It requires 4 1-2 yards of 44-inch material for a 10-year size. Price, 10 cents.

1885—Ladies' combination corset cover and drawers. Cut in seven sizes: 32, 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 3 5-8 yards of 36-inch material for a medium size. Price, 10 cents.

2207—Ladies' house dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires for a medium size 6 3-4 yards of 44-inch material. The skirt measures 2 2-3 yards at the foot, with plaits drawn out. Price, 10 cents.

1977—Ladies' apron. Cut in four sizes: 34, 38, 42 and 46 inches bust measure. It requires 7 1-4 yards of 36-inch material for a 38-inch size. Price, 10 cents.

1978—Child's dress. Cut in four sizes: 2, 4, 6 and 8 years. It requires 2 1-2 yards of 36-inch material for a 4-year size. Price, 10 cents.

1918—Child's rompers. Cut in 3 sizes: 2, 4 and 6 years. It requires 3 yards of 36-inch material for a 4-year size. Price, 10 cents.

2222—Union suit with or without sleeves, for men and boys. Cut in six sizes: 28, 32, 36, 40, 44 and 48 inches breast measure. Size 36 requires 2 7-8 yards of 36-inch material without sleeves. With sleeves it requires 3 1-8 yards of the same width. Price, 10 cents.

1998—Dress for misses and small women. Cut in three sizes: 16, 18 and 20 years. It requires 6 1-2 yards of 36-inch material for an 18-year size. The skirt measures about 2 3-4 yards at the foot. Price, 10 cents.

2210—Ladies' dressing sack. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires, for a 38-inch size, 3 5-8 yards of 36-inch material. Price, 10 cents.

The value of precious stones imported in 1916 for the first time crossed the $50,000,000 mark.

BE SURE TO GIVE NUMBER AND SIZE.

For Baby's Bassinet.

A cover for baby carriage or bassinet which will protect him from flies and mosquotoes is made of one and one-half yards of white net, 72 inches wide, small piece of bright blue voile and two and one-half yards white elastic, says the Kansas City Star. The corners of the net should be cut to be even, a three-fourths inch hem put all around and the elastic inserted.

The blue voile is used for bluebirds. Five or six about seven or eight inches long are enough to interest baby. These can be button holed around with the eye and the wings marked in heavy thread and can be machine stitched.

Mosquito netting can be used if one prefers, but wash net is much better.

Fitting Hogs for Fairs.

Doerfler Bros. of Silverton are selecting a fine herd of Duroc-Jersey hogs from some 50 head.

My Dear Boys and Girls:

What do you suppose are the things important in life?

Here are some of them:

Smile whether we feel like it or not.
Keep sweet temper all the time.
Never tell a lie.
Never steal.
Never be cruel.
Help others.

I am sure every one of the members of our Corner tries to do all these things. And we must not be discouraged if we fail sometimes. Let us put failure behind us and try again. I trust you all; I love you all; I feel sure you try hard. Your loving

AUNT NELLIE.

Some Ways to Help Our Country.

Dear Aunt Nellie: As I have not written for quite a while I am going to write you again. I am 13 years old and will be 14 the 31st of January. I am going to try to win a prize. My subject is "How Can I Help My Country?" For one thing we can grow all kinds of vegetables so as to help feed the United States soldiers and the allies. Also if we were old enough to become Red Cross nurses for the wounded soldiers that would be about the nicest thing any one could do for their country. If we were boys we could go and fight for Uncle Sam. If we are girls we can be sailorettes and take the places of men on the ships doing typewriting and things like that. I hope Uncle Sam wins in the war, which I think he will. If Russia wouldn't turn back it would help the United States an awful lot. The schools of Yakima county took up a collection to help put a flag pole at North Yakima and those that helped had their names buried in a box underneath it. It is in front of the courthouse. We have been having awful hot weather this week. I have been going in swimming. My mother is going to take a trip back to Greenville, Ohio, this fall so I am learning to bake bread and cook. I baked bread today and a cake. If I have a twin I would like to correspond with her or him.—Mary Weaver, Wapato, Wash.

Real Patriotism Begins in the Heart.

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I am 14 years old. I will be in the eighth grade this year. I am going to write about "How Can I Help My Country?" I can help my country by increasing, conserving and preserving the food supply that comes directly under our control. I can help my country by joining the Red Cross and influencing one other person to do the same. I can help my country by being saving not only by money, but food. I can help my country by increasing my efficiency, no matter where I am or what I am doing. I can help my country by being constructive in word, thought and deed, by avoiding criticism, and by going about my daily life with a new consecration to duty. Real patriotism begins in the heart. If you are patriotic within, the outward expression will take care of itself.—Gladys Powell, Bow, Wash.

Clelah Likes to Climb Trees.

Dear Aunt Nellie: This is the first time I have written to the Farmer. I like the Children's Corner very much and would like to be one of your nieces. I am 11 years old, and would rather live on a farm than any place. The other day my sisters went out on the farm and cleaned out the horse trough and went in swimming. On the farm we sleep out in the open air. Once when I was riding a horse bareback I wanted to gallop. The horse I was on trots very hard, but she trots before she gallops. I bumped up off her back and landed on my feet on the ground. I wear overalls most of the time. Overalls keeps our dresses clean, and mama doesn't have such big washings then. I like to climb trees and ride horseback very much. I suppose most children do. I am in the sixth grade. I would like to correspond with any of the cousins.—Clelah Cooper, Ritzville, Wash.

Not Very Easy to Drive Hogs.

Dear Aunt Nellie: I will shamefully say that this is the first letter I have written to the Children's Corner. My subject is "Hog Driving." I am at my grandmother's. My grandfather is a great hog lover. He calls them his little pets. I have to drive hogs many times and I expect you know how they act; they go any way but the way you wish for them to go. We have about 100 hogs. I have one sister named Claire. She is a mere babe, and I also have two brothers named Lowell and Ralph. I am 14 and in the eighth grade.—Edna A. Tueth, May View, Wash.

Keep House While Mother's Away.

Dear Aunt Nellie: My folks take The Washington Farmer and I enjoy reading the cousins' letters. This is the second time I have written to the Corner and I hope to write again. I am 10 years old and in the fifth grade. My birthday is March 19. Have I a twin? If I have I wish they would please write to me. I live on an 80-acre farm and would not exchange with any city girl. My mother and my baby sister are going on a trip to Ohio to see our folks. My sister and I are going to keep house. I have six sisters and three brothers. During school vacation I stayed with my brother in North Yakima about a month and then came home and then went up to see my teacher in Selah. Her name is Miss Oliver. We went with our neighbor in a car. We have a Ford. My sisters, Mary and Mildred, and I sang some school songs at a little schoolhouse in Selah that Sunday night. My sister, Mary, is writing about "How I Can Help My Country?" She forgot to tell that she has a sister in Columbus, Ohio, waiting on the tables for the soldiers.—Ruth Naomi Weaver, Wapato, Wash.

Likes to Watch Them Fill the Silo.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I like to read the letters very much. I am in the fifth grade. I am 10 years old. I will be 11 on March 31. My school teacher's name is Mr. Dailey. I live on a 40-acre farm. I can crochet an edging. I went up to the foot of the Cascade. The roads were very hilly. We picked flowers on the way up. We saw two blue racers, one snake was trying to seat the other up. We went a little farther and we saw two lizards. We have a sewing club. My brother used to work in the sheep camp. There was a spring where they used to get their water. In the water there was some little water lizards. We have a big silo and when they fill it I like to watch them. We have to go after the cows at night. We have one dog of our own and his name is Fritz. I take music lessons. We have a piano.—Lucile Turnley, Moxee City, Wash.

Cousin Gertrude Has Found Her Twin.

Dear Aunt Nellie: This is the first time I have ever written to the Children's Corner. We take the Farmer and I enjoy reading the Corner very much. Yesterday when I was reading the letters of the Corner I saw one from a girl that was the same age as I and her birthday is the same and she is in the same grade. Her name was Ruth Matthies. She lives at Pomeroy. We get some of our mail there. I would like for her to write to me. I have three sisters and one brother. My sisters' names are Ella, Laine and Leta. My brothers names is Clement. I hope to see my leter in print.—Gertrude Crawford, Unfried, Wash.

Brother Rides the Spotted Pony.

Dear Aunt Nellie: I think I will write to the Children's Corner for the first time. Papa takes The Washington Farmer and I always read the letters from the cousins. I will be 12 years old on the 31st of October, and will be in the seventh grade this year. I hope that I have a twin and would like to have her write to me. Papa owns a fruit ranch and a small dairy. We have four cows and five calves. We also have four horses. One of them is a pretty spotted pony that my brother rides. The pony is 16 years old and my brother, Lawrence, is 15. I do not like to ride horseback. I hope to see this letter in print.—Leona Baker, Selah, Wash.

Mildred's Glad When School Starts.

Dear Aunt Nellie: I thought I would write a letter to the Corner. I am 8 years old. My birthday is November 27. They are building on the schoolhouse now. I am glad when school starts. My two sisters are going to go to school when it starts. Their names are Dorothy and Elsie. I have six sisters and three brothers. The cookhouse is in front of our place now. We live on an 80-acre farm. We have six cows and one of them has her leg broken. We have four calves and six horses.—Mildren Eunice Weaver, Wapato, Wash.

Likes Summer Because He Can Swim.

Dear Aunt Nellie: This is the first time I have written to the Corner. I like summer best, because I can go swimming. There is a lake a mile away from our house. My brother and I go swimming every Sunday afternoon. I am going to tell you about our farm. We have 13 acres of land. We have two head of cows and one horse and two hogs and some chickens. We have one dog and his name is Teddy. I was 10 years old on Decoration day.—Rudolf Freeland, R. R. 3, Box 18, Olympia, Wash.

Is On the Roll of Honor.

Dear Aunt Nellie: I have seen two of my friends' letters in the Washington Farmer. I saw my name in The Washington Farmer on the roll of honor. I got a letter from one of the girls. Her name was Lenore Mitty. I would like to be a teacher. I would like to teach about 35 pupils. I like to teach my brothers. I wish some other girl would write to me.—Eva Boud, Valley, Wash.

Twelve Pupils Go to Grace's School.

Dear Aunt Nellie: This is the first time I have written to the Corner. I was 10 years old the second day of August. Our school was out the 28th of May and it starts the 4th of September. We have 12 pupils going to our school. I am in the fifth grade. I have five brothers. My oldest brother is 15 years old.—Grace Jones, Vaughn, Wash.

Boat Riding Every Sunday.

Dear Aunt Nellie: I saw my letter printed in the Corner. I have been helping papa haul hay. We got 20 tons in the barn. We gave the Elms a big cat and it got seasick, so they gave it away. We sold nearly all of our chickens. We only have two big ones and 40 little ones. We have a launch. Her name is Phantom and the skiff's name is Bud. We go boat riding every Sunday. We get lots of fish. Papa is going after a horse this Sunday. One of my brothers went out fishing with a line and caught 15 fish. We have a big dog. A man gave it to us. His name was Nip and we named him Spike. We have a few apples ripe now. I am four feet nine inches and have dark brown hair and gray eyes. I would like to hear from Viola Augst. She is the same age as I am. I will write to the Corner again. I like to read the letters very much.—Iris Chevalier, Provost, Wash.

Laura Won the Race.

Dear Aunt Nellie:: This is the third time I have written to the Corner. My father takes the Washington Farmer and I enjoy reading the letters. We live on a farm of 320 acres one mile from town. We have a very large farm house and many shade trees. Last Friday a girl friend and I went out horseback riding. We went many miles and had a fine ride. When we came to some good road we ran a race and when my horse found out we were racing we left my friend out of sight. I am 13 years old and would like to correspond with any boy or girl cousins.—Laura Lee, Ritzville, Wash.

Dorothea Writes a Welcome Letter.

Dear Aunt Nellie: I wrote to the Children's Corner once before and thought I would write again. We have two dogs and four kittens. We live out in the country. We have a bird. His name is Tony. We have five sheep and one lamb. I am 10 years old and will be in the fourth grade next year. I have five sisters and two brothers. Their names are Agnes, Edna, Violet, Grace, Reva, Billie and Bruce. I have blue eyes. My birthday is March 24. Have I a twin?—Dorothea W. Hicks, Box 162, Coulee City, Wash.

Enjoys the Cousins' Letters.

Dear Aunt Nellie: This is the first time I have written to the Corner. I enjoy reading the letters in the Children's Corner very much. I live on a 20-acre farm. I was 10 years old July 30 and I am in the fifth grade. I have four brothers and two sisters. Their names are Amos, Daniel, Kermet, Humbert, Leona and Dorothy. We have four cows, one calf and also two horses. My teacher's name is Miss Walker. I like her very much.—Esther Bergevin, Moxee City, Wash., R. F. D. 1, Box 339.

Finds Another Girl Her Age.

Dear Aunt Nellie: I have been reading the Farmer this morning and I see a girl in the Corner who is the same age as I am. I am 12. I would be very glad if some of the cousins write to me. I love to write to the Corner very much. Our school will start in September. We have a pony and his name is Tony.—Lyda Augst, Beebe, Wash., R. F. D. 1.

Mary and Dick Are Mae's Sheep.

Dear Aunt Nellie: I like to read the Children's Corner. We have two lambs and their names are Mary and Dick. I have two sisters and their names are Lois and Lucile. I have three brothers and their names are Forrest, Roy and Hial. My birthday is October 23. We have four horses and six cows. We have five cats and five kittens.—Mae Turnley, Moxee City, Wash.

Mary Goes Swimming Every Day.

Dear Aunt Nellie: My subject is "My Pets." I am 7 years old and have two sisters and no brothers. We have one cow and one calf. Say, we were out to Spokane and when we got back we had seven little pigs. I go swimming or wading almost every day.—Mary Luting Hulett, Nespelem, Wash.

The BUSINESS WORLD Calls You!

The demand for trained men in the business world today far exceeds the supply.

Never before has there been such an opportunity for the young man who wants to enter business as now. Prepare this winter for a well-paying position.

The Y. M. C. A. Commercial School

offers instruction in all departments—preparing for positions as bookkeepers, stenographers and general office work.

The Y. M. C. A. builds men of character as well as prepares you for responsible positions. Students can live in the Y. M. C. A. building and enjoy all privileges of gymnasium, swimming tank, reading rooms, etc.

DAY AND NIGHT SCHOOL. FREE EMPLOYMENT BUREAU.

Y·M·C·A· COMMERCIAL SCHOOL SEATTLE-WASHINGTON

Now Is the Time to LEARN TELEGRAPHY!

We know of nothing that will bring such quick and sure returns for a small investment of time and money than a thorough course of telegraphy. Not only are the railroads and telegraph companies short of men, but the United States army is needing hundreds of operators for the signal service. We have the strongest school of telegraphy in the northwest. We can not fill the demand for our graduates.

Other practical courses given, such as bookkeeping and accounting, shorthand, college preparatory and vocational training.

Write our educational secretary for information regarding any of your educational wants. He can help you.

YOUNG MEN! YOUNG WOMEN!

Your life opportunity is at hand—Decide now.

Stenography, Bookkeeping, Commercial Training

Give you a GOOD SALARY from the start; a BETTER INSIGHT into the methods and usages of business, and the BEST OPPORTUNITY to advance to competence and commanding influence in commercial life.

What school? Make no mistake.

THE TRUE TEST.

Most students, through a feeling of loyalty, will say a good word for their school, and if a school sends you to inquire of certain "business men" you may well suspect a "game"; therefore, make the true test of our standing, ask the best business men of Spokane and the towns of the Inland Empire about The Northwestern. We furnish bookkeepers and stenographers to business men, and these men are the best judges of the efficiency of our school—even better judges than the students themselves.

See the Northwestern and its equipment. Use your better judgment. Decide after inspection and inquiry. Enroll at

NORTHWESTERN BUSINESS COLLEGE

S317 Howard St. M. M. HIGLEY, President. Spokane, Wash.

Be an Auto and Tractor Expert

The demand for trained men in all branches of the Auto and Traction Engine Business is greater than ever before.

MY GRADUATES are filling responsible positions in large factories and assembling plants, also as GARAGE OWNERS. They are making big money as experts.

THE HAWTHORNE AUTO SCHOOL'S $30,000 equipment gives you the actual PRACTICE, TRAINING and EXPERIENCE on REAL AUTOS, TRUCKS and GAS ENGINES. We occupy 10,000 square feet of FLOOR SPACE. Write for particulars at once.

462 Hawthorne Ave., Portland, Ore.

Oldest, best equipped and most practical Auto School on the Coast. Established 1907.

Why Salesmanship on the Stock Farm?

By E. L. POTTER

Just as good agriculture is the art or science of making two blades of grass grow where only one grew before, so is good salesmanship the art or science of selling two articles where only one was sold before.

On the farm some products demand salesmanship of a high order, while others demand the minimum of salesmanship. An article for which the apparent demand equals or exceeds the supply requires no especial salesmanship and is therefore designated as being a "staple" article, since it may be sold at any time at the market price. On the other hand, products in which the apparent demand is less than the supply will remain partly unsold unless the demand receives some form of stimulation. The art of increasing demand is what we call salesmanship.

These nonstaple articles may in turn be divided into two classes—those that are needed in larger quantities than they are now being sold, and those that are not needed. The sale of the latter can be promoted, but only by dishonest or misguided methods. The other class of products may be sold by absolutely and praiseworthy, and, we might even say, altruistic methods.

But why, we ask, should a man who needs an article not buy it without having to be the object of any especially selling methods on the part of the producer? There may be several reasons why a man does not buy a certain product which perhaps he really needs: He may not know that there is such a product; if he knows of it, he may be ignorant of its value; he may be merely indifferent to the whole idea and have never given the matter any consideration; he may have a personal dislike for the product or more commonly for some person connected with its sale or manufacture; lastly, he may not know how to finance the purchase.

It will be noted that the most important of these reasons are based on a lack of knowledge. Salesmanship in these cases consists of bringing the necessary knowledge to the possible purchaser; in other words, in advertising. Even the question of financing the purchase is largely dealt with in the same way, that is, by bringing to the possible purchaser's attention either reasons why the purchase would be more profitable than had been supposed, or in proposing new methods of financing the deal.

The first step in advertising is the creation of interest. After interest is created the matter of supplying information is relatively easy. In fact, the purchaser may come to look for information. The great interest stimulators are promises of financial profit or of personal pleasure, and the latter is perhaps even stronger than the first. If the prospect once feels that it will be either to his pleasure or profit to make the purchase, he will then take the initiative in looking for further information and he will surely buy if it is at all wise for him to buy. Personal friendship does not lead to so many new purchases, but it is certainly true that a prospect who is wavering between two salesmen will be much inclined to deal with the one he likes best, but, what is even more important, he will not buy from a man whom he does not like at all.

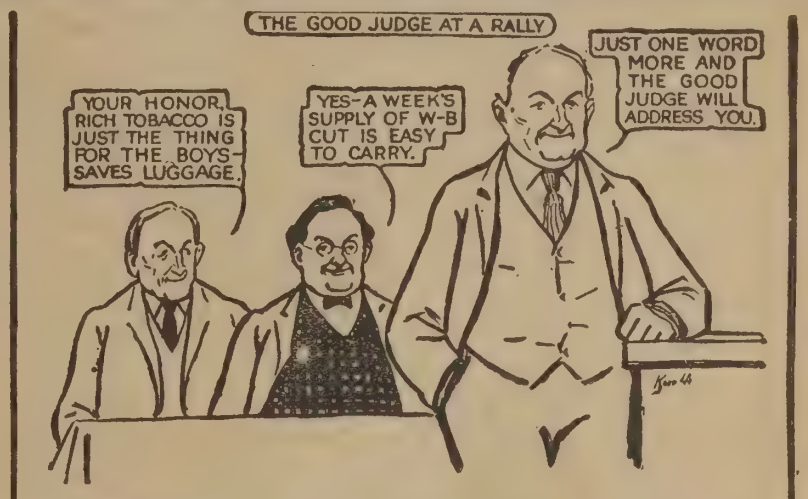
Let us see just what all this means to the farmer or stockman. In the first place, such products as grain and hay, dairy products, and some kinds of fruit and vegetables are staples; that is, the demand exceeds the supply. Fat cattle, sheep and hogs also come under the same head.

On the other hand, many kinds of purebred animals do not always meet with such a keen demand. For example, there are more good bulls in the country than there are men who have definitely made up their minds to buy a bull. Hence the selling of bulls requires a certain degree of salesmanship. Fortunately, there is no more fertile field for salesmanship than with the purebred live stock, since there is such an enormous number of men who could profitably purchase, but who are indifferent to or unaware of the advantages of such a purchase. These men may be reached by the proper methods of salesmanship, and in this way the demand may be multiplied many times. Viewed in this light, the possible demand for purebred live stock of all kinds far exceeds the supply.

Ignorance of these points has been the cause of most of the failures in the purebred business. Men who have been successful in raising market stuff have gone into purebreds expecting to follow the same methods. As a result they soon become disgusted with the "lack of demand." They do not realize that it is absolutely necessary to develop the demand if it is to meet the supply. The time will doubtless come when so much salesmanship will not be necessary in the handling of purebred live stock. That condition is reached now in some places and at some times. One fortunate thing about selling purebred live stock is that once a man becomes a customer he no longer has to be "sold," but on the contrary purebred sires become to him a staple article and he buys the number which his business demands without any especial encouragement on the part of the salesman. Even then, however, the breeder must not assume that his task is finished when the stock is raised. It is as much his business to encourage the more extensive use of purebred stock as it is to raise them.

Corn on the Ladd Farm.

D. Brooks Hogan, superintendent of William Ladd's Iron Mine farm, at Oswego, Ore., where his fine herd of Jerseys is now kept, is having a rather puzzling experience with corn this year. Mr. Hogan, two years ago, planted Minnesota No. 13 corn. This is the basis of the Oregon Improved Minnesota 13, and is the most recommended as a good early corn. He selected his own seed and last year instead of having earlier corn, it was a little later and a little larger. This year the corn is still later, is large for a dry season and is very loby. But on August 20 it had started practically no ears and the tassels gave promise of ripening and shedding the pollen before the ears would be in silk. A crop failure so far as ears are concerned was indicated, though there will be much stalk and leaf for silage. Mr. Hogan planted considerably of a corn known as Golden Glow. He planted it a week later, yet it is maturing much earlier and the ears are large and plentiful. I have heard the same corn spoken of very favorably at one or two other places.



William Ladd is the breeder of the great bull, Golden Glow's Chief. He is now working toward a line-bred Golden Glow's Chief herd. He has two sons of the old bull, one a Hood Farm Pogis 9th on the dam's side, the other, 75 per cent Golden Glow's Chief and his dam, now on official test after nine months' promises to make a world's record. There are six daughters. The herd has always been noted for big official records and several cows now on test are doing well.

It is a rather curious coincidence that the Golden Glow corn should be the one making good, when the herd is getting so strongly into the Golden Glow blood. H. A.

Live Stock in Australia.

At the annual meeting of the New South Wales Sheepbreeders' association the president, in his address, said that drouth and plague had reduced the stock and earnings during the past two years, but that the breeders were still in a strong position. Estimates of the stock in the commonwealth compared with prewar years were: In 1913-14—sheep, 78,600,334; cattle, 11,051,573; horses, $2,521,272; in 1916—sheep, 72,309,507; cattle, 9,738,467; horses, 2,410,923.

High prices for meat had led to the killing of both immature and female stock far in excess of what would ordinarily have been disposed of, and that must sooner or later react on returns.

THE Call to the Colors calls for thrift and common sense by everybody. A 10c. pouch of W-B Cut Chewing goes twice as far as 10c.'s worth of ordinary tobacco. That's the big point: W-B Cut isn't ordinary tobacco, it's *rich* tobacco, and a lasting chew.

Made by WEYMAN-BRUTON COMPANY, 1107 Broadway, New York City

OPPORTUNITIES IN JERSEYS

42 head cows, bulls and young stock, all of richest breeding, and good individuals, representing the blood of such noted sires as Golden Cicero, Foxhall's Fern Lad, and Noble Peer. With foundation of some of the leading American families. Complete dispersal of my registered herd. Will be sold at auction

October 4, 1917, Corvallis, Oregon

Catalogue giving full particulars is being compiled. Send name to E. A. Rhoten, Sale Manager, Salem, Oregon, and one will be mailed when published.

A. J. JOHNSON, Corvallis, Owner

COL. A. L. STEVENSON, Auctioneer.

IF YOU ARE INTERESTED IN REGISTERED HOLSTEINS

you should send to the Carnation Stock Farms, 1060 Stuart Bldg., Seattle, Wash., for a copy of their Auction Sale Catalogue, containing pedigrees of approximately 90 animals, including 4 herd sires, Johanna McKinley Segis (a 40-lb. bull), King Segis 10th, Matador Segis Walker and Dutchland Governor Sir Colantha.

Carnation Stock Farms will offer for sale 75 Registered Holsteins, most of them bred to the above herd sires. They will also offer 10 registered Holstein bulls, most of them ready for service. Among them will be at least one son each of the above herd sires.

VISIT SEATTLE AND PLAN TO ATTEND THIS

AUCTION SALE
160 REGISTERED HOLSTEINS
Kent, Wash., Oct. 3-4, 1917

All animals above six months offered for sale will be guaranteed to be absolutely free from tuberculosis. Study the pedigree of the Holstein cow and you will note that she holds records not only for quantity but for quality of milk. Plan to visit Seattle and attend this sale and arrange to buy at least one cow bred to a favorite herd sire.

Farm Located at Carnation, Wash. (formerly Tolt). Visitors Welcome.

NEWS FOR BREEDERS

Octavia's Duchess, a 3-year-old Jersey cow owned by Frank Laughary of Monmouth, Ore., recently finished a 10-month's official test, with an average test of 7.589 per cent. Her butter production was about 563 pounds. She was on test the full 12 months as a 2-year-old and made almost exactly the same record.

Henry Keyt of Perrydane, Ore., who purchased Prime Prince at the Shorthorn sale at the North Portland stock show last winter paying $1250 for him and who has paid good prices several times at that sale, including $610 for the fine heifer, Lilly Dale, has decided to disperse his Shorthorn herd. A few of them are already sold and the balance will be put on sale this winter. The sale promises to be very high class, as usual.

Clifford F. Reid is feeling pretty good because he has had five heifer calves in succession, dropped in his Jersey herd. One of these is out of Fussy's Fern Cowslip of S. B. Jr., that was champion at the Oregon State fair in 1916; another from Anota's Lady of S. B., that won sweepstakes of all breeds at the southwest Washington fair in 1916, and has an official ercord of well over 450 pounds of butter, begun under two years old and part of the time on the show circuit.

J. K. Conger of Castle Rock, Wash., put up the first silo in that neighborhood two years ago. Now there are fully 30 of them and over half were built this season. Mr. Conger fills his silo with corn every fall, but puts in oats and vetch or clover or oats alone for summer feed. Mr. Conger now has 12 registered Jerseys. Four of these were bought at the Henry Zorn sale and Mr. Conger already has one bull calf by King Coffee Violet Lad, the bull that sold in that sale for $770. He is a fine little fellow and probably will be kept for a herd sire.

L. Galbraith of Independence, Ore., who owns the two thoroughbred stallions, Tony Faust and Milton Bowles, reports 19 mares served the last season. Of this number 14 were from outside the state and not all were registered thoroughbreds. A few were polo ponies, whose owners wish to raise polo horses of more speed as well as size. Mr. Galbraith says there is a revival of interest in the thoroughbred which he thinks is not alone on account of the recognized value of the thoroughbred blood cavalry horses. Tony Faust is a very high class horse, being a son of the well-known sire, Sane, and his dam, St. Rose. Milton Bowles is by Salvation and out of Chico.

Nutwood Figgis, a Jersey cow owned by Frank Doerfler of Silverton, Ore., stood at the top of the list of all senior 2-year-olds on official test in the United States for the month of April. She produced 400 pounds of fat, or 470.5 pounds of butter, in 10 months as a senior yearling. She was bred early; and while another immediate test is working the little cow rather hard, she will evidently make a great record.

A. E. Westcott of Banks, Ore., reports that the Jersey cow, Princess Casarinda, that has an official record of 527 pound of butter in a year, will make a cow-testing association record of over 700 pounds this year. She has averaged over 70 pounds a month for seven months, her best month being a little over 74 pounds. She has a fine bull calf, and Mr. Westcott will probably keep him for his own use. Mr. Westcott has 21 head in the cow-testing association, 10 of them pure bred. Most of them are young, and the records they are making are good. Mr. Westcott had the high cow in the Weshington County Cow testing association last year, and has hopes of doing so again this year, though he says most of the members are making good records.

H. A.

St. Mawes Lad.

The above photo shows St. Mawes Lad, a young Jersey bull, recently purchased by G. G. Hewitt of Monmouth, Ore., from E. F. G. Carlyon of Bellingham, Wash. The young bull has long hips and a strong back, only the pose causing the swayed appearance. He is sired by Poppy's St. Mawes whose dam has an official record of 1120 pounds of butter in a year. His dam is St. Mawes Beauty, that made an official record of 690 pounds of butter in a year, beginning at 1 year and 11 months, and 879.9 pounds as a junior 3-year-old, while her dam, St. Mawes Susie, has a record of 918 and 938 pounds made in successive years. Rosaire Olga Lad, sire of over 20 Register of Merit daughters, is sire of both sire and dam. He was bred by Ed Cary, as the breeding indicates, and certainly has production inheritance entitling him to become a great sire. Mr. Hewitt has a herd almost entirely of Register of Merit Jerseys, some of them with big records and mated to a bull with such production inheritance he is in line for remarkable records for his coming calves. H. A.

Sells Registered Guernseys.

Middledale Farms of Goshen, Ore., reports the sale a short time ago of ten head of registered Guernsey females to J. H. Bowles of Merced, California. The animals Mr. Bowles got are a choice lot and are well worth the purchase price of $450 each. Among them was Lillie Lynes, the dam of two Advanced Register daughters. One of these, Jennie Van in the Hughes herd, holds the state record of 666.79 pounds of fat in a year. Jennie's April Rose, a daughter of Jennie Van, milks 38 pounds. She, as well as the others will be put on official test by Mr. Bowles. The entire lot, with one exception, are daughters of Longwater Emigrant, Middledale Farms' herd sire and he is of the same line of breeding as Itchen Daisy's May King of Longwater, that recently went from New York to a California breeder at $8000, the highest price ever paid for a Guernsey bull. Mr. Bowles is to be congratulated on his purchase, especially as he took with them the fine imported bull, Ivy's Masterpiece. Middledale Farms reports other sales at good prices and finds a strong demand for Guernseys. —H. A.

CUTTER'S
BLACKLEG PILLS
"California's Favorite" for nearly 20 years

For the Prevention of Blackleg in calves and young cattle

Their superiority is due to nearly 20 years of specializing in "Vaccines and Serums only."

Year in and Year Out they give better satisfaction than any other vaccine made, and the cost of a few cents per dose is cheap insurance against a disease that always takes the fattest and best.

Single Pills may be used for ordinary and range stock.

Double Pills should be used for pure bred and high grade stock.

Use any Injector, but Cutter's simplest and strongest.

Prices:

10 dose pkge. Single pills	$1.00
50 dose pkge. Single pills	4.00
10 dose pkge. Double Pills	1.50
50 dose pkge. Double Pills	6.00
Cutter's Pill Injector....	1.50

Insist on Cutter's. If unobtainable, order direct.

Write for new booklet, "The Control of Blackleg." It tells about Anti-Blackleg Serum which cures Blackleg and may be used simultaneously with vaccine to combat outbreaks and safely protect valuable stock.

The Cutter Laboratory, Berkeley, Calif.

The Cutter Laboratory of Illinois, Chicago
Eastern Agent

SCRUB COWS

never were profitable, and as the price of feed advances it becomes more necessary to get the producing kind.

Our Register of Merit
JERSEYS

would soon pay for themselves in the added production, to say nothing about laying a foundation for a future profitable herd. It is the PROVEN RECORD THAT COUNTS. Then when you not only have a producing cow, but her dam and her sire's dam were also producers and there are producing parents all the way back, you have a right to also expect that her calves will be producers. The 60 registered Jerseys that we are going to sell at auction are either Register of Merit animals or from R. of M. parents (excepting two heifers whose dam is untested). The offering is the dispersal of the herd of Frank Loughary & Son and a consignment from G. G. Hewitt, and includes Herd Bulls, Cows, Bred Heifers and younger Calves. The sale will be held on the Loughary farm near Luciamute station, about 7 miles southwest from

Monmouth, Oregon, Oct. 15, 1917

Complete catalog will be issued. Send name to either of the proprietors or to E. A. Rhoten, Sale Manager, Salem, Oregon, and one will be mailed when published.

AUCTIONEERS

AUCTIONEER

Special attention given to live stock sales.

BEN T. SUDTELL. Albany, Ore.

FOR SALE--Percherons, Shire Stallions and Mares

Jerico 110196, a dark iron gray Percheron stallion, 3 yrs., wt. 1850; sire Jube 81251 by Coco, dam, Bird 81977 by Brilliant Jr. His 1st, 2d and 3d dams are close descendants of Brilliant. Winnings at Northwest Live Stock Show, Lewiston, as suckling colt, first in class and Percheron society gold medal as best stallion under three years owned and bred by exhibitor As 2-yr.-old, 1st in class and champion under 3 years, three Society medals, best under three years owned and bred by exhibitor, grand champion and best stallion owned and bred by exhibitor and in open class reserve grand champion.

Aaron 117566, a 2-yr.-old half-brother, dark bay, wt. 1550. Sire Salvador 51340 by Calypso. Equally good (some say better). He has never been shown.

Callie 88642, a dark gray mare, 6 yrs. old, wt. 1750. Sire Apollon 26130. She is very strong in Brilliant blood; has mare colt by Halicite.

Lady Grace II., 15452, a 3-yr.-old Shire, bay, white face and white hind legs, wt. 1650. Sire Imp, Toga VII. 9288; dam Bay Lily 13577, by Imp. Greenham Champion.

All first class in every respect, mostly our own breeding, reserved for our own special use.

On account of the death of one of the partners, must sell to close estate.

FOLLETT & SCHOOLER. Genesee, Idaho.

Grain and Produce Markets

Chicago Grain.

CHICAGO, Sept. 17.—Corn slid downward in value today, influenced mainly by the prevailing ideal weather for maturing the season's crop. Prices, although steady at the close, were 1 1-8c to 1 7-8c net lower at $1.15 3-8 to $1.15 1-2 December, and $1.12 1-2 to $1.12 5-8@1.12 3-4 May. Oats finished 1-2c to 1 1-8c off. In provisions the outcome ranged from 25c decline to an advance of five cents.

General selling of corn started as soon as trading began. Clear skies and warm temperatures formed the rule in every direction, and besides there were advices at hand distinctly minimizing the amount of damage said to have been inflicted last week by frost.

Oats sympathized with the weakness in corn.

Arrivals of wheat showed a notable enlargement, especially in the northwest, Duluth and Minneapolis getting 809 carloads, as against 262 a week ago. Gossip was current that neutrals would obtain no more American wheat for some time and that no foreign shipments would be made except on the strictest rationing basis.

The Wool Market.

BOSTON, Sept. 14.—The Commercial Bulletin will say tomorrow:

"The demand for wool on private trading has been decidedly better this week, several million pounds of territory original and graded wools alone having been sold at fully recent rates. The government has continued to purchase wool, but just how much is not revealed.

"A little more interest is reported in goods by the mills and the purchases during the week would seem to reflect a better tone to the goods market.

Scoured basis:

Texas, fine 12 months, $1.65@1.70; fine, 8 months, $1.55@1.60.

California northern, $1.70@1.75; middle county, $1.45@1.50; southern, $1.35@1.40.

British Navy Increases.

Since the outbreak of war the personnel of the British navy has increased from 146,000 to 350,000.

Portland Market.

PORTLAND, Ore., Sept. 15.—Statistics just compiled by the Confederated Onion Growers' association show a crop in Oregon of 437 cars of onions on an average of 824. Last year, 374 cars were produced on 661 acres. The association expects a good market this year, but a repetition of the abnormally high prices of last winter is not looked for. The crop will not be marketed until other onions are out of the way.

Butter prices were raised a cent at the close of the week on account of the scarcity of the product. There was also a cent advance in cheese, the strong eastern demand being given as the reason. Eggs, which are scarcer, are also advancing. Poultry and dressed meats continue firm.

The peach market now is chiefly supplied with Yakima Elbertas, which are selling for the most part at 75 cents.

The hop market shows a tendency to advance again. Dealers are generally bidding 35 cents, but some business at 36 cents is reported. Picking will be finished in this state this week. The Oregon crop is estimated at 25,000 to 30,000 bales and Washington at 20,000 to 25,000 bales. The Yakima crop is reported by dealers there to be cut to 15,000 bales by red spider.

Another 2 cents decline in hide prices has been announced by buyers in this market.

In the following list of quotations the grain, hay, mill feed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 1, $49.50 per ton.

Mill stuffs—Bran, $37 per ton; shorts $40.

Barley—No. 1 feed, $48; brewing, $49; rolled, $55@57.

Hay—Buying prices: Timothy, eastern Oregon, $27; alfalfa, $22.50@24; grain, $20.

Eggs—Oregon ranch, case counts, 40c per dozen; candled, 42 1-2@44c.

Poultry—Hens, 16 1-2@18c; ducks, 13@20; turkeys, live, 20@22c; geese, 10@11c.

Butter—City creamery, prints, 48@49c per pound; cubes, extras, 45c.

Cheese — Tillamook triplets, 25c; young Americas, 26c.

Dressed meats — Veal, 15 1-2@16c; pork, 22c.

Hops—1916 25@26c; contracts, 35@36c.

Potatoes—New, 2 1-4@2 3-4c per lb.

Wool—Eastern Oregon, fine, 52@61c; coarse, 60c; valley, 58@60c.

Beans — California small white, 15 1-2c; large white, 15c per pound.

Seattle Market.

SEATTLE, Sept. 15.—One more week will see the finish of the most remarkable movement of peaches in the history of Western avenue. Jobbers claim that deferred domestic canning operations, because of high prices of sugar and other fruits, centralized when the peach market opened at 65@75 cents, the level to which buyers had long been accustomed, burst suddenly and it has been difficult to keep pace with the demand. The movement throughout the week has been five, six and seven carloads a day. More peaches have been sold in Seattle during the last six days than at any similar period to the memory of the oldest commission merchants.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 42@43c per dozen; eastern Washington, Idaho and Oregon, 40c per dozen; pullets, 32@35c dozen.

Poultry—Live hens, fat, over 4 lbs., 20c per lb.; 4 lbs. and under, 16@17c; old roosters, 12c per lb.; squabs, large, $3.50 per dozen; geese, fat, live, 10c per lb.; springs, live, 20c per lb.

Butterfat—53c per lb.; dairy butter, 33c.

Beef—Buying prices. Prime beef, steers, 7@8c per lb.; cows, fat, 7@8c; heifers, 6@8c per lb.

Hogs—Light, 15@17c per lb.; do heavy, 12@13c per lb.

Veal—Fancy light, 14@16c per lb.; do heavy, 9@13c per lb.

Wool—Puget sound, 52c per lb.

Portland Wheat.

PORTLAND, Ore., Sept. 15.—There has been no clearing up of the wheat price situation yet, but dealers report a rather freer selling movement on the part of farmers, who evidently believe the government will not alter the price announced for the Pacific coast. It is understood that most of the wheat bought in the past week is intended for California mills.

Women May Help

To Speed Up Apple Box Output

How to speed up the manufacture of boxes to take care of the northwest apple crop was the subject that drew to a conference in Portland last week representative men in the various lines concerned in Oregon, Washington and Idaho. The meeting was presided over by W. B. Ayer, representative in Oregon for Herbert C. Hoover, federal food administrator.

An important result of the conference was the telegraphic appointment by Mr. Hoover of J. B. Knapp of the Shevlin-Hixon Lumber company of Bend, Ore., as chairman of the special committee to mobilize the northwest box output with the cooperation of makers and growers to get the required number of boxes into short territory from the nearest manufacturing plants. Mr. Knapp is empowered by Mr. Hoover to appoint as many assistants as necessary to handle the situation. These are to serve without pay as a patriotic voluntary proposition.

It was sharply developed during the meeting that, in addition to the strike troubles, all wages for labor are much higher, and working hours are shorter, generally, than when some of the contracts for boxes were made.

Strong demands from eastern points, from the government and from private concerns for boxes of all kinds have worked an increase in box prices, it was explained. Fully 20,000,000 are wanted by manufacturers of various products, including the oil companies and food concerns.

Mr. Ayer and Mr. Knapp advised the growers to order, even at increased prices, the boxes necessary to care for their crops, if their original contractors have been or are now unable to supply enough.

Eastern Washington Wheat Moves.

Colfax dealers are buying wheat for shipment to the Coast, paying $1.90 for bluestem, $1.88 for fortyfold and $1.86 for club. This is on a No. 1 basis. Off grades are commanding several cents below these figures.

Within the last five days, Walla Walla dealers estimate, close to 1,000,000 bushels of wheat have been sold by farmers. Rush orders for cars were received by the railroad companies as a result, and the grain is moving to tide water. The Jones-Scott company alone has bought nearly 250,000 bushels of wheat, including an amount today when selling was heavy.

Nothing to Dread.

Why dread gray hair? Usually it is very becoming.

FARM LANDS—FOR SALE 651

WHEAT FARM.

The price of wheat being fixed at $2.20 per bushel makes of wheat farms a splendid purchase at $20 per acre. We are authorized to offer 160 acres in a proven section of western Lincoln county, near the Great Northern railroad. The land has been summer fallowed and is now ready for seeding. If the yield should be as little as 15 bushels per acre the gross receipts for the place next year will be $30 per acre. Terms of $1200 cash and the balance to suit the purchaser.

CALVIN PHILLIPS & COMPANY.
800 LEARY BLDG.,
SEATTLE, WASH.

FARM LANDS—FOR SALE 652
Continued.

THIS LONG, DRY, HOT SPELL has proven the value of our subirrigated cut-over lands. Send for folder and ask for particulars.

Good lands of this character produced nearly as well as in ordinary seasons.

We have lands to suit nearly every requirement, from forty acres up, for grain, hay, stock and fruit growing, on a good state road and railroad; good communities, schools, etc. Send to either of the offices named below for folder containing pictures of some of the homes and lands, or come and let us show them to you.

THE FOLLOWING TRACTS GIVE AN IDEA OF WHAT WE HAVE TO OFFER. IF THEY DON'T SUIT YOU, LET US KNOW WHAT YOU WANT.

40 ACRES.

40 acres of raw cut-over land; very productive soil, with an abundance of moisture, as would be indicated by willow bush; in good locality, on public road, close to railroad; on easy terms.

160 ACRES.

25 acres cleared; on county road, rural free delivery, etc.; sandy loam soil; good subirrigation; lies fairly level; in good community. Price right and terms easy.

80 ACRES.

40 acres cleared; on state road and two county roads; very centrally located, in good community; would make an excellent home; would make some improvements for proper party. Small payment and very easy terms.

480 ACRES.

480 acres, within half mile of railroad; cordwood enough to pay for it; in dollar limit of Spokane; good soil; make stock proposition; more land could be had adjoining; $12.50 per acre, easy terms.

MILAN FARMS DEVELOPMENT COMPANY.
1322 Old National Bank Bldg.
or
ALLIN REALTY COMPANY.

VOL. XL. NO. 39. SEPTEMBER 27, 1917. WEEKLY.

Northwestern Wheat Growers Win Better rice

Instead of receiving for their wheat $2.20 a bushel less a 30-cent freight rate to Chicago, as against the full $2.20 at Chicago, the northwestern growers will receive a price based on a basic price of $2.05 in bulk at Coast points. Exactly what this will mean at interior points is still doubtful, but it is evident that it will mean an increase of several cents a bushel for all the wheat of the northwest. It is interpreted by northwestern representatives now in Washington, D. C., as meaning about $2 per bushel for sacked grain at the interior shipping points. While the gain is appreciable and very welcome, it is apparent that it only partially removes the discrimination previously declared against growers of the northwest.

Representatives of the wheat-growing interests met at Portland, framed up the argument against the previous announced unjust discrimination against northwestern growers and sent a committee to Washington, D. C., to lay the argument before the officials. The increased price is the result. The following telegram from Herbert Hoover to Charles Hebberd, Washington state food commissioner, is official announcement of the raise:

"The representatives of the Pacific northwestern grain producers and handlers in conference with the food administration today arrived at a settlement in regard to handling the northwestern wheat crop, with the assistance of the shipping board.

"The food administration has been given assurance of overseas transport for Pacific northwest grain and it, therefore, is able to make a base price at north Pacific export coast points on an overseas basis instead of the previous footing of a price based on rail transport to Chicago. The base price unanimously agreed upon by the northwestern representatives is $2.05. No. 1 northern, or equivalent, at Portland, Seattle and Tacoma for bulk wheat, with the usual premium for sacked wheat.

"In order to adjust difficulties of the new federal grading act the food administration will, until further notice, purchase everything below No. 3 grade on sample."

Immediately after receiving this notice from Commissioner Hoover a telegram was sent to members of the committee in Was on, asking whether or not the 5 price was a flat price for th hole northwest or whether it s Coast only and therefore a co tinued discrimination against interior points. The following wire from R. Insinger of Spokane, a member of the growers' committee, indicates the food commission's intentions, Spokane being taken as a representative interior point:

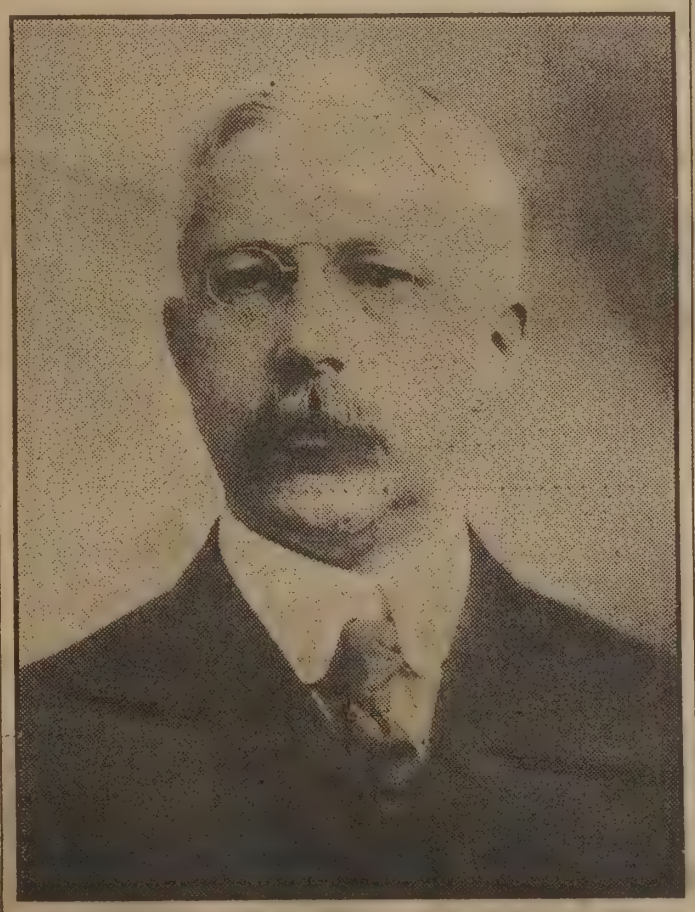
"After meeting the president Thursday, Hoover on Friday and Hoover and Barnes Saturday, wheat price is fixed at $2.05, bulk, at Coast points, giving $2 sacked in Spokane county, as against $1.50 in bulk at the Coast heretofore."

As pointed out in the telegram sent to Washington by J. L. Paine and other members of the Spokane Chamber of Commerce, a fair application of the food administration's decision would give the growers $2.05 at Inland Empire shipping points. It reads:

"Two dollar and five wheat price is interpreted here to apply as uniform price in all Pacific northwest territory having a 30-cent freight rate to Chicago. Can the food administration be induced to put this construction on today's decision? It is contended here that much of our wheat will probably be moved by government by rail to Chicago, and as Inland Empire wheat will have the shorter haul to Chicago, growers here should be paid at least $2.05, the price received by Willamette valley farmers."

The freight rate on wheat from the Pacific northwest to Chicago is 30 cents flat, whether shipped from the Willamette valley, near Portland, from eastern Oregon, eastern Washington, northern Idaho or western Montana points west of Havre.

The food administration has insisted that after the government has bought the wheat of the Pacific northwest it will ship it east by rail to Chicago, and gave that plan as its original reason for buying northwestern



Continued on page five.

Future Makes New Demands

By STEPHEN B. L. PENROSE.

A new era has begun for the United States. Whether we like it or not, we have been forced into the world war and certain far-reaching changes have been forced upon us, which will affect the nation from center to circumference. I mention three of these effects: First, a new horizon has been created for us people of the United States. Henceforth we must be citizens of the world, must see beyond our own borders, must be in sympathetic relations with foreign nations, and be intelligent friends of the en-

Continued on page three.

President S. B. L. Penrose, whose photograph appears above, is an educator peculiarly qualified to speak of the past, the present and the future of educational needs in the northwest. For nearly a quarter of a century he has been president of Whitman college at Walla Walla, playing a leading part in the development of the northwestern territory. He knows its past; he knows its present. With keen perception of new conditions and new requirements he looks into the future and urges its young manhood and young womanhood to prepare for a larger part in a larger world by securing the best education possible.

WAR TIME SAVING

In these strenuous war times, when the ever thought of saving in every way possible is foremost in each mind, mighty few real opportunities are placed before the farmers of this glorious Pacific Northwest. No real bargains, when any big saving worth while can be made, are offered to the reading public. Right now, when prices of all things are mounting skyward, here comes a bargain offer that should appeal to every one that it reaches. Instead of adding to the increased expense of our readers, we are making them an offer that they can not and should not hesitate to grasp. Read this big bargain offer and see for yourself the saving you are making.

THE WASHINGTON FARMER

(A Three-Year Subscription.)

(Annual Subscription Price $1.00)

Included in this special saving offer is a three-year subscription to The Washington Farmer, the biggest and best exclusive farm paper published in your own state, for your own interest and of such value to the farmer that he can not afford to be without it. Its various features, its many departments, its interesting and educational items and facts, and its general farm news are worth their weight in gold to the farmer. It's the most complete farm paper published.

The Twice-a-Week Spokesman-Review

(One-Year Subscription.)

(Annual Subscription Price $1)

There is also in this same bargain another paper—a twice-a-week newspaper, which keeps you accurately posted on local, state, national and world affairs. Its news is complete and reliable—condensed for the busy readers. Its connection with the largest daily newspaper in the Inland Empire, its membership in the Associated Press, the greatest news gathering service in the world, give it news value that no other similar paper can claim.

HERE YOU ARE!

The Big Offer—Save Two Dollars

THE WASHINGTON FARMER.

Three years' subscription at $1.00 a year $3.00

TWICE-A-WEEK SPOKESMAN-REVIEW.

One year's subscription at $1.00 a year 1.00

tire world. Secondly, we are being forced into cooperation and all classes of citizens, under the pressure of war, are being driven close together to meet the nation's needs. Third, we are being spurred to new effort. If anyone has been sluggish or lazy, he can be so no longer. The pulse of the nation has quickened, and a tremendous effort is being put forth, not spasmodically for a brief time, but with a steady pressure which will not be relaxed.

These changes in our national life make new demands upon the citizens of the future. Education henceforth must be for world citizenship and not village citizenship. The United States will need men and women who can enter intelligently into the world life, can speak modern languages as well as English, are acquainted with economic conditions and with the politics of England, France and Germany, as well as of Japan, Italy and China. The citizen of the future must be not only thus broadly educated, but he must be wide awake, keen, and quick as never before. He will be resolute and active as well as intelligent, for the next generation will put a greater premium upon efficiency than this generation has done.

The cry "no slackers," has already been heard, but it will be heard henceforth more loudly and more steadily. The slacker of the future will be the man or woman who refuses to prepare himself for this enlarged kind of citizenship and prefers the lazy life of the village to the large and efficient life which the nation will call for. Education aims to do away with slackers. Every boy or girl who wants to do his "bit" in the future will seek to get the best education possible. Don't be a slacker.

Members of ... families held sway Friday and kept things moving.

Saturday was patriotic day, and demonstrations of a patriotic nature were spectacular.

For the constructive progress of the fair Secretary Meredith is given much praise by those familiar with its growth since the reorganization. Mr. Meredith's determined effort to make the state fair an institution of real aid to the agricultural development of the state finds appreciation in every quarter.

In line with other northwestern fairs this season the Washington State fair at North Yakima devoted attention to exhibits of an educational character. They were far above the standard ordinarily maintained, and in many instances one was reminded of the fact that the nation has at last settled down to the business of war preparation.

The Yakima county Red Cross society demonstrated the art of making bandages and of dressing wounds and otherwise caring for the sick and injured. This feature of the demonstration was in charge of Mrs. H. S. Rand Jr., Mrs. W. L. Lemon had charge of the Red Cross exhibit in general. Yarn for soldiers' socks was spun by Mrs. B. F. Benson, 84 years old. An old spinning wheel operated by her every afternoon was a feature of great interest.

Y. M. C. A. Gives Service.

What the Y. M. C. A. is doing for Uncle Sam's soldiers at the various cantonments was shown by exhibits of models of Y. M. C. A. army post buildings, and an explanation of the various features of the work asked for by the federal government, and for which money was recently contributed throughout the nation.

The U. S. army and navy and their different branches were represented by an interesting exhibit of ammunition, including a huge submarine torpedo. Equipment used in army and navy life was shown.

State Commissioner of Agriculture E. F. Benson and a number of his assist-

...man is doing ... the progress he and his sons and daughters are making in an industrial way was shown by exhibits of a splendid character from the Cushman Trades school Indian exhibit and from the Yakima Indian reservation.

Is Flour Too High?

Figures Indicate Millers' Profit

F. H. McKay, for 19 years a grain buyer for northwest mills and now the farm loan expert with the Union Trust company of Spokane, Wash., has made an interesting computation, which is true elsewhere if true there. According to his figures the present wholesale price of flour should be $8.33 a barrel instead of $10.60 to $10.80, as quoted in Spokane. Look over his figures and judge for yourself:

"It takes four and one-half bushels, or 270 pounds, of wheat to make a barrel of flour. A barrel of flour weighs 196 pounds. After allowing four pounds' waste or loss to each barrel the miller still has 70 pounds of mill feed left, which sells at $35 per ton, or 1 3-4 cents per pound. So the mill feed from each barrel of flour is worth $1.22 at present and four and one-half bushels at $1.90 per bushel amounts to $8.55. The government allows for cost of manufacture 75 cents per barrel and also allows 25 cents per barrel as a legitimate manufacturer's profit.

The Calculation.

"If the above outline is correct, to decide what the wholesale price of a barrel of flour should be we first figure up the cost of the wheat used in producing a barrel of flour and add to this the cost of manufacture and the allowed profit. We have found that the wheat cost $8.55, to which should be added $1 per barrel, government allowance. Therefore, the total selling price of flour and feed should be $9.55. If from this we deduct the value of the mill feed, which is $1.22, we have left a balance of $8.33, which should be the wholesale selling price

...of the ... they are ready ... going down into their pockets, was shown when two sheep, sold at the Washington State fair for the benefit of the Red Cross, brought $925. And this was but one sample of the many high prices received at the first annual sheep sale at the fair held on the fairgrounds at North Yakima September 20-21.

The sale was promulgated and managed by Professor Hislop, head of the animal husbandry department of the Washington State college, with George Gue as auctioneer, and 812 sheep were put through the ring for a total of $28,979.50, an average of $35.69. Most of them were pure bred, though there were some good unregistered sheep.

The Red Cross sheep were purebred Lincoln lambs, and were donated by H. Stanley Coffin of North Yakima. F. M. Rothrock of Spokane first bid them in for $56 each. He ordered them sold again and Arthur Griffin got them at $66 each. They were then bought and sold successively as follows: Mr. Buckholtz of North Yakima, $65 each; John McGregor, Spokane, $51 each; A. G. Butterfield, Weiser, Idaho, $54 each; William McGuffey, North Yakima, $59 each; P. B. Stice, North Yakima, $59 each; E. Berg Sheep company, North Yakima, $35 each. Then Mr. Coffin bought one back for $36 and Mr. Buckholtz one for $25.

The first ram up in the regular sale, a Rambouillet, consigned by Butterfield, was sold to H. Stanley Coffin for $105. Two more Butterfield Rambouillets went to L. L. Robinson of Walla Walla, Wash., for $110 and $130. A Butterfield Hampshire ram went to Coffin for $115, and one to Robert Nelson of North Yakima for $75.

The second prize Rambouillet of the show, consigned by John Seely of Mt. Pleasant, Utah, topped the sale, going to H. Stanley Coffin for $300, and Seely's third prize ram went to L. L. Robinson for $250. Two of Seely's yearling ewes were taken by Robinson for $140. C. C. Beers of Lyons, Ore., sold his first prize Hampshire ram to Dr. Gardner of Anaconda, Mont., for $150, and J. G. S. Hubbard's champion Hampshire, a ram lamb from Monroe, Ore., went to Harry Ruffle of Walla Walla for $155, and another Hubbard Hampshire was taken by J. S. Proul of Leavenworth, Wash., at $100. Lincolns, Cotswolds and Oxfords were sold, as well as Hampshires, Rambouillets and Shropshires.

Professor Hislop, who has been very highly complimented on his management of the sale, says that it will probably be a permanent feature of the fair, and George Gue has now established a high reputation as a sheep auctioneer as well as of all other stock he has ever attempted to sell.

…ld, …higher …ices yet before spring.

With wheat and oat straw available at from $9 to $10 a ton, many western Washington dairymen will be considering the practicability of feeding some straw and less alfalfa hay than usual. This can be done profitably this season..

Wheat straw shows 36.9 pounds of digestible matter per 100 pounds, as against 45.6 pounds of digestible matter in 100 pounds of oat straw. Wheat straw is much less palatable to live stock than oat straw and, as shown by the amount of digestible matter, it is seldom practical to feed it unless it can be bought for, at most, two-thirds the price of oat straw. As it is seldom practical to buy wheat straw for feeding dairy cows, we will not give it further consideration in this article.

Oat straw contains 45.6 pounds of digestible matter per 100 pounds, as against 51.6 pounds of digestible matter contained in alfalfa. Were we to consider only the total digestible matter contained in oat straw, we might come to the conclusion that it was 75 per cent as valuable for feeding dairy cows as alfalfa, but the proportion of digestible protein to digestible carbohydrates and fat in oat straw is only about 1.45, while in alfalfa it is about 1.4. It is because alfalfa is so palatable to stock and so rich in protein that it is such a valuable dairy feed. It is because oat straw is less palatable and is low in protein that it is a low-grade dairy feed.

With alfalfa costing $25 a ton or more and oat straw available at $10 a ton or less, it will pay most dairymen to feed some oat straw. This straw may be offered to the cattle whole, in which case if it is of good quality they will probably eat half of it and the balance may be used for bedding. If the dairyman wants his cows to eat all of the oat straw he must cut it up and mix it with cut hay or alfalfa and add molasses, or if silage is available mix the cut straw, cut hay and silage for 24 hours' feeding together as follows: Spread on the feeding room floor a two or three inch layer, first of cut straw, then of silage, then of cut hay, then of cut straw, then of silage, then of cut hay, etc., until there is a pile at least about three feet deep. Dampen the pile with water; hot water is better than cold. Cover with gunnysacks or some such material. This pile should be allowed to stand 24 hours before it is ready for feeding. In that time it should heat through thoroughly and the whole will be very palatable to cows. One hundred and fifty pounds of cut alfalfa hay, 200 pounds of cut oat straw and 750 pounds of silage

…wintered t… …ble. Another use … …with grain for the purpose of …the ration. In this case it, of course, must be chopped.

Chaff is of higher feeding value than straw from the same plant. The market value of straw should depend largely on the market value of the roughage that it particularly displaces. It would seem that this time of high-priced roughage that straw should be used to a greater extent than ever before. While speaking of straw in general it might be well to consider the straw from the legumes. As a rule this kind of straw contains considerable more protein and less fiber than straw from the cereals and is more digestible. The straw from field peas being finer than straw of the bean plant, is more digestible and has a higher feeding value. C. F. MONROE.

Montesano, Wash.

Pea and Bean Straw Valuable.

To the Editor of The Washington Farmer: The feeding value of the various straws will differ widely, depending on the stage at which they are harvested. If they contain large quantities of green material their feeding value is naturally increased. Peas and bean straw are the most valuable, then oats, barley and wheat in order. In no case should straw be considered as a complete ration, but rather as a supplement to other feeds or to tide the animal over winter.

It is economical and satisfactory to allow milch cows, growing animals and work horses all the straw they will eat, and this will be considerable when legume hays are fed. Pea straw can be fed as a part of the ration to these type of animals, or alone with satisfactory results to dry cows and idle horses. During the first portion of the winter it will be sufficient for sheep. Growing or pregnant animals should receive concentrates in addition.

While oats, barley and wheat straw are often fed alone to cattle and horses, they will lose weight on this ration, especially if not sheltered. From two to four pounds of alfalfa or clover hay, or one-half to one pound of cottonseed or linseed meal daily will make up this deficiency and is more satisfactory than to try to add weight by heavy feeding in the spring. A few pounds of roots daily will be valuable for their laxative effect. A. R. HAHNER.

Colville, Wash.

Molasses and Chopped Straw.

To the Editor of The Washington Farmer: In regard to feeding wheat and other straw, will say that I am decidedly of the opinion that dairymen and other stockmen who have not con-

…hay and grain to harden them up for work. There are thousands of tons of straw goes to waste in this country every

(Continued on page ten.)

Great Ram Sale

Five Thousand Offered at Salt Lake

By E. J. IDDINGS.

The ram sale at Salt Lake, Utah, recently, with 5000 head of sheep listed for sale, was one of the great live stock events of the year. The sheep were from many states and consisted for the most part of Hampshires, Rambouillets, Lincolns and Cotswolds, though other breeds were also represented well. The consignors and purchasers likewise represented practically every state of the west and many of the Mississippi valley. Among the better-known men from eastern states were Bob Blastock of Walnut Hall, of Kentucky, Professor Coffey of the University of Illinois and Dwight Lincoln, the well-known breeder and auctioneer from Milford Center, Ohio.

The first day's sales of single stud rams and unregistered range rams in groups of 25, a total of approximately 420, brought a little better than $45,000. There was some pessimism prior to the opening of the sale. Many said that the buyers were not there in numbers, that many sheepmen had "cold feet" and would buy rams on a conservative basis only, with emphasis on the word "conservatice" and some visitors thought the Hamps were on the decline and that there would not be the keen demand for the sheep of this great Down breed. The pessimist got little comfort, however, from the results at the ringside and his clouds of gloom soon were wafted away and he went into the fray to get the good ones or make the other fellow pay well for them.

The result was a splendid sale, with keen demand for all the sheep that were really good and that were presented in an attractive way. There were many lessons to be learned if one was at all observing. Not the least impressive lesson taught many was the one just alluded to. The right kind of breeding was demanded, but, regardless of this most important factor, the buyers at Salt Lake demanded special preparation for sales ring display. If the higher prices were paid, the sheep were in every instance well grown out, carried enough flesh to give them shapeliness and make them look thrifty and fit and the fleeces had been given special attention and in many

Th… great progress that has been made dur… ing the last few years in sheep breed… ing on the range and the high stand… ard of the flocks of the west clearly… and unmistakably demonstrate the cor… rectness of this point of view.

Steer Feeding

Prospect for the Coming Winter

By E. L. POTTER.

The prospect for fattening steers during the coming winter are practically nil. There is no hay to feed them on and if it were obtainable the cost is prohibitive. Unlike hogs, cattle have not increased in price at the same rate as feed.

Normally the farm price of a ton of hay and of 100 pounds of good steer should be about the same, but now the price of the ton of hay is three times the price of the 100 pounds of beef.

Of course every one expects the price of beef to be much higher next spring, and it will have to be or some one will lose a lot of money. Even at that it would take a tremendous increase to offset the price of hay.

A feeder steer costing eight cents a pound in the fall will have to bring 12 cents or better on the farm to break even on $20 hay. That means close to 13 cents in Portland for hay fed cattle. Feeders, of course, may not cost quite eight cents, as the market is not yet open up. They are not worth that much at present.

The indications are therefore that but few steers will be put on feed in the northwest. It is practically impossible to be otherwise.

May Bring in Canned Goods.

Americans returning from Canada may bring free of duty $100 worth of canned goods and other foodstuffs, under a ruling announced by the treasury department.

The Physician's Part in War

By ERNEST C. WHEELER, State Council of Defense

A significant fact unknown to the average citizen is that the fatality among army surgeons, during the present war, has been higher even than that among the "bird men."

The part which the American physician will be called upon to play in the world war is not generally understood. In the wars of the past, pestilence and plague have killed more soldiers than did the attacks of the enemy. With the increased deadliness of modern offensive methods, it is essential that this preventable leak in man power be stopped, and in this connection the physician steps in and becomes one of the vital factors in army organization.

Here are some of the problems having a medical bearing which must be solved by those in charge of the state and national movement. First of all, we must look to the physical and moral surroundings of our mobilized camps. The zone lying about a great military post has not always been the most ideal place in the world, but now the spirit of the times—the spirit which brings America into a war for justice and decency—insists that no element of license shall be permitted to taint the high purpose which dominates us as a nation. The state of Washington has one of the great national camps. It is incumbent upon every citizen to do his or her part to make the surroundings of this camp all that they should be; but upon the physician falls an added burden of responsibility.

Dr. E. C. Wheeler..

As a member of the State Council of Defense, it has been my duty and privilege to look to some of the practical details of this matter. At this time I can state that we have taken steps to insure cleanliness, moral and physical, in the zone surrounding the American Lake camp. The state and the national governments are behind this movement, so that any element which might be tempted to try to introduce undesirable forms of amusement is certain to feel the heavy hand of the law. We mean business.

These things which must be avoided form but the negative side of the question, however. There is a positive side: in the place of the dissipations of the old-time army camp we must find something to offer our soldier. This is unbroken ground, and we will have to solve many problems as we go forward. Moving pictures and good reading matter will help. Other sources of wholesome recreations will be utilized as fast as we discover them.

A significant fact unknown to the average citizen is that the fatality among army surgeons during the present war has been higher even than that among the "birdmen." Ten minutes after the attack is launched the surgeon and his ambulance or stretcher crew are on the ground. Necessarily, working so close to the firing line, the fatality among surgeons has been something terrible to consider.

This has a direct bearing upon the part the American surgeon must play in the great war, for not only must we provide 20,000 physicians for our own army—we now have about 6500—but we must help fill the vacancies left in the French and English ranks. This will not be easy to do. The physician, from the very nature of his work, grows roots into his community. His work is not the kind which can be turned over to a hastily trained substitute. And the financial sacrifice which he is called upon to make is conditioned by the fact that he is paid strictly for his personal services, so that when he closes his office door his income ceases. All of these things are fragments of the big problem which the American physician must solve, as he plays his part in the great war.

England Raises Wheat Price

As Farmer readers were told last week, the maximum prices recently fixed by the British food controller are considerably higher than the guaranteed prices orginally announced by the government last January.

To stimulate wheat-growing the British government told its farmers that it would guarantee them a price of not less than 60 shillings per quarter of 504 pounds, or $1.72 per bushel in American money. Apparently it found that guarantee too low, and to encourage growers it now fixes the starting price at $2.10 a bushel.

But the British government has adopted a different plan from that adopted in the United States. Here the government has set a fixed price for the entire harvest of 1917, regardless of time of delivery. The British plan is a sliding scale—$2.10 a bushel for wheat delivered before December 1, 1917, and increasing gradually to $2.21 for wheat delivered after June 1, 1918.

The food control officials of the United States and Great Britain are working in close cooperation, and apparently the British officials have adopted the policy of paying their growers substantially the same prices that the American government is paying its producers.

But since the British government will have to pay the freight rate on wheat bought by it in the United States, the grain it buys here will cost it just that much more than the grain it buys from its own farmers. It overcomes this inequality by striking an average of all wheat bought and distributing the flour to the public at the average cost.

The first cost of flour will, therefore, be higher in England this year than in the United States, but bread will probably be cheaper there, as the British bakers have to be content with smaller profits than the American bakers receive. Bread now is considerably cheaper in England than in the United States.

Wheat Growers Win Better Prices

(Continued from page one.)

wheat at prices 30 cents below the Chicago basic. It seems entirely just and reasonable then to expect that the $2.05 price will be paid at all points in the Pacific northwest. If Mr. Hoover is right in his former contention that the wheat must go east by rail, Inland Empire grain will have the shorter haul to Chicago, as compared with grain grown west of the Cascade mountains, and growers of the interior should be paid at least $2.05, the price received by Williamette valley farmers.

Exactly what the result of the action of the food commission will be is a mooted question. The action appears to have been taken partially on two grounds: That the northwest does have shipping facilities by water to handle at least a large part of its grain, and that the northwest had actually been discriminated against in comparison to other points distant from Chicago, among them Minneapolis. At these latter points the price has been fixed at the Chicago basic price of $2.20 less about one-half the freight to Chicago, while in the case of the northwest the price had been fixed at the Chicago price less the full (30 cents) freight to Chicago. The new Coast basic price is the Chicago price less about one-half the freight to Chicago, it appears.

Further interpretations of the rulings are expected at once, and until they are actually made the farmers of the northwest will be in doubt as to exactly what prices will be paid for their grain at such points as Pendleton, Athena, Grangeville, Moscow, Colfax, Ritzville and other interior points.

State College Opens Oct. 1.

The state college at Pullman opens for the work of the school year Monday, October 1, according to announcement from Pullman. This date is considerably later than is the custom, owing to the desire of the institution to permit the students to remain out for the harvest work as much as possible.

Water Helps Pumpkins.

W. E. Mullen of Parker has made up his mind that in future he will not stint pumpkins when it comes to irrigating. This year he had a break in an irrigating ditch which caused constant overflow. The pumpkins he had planted in this part of the patch grew to enormous size, while the others, which were irrigated in the normal way, were only fair.

Good Poultry Show.

Under the direction of Harry H. Collier the state fair poultry show held the attention of fanciers at North Yakima throughout fair week. Showings of prize winning birds from all sections of the state were many and the competition in nearly all classes was keen.

Schools Make Progress.

That Washington schools are making great progress in agriculture was evidenced at the state fair by the exhibits of district schools from various sections, particularly the Yakima valley. Besides the fine specimens from field and garden there were many evidences of a well defined war program being carried out. Among the schools represented were the following, in Benton county: Walnut Grove, Finley, Prosser, Hover, Kiona, Benton City, Hanford, Richland, White Bluffs, Kennewick, Valley Heights and Buena Vista. Good agricultural displays were sent by Sunnyside, Pierce county, Kittitas county, Douglas county, North Yakima, Thurston county, Grays Harbor county, Nob Hill and Yakima county. Remarkable in their design and workmanship were products of industrial progress coming from the Selah central school, Pierce county, Kittitas county and Everett.

Live Stock Well Balanced at Yakima

Excellent Display Made at Fair; Nearly All Breeds Shown

By HORACE ADDIS.

One of the most frequent comments on this year's Washington State fair is that it was well balanced. And in no department was this more noticeable than in the live stock. There have been larger stock shows at North Yakima and years in which the Holsteins have made almost the entire show, but this year there was a good show in every class and while, with an extra barn the show did not look large, every visitor must have been impressed with its general high quality. No matter whether horses, dairy cattle, beef cattle, hogs or sheep were viewed, poor stuff was conspicuous by its absence and quality was predominant.

The smallest show in numbers was that of the horses, but in no department was quality higher. Percherons wre represented by only one exhibitor, but not only was there not a poor animal in the 11 head shown by A. R. Hunter of Island City, Ore., but they were all of extra good quality. Kroumir, the first prize and senior and grand champion, is a horse of 2200 pounds weight, with heavy bone, yet he has a perfect Percheron type, great style and grand action. He had already to his credit championship two years ago at the Cascade International, Northwest, Oregon State and Union, Ore., live stock shows. And yet his 2-year-old son was so good the judge took considerable time deciding between the two. The champion mare Snookum, a growthy 2-year-old filly, with much bone and good type, is a daughter of Kroumir.

Clydesdales also had only one exhibitor, I. O. Trice of Grandview, Wash., with five head. And here again quality took the place of numbers. Byron Prince, the champion stallion, was senior champion and reserve grand champion at the Panama-Pacific. He is a horse of great substance, a very typical Cylde, and has fine action. The cham-

(Continued on page sixteen.)

Eight Hundred Farmers Unite

Frazier Valley Milk Producers' Association Controls 90 Per Cent of Milk Production

The Frazier Valley Milk Producers' Association of British Columbia has sprung into notice as one of the most successful of cooperative organizations. In order to ascertain facts first hand The Farmer sent one of its staff representatives across the line and his investigation will be reported in an early issue of this paper. An organization that controls 90 per cent of the milk production in the territory surrounding Vancouver, B. C., and including 800 farmers in its membership, is certainly worth while. Milk is now selling eight quarts for a dollar in Vancouver and the producers are receiving 27 cents per gallon. Watch for this extremely interesting and informative article.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

The Cost of Hooverizing

There are hundreds of thousands of men and women in America who are willing to make any sacrifice necessary for their country, and the agricultural districts offer no exception to this rule. Families of the farm are offering their lives and their means, gladly and ungrudgingly.

But there is one sacrifice that should not now be asked of members of that great, common class, whose loyalty and patriotism are the nation's anchorage. The majority of people, both in the country and in the city, are living as economically as possible to make their means meet their actual needs of food, clothing and shelter. They can not be asked to make further sacrifices in the form of still higher cost of living.

It is not sufficient, therefore, for the food administration to specify what foods shall be eaten and what shall be saved for the soldiers. It is necessary that the foods to be substituted be made obtainable at prices no higher than those commonly used.

To illustrate, if it is necessary to substitute corn or rye or buckwheat for the wheat foods commonly eaten, it is necessary also that corn and rye and buckwheat be obtainable as cheaply as wheat. The average farmer and the average resident of the city can not pay more for his food than he is already paying, and his patriotism should not be questioned if he feeds his family upon the cheapest nourishing foods obtainable.

If it is necessary to substitute fish and poultry and eggs for beef and bacon and mutton, it is necessary also that fish and poultry and eggs be made obtainable as cheaply as beef and bacon and mutton. It is far from enough for the food administrators to say to the farmer of the northwest, "Eat corn bread, fish, fresh fruits and vegetables and save your wheat and beef and bacon for the soldiers." Results will be obtained, it is true, for the farmers and townspeople will rally patriotically to the call and do their best. But this is not a corn country, nor is fish an easy thing for the farm family to substitute for bacon. Wheat flour at present enormous prices costs about six cents a pound, but it takes about eight cents to buy a pound of corn meal, and if it comes in a sealed package, as in many cases it does, it requires 10 to 15 cents to buy it. The bacon is raised and cured on the farm, but the fish must be brought on, and seldom in any other way than in the can. While such facts as these remain facts, the common citizen of America is powerless to do in full what the food administration is asking him to do. The administration must go one step further and make the foods that it desires to be eaten obtainable, and at prices no greater than those of the foods that it desires to be saved.

Commissioner Hoover and his coworkers have accomplished wonders and will accomplish still greater wonders. The people as a whole have rallied loyally to the country's call to save the staple foods, but they will rally still more loyally and effectively if the food administration makes it economical as well as healthful and patriotic to Hooverize.

Box Men and Fruit Men Get Together

That was an important meeting in Portland which brought together the fruit box manufacturers and the fruit growers, presided over by W. B. Ayer, food administrator for the state of Oregon.

The growers took the floor first; they had ordered boxes and were having difficulty in getting them. Apples are a fair crop; the demand is good; the market is ready; the fruit is ripening; as great an authority as Herbert C. Hoover has pronounced apples a valuable food and important in preserving the health of human beings, so the matter of handling the crop takes on a larger importance than the protection of the orchardists. Apple boxes had gone up and up in price, from 11c to 20c, and even at that price it was almost impossible to get them. Some of the independents hinted at a combine.

On the other hand, the box men and sawmill representatives declared that they were having their troubles, too, and these were great. Strikes and the great difficulty in securing lumber were the chief of them. Lumber had gone up and in some instances it was almost impossible to get enough to meet their needs. New contracts had been offered at advanced prices, but they were letting the lucrative business go and living up to their contracts, in some instances at a loss. The charge that there is collusion between the box manufacturers and commission men was denied.

The Spokane district appears to have a sufficient supply of boxes; the same was reported for the Goldendale district; about two-thirds of the total number needed had been delivered at Hood River; no shortage was reported from Milton, Freewater and Pendleton. White Salmon reported a shortage of 100,000 boxes, and their contracts had been cancelled and a higher price asked; the Grand Ronde district was partly provided for; the Weiser-Payette section is very short, as is most of the fruit section of Idaho.

While no definite action could be taken, it is believed that a better understanding prevails. The box manufacturers realize how necessary it is to save the crop and provide containers, while the growers see more clearly that there is real difficulty in securing material to make the boxes, that the cost has advanced and that mutual forbearance will have to rule.

Give the Boy Some Responsibility

At one of the fairs this fall a boy of some fifteen or sixteen years was seen carefully scrutinizing the young bulls on display. Before the fair was over he had purchased a fine, young animal to take home with him and place it at the head of the farm herd, two hundred miles away.

Comparatively few boys could be relied upon to use mature judgment in a deal of that kind, but there are matters in which every boy is qualified to act upon his own responsibility. At least, every boy can be trained or allowed to train himself to live up to such responsibility.

Nothing so develops the powers of a boy or a man or a girl or a woman like bearing responsibilities, using personal judgment and profiting or losing by it. The best of them, old as well as young, make mistakes, some of them costly. But it can't be avoided. One can not learn to swim without getting into the water. Make small beginnings, but don't wait until your boy has grown up before letting him assume responsibilities.

Community Canning

Some time ago the Port Townsend high school in western Washington put in a pressure cooker of a capacity of 1000 cans per day and fitted the room for canning purposes with the idea that the plant could be used by the people of the community as well as the canning clubs. County Agricultural Agent O. T. McWhorter reports scores of mothers, as well as boys and girls of the clubs, taking advantage of this opportunity. Miss Celia Olsen, a state university graduate in domestic science, has charge of the canning work, and is well pleased with the results. The high school plans to put up 6000 cans of peas, beans and fruits, the boys and girls being paid by the school for the work they do in canning.

Washington Gleanings

Douglas county will have a $7,000,000 wheat crop.

The kelp plant at Port Stanley is being enlarged.

Improvements amounting to $120,000 are proposed for the Kelso highway.

Over $30,000 worth of Arcadia apples were sold recently to eastern buyers.

A starch company, capitalized at $60,000, will begin operations at Beaverton.

A new 15,000-bushel grain storage plant has been completed at Pleasant Valley.

Pacific county is making improvements on National Park highway to the amount of $9300.

The new cold storage plant at Zillah, having a capacity of 700 carloads, is now ready for business.

The South Bend Canning company has opened a new fruit and vegetable plant, the capacity of which is 500 cases daily.

The formation of a cooperative marketing organization and the building of a community warehouse in eastern Lewis county is assured.

Puget island, comprising 5217 fertile acres, in the lower Columbia, opposite the town of Cathlamet, is to be reclaimed by a system of dikes and the entire area utilized for agricultural purposes.

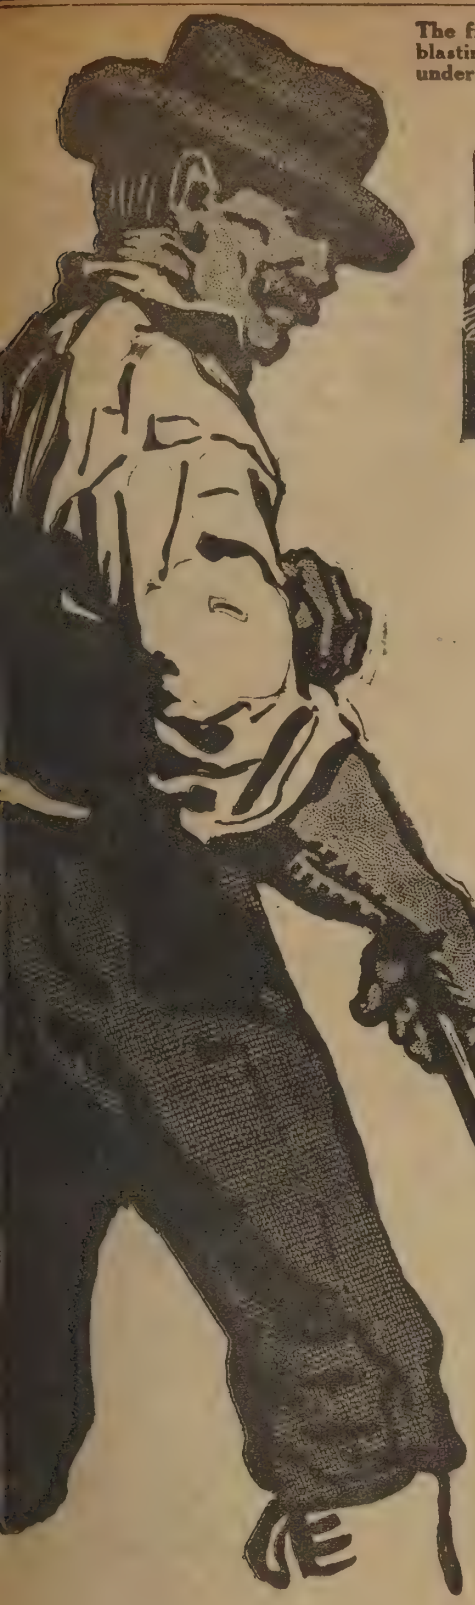
Fred L. Strange, formerly county fruit inspector for Douglas county, Ore., has accepted the position of field manager for Wittenberg, King & Co. of North Yakima, manufacturers of processed fruits.

Two representatives of the Farmers' Nonpartizan league, an organization having its chief field of activity in North Dakota, have arrived to begin a month's campaign in Washington state, to assist in a similar movement here.

W. H. Reeder, a wheat grower of Tacoma, has purchased the T. M. Donahoe farm, west of Chehalis. The price was $37,000, and the farm, which is one of the best in that vicinity, contains 214 acres, 160 of which are under cultivation.

James Berney, a prominent Klickitat sheepman, recently sold to William Chamberlain, a stockman of Quinton, Ore., 100 head of lambs on the summer range near Glenwood in western Klickitat county for $10.25 per head without a cut.

A comparatively new industry in the northwest will be launched by Portland capital at Bellingham, when the final formation of the Cypress Island Goat company will be completed. The company's ranch is located on an island in Puget sound, out from Bellingham, and comprises 6000 acres. It is the purpose of the company to breed goats for milking.



What Others Say

Farmers' Review: We look for live stock production to be put on a more satisfactory and profitable basis in the near future—better than ever before.

Hoard's Dairyman: When the time comes for selecting a new bull his conformation and the records of his ancestors are the chief things to consider.

Rural New Yorker: Make the American farmer believe that he will be fairly paid for his labor and he will produce all the food this world needs.

Iowa Homestead: One peck of potatoes may appear in outward form to be exactly like another peck, but if the one is taken from high yielding hills and the other from low yielding hills there may be a vast difference in the weight of the crop per acre the following year from the two plantings.

The first step in stump blasting; making hole under the stump.

Loading sticks of Giant Stumping Powder in hole under center.

Giant Stumping Powder left the stump ready for easy handling.

Save money on your stump blasting.

The explosives that get stumps out cleanest and cheapest are those that have a heaving and lifting effect, shattering the stumps just enough to break them up. Then you can handle them easily.

"The farmer," says an Experiment Station, "should use an explosive prepared especially for his work; one that stands all ordinary shocks of handling and transportation and does not easily freeze. He does not need and should not use the expensive nitroglycerine explosives." Thousands of farmers have taken this advice and have found that

GIANT FARM POWDERS
STUMPING — AGRICULTURAL

always save them money because they go further than any other stumping powders. Also, because they are made especially to suit *western* farm conditions and because they are always uniform in composition and action.

Giant Farm Powders—the product of the oldest manufacturer of high explosives in the United States—are the only genuine "giant powders" for agricultural use. They are made in two brands—Giant Stumping Powder and Eureka Stumping Powder.

Giant Stumping Powder is the ideal explosive for blasting stumps in wet ground. It keeps perfectly for months, resists water and chilling, and gets the stumps out economically.

Eureka Stumping Powder is the money-saving, low-freezing explosive for blasting stumps in dry soil. It costs less than Giant Stumping Powder and careful blasters save many dollars by using it for wet work also.

EVIDENCE

I bought five boxes of your Stumping Powder and now I want to sell a lot of other powder that I have.
RUDOLPH STADELI, Silverton, Ore.

Your Stumping Powder has a wide breaking power and less fumes to contend with after being exploded than any other on the market.
G. L. METZGER, Hillsdale, Ore.

In using a thousand pounds of your Stumping Powder neither I nor any of my men had the least bit of trouble in getting the very best results. I have used practically every powder on the market and find there is more strength in yours. J. L. EIDSON, Silverton, Ore.

Your Stumping Powder shoots the roots and spreads wide in the ground instead of going down. It is the best powder we have used.
G. S. McCARTNEY, Russellville, Ore.

I find your Stumping Powder all you claim for it. ELI CLINKER, Camas, Wash.

I am a large user of powder in stump blasting as well as in grading roads, breaking boulders and making ditches. I get good results from the Giant brands all the time.
MICHAEL HARVEY, Charleston, Wash.

Giant Stumping Powder gives good results when all other means of removing stumps have failed.
ROBERT CHABOT, Moclips, Wash.

Make This Test

You want to clear your land as cheaply as you can. If you are not using Giant Farm Powders, try them *now*. Mark and mail the coupon at the right. We will have our nearest distributor supply you—at the lowest market price—with a 25-pound or 50-pound case of Giant Stumping Powder or Eureka Stumping Powder. Compare this with any other and *prove* for yourself that Giant Farm Powders will save you money, time and work.

We Issue Five Valuable Books for the Farmer

They tell and show how to remove stumps and boulders, how to increase the fertility of the farm by blasting the subsoil, how to have earlier-bearing, thriftier orchards by blasting holes for trees, and how to drain your land by using Giant Farm Powders. These books are written especially to cover Pacific Coast conditions, and will be helpful to every farmer. Choose the books that you prefer and *mark and mail the coupon.*

Clallam County Tests 521 Cows.

Tester E. W. Soper's report for the Clallam County (Wash.) Cow Testing association shows 521 cows on test and an average of 30.8 pounds butterfat, according to O. T. McWhorter, county agent of Clallam and Jefferson counties. Thirteen cows made 50 pounds each or better, and there were 85 cows producing between 40 and 50 pounds of butterfat. Tester O. E. Leonard, in the annual report of the Jefferson County Cow Testing association, has the following to say: "Of the 309 cows tested for the entire 12 months 20 produced over 400 pounds of butterfat;; 96, or 31 per cent of the cows, produced over 300 pounds and 176, or 57 per cent, produced over 250 pounds butterfat. The average of all cows tested for 12 months was 6993 pounds of milk, containing 278.5 pounds butterfat. Comparisons of high and low production show clearly the economy of good cows. Ten cows with average of the best herd would produce as much butterfat in a year as 23 cows having the average of the poorest herd. And as for net profit over feed cost it would take 35 cows of the poor herd to make the net profit of 10 cows with the average of the best herd. Owners of both herds compared were selling cream at the same price per pound."

E. W. Soper, the tester for the last year, was strongly urged by the old members to stay with the association for another year, but he has been called in the selective draft. O. E. Leonard, W. S. C., '17, was selected to fill the vacancy.

Another Ayrshire Champion.

Willowmoor Vesta 4th 34150 has just finished her junior 4-year-old advanced registry test for a year, qualifying with a record of 17755 pounds of milk and 753.18 pounds of fat, which entitles her to the junior 4-year-old Ayrshire world championship in her class. She was bred by J. W. Clise, Redmond, Wash., owned and tested by E. B. McFarland, San Mateo, Cal. She is from Mr. Clise's famous Robin Hood strain.

Stubborn Dairy Facts

Finally Are Reduced to Simple Little Figures

James N. Price, the live stock specialist of the extension department of the Washington State college, was in to see me the other day. I am always glad to see Mr. Price, because he is so full of plain, hard sense in his talk and so little given to extravagant claims. While I was talking with him I was reminded of a little instance which occurred two or three years ago when a few of us were waiting to meet with officials of the Spokane Chamber of Commerce. Among those in the party were R. B. Paterson of the Spokane Dry Goods company and A. A. Kelly, the market gardener of East Spokane.

"I don't see how you can manage such a big business concern as falls to your lot," said Mr. Kelly to Mr. Paterson.

"It is only adding to the littles that make a big business," was Mr. Paterson's reply.

In other words, it isn't the tremendous profits on some particular articles which build up a big business, but a multitude of little profits on a multitude of common articles.

When Mr. Price talks of lessening the cost of production by the dairymen he is figuring on these littles. Of course there is a pretty big reduction in the cost when the dairyman sells to the butcher the cow who doesn't pay for her feed, but this cost is only detected by the detail of weighing and testing the milk, a matter of detail. In the matter of feeding itself there is a lot more detail in saving littles. It is up to the dairyman who would pattern after the big Spokane merchant in the principles of business success to find out just how much milk each cow gives, what it tests, and then apportion the feed according to her production. While more dairy cows are underfed than overfed, yet there is a big waste and loss in the aggregate by giving a cow more feed than she converts into milk. Then again, when grain is high it may pay to cut down the amount given to the cow, even if it would result in cutting down a certain percentage from the amount of milk produced

According to Mr. Price, it may make the difference between profit and loss to the dairyman if he can raise the hay and grain for his own herd, even to the extent of having some hay to sell later in the season when it may command a high price. "Better to understock than to overstock a dairy farm" is the way Mr. Price puts it.

In this matter of reducing the cost of production the farmer is his own boss. He is master of the situation. When it comes to selling the milk he gets into a harder job. He finds himself in a position that he must associate himself with other dairymen, must give up some of his individuality, must listen to the other fellow, must join in hiring a manager who will not always do as he himself thinks best. This form of cooperation is practically the only way of influencing selling prices and has worked successfully in the big milk situation in New York and Chicago and is working well now on the Coast in King county.

For a year or more a campaign of education has been going on in Seattle as to the superior food value of dairy products, especially of milk. Day after day, week after wek these matters have been brought through the newspapers to the people. Then for about three months there is carried on a special campaign of education as to the cost of producing them. Facts and figures were given showing the rise in the price of feed and the price of labor on the dairy farm and all other advances in the milk business. So when a jump of two cents a quart was made in the price of milk at Seattle there was no sensational protest on the part of consumers. They accepted this rise as a matter of fact, having been informed as to the reasons why the rise should be made, the distributors of Seattle having a working agreement with the King County Dairy association of producers.

Mr. Price leads me back to the two great essentials in the solving of the milk situation, the two basic facts—the cost of production and the costs of distribution. Traveling over this state talking with dairymen and farmers, taking into account the hay and grain fed and checking up with the cow testing associations Mr. Price found that the cost of feeding the average cow which produces not over 200 pounds of fat in a year is about $60 at prices prevailing previous to January, 1917. At 30 cents for butterfat the 200 pounds of fat will bring $60, the cost of feeding the cow. Increase the production of the cow 100 pounds a year, as has already been done by some of our best dairymen and you have a margin of $20 right there, because the feed cost will not have increased more than $10. The keeping of records through a cow testing association will help the dairyman to make this improvement.

The cost of producing milk has very greatly increased during the last year. The cost of feeds have increased 30 to 50 per cent and labor about the same, and that simply means an increase in the price of milk.

The city consumer of milk, however, seems to think that any attempt to increase the price of market milk is little less than highway robbery.

It is the business of the dairymen to cooperate in putting this matter before the consumer in a way that he will see the necessity for an increase in the price of milk. Dairymen should advertise their product by relative cost and food value of dairy products as compared with meats and other common articles food.

Dairymen should remember, however, that the price of milk should be based on the cost of production with a cow that is a little better than the average and with good care and not with the poor cow and poor care.

It is better to pay the producer of milk a fair profit, it is better for the distributor of milk also to make only a fair profit, than if possible to give a big profit to the producer and allow the distributor to make a big profit. Big profits would bring on an unhealthy promotion of the dairy business with attendant results, one of which would be to lessen the consumption of milk, the extraordinary price, either from necessity or from thrift, cutting down the use of milk of the average family.

The milk problem is not an easy one to solve. It is a big problem and one which should be approached with reason and common sense and good feeling and in an attitude of appreciation of the other fellows's difficulty. The main thing is to get at the facts of the case and be willing to sit down and reason it out together.

E A S

Sweet Clover for Pasture

The above cut shows a scene at a demonstration meeting recently held at Winona ranch, near Grants Pass, Ore., by County Agent C. D. Thompson.

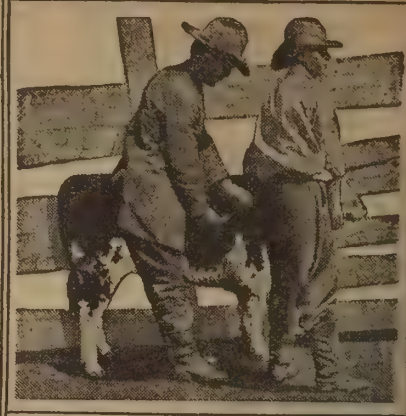
In the summer of 1915 F. R. Steel of Winona ranch slashed off about four acres of brush bench land and burned it over in the early fall. In February following he seeded it to white sweet clover, using five pounds scarified seed per acre. Wherever the ground was burned over there was a good stand. Early in May he began pasturing it with cattle and pastured until late fall. At first the stock did not take kindly to it, but in a short time it was eaten by them just as readily as any pasture.

This year he began pasturing it very early in the season with milk cows, young cattle and horses and it has furnished an abundance of pasture and will continue good throughout the season. His milk cows have kept up a good flow even during the dry months of July and August, with this as their only pasture and a very small grain ration.

The young stock have grown and are looking fine with nothing to eat except this pasture.

The background in this picture shows the nature of the growth of the brush on this piece of land.

Mr. Steel seeded another piece of land adjoining this one last year, except that he used 10 pounds of seed per acre and seeded it in November. He has an excellent stand on this except on spots that were not burned over.



Secures Thoroughbred.

Gleeson Brothers, owners of a fine hay and stock ranch located three miles east of Lawton, Ore., have secured a splendid young Shorthorn Durham bull to head their herd. This animal came from the herd of Frank Brown of Carlton, Ore. The bull, whose sire was awarded grand champion over all breeds, at the Live Stock show at Portland last year, is a yearling, but weights over 800 pounds.

Build More Silos.

More silos have been built in Washington county, Ore., this season than ever before. Among the new converts to the silo are Bud Dilley of Dilley and Bert Doane of the Watts section; also Frank Doane of Oak Hill.

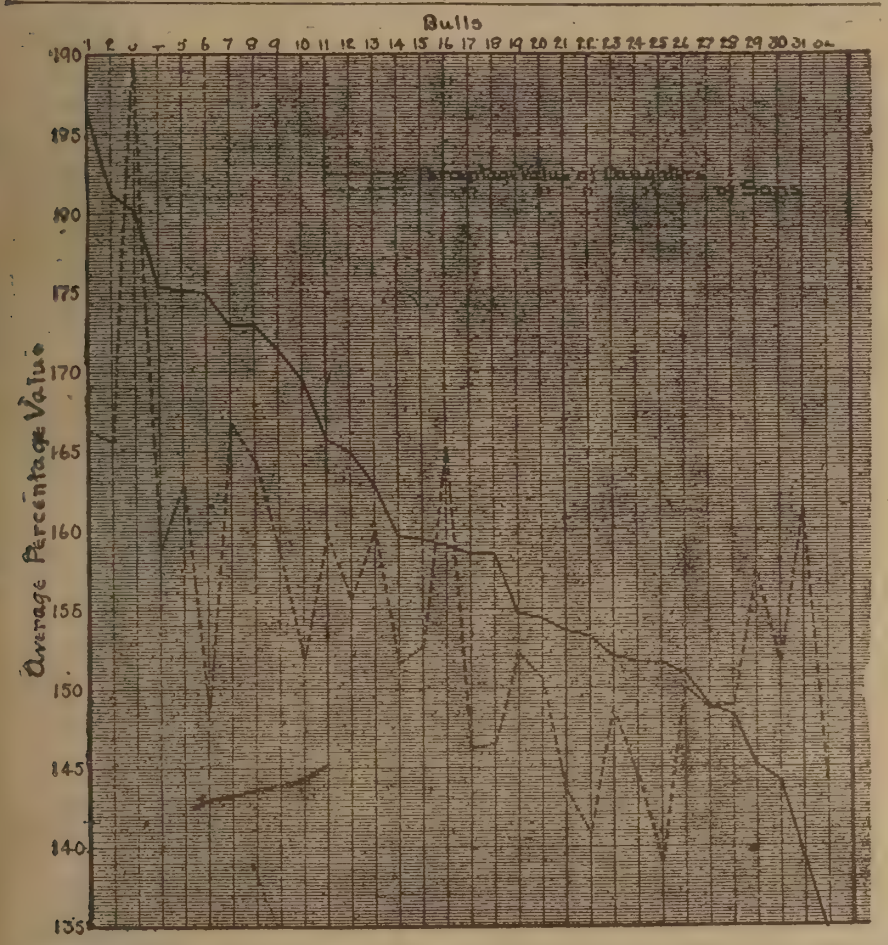
LIVE STOCK NOTES

Write to the Editor



E. J. IDDINGS, Editorial Contributor.

B. C. Altman of Gresham, Ore., whose Jersey dispersal sale last fall realized good prices, promises soon to be actively in the ranks of the breeders again. The heifer calves he saved from the sale will all freshen this fall. He has picked up a few good cows, mostly by the herd bull, La Belle's Oxford Lad, that sold for $350 at the sale. This bull is by Oxford You'll Do Jr. and out of Imp. La Belle Siberius. He has universally sired good heifers, better producers, in fact, than his Jacoba Irene bull. Mr. Altman will put all his heifers and other cows on official test, and no doubt will make some big records.

Mr. Altman is doing some experimenting with corn, having planted four varieties. Two of them are doing poorly and not standing the hot, dry weather, while the other two grow right along and look well, Gold Nugget being the best. His spring oats, sown in May on land rich with a double spreading of cow manure, were looking good when visited, while nearly all fields on land that had been in potatoes and other crops were scarcely worth cutting. H. A.

Selecting Dairy Bulls by Performance

Interesting facts have been brought out by the Utah experiment station in the manner of selecting dairy bulls by performance. One of the features of this bulletin was the endeavor to obtain a measure of the performance of a bull by a performance of his son. To this end, the records of the daughters of the sons of the bulls in question were calculated to a percentage basis, as outlined above, these records being taken as a measure of the son's performance.

Correlation between the average value of bulls and average value of sons of these same bulls as shown by the average percentage values of their daughters.

There were 7632 of these records. The result of the calculation gives the average percentage value of the daughters of the sons of the 32 bulls being studied. These values are given in table VII along with the average value of the bulls as shown by the performance of their daughters.

The close correlation between these two values may be taken by some as evidence that milk production is transmitted through the male line. The writer, however, chooses to regard it merely as greater intensity of breeding, so to speak, on the part of the bulls, due to the more rigid selection toward milk production which they have undergone.

Practical Selection by Performance.

Most practical dairymen now realize the advantage of breeding to a tried bull—one that has proved his power to sire high-producing daughters. Just what performance these daughters must attain before a bull is considered good in practice, is very indefinite. A bull whose daughters are uniformly above the average as producers is the bull which usually, and rightly, attracts attention. Another bull may be the sire of one phenomenal producer and a large number of rather inferior cows. Such a bull is a good one for the average dairyman to shun. There may be a certain temptation to duplicate the extreme production of the one cow, but the odds are too much against this for him to gamble for this end.

The fact immediately arises that at some period even in each good bull's life he was an untested sire. This is very true and some one had to give him a chance to prove himself. There is always a certain risk in breeding to an untried bull. The chance to measure his value is necessarily delayed not only till the particular heifer is born, but till she is in turn bred and comes into milk. Even then, anything but a complete lactation record is not a good standard from which to draw conclusions. All told, then, it takes the better part of four years to measure the value of a bull. In that length of time this bull could have sired five crops of calves, thus completely making over the herd upon which the owner must depend for future profits.

The seriousness and lasting effects of such a move suggest that great caution should be employed. The careful method of testing out a new bull is to breed him only to a few older cows of known breeding capacity, then hold him in reserve, using him only when absolutely necessary, till the results of this first trial are completed. If the majority of these first heifers prove to be satisfactory producers the bull could then safely be used generally in the herd.

This may appear to be a long, rather expensive, and more or less useless precaution; and yet, compared with the disaster of wrecking one's entire herd with a single inferior bull, as is entirely possible if one proceeds blindly, this expense and trouble can not be considered.

JAMES DRYDEN
Editorial Contributor

Turkeys Have Worms

To the Editor: Would you kindly advise me what to do about my turkeys. They are looking well, but I find worms in their droppings. Once one of them dropped a ball of nothing but worms. Some of the worms are tiny fellows and others are long, flat, about an eighth of an inch wide and have irregular edges. There are about 200 in the bunch of young ones. I think the old hens are all right. For feed they pick oats of the straw and range on the prairie, also they get a little loose oats at night. They have grit and clean water.—A. E. O., Roy, Wash.

A common remedy frequently recommended for intestinal worms in fowls is heavy feeding of onions or garlic. Powdered pomegranate root bark is an effective remedy. This should be mixed in a soft food at the rate of about a teaspoonful to 20 or 25 turkeys. The turkeys should be fed on clean feeding ground. The usual method of infection is the picking up of feed that has come in contact with infected droppings. It is a good plan to cover the night droppings with poultry netting to prevent the turkeys picking the worms from it. Scatter lime on the feeding grounds.

J. D.

Conservation vs. Production.

In a recent issue of a paper the statement is made that it is easier to increase the food supply by proper conservation than by campaigns to increase production. It is necessary, of course, that attention be directed both to conservation and production, but it may be true that as much is now lost by failure to use proper methods of conservation as we may gain by campaigns to increase production.

There are losses all along the line. There are losses in grain, fruit, milk and butter, and in eggs alone the loss in the United States has been estimated at over $50,000,000 a year. And this is practically all preventable. The eggs are all good when laid, but the broody hen and high temperatures before they reach the consumers cause great deterioration. There are also great quantities that are broken. Think of it! Obliging the railroads to carry more than 10,000 carloads of eggs unfit for consumption in these days of car shortage. That's what it amounts to—the loss on eggs alone by failure to preserve their original good quality.

J. D.

Variety in the Ration

Circular No. 3 of the Idaho experiment station, by Pren Moore, reports an experiment with three different rations, as follows:

Flock No. 1.

Scratch food, 15 parts wheat, 2 parts oats, 2 parts barley; mash, none.

Flock No. 2.

Scratch food, 12 parts wheat, 2 parts peas, 3 parts oats, 2 parts barley, 1 part kaffir corn, 1 1-2 parts millet, 1-2 part sunflower seed, 1 part buckwheat; mash, 2 parts bran, 2 parts shorts, 1 part cornmeal, 1 part wheat meal, 2 parts fish meat meal, 1 per cent charcoal.

Flock No. 3.

Twelve parts wheat, 2 parts corn, 2 parts oats, 1 part barley, 1 part kaffir corn, 1 1-2 parts millet, 1-2 part sunflower seed, 1 part buckheat; mash, 2 parts bran, 2 parts shorts, 1 part cornmeal, 1 part wheat meal, 2 parts fish meat meal, 1 per cent charcoal.

There were 30 White Leghorn pullets in each flock occupying a colony house 8x16 feet, with a yard 50 feet square. The grain was fed in a deep litter of straw, and the mash fed dry in hoppers. The following gives the egg production per hen for the year beginning November:

Flock 1, 24 eggs; flock 2, 116 eggs; flock 3, 131 eggs.

This certainly brings out the importance of feeding a variety and of feeding part of the ration ground. Poultry-keepers should think it over.

J. D.

Straw to Help Out in Feed Shortage

(Continued from page four.)

year, as the stock run in the straw piles and tramp half under their feet. There is no demand for straw here except for bedding in the stable. The price is $1 per load. There has been no straw baled in this part of the county that I know of. If every farmer would save and feed the straw properly there is no question but that it would save 25 per cent of hay and grain during the year. JAY ROCKWELL.

Endicott, Wash.

More Combines Used.

To the Editor of The Washington Farmer: Practically all straw that is used will be picked up from the combines. Some save the chaff only, while some save chaff and straw. There is little stationary threshing done here this year on account of so many combines.

As for baled straw here, there are no balers that we know of anywhere. As to cost, the straw of itself would not be so high, but the cost of hauling picked up after combines with men at $3 to $4 per day and horses 75 cents to $1 a day with board would make expensive baling straw. Grain hay is worth $14 to $18 per ton delivered in Davenport. ALMER M'CURTAIN.

Davenport, Wash.

Other Replies.

Many valuable pointers will be found in other replies which are given below:

F. M. REYNOLDS, Glody, Wash.: Straw is scarce in this locality. It is selling for $4 per ton in stack. There will be enough here to winter what stock there is, but non to spare.

GEORGE DE BOLT, Adarin, Wash.: Stock can be wintered on wheat straw if not worked, but it is best to feed some grain with it. Straw is very scarce in this part of the county and can not be bought for any price, for all farmers need what straw they will raise to winter their own stock.

M. D. DUNCAN, Creston, Wash.: We use straw to winter our horses on wheat farms. They only eat the chaff. It has a value of $2 or $3 a ton in the field, and loose at that.

J. C. FARR, Albion, Wash.: The only remedy for the farmer is to conserve his straw at this time. There is not generally much demand for straw, but $25 per ton for hay will surely make straw valuable. Straw can be used at about one-half value in winter. Straw should be worth about $8 to $10 baled, f. o. b. cars.

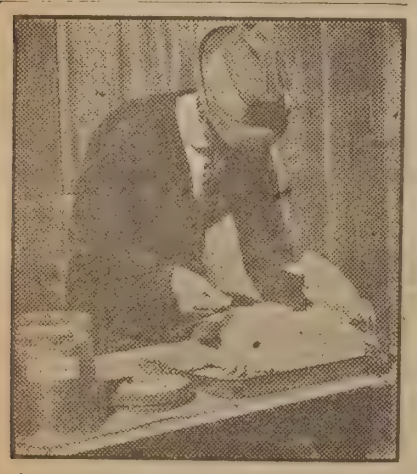
L. C. MILLER, Lacrosse, Wash.: We stack straw and it helps to a great extent in wintering the stock, and if we are short of hay we can feed straw during work time by giving a larger ration of chop. We have no baled straw, but it ought to be worth quite a bit for roughage.

HARRY GOLDSWORTHY, Rosalia, Wash.: Stock in this section are practically all wintered on straw. It is poor feed at best and I am inclined to think that on the farm we are getting as much feeding value as it is possible to get from the straw. There is very little demand for straw. Good oat straw, baled, will occasionally find a market at from $4 to $5 per ton.

GEORGE M. REASONER, Pasco, Wash.: If you are in a position to turn cattle directly to the stacks, young stock will go through the winter fairly well on straw alone. If the straw is baled or moved the chaff and shattering, which is the best part of the straw, is lost.

JAMES STROUF, Stratford, Wash.: The farmers in this vicinity do not have any more straw than enough for their own use. There is no straw for sale, therefore no price.

JOHN JANTZ, Ruff, Wash.: Straw will all be needed here, and some is worth about $15 a stack and straw will be very scarce yet, as crops were short. Demand for feed will be great.



J. S. TRUNKEY, Malden, Wash.: We have plenty of straw and hay in this territory and if there is any demand for same in other places we can furnish it. We have 40 tons baled wheat hay ready for market. As to price I am not posted.

STEPHEN HIGGINS, Hartline, Wash.: There will be a bout enough straw to supply the demand in this community, but none to ship.

WILLIS E. MAHONEY, Tekoa, Wash.: The shortage of feed for stock can be greatly relieved by farmers taking advantage of baled straw. Good wheat and oat straw can be sold for $8 to $10 a ton. The farmers in the Fairfield pea district find a strong market for baled pea straw at all times. Owing to the scarcity of hay and the extremely high prices it would be my advice for the stock raisers to bale all available straw, for with a shortage of hay at this time you can readily imagine the results in the early spring. Montana and southern Idaho are feeling a shortage of hay and the high price of feed is forcing many to dispose of their stock.

Need Dust to Kill Lice

My chickens have lice and I can't get rid of them. I tried powder and also kerosene and lard. Saw in one of your poultry articles about using Sodium Flouride, but haven't been able to obtain it. Have eight May pullets, when should they lay? They are White Leghorns. I feed them lots of milk. —Mrs. A. C. S., Metaline Falls, Wash.

The United States department's specialist. Such pinch can be distribuithe "pinch method" to be entirely effective against all lice. When applying the powder by this method it is placed on a table in an open vessel or pan, and the fowl is held by the legs or wings with one hand, while with the other a small pinch of the chemical is placed among the feathers next to the skin about as follows: One pinch on the head, one on the neck, two on the back, one on the breast, one below the vent, one on the tail, one on either thigh, and one scattered on the underside of each wing when spread. Each pinch can be distributed somewhat by pushing the thumb and fingers among the feathers as the material is released. It is advisable when dusting to hold the chicken over a large shallow pan, as in this way the small amount of material ordinarily lost is recovered.

The natural remedy for the chicken louse is dust. The louse breathes through the pores of the skin and the closing up of these pores with dust kills the louse. If the fowls do not have access to a dusting place in the yard or fields a box of dry earth must be provided. On account of their irritating nature sulphur, pyrethrum or lime added to the dust will make it more effective. Sometimes it may be necessary to dust the fowls by hand, but this is usually considered impracticable by poultrymen who keep large flocks. Sulphur and slaked lime make a good dust powder. A good powder may be made by mixing crude carbolic acid 90 to 95 per cent strength, with enough plaster of paris to make a dry powder that will work thoroughly into and among the feathers.

Sodium Fluoride, referred to in these columns some time ago, is a good powder. The coutntry town druggists do not usually keep it, but it may be obtained from druggists in the larger cities at about 25 cents a pound.

White Leghorn pullets that have had good care throughout the brooding and growing period should lay at from six to seven months of age.

J. D.

Feed Prices.

It will be probably just as well for poultrymen who buy their feed to wait until the new corn crop is harvested in the corn states before laying in their supply of grain. The indications now are that corn will be cheap enough to make it the base of the ration. J. D.

IN THE ORCHARD

Write to the Editor

GRANVILLE LOWTHER
Editorial Contributor

It has been several years since we had as good prices for fruit as we are getting now, and the tendency of the government to stop speculation in food products is one of the factors. When the farmer can get a fair profit and the consumer can buy at a fair price, it stimulates both production and consumption.

When Delicious apples will sell for $2 per box and Jonathans for $1.40 there is 60 cents difference. That 60 cents is equal, or almost equal, to the cost of production. Then unless there is some good reason for growing the Jonathan instead of the Delicious, it would seem wise to grow the apples that bring the highest prices. When Winesaps will sell for $1.70 per box and Stayman Winesaps sell for $1.40, there is 30 cents difference. So we might compare a good many other varieties. Then why grow the cheaper varieties? The answer with many of us is that we have the cheaper varieties already planted and in bearing, while the others are yet to plant and bring into bearing through years of waiting, cultivation and expense. Of course, there are other reasons, but I think the one given will cover more ground than any other, or perhaps more than all others combined.

G. L.

ORCHARDING AN ART.
Success Requires Real Application

By Granville Lowther.

In a previous article Dr. Lowther called attention to the fact that fruit growing was a real art, a fine art. Here are some of the arts of the business as he sees them, and later he will tell of further arts and draw some interesting conclusions as to the man and the business.—Editor.

Among the things requiring skill in orchard work are irrigating, cultivating, spraying, pruning, thinning, picking, assorting, packing and marketing. All of these require a knowledge more or less technical in its nature, and unless the fruit grower understands them, or at least knows that he does not know and employs some one who does understand, he will not succeeed in the highest degree.

The orchardist if he employes help, should know when that help is doing his work properly. If the men he employs do not know what to do, he should be able to show them. Irrigation is an art, and every year there are held irrigation institutes, the purpose of which is to educate the water users in the best methods of irrigation.

Orchard cultivation is an art requiring a knowledge of soil conditions, the root system of trees at different periods of growth, in order not to injure them in the process of cultivation.

Spraying is an art. The man who does not know how to test the strength of his spray materials, how to mix the different kinds that may be combined, how much to use under different conditions, how to apply them, how to keep the machinery in order, when to spray and what to spray, is not prepared for his work.

Pruning is an art. Different varieties of trees require different rules of pruning. For instance the Winesap that has a spreading top, requires different treatment from that of the Wagener with a vase-shaped top. The Thompkins King, with a heavy foliage, requires different treatment from that of the Spitzenburg or Yellow Newtown of a slower growth. Then there is pruning for a larger fruit crop, and in case of extra heavy bearers, for a smaller crop of fruit and a larger wood growth. In many cases, the same law applies in the cutting off of important branches, as would apply in a hospital in cutting off legs and arms. The difference being that if a mistake is made, the consequences are not so serious.

Thinning is an art. In order to thin successfully, the thinner should have some imagination, and be able to see what the tree will bear, when the crop is developed; whether it will produce three tier apples, four tier, five tier or jumbles. He should be able to judge the relative vitality of the tree and know whether it is able to develop a heavy or light crop into commercial sizes.

Cyanide for Codling Moth.

The question is being asked, "Is cyanide of potassium a good codling moth spray?"

I do not know, but since it is one of the most deadly poisons known, I have no question of its potency in killing anything that eats it. My only question is will the apple hold enough poison in its calyx cup to poison the folks who eat it?

One man has tried cyanide, and has offered one dollar for every moth that can be found in his orchard. The men who applied the spray, wore masks over their faces, so I am told and sponges through which to breathe, so as not to get the poison while spraying.

Now do we want to run the risks of using a poison so dangerous as this? Personally I would not use it until it had been proven that it will not kill the folks who use the apples as well as the apple pests. I think until that time, it should be used with extreme care.

G. L.

Home Storage of Cabbages

Heads of late cabbage may be cut and stored in conical pits in the same manner as beets, says Farmers' Bulletin 879 of the United States department of agriculture. Another common and very satisfactory method is to pull the plants, roots and all, and place them in a long pit with the heads down, as illustrated in figure 1. A few heads may be removed from time to time without disturbing the remainder of the pit. As slight freezing does not injure the cabbage, the covering of the pit need not be as thick as for other vegetables.

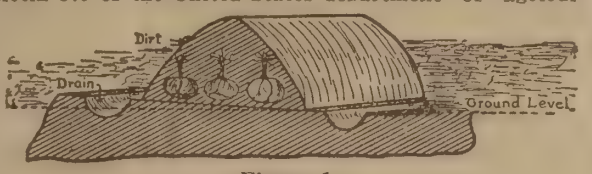

Figure 1.

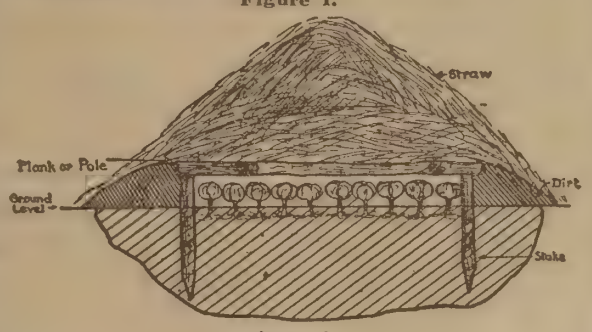

Figure 2.

Another good method of storing cabbage is illustrated in figure 2. The plants are pulled, roots and all, and set side by side with the roots down in a shallow trench, the length of which corresponds to the width of the bed. The bed may be any width up to eight or 10 feet and as long as necessary to hold the number of cabbages to be stored. Cover the roots with earth. Around the bed erect a frame of rails, boards or poles or by driving a row of stakes into the ground so that an inclosure about two feet in height is formed. Bank the outside of this frame with dirt and place poles across the top, covering them with straw, hay or corn fodder. Make provision for removing portions of the stored product from one end of the pit. This type of storage is inexpensive and gives good results. When the heads are cut, leave the roots in position, and in the spring these roots will sprout and supply the family with an abundance of greens. A large percentage of the cababge sprouts found on the market are produced in this way.

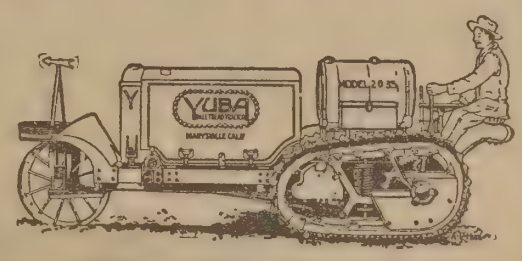
How Many Acres Have You?

YUBA TRACTOR 12-20

In citrus orchards, when continuous cultivation is demanded, 60 acres warrant investment in a YUBA.

For 60 to 100 acres of orchard, the YUBA is right in height and power.

It's the right width for 20-inch beets, 7-foot asparagus, and 7-foot vineyards.



On small farms one is enough. Large companies buy two or three.

With the Yuba All-Around Plow, it's a one-man outfit—a profit maker.

Yuba Manufacturing Company

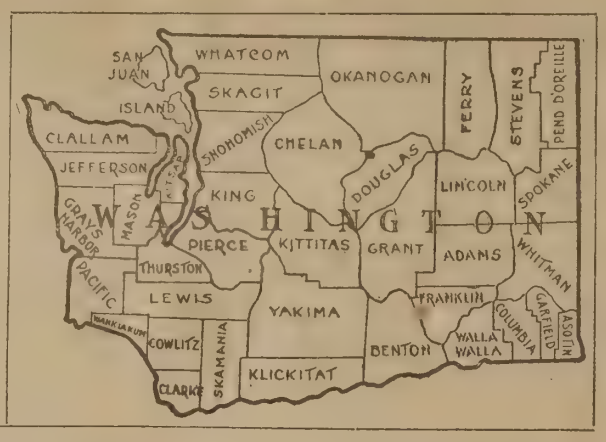
433 California Street, San Francisco

Factories at Marysville and Benicia, Cal.

YUBA TRACTOR 20-35

For the grain grower and biggest fields—for heavy work:

—plows 15 to 20 acres a shift
—discs 35 to 40 acres a day
—hauls 20 tons on high speed
—operates a 32-inch separator
—pulls combined harvester with 20-foot cut.



The ideal machine for the wheat farmer, the rice grower, the bean raiser, and the contractor.

Yuba Manufacturing Company Dept. C-6

Will Mix Beet Syrup and Straw

By-Product of Sugar Beet Is a Possibility in Helping to Solve the Feed Shortage Problem; Much Silage Is Being Made This Fall.

YAKIMA, Yakima County, Wash., Sept. 19.—Winter feed prospects are very good. The price of feed, of course, is high, but feed is very plentiful. The number of silos have been materially increased, while the acreage of corn has been increased about 30 per cent. We have approximately 10,000 acres of corn in Yakima county this year which will yield in the neighborhood of 10 tons ensilage per acre. The sugar beet factory will also have a large quantity of by-products, and, according to Mr. Horn, most of this will be disposed of to feeders in Yakima county. As regards the use of straw, will say that there is a movement on foot among the farmers to use up the straw, stover and beet tops. So far, I do not think that there has been a market established on straw in the valley, although I have heard it quoted outside of the trade about as follows: Wheat straw, $2.50 per ton; barley, straw, $3; oat straw, $3. As you perhaps know there will be quite a quantity of crude syrups from the manufacture of beet sugar. Many of our farmers are planning to use this substance mixed with straw as a winter ration. I have learned from correspondence with other experiment stations and from Mr. Wheelon of the Utah-Idaho Sugar company that the crude syrup has a feeding value equal to oats, pound for pound. The company has agreed to dispose of the crude syrup to our farmers at $10 per ton. I am carrying on a campaign to have this feed thoroughly tested out in the valley during the coming winter. There is 12,000 acres of potatoes in the Yakima valley this year. The crop is about 80 to 85 per cent normal, and I have figured that we will have approximately 4200 cars for export. The 12,000-acre estimate does not include patches smaller than one acre, and I believe there are enough of these in Yakima county to almost supply our local demand. The storage facilities are very satisfactory, there being enough storage to accommodate approximately one-half of the apple and potato crop if it is necessary to store that much. There is considerable active preparation for increasing acreage during the coming year in Yakima county. As you perhaps know there is a bill before congress appropriating $750,000 for extending the irrigation system on the Yakima Indian reservation. If this bill goes through approximately 30,000 acres of new land wil be brought into cultivation. Outside of that there is an additional 8000 acres coming under irrigation by a pumping plant on the present Sunnyside canal. There will also be quite an increase in crop acreage on the Tieton project. The increase in acreage during 1918 will be largely in the following crops: Sugar beets, corn, wheat, alfalfa and beans. The increase or decrease of potato acreage will depend entirely on the price which the farmers receive for the present potato crop.

LEE W. FLUHARTY.

Are Saving the Straw.

OTHELLO, Adams County, Wash., Sept. 18.—The feed problem is demanding and receiving more than usual attention from the farmers. There never has been such a demand for straw. Combined straw is being stacked carefully and all stacks are being topped out. It usually sells by the stack. None is baled here. The price per stack varies from $10 to $15. We were at a sale on Saturday and loose rye hay sold at $13 per ton. It is higher than ever before in this locality. There is not a spear of green vegetation except thistles in the stubbles, but stock is keeping in good shape on them. There will be a full acreage again next year, but no increase over this year. No seeding has been done and none will be until a rain comes. Many farmers are holding their grain on their farms and not storing in warehouses. Some say they will not seed any next year unless they can get a better price this year, but we think when the time comes the land will be seeded, as they can raise nothing else here except wheat. There is a shortage, to some extent, of farm help, but there are cases where the hired man does the work and the boss uses up gasoline, when, if the boss would labor, he could dispense with his man. This is a bitter lesson that many will be forced to learn if our boys don't "can the kaiser" soon.

A. O. LEE.

Second Growth Potatoes.

EPHRATA, Grant County, Wash., Sept. 12.—There is apt to be some shortage of feed in this county. The wheat was a little short this year and consequently the supply of straw will not be as great as in former years. Practically all the straw will be fed on the farms to horses and cattle. Not a great deal of straw has changed hands so far and do not know if there is any price set on it at the present time. None to amount to anything will be baled, practically all will be sold loose where it is sold at all or fed in the field. The potato crop will be light, except on irrigated land, where it is as good as usual. More or less trouble has been experienced this year in second growth potatoes. This was due largely to the extremely hot weather during July. The crops next year will be about as usual. Owing to the limited rainfall in this county it is necessary to summer fallow every other year, so the crops can not be increased a great deal from year to year without reducing the crop following.

H. W. REAUGH.

Late Potatoes Fail.

SOUTH BEND, Pacific County, Wash., Aug. 31.—Winter feed will be here, as elsewhere, a problem. Everyone is trying to conserve all of the stock feed they can. Half the milk routes in Raymond have stopped. Many farmers will feed straw with hay this winter; straw is selling at $6 a ton and alfalfa at $25. The pastures on the uplands have dried up but the tideland pastures are green and do not seem effected by the dry weather. Some crops are beginning to dry up; lots of corn is stunted and the leaves are curled up. Early potatoes were plentiful and large, but the late varieties are a failure. One farmer reported his crop of potatoes as not worth digging. Beans are doing well. There has been a great increase in this crop. The weather was favorable to late hay making.

MRS. WINNIFRED BUCKINGHAM.

Mistake in Selling Young Stock.

KENNEWICK, Benton County, Wash., Aug. 24.—Wheat is the only crop that has suffered from drouth to any extent. All other crops in this section are grown under irrigation. The wheat, however, has not suffered to the extent that it appeared it was going to early in the season. This is especially true where the land was worked early in the season the previous year. It is very noticeable throughout the wheat section that the wheat which was sown on summer fallow which was worked early the previous spring has not suffered to compare with that which was sown on summer fallow which was worked late. This year above all others has shown the folly of not working the ground that is to be summer fallowed early in the spring. The farmers are all beginning to realize now that early work makes a material difference in the amount of moisture saved. The high price of live stock tends, of course, to stimulate production, and to counterbalance this the price of feed is retarding production. In fact, in some places the farmers are getting rid of their stock on account of the price of feed and in spite of the fact that stock is high. Considering a period of two or three years there are many reasons to believe that a farmer is making a serious mistake in disposing of young stock on account of the high price of feed. He will undoubtedly be out of stock to feed at a time when stock is extremely high and when feed can be sold only at a fair price. This is sure to be the condition, as the production of feed can be materially increased in so much less time than can the production of live stock.

LEE M. LAMPSON.

Good Cattle for Sale.

CHEHALIS, Lewis County, Wash., Aug. 23.—Pastures are so very short that dairy cows ought to go on nearly full feed now and stock cattle should have half rations so as to begin winter in a thrifty, vigorous growing condition. They had to be fed extra long last spring. It now costs three times as much to grow a cow here as it used to. Milk is now $2.50 per 100 pounds and ought to be $3.50 to leave a fair living for dairymen and their families. Many good cattle are for sale, but beginning to feed so early will cause much feed to be shipped in. Cutting and threshing are being pushed. Grain is about two-thirds an average crop. It is of fine quality. Straw is quite short and most all will be baled and much of it held. It will probably sell on the start at about $7 a ton on cars, and $4 in stacks. Loose hay is $10 to $12 in the stack now and $20 on cars. A large acreage is in potatoes. A small part will be a fair crop. A much larger acreage will have about a third of a crop. That is if we get rain soon. Probably nearly a quarter of the acreage will scarcely be worth digging. Wages are too high to plan any increase for next year's crop. If food control sets a price below cost, farmers will have to raise plenty for themselves and a small surplus for expenses and let consumers go to the land and do likewise.

L. K. COGSWELL.

Feed Prospects Normal.

LA CROSSE, Whitman County, Wash., Aug. 25.—Winter feed prospects are about normal. Straw will possibly be less than usual as quite a number of combines are used. Potato crop, which for a while, promised a record crop, is at present very poor due to lack of rain and excessive heat. No rain has fallen since June 29, making it one of the longest drouths on record. Threshing is progressing rapidly. General opinion is that crops are from 50 to 60 per cent normal. Some yields of 25 to 30 bushels per acre are reported and will probably average 15 to 16 bushels per acre. From present indications crop area will be increased 25 per cent for next year.

M. E. SCHRECK.

Work on Straw and Grain.

WASHTUCNA, Adams County, Wash., Sept. 2.—We wheat farmers depend on our straw stacks to keep the horses and cattle all winter. The straw itself seems to have little food value, but the chaff is nearly as good roughage as hay. Of course in the stacks there is usually a little shrunken wheat which the threasher has blown over and helps keep up body heat. The custom is becoming more prevalent to feed straw and grain for all early spring work up till plowing time. The horses seem to stand work for a month or so on straw roughage, but begin to fall off after that as the day gets warmer and the work harder. At present there is no market for straw feed.

R. W. SNYDER.

Many Waste Their Land.

FERNDALE, Whatcom County, Wash., Sept. 17.—A heavy rain has hindered harvesting and threshing in this vicinity, but it will be a great help to all root crops and cow-kale. These crops make the best growth in the cool months of the fall and with the present rain a good crop is assured. Although this is not much of a grain-growing district there has been more grain grown the last year than previously, especially oats and wheat for chicken feed. The war gardens are yielding well and the housewives are busy canning and drying the perishable varieties for a good winter's supply. Farmers are realizing that a small patch of corn, properly cared for, provides a good green feed when fed directly from the field, when the pastures commence to get short and before the cow-kale is ready later in the fall. The greatest obstacle in increasing food production in this vicinity is in clearing the land. When the land is once cleared, and common sense farming methods applied, farmers can rest assured of a crop. Of course if all the timber was cut down and the slashings burned good and then seeded down with a good pasture mixture, more pasture would be provided. This would also start the large stumps to rot. The average farmers around here have five, 10 and 15 acres under cultivation and they should not waste any land after working hard to clear it. Nevertheless one can see on many farms a great amount of space wasted, in large barnyards, around buildings, along fences and in many places, division fences that are practically useless are allowed to grow up into a veritable hedge. A number of farmers in this county are growing sugar beets under the direction of the United States department of agriculture. This fall after harvesting a few beets will be sent away to be tested for their sugar contents and if the per cent is high enough it is the intention to try and grow this crop on a commercial scale. At present the beets are growing well.

CARL J. MENZE.

New Silos on Four Farms.

According to County Agriculturist B. W. Cooney of Klickitat county, silos have been constructed on four farms in the Trout Lake valley. These silos are the first being built in the valley. The construction is known as the continuous wood hoop.

Blasting of Stumps Having Heavy Tap Roots

A. Electric Blasting. B. Fuse Blasting. Note location of charges.

The kind of explosives to use depends on both the nature of the soil and the nature of the roots, says a bulletin from the Arizona experiment station. The heavier and finer the soil, and the less the tendency to send down a long and large tap root, the lower the per cent strength of dynamite to be used. With a clay soil and stumps having no marked tendency to send down a tap root, it is generally desirable to use 20 per cent strength explosive, and under more extreme conditions, possibly a 15 per cent strength powder might be employed. With a sandy soil and deep, heavy tap roots, our experience has led us to favor a 40 per cent strength dynamite, and under some conditions as high as 50 per cent strength. This, also, is a matter which must be left to the judgment of the operator. Most explosives known to the trade as "stumping powders" are about 20 per cent strength, but our experience favors the use of these only in a fine soil, as a quicker and stronger dynamite is more satisfactory in coarser and sandier ground. In blowing very large stumps we are led to favor the firing simultaneously of three or four charges, located at different places under the stump, with an electric blasting machine. Electric blasting caps are used in priming the cartridge virtually the same as blasting caps. A hole is made in the center of the end of a stick of dynamite, in a slanting direction in such a way as to come out at the side a couple of inches from the end. Double the wires, and insert through the hole, looping around the stick as shown in the accompanying illustration. Then punch a hole in the end beside the first, only straight into the stick, and insert the cap. Tighten up the wires, and the cap is held firmly in place. The ends of the wires are connected up in circuit with the blasting machine as shown in the diagram.

Buys Costly Fowls.

One hundred dollars was paid for three White Orpington chickens by Claire Wellman of Lewiston, Idaho, according to reports from that place. Wellman is a boy of 13 years, but is reputed to be an excellent judge of poultry and live stock. He purchased the chickens from the proceeds of the sale of a cow. The birds are a pure-bred cockerel and two pullets, from which he expects to build up an excellent strain of poultry.

You cannot name another trade, calling or profession, which can be so quickly and easily learned, that is so sure to bring a person immediate, pleasant, profitable employment, as the training to be had in

Wilson's Modern Business College

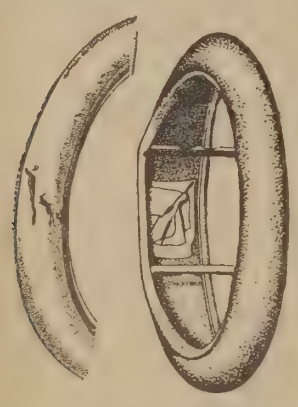
Fair at Puyallup

Western Washington Features

The date for the Western Washington fair, which is to be held at Puyalcup, is rapidly approaching. For 17 successive years this fair has been the great annual fall event for Pierce and King counties and the eighteenth annual exhibition, which is to be held from October 2 to 7, inclusive, is being looked forward to with more than usual anticipation. Owing to war conditions and the great interest which is felt in things military an endeavor is to be made by the management this year to give a military air to the entire exhibition. Troops from the cantonment at American lake, and marines from their station at the university campus at Seattle, are to be featured, parades and maneuvers are to be daily features and flags and bunting are to be lavishly displayed. The fair of 1917 will be a military fair.

The management is at present exercised over the question of providing quarters for the increased numbers of horses, cattle sheep and hogs for which space applications are daily being made. It is believed that the stock exhibit this year will consist of more high class animals than ever before, owing to the fact that the two great fairs of Washington and Oregon immediately preceed the Puyallup exhibition. Cattle breeders and horse owners have signified their intention of showing their stock at the state fair at Yakima from September 17 to 22, then at the Oregon state fair at Salem, September 24 to 30, and then be in Puyallup in time for the Western Washington fair October 2 to 7.

Added to the great stock display will be the large and attractive showing of fruits, vegetables and flowers, never better for show purposes than this year. But all these, no matter what the quantity and quality, do not make a successful fair without attendance, and the fair management is asking the friends of the fair to boost for attendance from now on until fair time. That it will not ask in vain is assured. Every year sees the same happy, fun-loving crowd, coming in swarms through the big gates, massing in front of the concessions, streaming through the various buildings, cheering the track events from the grandstand and at last, tired but happy, hurrying from the ground just in time to catch the last bus or train for home. A day at the Puyallup fair is a day of delight. Let every good fellow boost early and late.



The Motor Car

On the Farm

Blow-Outs.

By W. D. ALBRIGHT.

The illustration herewith is of a tire whose necessary repairs have been neglected. To begin with, the tire was cut entirely through by some sharp object. An inside patch was applied by the owner, but he neglected to have

pulled away from the position it originally held and has been forced through the patch removed and a permanent repair made at the first opportunity. This temporary patch has gradually the break. When inside patches are used an outside emergency band should also be applied, but both removed as quickly as it is possible to make the repair. Don't wait until the tire gives out but look up a repair man it once. Have the tire repaired while the injury is small.

Whole County Can Autoride.

According to John P. Duke, cashier of the Security State bank of Palouse, Whitman county, Washington, has enough automobiles to take every resident of the county for an automobile ride at one time. Mr. Duke cited the wide use of automobiles as indicating the prosperity of the district.

"More than 1000 new machines figured on the assesment rolls this year," he said, "and the number undoubtedly would have been increased 2000 or 3000 had the dealers been able to secure cars for prospective purchasers. The county's population is 35,000. We have enough machines to move every one out of the county, if necessary, in one trip."

Trucks for Hog Hauling.

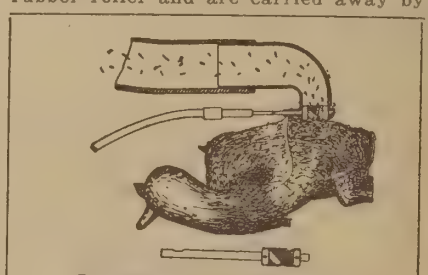
L. Stubblefield of Hunters, Wash., manager of the Tonasket Live Stock company, uses two motor trucks for hauling live stock to the Spokane stock yards. He says he has found the motor truck much cheaper than shipping by rail. One of the trucks he uses is of large capacity, and he can haul to town in one trip approximately a car load of hogs with his two machines. His haul is about 40 miles.

Kittitas Crops

Make Total of About $6,000,000

The hay crop of the Kittitas valley this year is estimated by hay and grain dealers to be 65,000 tons. Of this, 50,000 has been baled, the balance stacked for home use. Timothy constitutes the larger amount, with the balance alfalfa and timothy and alfalfa mixed. Prices are about $25 for timothy, $21 for alfalfa and $23 for mixed hay, making the value of the crop close to $1,500,000. The acreage and thus the yield of hay was smaller than usual and the acreage of grain probably larger than ever before, though the yield per acre was light. Probably 2,000,000 bushels of grain were raised, the larger portion of which was wheat, with a good share of oats and barley, and worth perhaps $3,000,000. Add to this the fruit, horses, cattle, sheep, wool and the few hogs produced in this valley in 1917 and it makes a total of probably $6,000,000. Ellensburg, the metropolis, is prospering with the valley. H. A.

Field Averages 43 Bushels.



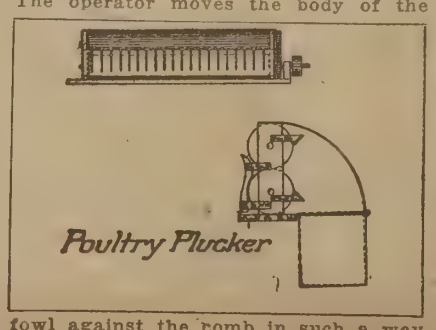
The field of wheat near Waterville that was on a summer fallow demonstration has just been harvested, reports A. M. Richardson, county agriculturist of Douglas county. It has not been hauled yet. But the one or two loads that were hauled weighed 143 pounds per sack. There were 2720 sacks on the 150 acres. The field averaged approximately 43 bushels per acre.

Inventions

By C. J. LYNDE, Macdonald College, Quebec.

Pin Feather Plucking Machine.

In this machine the pin feathers are plucked between a steel roller and a rubber roller and are carried away by



Pin-Feather Plucker

a current of air. The air is drawn through the steel roller, which is made in the form of a hollow spiral for this purpose.

Plucking Machine.

This machine has a broad-toothed comb in front of two revolving rollers. The operator moves the body of the

Poultry Plucker

fowl against the comb in such a way that the feathers pass through and are plucked by the rollers.

Fill out the Coupon and learn about the BULL TRACTOR.

America's Answer!

America has answered the call of humanity and freedom. Our soldiers are now in France fighting for the principles of democracy.

But America's greatest answer will be food.

One billion bushels of wheat will be needed to feed the fighting men of Uncle Sam and his allies and the starving women and children of Europe.

The Northwest farmer with his progressive methods must do his share... His best ally is the

BIG BULL TRACTOR

Burns Kerosene or Gasoline

The most economical and efficient tractor on the market today; because of its exclusive self-steering wheel, low fuel and upkeep cost; ability to plow close to the fence and turn sharp corners and 24-hour reliability, it is his choice as an ally for the production of bigger crops at less cost.

BULL TRACTOR SAVES LABOR

The Bull Tractor will plow for you at a cost of from 30 to 60 cents per acre. It saves you labor for it is a strictly ONE MAN Tractor for binder, header or plows. It reduces the cost of crop production and will pay for itself in a season.

More in the Northwest than any other make

You owe it to yourself to produce crops as cheaply as possible. The Bull Tractor at $985.00 will do more than many tractors costing several hundred dollars more.

Investigate before you buy a tractor. It costs you nothing and will save you hundreds of dollars.

More Kaiserism Shown

Utter Treachery Is Common Practice

Further evidences of the just grounds back of this country's break with Germany, and further justification of the stupendous war preparations that are now changing the face of American life are daily being revealed. It was not enough that Germany should seize upon an insignificant incident as a ground for launching a world war; that she should hold bona fide treaties as mere scraps of paper and ravish helpless and peace-loving nations; that she should wantonly destroy thousands of neutral and noncombatant lives on land and sea by the most inhuman means yet devised. It remained for the kaiser's hand of treachery to reach into practically every corner of the world, violating without stint all international law and disregarding every neutral right.

German Treachery.

While professing friendship for America the kaiser and his men were plotting secretly to involve America in war with Mexico and Japan, fomenting industrial disorders in America and destroying American factories. While professing friendship for America, the kaiser and his men were financing an organization in this country designed to influence congress in such a way as to handicap President Wilson in his dealings with Germany, and prevent the United States from standing up for its honor and its rights. This is one of the latest disclosures at Washington, D. C. Copies of a telegram sent by Count von Bernstorff, former German ambassador to this country, asking his government at Berlin to advance $50,000 as a fund with which to influence congress, are in the hands of the department of state at Washington. That this was not the only like offense, and that the ambassador had no doubt but that the money would be forthcoming are shown by his reference in the telegram to the influence he wished to exert on congress "as on other occasions," and by his statement that he would proceed on the assumption that the money would be appropriated. This message was sent January 22, significantly just before Germany's announcement of its ruthless submarine campaign.

Likewise, while Germany was professing friendship for Argentina, the only great food-producing nation to hold out long against the German violations, she was sending secret messages from the German embassy in Argentina's capital to Berlin instructing submarine headquarters of the movement of Argentine vessels, that they migfiht be torpedoed and sunk "without leaving a trace." Unfortunately, the Swedish government was involved in the transmission of these messages, though whether wilfully or not has not yet been decided.

Another revelation showing the total lack of humanitarian spirit on the part of the leaders of the German propaganda is that of the discovery in Rumania of hidden cultures of disease microbes which documentary evidence seems to prove were prepared for the sole purpose of infecting the cattle and horses of that country with contagious disease. In like manner, high explosives were secreted for use in destroying Rumanian industry. The treachery shown by these revelations is all the more great in view of the fact that Rumania was at that time a neutral country, though it appears that Germany anticipated that sooner or later the two countries would be at war.

Such a record on the part of Germany certainly explains to the satisfaction of every American patriot and lover of honor and fair dealing between men and nations why the United States is in the war, and why she is appropriating billions of dollars and calling hundreds of thousands, even millions, of her best men to carry it on to a successful conclusion. Certainly it explains why terms of peace, from whatever source they may emanate, can not be considered until they are so drawn as to remove the German kaiser and his blood from the seat of power and enthrone a government in Berlin that will respect human rights and cooperate with the rest of the nations in democratizing the world.

Argentina and Germany.

At this writing a declaration of war by Argentina against Germany has not been made, though the break is still likely to occur. The Argentina congress was preparing to vote on the matter when a note came from Berlin expressing something in the nature of a disapproval of the action of her former minister to Argentina in transmitting the messages to Berlin designed to aid in the destruction of Argentine shipping. Argentina's action is delayed pending a consideration of the note, which is not believed to be satisfactory.

Ship Builders Still Out.

Strikes in the shipbuilding industry on the Pacific coast continue to tie up building operations that are greatly needed to continue by the government. Six thousand men are involved in a strike at Portland, in addition to something like 25,000 at San Francisco and a large number at other coast yards. The government is attempting to effect a settlement of the controversy, which is largely one of desired increase in wages. A truce has been declared in the San Francisco strike, which may result in a return to work some time this week.

Impeach La Follette?

As an immediate result of utterances which many believe were little if any short of treasonable, the Washburn Loyalty league of Washburn, Wis., has requested Senator Bob La Follette to resign his seat. "A long-suffering Wisconsin electorate refuses to be longer disgraced by your acts and words," says the request. A message was also sent to the United States senate asking that impeachment proceedings be brought against the senator. It was at St. Paul that he made his recent public statements claiming that the United States was not justified in being in the war against Germany, and an official investigation has been started by Minnesota authorities looking toward his possible arrest on the charge of seditious utterances. The governor of Minnesota has issued a statement that the senator would not be held immune from arrest if the charges were found to be well grounded.

Germany Wants Peace.

That Germany is anxious to secure peace appears evident in reports that continue to come from Berlin, though as yet nothing in the line of a suggestion that the allies will consider has come forth. Germany has answered Pope Benedict's peace appeal favorably. The United States and her allies, however, have agreed to no further peace talk until such time as it is forced by another appeal or until something reasonably satisfactory comes from Berlin in the form of an offer of negotiations.

Alfalfa

Cures While You Handle the Hay

By CLARENCE VALENTINE, Loomis, Wash.

The Q. S. ranch has about six acres in alfalfa. I cut 22 big loads this season. We have no irrigation and there has been no rain here since June 10. After the last crop is off I use it for pasture. It is good for dairy cows and hogs and a fine feed for chickens. I cut the alfalfa just as soon as the first bloom is in sight, follow up closely with the rake, get it into the windrow, then in the shock, then put it in the barn or stack it. It cures while you handle it. Then spread it around well, tramp it down good, and it is the finest feed in the winter that grows, for cattle, hogs and sheep. I never have had any experience with silage. In preparing ground for alfalfa it should be plowed deep in fall or early spring. Cultivate well before seeding with harrow. Try and sow just before a rain. Harrow it in, then float it. By doing this it comes up before the weeds do. Sow oats for a nurse crop. It makes fine hay after the second season. It wants to be harrowed in the spring as deeply as possible. The more you cultivate alfalfa the better it produces. Hogs will winter on dry alfalfa as well as cattle.

Farmers' Market Successful.

The King County Farmers' Public Market has been in operation for the last few weeks, and is meeting with fair success, reports F. W. Rader, county agriculturist of King county. A number of communities are endeavoring to market their surplus, cooperatively through this new market. A large number of small land owners have signified their intention to plant additional garden truck next year, saying the changes in the city ordinance governing this public market makes it possible for them to dispose of their products at a paying figure.

Live Stock Well Balanced at Yakima

(Continued from page five.)

pion filly, Queen Lucile, is growthy, but has much quality.

Standard breds and Morgans showed together and competition was sharp. The fine-acting, handsome 3-year-old standard-bred, Brooknook Czar, owned by Rev. H. C. Stover of Salem, Ore., won champion honors over H. E. Angel's Morgan, Quesal, though the latter is also a very handsome, show animal. Emily L., one of Mr. Angel's Morgans, a yearling filly, won female champion honors.

Professor C. F. Monroe, county agriculturist of Grays Harbor county, Wash., placed the ribbons.

The following are the horse awards:

Percherons.

Stallion, four years and over—1, A. R. Hunter, Island City, Ore., on Kroumir; 2, W. E. Arnibrook, Goldendale, Wash. All other Percheron awards went to Hunter, as follows: Three-year-old stallion—1, on King; two-year-old—1 and 2, on Donald and Salem; under one year—1, on Dudley Kroumir.

More than four years and over—1 and 2, on Grace and May; two-year-old—1, on Alice Kroumir. Champion stallion—Kroumir. Champion mare—Alice Kroumir.

Clydesdales.

O. I. Trice of Grandview, Wash., the only exhibitor, received the following awards:

Three-year-old stallion — 1, on Byron's Prince; two-year-old—1, on Byron McQueen; under one year—1, on Liberty Bond.

Mare, four years and over—1, on Queen Lucile.

Champions—Byron Prince and Queen Lucile.

Coach Horse.

John Walker was awarded first and championship on the stallion, Raven.

Standard Bred and Morgan.

Stallion, four years and over—1, H. E. Angel, Donald, Wash., on Quesal; 2, B. F. Quesenberry, North Yakima, on Dan of Spokane. (Both Morgan.) Three-year-old—1, H. C. Stover, Salem, Ore., on Brooknook Czar, (standard bred). Two-year-old—1, A. Helmich, North Yakima, on Aberdour. Yearling and under one year—1, Angel, on Texas Morgan and unnamed, (both Morgans).

Mare, four years and over—1, Angel on Bess of Spokane; (Morgan); 2, Stover on Nymphea, (standard bred). Two-year-old—1, Angel on Lassie Golden. Yearling—1, Angel on Emily L. Under one year—1, Angel on May Day. (All three Morgan.)

Get of sire and produce of dam, both won by Angel.

The Cattle Show.

Dairy cattle were represented by three breeds, Holsteins, Jerseys and Guernseys, besides five head or Brown Swiss, in smooth condition, shown by Ed Mycosick of La Grande, Ore.

Carnation stock farm of Seattle and William Bishop of Cimacum, Wash., each showed a full herd of Holsteins, while J. H. Hulbert of Mount Vernon, Wash., showed 13 head and William Todd & Sons of North Yakima four head. These latter were very uniform and typy senior and junior heifer calves, reflecting credit on their sire. But it seemed odd to not have Davis, Marks and Todd all present with full herds.

Carnation Stock Farms were accorded a majority of the blues, and their bull, Hazelwood Sir Ormsby, recently purchased from John L. Smith, won grand championship, defeating their own former champion, Matador Segis Walker, who was placed third, while William Bishop's Canary Paul Loren DeKol stood second. The latter has great size, a strong back and hips and thighs of very satisfactory style. But Hazelwood Sir Ormsby has not only the back and hips needed to make a great bull, but he has a magnificent front and was in a little the better show condition. He has never been defeated except by his sire. For champion cow, while there were a number of great cows, including some that have won champion honors, there was no chance to defeat Bonnie Ormsby Lass, the great cow that William Bishop has so successfully shown at the Panama-Pacific and other stock shows. She holds her quality from head to udder, and shows dry almost as well as fresh. Junior honors went to Carnation's Matador Segis Walker 6th, defeating Mr. Hulbert's La Connor Pontias Howtje, that has won at previous shows, but did not show as well as usual, while Hulbert's very sweet heifer calf, La Connor Pontiac Grant, won female junior championship with credit to herself and Mr. Hulbert's herd sire.

Two herds of Jerseys competed. Clifford Reid of Portland, Ore., secured all championships, after his great show bull, Onota's Cotillion Boy, had been defeated by his own bull, Violet's Noble Fern. But he had no walkover. Emil Erickson of North Yakima had a very smooth herd, throughout. His herd bull, Sutton Star, has long hips, good head, much quality and, while Violet's Nable Fern won, correctly it was very close. So with the 3-year-old cows, on which the decision was again close.

Middledale Farm of Goshen, Wash., had the only herd of Guernseys. They showed cattle in fine condition, displaying Guernsey type and dairy quality to the best advantage. Their herd sire, McDonald Wakefield Prince, a Longwater bull, was made senior champion, but both grand championships went to the juniors, which reflects credit on the sire and on the Middledale method of breeding and developing.

Shorthorns were represented by Day & Rothrock and A. D. Dunn, with splendid, well-fitted herds of mostly young stock. Dunn's great cow, Scottish Jane 2d, and his bull True Boron, were given senior champion honors, while Day & Rothrock's juniors won the grand championship. Their champion heifer, Topsy 4th, has improved even from a year ago, when I considered her one of the sweetest things I had ever seen, and one of the most promising.

Congdon & Battles made the Aberdeen Angus show, with the exception of two entries by the state college, and a great show it was. From the great old bull Eileenmeer, that has won in

(Continued on page twenty-four.)

For $10 Buys a Pony With an Evil Reputation

The Ups and Downs of a Bunchgrass Boy---No. 28

Part II.

By JOE L. ASHLOCK

Copyright, 1917, Joe L. Ashlock.

After I had ridden Rowdy, my buckskin pony, over the 60-mile stretch of country betwen our home and Waterville, selling White's history of the Spanish American war, winter was on us. So I loaded my books in my one-horse sled, hitched Rover to the sled and started out to make my deliveries.

My first mishap occurred going down into Moses Coulee, where the wagon road was high in the middle and worn deeply into the wheel tracks. Rover, compelled to walk in the high, slippery middle of the road, kept slipping into the deep ruts. I should have had my shafts set out to the side; but this precaution I had overlooked. So we made out the best we could.

By and by a big, angular rock covered with snow and set up in the high middle of the road, stopped my sled with a yank. The jerk pulled the shafts loose. Startled Rover leaped forward. I stayed with the lines and was dragged over the dashboard and out in the snow. Then and there the broncho and I fought our first real battle.

Strong lines and a bit that was cruel when jerked made the odds against the horse. He circled and reared about me for a little while, but the bit was too much for him. So he quieted down. I tied the shafts to the sled, using the halter rope and the "hold back" straps for this purpose; and we proceeded.

A day or two later, while I was delivering books in the settlement between Moses coulee and Waterville, a man noticed that I was driving without hold-backs in my harness. He told me that some day the sled would run onto the cayuse's heels. I would have a runaway then, he warned me; and if I didn't look out I'd get my head kicked off.

I should have taken the warning, but didn't. My way of getting down a hill was to let Rover gallop fast enough to keep out of the way of the sled. Bronco-like, trained to the saddle, galloping in the harness was to him the same as galloping under the saddle. It was the same with running. Also, when I left him tied, if tired he would lie down in the shafts just as if he were saddled instead of being hitched, crossing the shafts over his back and getting all tangled up in the lines. Several times on my trip people saw him lying down in this fashion and came up in a scared way to untagle him, thinking he was choked, or "down" for some other reason. They always looked sheepish when they got near and saw he merely was taking a snooze. When I came up I would slap him on the neck, and tell him to get up, first pulling the sled around or lifting his hind feet so that he would not get up astride of one of the shafts. People standing near often would warn me to "look out." They were alarmed merely because they didn't know Rover. I knew him.

However, I believe no one ever becomes so well acquainted with a bronco cayuse but that sooner or later they touch a spot in the mind or hide of the horse with which they are unacquainted. Grief may follow. This nearly happened to me when Rover, the sled and the sled load of books all started down the long Douglas hill east of Waterville. I forgot about not having the holdbacks. The sled went against Rover's heels; followed, a bang, a crash and a runaway.

In the first hundred yards of that runaway I did some fast thinking and, some fast going. The beginning of the Douglas hill is a slope of a few hundred yards; then you go up a short, steep hill, over the top, and strike the long grade which, after a short, steep plunge, curves around the rocky hill. My chance of getting to the bottom of the hill right side up were about as good as those of a camel to go through "the eye of a needle." I had to stop on the upgrade if I stopped without a wreck.

Now, a horse running at top speed doesn't kick very efficiently. To kick with both hind feet at once the horse must stand on his front feet; and he can not do that and run. For the same reason a swiftly running horse can not kick with one hind foot. Most of you who have observed runaways have noticed, if you noticed anything, that the kicking was done before the runaway commenced or when the horse was slowed down.

This was what happened in my case. The sled went into Rover's heels. He promptly kicked pieces of the dashboard past my ears. I dared not pull the lines hard, for by so doing I would pull the sled any myself under his heels when he was not going so fast but that he could kick.

It was different, however, when he started to run. Taking the risks the act involved I set my heels, wound my hands in the lines and pulled—not jerkily, but with a steady, cutting pull; and every time the horse's head came up I held it there, and pulled harder. I pulled so hard and so cruelly that after the first plunge or two, Rover's head came around and I saw blood starting from the corner's of his mouth.

Pulling the sled into the heels of the runaway was not a good chance to take but it was either that, jump and lose my sled and books, or go over the hill—and in going over the hill there was no chance.

I thought we were going over, but on the very crest of the hill Rover slowed down. Right then I began to climb out of the way of his hind feet for I knew they would be coming. They did, and the rest of the dashboard flew up in the air. We had slowed down sufficiently to enable me to jump out. With one hand I held the lines against the bit which was not one of the "humane" kind and tortured the horse cruelly when pulled hard; with the other I managed to pull the sled back to the end of the tugs, a little out of the way of his kicking hind feet.

But Rover kicked himself loose from the sled, taking the shafts out of their unstable moorings. We fought in a circle, and I think the bit and the strong lines were all that saved the day. Finally he stopped. I used the halter rope and a piece of wire and other odds and ends to piece my outfit together so that we could travel. The excess length of the lines I used for hold back straps to get me down the Douglas hill without another smash.

The frosty, moonlit night was well advanced when I was driving three miles east of Waterville, which town I had determined to reach. We were speeding along the smooth road, thankful that all was well—when in a flash, it wasn't!

One of my runner-irons had been broken in some way. The broken end caught on the angular edge of a solidly anchored stone, and stopped the sled with a bang and a crash.

Rover, trotting steadily along, went right ahead, shafts and all. Hanging to the lines, I followed, yelling whoa. But he didn't whoa worth a cent. It took the bit and the lines to do it, and again his mouth bled. Once more I tied my outfit together; once more I got in the sled, which now had no dashboard, and kept running to one side of the road, and said "Get up!"

We got to Waterville safely. I was headed for Tom East's place at the west end of Main street, meaning to put in there for the night. Rover, the bunchgrass broncho, was a good deal of a country jake. He didn't like electric lights a little bit, and said so with several snorts which must have awakened everybody in our end of town.

Just before we reached the alley entrance from the street to East's barn, in the rear of his house, we passed under a big arc light. The thing sputtered loudly just as we passed under it—had been waiting for us, I think. Rover had already informed the sleeping public of his dislike for electricity—and this was adding insult to injury! He went off like a bomb. Sled, shafts, books and all, blew up in the middle of the street. The arc light, having started a good thing, kept it up and sputtered on.

Leaving the sled untenanted in the middle of the street in the full glare of the sputtering arc, Rover and I made our tumultuous way down the alley to East's corral gate, which was at the end of the alley and open. Rover plunged into the gate, dragging me by the lines. Ahead, I spotted the barn door, which was open, and headed the runaway horse for the door. We missed it three feet, hitting the side of the barn with a bang and a crash. I thought the whole barn was coming down on top of me.

Easts had gone to bed; but Tom—then clerk of Douglas county—heard the racket. He got out of bed, opened an upstairs window, stuck his head out, and called down: "What's up out there?"

I called back that I had had a runaway and landed in his corral. I heard him laughing and saying something to Mrs. East, who had also been awakened. Presently, to me, he said that he reckoned I had landed in a good place. Directly he came out dressed, and helped me put my snorting, prancing broncho into a stall, where we soothed his troubled spirits with some town hay and oats.

The next day, helped by most of the boys in East's end of town, I dragged my sled to a blacksmith shop for repairs. Likewise, I took my harness to a harness shop. Rover was skinned up a bit, and his mouth was sore; but his love for East's oats and hay covered a multitude of sins so far as his persecutors were concerned. His eyes showed a quiet, peaceful brown and no white; so I left him to the joy of a deep manger full of hay and a box half full of oats. My hands ached where the lines had jerked and cut against them. Something, I don't know what, had biffed me in the side, making a black, sore place as big as your hand. But when I counted my books they were all there and uninjured.

SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University).

What Wrinkles Tell People About Your Disposition

Dr. Hirshberg.

Worries, passions, anger, bitterness, pessimism, blue devils, sorrows, envy, irritability and scandal-mongering are a few of the self-torturing ideas which help to produce wrinkles.

These facts also go far to explain why wrinkles are more common among women than among men. Men generally take a bigger, broader view of their neighbors and the world at large, hence they have fewer wrinkles.

Almost any tense, repeated twist of the muscles of the forehead, face and neck may be looked for, sooner or later, to produce furrows, lines or wrinkles. While an unemotional thought may not cause a crease, as a matter of fact, there is scarcely any thought unaccompanied by feelings and sentiment. It is the emotion continually interwebbed with the memories and thoughts, which stamp themselves indelibly upon your face.

You, as well as doctors, can tell much that goes on in another person's mind by a swift, almost unconscious glance at the faces round about.

The Mean and Kind.

A mean-minded woman or man, one who thinks the world is all wickedness and villainy, has wrinkles about the nose, which seem to pull it upward. You may expect a fanatic who thinks all who believe in some other than her religion to have these lines, or perhaps, a narrow-minded bigot, who considers all others wrong if they do not fully agree with him.

Wrinkles and creases which burst forth like the radiant sun, from the corners of the eyes seem to be coupled with good-humor and optimism.

The physician who notes such a sunburst radiation at once sets the proud possessor in the cheerful, gladsome-hearted class. A sense of humor, a great wit and repartee and a most kindly heart are spelled into this alphabet of spokes.

When you see lines and wrinkles on the forehead, which are parallel like lines of music, from side to side, you may judge justly that elevation of the eye-brows, in mock surprise, is a habit of the owner. If these lines seem to sag a bit in the middle, it means that a pleasant disposition, a tolerant nature, love of peace, readiness to be unselfish in other people's cause and a sacrifice of self for the sake of harmony, are present.

Perplexity, as a habit of thought, soon shows itself in the face by a set of shallow wrinkles situated between th eyebrows. Interrupted and short wrinkles cause the narrowed forehead between th eyes. These same symbolic creases mean narrowness of mind, dogmatic positiveness and a habit of faultfinding and worry.

What about those, however, who have not one line or furrow on their brows? Such wrinkleless, flat, broad foreheads denote vanity, selfishness, overwhelming conceit, coldness of heart, dictatorial positiveness usually wrong and a cold, steel-like heart. An unforgiving temperament is then to be expected.

No Commandeering of Food in the Home

A Washington dispatch says the untraceable rumor that the government intends to take canned and dried foods from homes persists and has spread to such an extent that the department of agriculture today placed an explicit and official denial in the hands of every county agent and representative, with instructions to give it widest publicity.

The government never has contemplated commandeering foods from the homes in any sense.

If people would read the law instead of giving ear to wild rumors much needless alarm would be prevented. It was to protect its readers against such misinformation that the Farmer printed the full text of the food control law.

The government has no authority to seize home stocks of food supplies. Its power to commandeer supplies for the navy, the army and other public uses is limited and defined as follows:

Section 10. That the president is authorized, from time to time, to requisition food, feeds, fuels and other supplies necessary to the support of the army or the maintenance of the navy, or any other public use connected with the common defense, and to requisition or otherwise provide storage facilities for such supplies; and he shall ascertain and pay a just compensation therefor. If the compensation so determined be not satisfactory to the person entitled to receive the same, such person shall be paid 75 per centum of the amount so determined by the president, and shall be entitled to sue the United States to recover such further sum as, added to said 75 per centum, will make up such amount as will be just compensation for such necessaries or storage space, and jurisdiction is hereby conferred on the United States district courts to hear and determine all such controversies.

"Provided, that nothing in this section or in the section that follows shall be construed to require any natural person to furnish to the government any necessaries held by him and reasonably required for consumption or use by himself and dependents, nor shall any person, firm, corporation, or association be required to furnish to the government any seed necessary for the seeding of land owned, leased or cultivated by them."

Under this provision of the law the government could, if it were necessary to secure supplies for the army and the navy, requisition the surplus produce of a farmer. It would have to leave him, however, ample supplies for his family and ample seed stock for his farm, and pay him a fair price for the commandeered supplies. There is, however, no probability that such action will be necessary.

A Wayfaring Man

The Sensation of a Discarded Farm Well

By PAUL E. TRIEM

If we had expected that there would be any decided change in Dr. Brocton's habits or his manner toward us, following his work as nurse and physician during my husband's illness, we were disappointed. As John grew stronger and was able to be about, the physician drew more and more into his old, taciturn avoidance of us. For a while he ate at our table, but I was not deceived as to his purpose in this. He was still keeping his eyes on the convalescent; and as soon as the latter was fully recovered he left us abruptly and went back to his cabin.

And still, there had been a change. It was in his manner toward Lena, whom I often caught him watching curiously, gently, with something of remorse in his deeply sunken eyes. Then he would shake his head and turn away. He avoided me, habitually; indeed, he seemed hardly conscious of my existence.

Late in November he left us, promising to return in time to help with the spring work; and it was the second day of March when we next saw him. He came swinging into the ranch yard, followd by a younger man in a mackinaw coat.

Dr. Brocton strode up to where John and I were standing and spoke vehemently. "I have told this fellow that I wasn't going his way," he said, "but he persisted in following me. I am not responsible for him in any way, however—please understand that!"

The stranger was a mild mannered person, with sandy hair and milky blue eyes. He smiled deprecatingly at Dr. Brocton's vehemence.

"Our friend wasn't going my way, but I was going his," he explained. "So I came with him, and most entertaining company he is, I assure you."

This was our introduction to "the wayfaring man," as he described himself—"A plain wayfaring man, with a faculty for discovering unusual things." He arranged to board with us indefinitely, and at once began wandering about the neighborhood. His name was Sparger.

There was an antipathy between the wayfaring man and Dr. Brocton, and I believed that it was as a direct result of the physician's share in this feeling that he again took to eating with the rest of us. He seemed anxious to watch the newcomer, and punctually three times a day he appeared at the table.

One evening Mr. Sparger came in to supper late. He seemed preoccupied; and when he was half way through his meal he suddenly laid down his fork and addressed my husband.

"What value would you put upon this land of yours?" he demanded.

John stared. "The ranch, do you mean?" he asked.

"Yes. You have a government deed to 160 acres of land. What's it worth? What would you sell for?"

John glanced at me. "I don't think we would care to sell," he replied. "It would be hard to invest the money so that it would bring us the same income we get from it here."

"Everything has its price," the wayfaring man insisted. "There must be a figure at which you would be willing to sell. What would it be?"

There was something oddly persistent in his manner, and I noticed that Dr. Brocton was watching him narrowly.

John, too, was affected by the stranger's earnestness. My husband was a hard working man, with a considerable liking for money. Now his glance grew hard, and his lips tightened. "I would sell for twenty thousand dollars, and not a cent less," he declared.

Mr. Sparger nodded. "I'd like a sixty-day option on your land at that figure," he said. "I'll pay one hundred dollars for the option—"

He was interrupted by a cry from Lena. "You wouldn't sell the ranch, John?" she protested. "Think what it has been to all of us—what is money? It would be a crime!"

Something that was almost a snarl came into Mr. Sparger's voice as he started to reply. "I'm talking business," he declared angrily. "If Mr. Carlson——"

"I'd like to know a little more about this," John interrupted. His eyes glowed, and I saw that his hands were clinched so that the knuckles were white. "What do you want to buy for? You're no rancher."

Mr. Sparger had taken from his pocket a printed form, which he was filling out. "You and your wife sign this," he commented tersely. "Here's your hundred dollars—and I'll tell you all about it directly after you've set your signatures to the paper."

John took the fountain pen which the other offered him and signed his name defiantly. Then he pushed pen and paper over to me. "Sign there," said he.

A moment after Mr. Sparger had examined our signatures and had handed over the hundred dollars in gold, he leaned back with a sigh and looked pleasantly about him. Then he took from a side pocket of his coat a bottle which was half full of dirty, oily looking fluid.

"There's a hole some 40 feet deep up beyond your orchard," he began.

John nodded. "We started to dig a well there after Dr. Brocton had discovered that the spring was unsafe to use," he explained. "Then we found a place where the drainage was better, and left it just after we struck water."

The wayfaring man nodded. "Just so. Well, I told you when I came out here that I had a faculty for discovering curious things. And in that well I found—" he paused and held up the bottle, "I found oil!"

He was smiling triumphantly upon us.

A sort of chalky pallor swept over my husband's wind-burned face. He licked his lips and whispered, "Oil!" Then the color surged back into his cheeks and he laughed bitterly. "So, that's why you were so willing to pay a fancy price for my land! I suppose you've snapped up everything else in the neighborhood?"

Mr. Sparger nodded. "Everything," said he. "But you musn't suppose that I'm the kind to take advantage of you, who have been my host. I had to protect myself, but you'll lose nothing through me."

He launched into details, and for more than an hour held us all fascinated—all except Dr. Brocton, who sat scowling at him. When the wayfaring man had finished Dr. Brocton spoke, for the first time that evening.

"Who's backing you?" he demanded. "It takes money to do these things—and you don't look to me like a capitalist."

Before Mr. Sparger could answer, John spoke. "You'll please not interfere in this matter, Doctor," he said harshly. His eyes were feverish, and I saw that his knuckles were still white with the tension of his clenched hands.

Next morning John and the wayfaring man went out to look at the well. I could see that my husband was shaken through and through by this vision of sudden wealth, and I feared that the effect upon him would not be good. He had joked Lena at the breakfast table, but always there was a gamester's elation upon him.

"No more spraying and packing for us, sis!" he cried. "We'll go to New York and see the sights. We'll eat apples and let other people have the work of raising them."

"I'd rather raise them," Lena said. "There's nothing in money, except the fun of earning it."

Dr. Brocton came into the kitchen while I was getting breakfast and told me that he was going on a hunting trip into the foothills. He took some bacon and corn meal with him, and said he might not return for a week or 10 days.

"There'll be no work done here for a while," he said bitterly. "I'll mind my own business better if I keep out of the way."

I tried to apologize for my husband's rough speech of the night before, but he silenced me by a look. "Madam," said he, as he was taking his leave, "I'm praying for your husband to come through this trial with nothing but the dross burned from character. He's a young man—and he doesn't yet know the curse of unearned money!"

I had always lived in a farming country, where such events as the finding of gold or oil were unthought of; and the rapidity with which the lust for wealth swept through our neighborhood was a revelation. In the years we had lived in La Grange valley we had seen it chang from a wilderness to a prosperous community. There were substantial houses and barns near us, and the orchards and alfalfa fields were making the district famous throughout the northwest. And now men forget their plans and their dearest wishes as if they had been dreams, and began chasing the rainbow.

Our house was the storm center. Men came from all around to see the famous "oil well," and to sniff at the bottle which Mr. Sparger always kept in his possession. He was making a more careful examination of the neighborhood, preparatory to going east for capital to develop his prospects.

"What I don't understand," commented young Bill Schmitz, who had taken up a homestead next to ours, "is how we happened to be such fools as to give him options on all this wealth! It ought to belong to the community—and we've bartered it away. Why don't you talk to him, Carlson, and see if you can't get him to let us in?"

That remark was the spark which touched off the explosive under-current of feeling in the neighborhood. A committee of eager, anxious-eyed men surrounded the prospector and argued with him. Mr. Sparger was pleasantly obstinate. He felt kindly toward the neighborhood, but business wasn't pink tea, and he was in the thing for what he could make. He was paying us all top-notch prices for our land—or would be when he took up the options; and aside from a little good will offering which he felt it his duty to make to his host he believed that he had done his duty by the community.

"We aren't asking you to give us something for nothing!" Emil Schmitz shouted. "Give us a chance to invest—we can form some kind of a company and push this thing, just as well as people back east could!"

Mr. Sparger was evidently impressed by this idea, and his hesitation was the signal for another outburst of pleading. He asked to be allowed to consider, and finally a time was appointed for a public meeting. Mr. Sparger had consented to let the community back him, if any way could be found of turning its wealth of land and timber into money.

We ate supper alone that night—just John and Lena and I—for the first time since the wayfaring man had come among us. Mr. Sparger had gone to stay for a couple of days with a neighbor.

"I wish he had never come here," Lena said bitterly. "I don't see how you can trust him. He is always smiling at some joke no one knows of but himself. He never looks any one in the eye."

I had felt this. "Do you think he is honest, John?" I asked, anxiously.

My husband was the best-tempered man in the world, but the strain of excitement and anxiety was telling on him. He flared up and spoke angrily to us, saying that we had been infected by Dr. Brocton's jealousy of the oil man. Next moment he softened and begged us to forget what he had said.

"It's only you I care for," he insisted, penitently. "It's our one big chance, and you mustn't ask me to do anything to sacrifice it. We'll be millionaires this time next year."

After John had gone to the meeting, which was called for Wednesday afternoon, Lena and I wandered about the house, avoiding each other as much as we could. Neither of us cared to confess to the anxiety we felt. There had been secret conferences betwen my husband and most of the other men in the neighborhood, and a notary had come out from town and put his seal to a bunch of formidable looking documents. One of these John asked me to sign.

"It's a note and mortgage," he explained casually. "I may not need it, but in case we succeed in getting together on this plan it'll be necessary to have everything ready."

I was sitting on the porch, still thinking of this mortgage which John had taken to the meeting with him, when the sound of footsteps on the gravel path reached me, and I looked up to see Dr. Brocton walking swiftly toward the house. The gun which he had carried when he left the ranch was gone, and he seemed worn and haggard.

He came straight to the edge of the porch and spoke. "Where is your husband?" he demanded. I told him that John had gone to a meeting at Mr. Caldwell's house, a mile up the valley. "What kind of meeting was it?" the physician continued, with an expression of fear in his eyes. Then, seeing that I hesitated, "Don't be afraid to tell me," he added. "You'll not be violating any one's confidence, and I must know at once."

In spite of his rather harsh personality there was an honesty and simple integrity in Dr. Brocton's presence which no one could mistake. I told him all that I knew—which was little enough—of the meeting, and of the events leading up to it.

I could see that the physician was mastering his excitement with an iron hand, but he heard me through silently. Then he nodded.

"I may be in time to prevent it," said he.

He turned, but at that moment my husband and the wayfaring man drove into the yard, and the latter jumped hurriedly out.

"Help Mr. Sparger get his things together, Jane," my husband called. "I've got to get him to town in time to catch the evening train."

I glanced at Dr. Brocton, who stroke forward and stood before the oil man.

"I want to ask," said the physician deliberately, "if this man has any papers about him which would give him any authority to dispose of your land, or any one's else land."

A livid band appeared about Mr. Sparger's mouth, and for once his eyes met his antagonist's fully and malignantly. He was about to speak, when my husband intercepted him.

"Get your grip," he commanded. "And you," he added, turning upon the physician, "let me ask you to be less inquisitive and meddlesome!"

Dr. Brocton's gray eyes seemed to be the poles of two high tension wires. They held the prospector motionless before him. "Any man has a right to interfere to prevent a swindler from accomplishing his work," he commented quietly.

John gave a sudden start and sat staring at the physician. "Prove what you say!" he cried. "Your opinion is worth no more than any other man's—prove what you say, or else get out of the path!"

Dr. Brocton nodded and drew from his pocket a sheet of paper, which he unfolded. "When I left here, 10 days ago," he explained, "I took with me a sample of oil from this well which I carried directly to town and forwarded to the state geologist, with a request that he analyze it and tell me whether a prospect which yielded such oil would be worth investigating. Here is his reply, which I received this morning." Dr. Brocton glanced at the wayfaring man, then read the short letter aloud.

"'In reply to your inquiry of the 10th instant would beg to inform you that your find is a highly interesting one. This is the first discovery in all history of a well which yields refined petroleum. In view of the fact that this may not be a hoax on your part let me assure you that oil such as you forwarded for examination is turned out by the refineries, but not by nature—it is not crude petroleum, but high grade lamp oil!

"'ALFRED S. CLEAVER,

"'State Geologist.'

"I appear to have established a bad reputation for myself at the university," Dr. Brocton commented grimly, "but I have had the pleasure of exposing a rascal! I'll trouble you," he added, "to hand over those papers. If you do it and get out of here within five minutes you may escape a coat of pitch and feathers—for I'm going to reassemble your committee of lambs and demonstrate to them that you never intended to take up your original options, that you couldn't have secured a cent of backing in any sane community for this scheme, and that, from the moment when you first loaded your prospect with kerosene you did intend that they should do exactly as they have done: back you with all they had, their homes. And you would have sold them out to unsuspecting third parties, whose claims the law would have had to enforce."

He stood erect and silent until the figure of the promoter had disappeared down the road, four minutes later. Then he turned and spoke gently to my husband.

"My son," he said, "God has been very good to you—for he has removed the scales from your eyes before it was too late. He doesn't do that with all of us."

Next moment he turned and was striding toward his cabin.

A Few Dependents.

Recruiting Officer—How about joining the colors? Have you any one dependent on you?

Motorist—Have I? There are two garage owners, six mechanics, four tire dealers, and every gasoline agent within a radius of 125 miles.—Judge.

Use Much Sugar.

We are now annually consuming more than 86 pounds of sugar a head, more than 430 pounds for every family in the United States, or more than a pound a day the whole year through. In this we are surpassed only by England and Denmark.

Boys If you want to earn some dandy prizes by doing some easy work among your neighbors, write to the **Prize Editor of the Washington Farmer, Review building, Spokane, Wash.**

All the World's a Stage, and All the Men and Women Merely Players

Dies After Long Illness.

Queen Eleanore of Bulgaria died recently at Sofia, Bulgaria. She had been ill for a long time. Since the outbreak of the war the queen had done considerable Red Cross work.

British Troopers Ford a Stream

British official photo.

In the above photograph British troopers are shown crossing the Yser on the western front. The Yser has overflown its banks this season and is more boggy and swampy than usual on account of intense shell fire which has made changes in the landscape. This is a British official photograph.

Where the Gleaners?

Should Revive Old-Time Custom

Harvest time has come again, and the crops in many places are small. Yet, with all our nation's call to save, many thousands of bushels of wheat will go back to Mother Earth ungathered.

Have the years of prosperity raised us above our Bible sisters, our colonial sisters, our pioneer sisters of the west?

Have Ruth and Naomi forever disappeared?

Have we not something in common today with our colonial grandmothers, who gleaned and knit and wove and spun, not for their own needs alone, but for all who were in need. For the men who sacrificed their lives for the liberty we have so long enjoyed.

My mother, who is now 81, was raised by her grandmother, who lived in the days of the revolution. She was taught all the thrift of the colonial times, and, in turn, mother taught them to her children, who came to her in the early days of the west, when everything that was raised must be saved in order that all be provided for.

The grain was cradled by hand, then tied in bundles with some of the straw, knotted by expert hands. The bundles were placed in piles, then hauled to the barnyard and stacked for the threshing, which was often done by hand.

As soon as the grain was placed in piles the gleaners commenced their work.

The daughters of the governors, as well as the daughters of the cobbler, blacksmith and farmer, went to the fields to glean the wheat that was left by the harvesters. Generally the heads were all placed carefully one way, then tied in neat bundles, but often the women would gather handfuls of heads, twict them from the straw and fill their large aprons. Early in the mornings and late in the evenings the fields were dotted with the gleaners, who generally rested during the heat of the day. How delicious was our bowl of bread and milk when we returned with mother after the gleaning hours were over.

The call to save has taken me again to the fields to see if our wonderful harvest machines were leaving anything to be gleaned. And, oh! I thought if such a harvest had been before Ruth and Naomi Boaz would never have had to order his men to leave more behind that they might have plenty to glean.

I made up my mind I would glean at least enough to make one bushel of wheat, if not to send to the Red Cross, to give to the poor in our own country, for it is a fact that before the war commenced there were little children in every city and almost in every town going to school hungry. The high prices are bound to increase the poverty in our midst.

I told my little ones about how we used to glean, and they became anxious to see how it was done. So we went to the fields two hours in the morning and two in the evening and filled our bags with golden heads of wheat. They really enjoyed it for I told them Bible stories of the gleaners and sang them what I could remember of the old song:

"Her Little Blue Apron to Fill."

"Before the bright sun rises over the hill
Poor Mary in the cornfield is seen,
Hard at work, hard at work all the day,
Her little blue apron to fill.
Why don't you grow weary and sit in the shade,
In the shade as the others have done?
'How could I grow weary and sit in the shade
When dear mother at home lies sick in her bed
And my poor little brothers are crying for bread,'
So Mary worked on with a will,
Her little blue apron to fill."

"Sing it again mother," the children cried, and I sang it again and again at their request.

"Call us early in the morning, so we can be gleaning before the sun rises over the hill."

They are working every night and morning now, whether I am able to go with them or not, and they are making great plans for the harvest they are gathering.

We have picked and put up 100 quarts of wild fruit. The children said it seemed like the berries were calling, "Pick us or we will fall off and rot." Their idea came from the fairy story of the good and bad girls.

Every one can not have a vacation in the fields and hills, yet there are few who can not be gleaners. Just gather up something that might be wasted and put it to use.

While in town last week I was making a little dress from a castoff big one, and before it was finished my opportunity came. I had often fed the hungry, for it is a tradition of our family, "if you never turn any one away from your door hungry you will never have to beg for bread." But I had never really clothed the naked, though I had often given clothes. With the little dress in progress I espied two naked children. Immediately I sought the cause, and found they had but one suit to their backs and that their mother was washing them. Quickly I finished the little dress and converted a middy blouse into a shirt, a small pair of pants were at hand, and I had the comfort of clothing the naked.

Join the gleaners old and you. No time to organize, no organizing necessary. Observe one law, "Love one another." Pay your dues by gathering up something good you can bestow upon others, if only kind words.

Where are the gleaners who will come
To help to gather the harvest home?
Who will gather some golden grain
A feeble life to help sustain?

ELLA KOHLHEPP.

American Falls, Idaho.

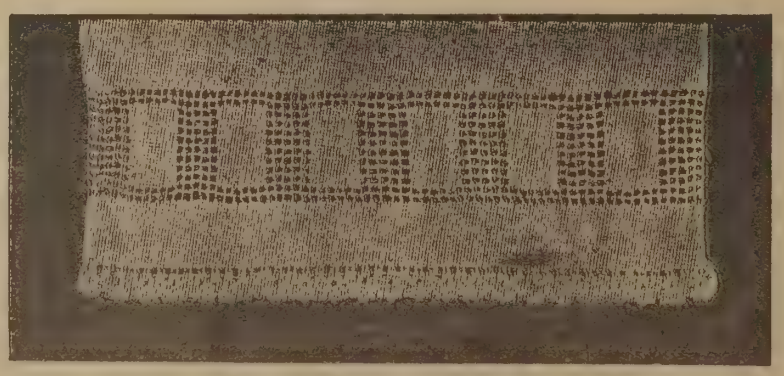
Look 'round our world; behold the the chain of love
Combining all below and all above;
See plastic nature working to this end,
The single atoms each to other tend,
Attract, attracted to, the next in place,
Formed and impelled its neighbor to embrace,
See matter next, with various life enduced,
Press to one center still, the general good.

—Alexander Pope.

Study Your Family's Tastes.

To the Editor: You must learn the tastes of those you are cooking for and by doing that you are ready to commence saving food. There are so many that never think on that line, hence so much waste. In the second place, never can any but the very best fruit. It is a waste of time and money.

MRS. JACOB FERBY.



Hartline, Wash.

Crisp Pickles.

First wash pickles of same size and pack in jars without heating. Then to one gallon of vinegar add one cup salt, one-half cup mustard, one cup sugar, one-half teaspoonful of salicylic acid. Bring to a boil, then pour over pickles and seal.

Crochet and Tatting Designs

By WINIFRED WORTH.

Insertion for Bath Towel.

These useful towel motifs are easy to make. Follow the instructions for both the insertion and edging.

For the 12 open meshes chain 36. Make 5 rows of open meshes at the beginning and at the end 6th row leave 2 open meshes, filling the intervening 8 with treble crochet. Make 6 rows, then 5 more rows of open meshes; repeat for desired length. In center of 6 rows of treble make circle of French knots of any color, with lazy daisy stitches from top and bottom of circle. These were made with blue flochet. Two colors (pink and green) are very effective.

Detail of Edge of Bath Towel.

1st Row—Fill entire edge of towel with d. c. for foundation.

2d Row—Chain 5, skip 2, 1 tr., in 3d st., ch. 2, 1 tr. in next st., ch. 2, sk. 2, 1 tr., ch. 2, 1 tr., repeat entire length, turn.

3d Row—Ch. 5, 2 tr, on ch. of 2, ch. 3, 2 tr. on same ch. of 2, repeat.

4th Row—Ch. 3, 12 tr. in ch. of 3, fasten by sl. st. in top of next shell, repeat entire length, 12 tr. in every other shell, turn. Using color used in making French knots in insertion 2 dc., 1 p., 2 dc., 1 p., 2 dc., 1 p., 2 dc., in each scallop the entire length.

Our steam-pressure canning outfits include everything you need to put up fruits and vegetables. Write for free literature. Seattle Can Co., 1263 Utah, Seattle.

A Patriotic Appeal to Every Reader of This Paper

The Young Men's Christian Association is anticipating the GREAT NEED of right environment among our soldier boys, in the cities, in the training camp and at the front in the trenches. Send your "bit" for this work to Y. M. C. A. War Work Secretary, Spokane, Washington.

Help! Help! Help!

Everywhere they are crying for help, not inefficient or untrained, but real help, **help** that **knows.** Every business needs experts. Auto and tractor owners want the kind of help that will save the life of their machines.

ARE YOU READY TO FILL AN AUTOMOBILE EXPERT'S JOB?

My school is equipped from top to bottom with every device and gas engine part necessary to teach you the gas engine business. We have equipment—lots of it—for you to work on, from vulcanizing and welding machines, to twin-six and twelve-cylinder motors. Each student gets personal instruction from men who have been in the business for years. Every part of my course is practical and teaches what you need to know to be an auto or tractor success. Best of all, my charge for this complete instruction is within reach of every man who wants to learn, and my course arranged so you can take it all in seven weeks.

FREE AUTOMOBILE AND TRACTOR BOOK. GET IT

Why Not Fix Up the Old Table?

Maybe the old pine table you started housekeeping with has been a grievance for years. Why not give it a coat or two of white enamel and convert it into a 1917 model by covering the top with nickel, which comes for that very purpose in 30x15-inch sheets? It can be tacked on easily by the amateur.

Kindly Deception.

"We have asked her several times to sing, and she has refused each time." "If I were you I'd let it go at that. Some of the strangers may go away thinking they've missed something."—Detroit Free Press.

Glad You Haven't Fogotten Us.

Dear Aunt Nellie: I guess you think I have forgotten you, but I have read all the cousins' letters. Mother and I just got back from Bellingham. We had a fine time. I wish some of the cousins had been with me to join in with the happiness. We just got home. Everything has grown so since we left. I have corresponded with Mary Bennett, Puget, Wash. She seems to be a very nice girl. She is 10, but now I am 11. I was 11 in August. She is in the sixth grade. This year I will be in the seventh grade. Well, cousins, I wish some more of you would write to me. I would gladly write to you. I haven't any brothers or sisters. My auntie just died. I hope and think everybody else hopes that Aunt Nellie may always live. I see our Corner is nearly two Corners now. I hope it will get much larger. Now, cousins, that haven't joined or written for a long time, get in and make our Corner the largest reading in the paper. They in winning a prize and I think Aunt Nellie would be glad to give you one. If you do not succeed at first try, try again. I am going to try to win one next time.—Grace Humbly, Friday Harbor, Wash.

Call Their Cat Whiskers.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. We live on a 74-acre farm. We have 15 cows and are milking 14. We have seven calves. We have about 25 chickens. We did not raise any little chickens. We have one dog and one cat. We got the cat on the Fourth of July. The cat was only about two days old. It is a very playful cat. My sister Mildred is 4 years old. My sister Mabel is 17 years old, sister Edna is 18 years old, sister Mae is 21 years old. I have no brothers. One day, Mildred cut off the kitty's whiskers. Now we call the cat Whiskers. Our dog's name is Gypsy. Our school starts September 4. I will be glad when school starts again. I am in the seventh grade. I am 14 years old. My father takes the Washington Farmer. I read the letters every time. I wish some of the little girls would write to me.—Sophia Mausolf, Enumclaw, Wash.

A Trip to Seattle by Auto.

Dear Aunt Nellie: I have not written to you for a long time. Our school does not begin until September 24 this year. In the country the school does not begin until October 23. I am going to write on the subject of My Vacation. As soon as school was out I went down on our farm and picked cherries. After the cherry season was over I came home for there was nothing to do on the farm. We went to the mountains several times and my brother from Seattle came on a visit. A few days after my brother had gone my aunt came from Illinois. I had never seen her before. She is the only aunt I have ever seen. After the peaches are off we are thinking of taking a trip to Seattle in the automobile. I suppose by that time school will start and so you can see I have had quite a vacation.—Thela Bowen, Route 7, North Yakima, Wash.

Trixie Was Run Over One Night.

Dear Aunt Nellie: This is the second letter to the Children's Corner. I have a new nephew. His name is Richard David. I have three nephews and no nieces. I am going to visit my sister in Seattle. I would like to have some of the cousins write to me. We live in the river bottom land. We have about 40 acres of land which we rent. I had a nice big dog, but some one ran over it with a car one night. His name was Trixy. One of our dogs died last summer. Her name was Nellie. We have a little brown horse named Dolly which we drive to school every day. We have lots of fun with him. My teacher's name is Mr. Albers. One of my brothers got his diploma in May. —Emma Brune, R. F. D. 2, Lynden, Wash.

Vera Goes to Hart Lake School.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner and I hope it will not be the last time. I am 12 years old and am in the eighth grade. I have light hair and light blue eyes. Have I a twin? If I have I should like very much to hear from her. I go to Hart Lake school.—Vera Allen, R. F. D. 1, box 26, Roy, Wash.

Hill Rougher Than Mollie Thought.

Dear Aunt Nellie: This is the first letter to the Children's Corner that I have written. I am a girl 12 years old. My birthday is the 31st of December, the last day of the year. Have I a twin? My complexion is fair, I have brown eyes, light brown hair. My weight is about 85 1-2 pounds. My height is four feet 11 inches. I have one brother and four sisters. Their names are Kate, Esther, Lucille, Alvina and Flophil. We have four cows and two calves. We have about 100 old chickens and about 200 spring chickens and nine ducks. My subject is "My Worst Day." It was last winter when the snow was on the ground. I took my sled to school and at noon I went out to take sled rides. I went up a hill which I thought didn't look very rough or high. I got on my sled and started down the hill. I had gone about 16 feet when I hit a large bump and the sled upset and I flew off and bumped my nose. Then that old school bell rang, which I thought made my nose hurt worse. When we were in the schoolhouse I didn't get one study well. At evening when I came home I did not say a kind word to my sister.—Mollie Hergert, Penawawa, Wash.

Elzina's Brother Is a Soldier.

Dear Aunt Nellie: This is the third time I have written to the Corner. I like to pick blackberries quite well: I have a brother in the war. I like the country better than the town. I have two uncles in Alaska who are coming home this winter. I like to gather the wild flowers. My birthday is the 4th of April. My brother's birthday, who is in the war, is in September. I will be glad when school starts. Our teacher's name is Mrs. Lena Hartzel. I am 10 years old. Papa is hauling hay today. I do the most of the cooking and I like to cook. Our school starts September 3.—Elzina Rogers, Arlington, Wash., R. F. D. 2.

Help Little Children Get a Start.

Dear Aunt Nellie: My subject is "What I Want to Be." I would like to be a school teacher and help little children to get a start. I taught my little 3-year-old sister her A, B, C's and she can count and say some sounds. A week ago last Wednesday I went down the mountain to the Mount Pleasant store. Then a lot of others and I went in bathing. We haven't much fruit on the farm this year. That is, not as much as we had last year. I had to weed carrots this year. We had 49 rows. I put on overalls and went out to weed. Papa gave me $1 for weeding them.—Lenore Fox, Washougal, Wash.

Ethel Must Write to Us Again.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. Papa got the lower bone broken in his arm. I am 8 years old. I have four sisters. They are Agnes, Hilda, Ercell and Olga. We have about 27 horses and two cows. I have six cats. I will be in the third grade when school starts. I have been reading the Children's Corner and mama said I might write. My favorite books are Jack the Hunchback and Helen's Babies.—Ethel Corvin, Connell, Wash.

Fun With Little Seattle Visitor.

Dear Aunt Nellie: I wrote to the Children's Corner and thought I would write again. We have 84 head of cattle and 22 head of horses, colts and all. We have six sheep. The hay is turning fast now. We are heading. There was a girl came from Seattle. She stayed at one of our neighbor's, Mr. Haines. The girl's name is Helen. We went over to see her quite a few times. We had lots of fun with her. She went back to Seattle July 30.—Reva Lamb, Coulee City, Wash.

Go Swimming Every Day.

Dear Aunt Nellie: I am spending the summer with Mabel 12 miles from Centralia. I live in Aberdeen. My father, mother and little sister Helb are home this summer. Mabel and I go swimming every day when it is warm. We go riding often in the car. There are lots of cherries here. We have picked many. I sent two small boxes full to Helbe. I will watch for my letter in The Washington Farmer and I hope to see it soon.—Viana Salo, Rochester, Wash.

Takes Music Lesson on Wednesday.

Dear Aunt Nellie: This is the third time I have written to the Children's Corner and I am pleased to see my letters always printed. I am 10 years old and in the fifth grade. This summer I started to take music lessons and like it very well. I take my lesson every Wednesday, and when school starts I am going to take them every Saturday. I have a little baby sister 13 months old, and instead of creeping she rolls all over. I saw my cousin's nice little letter printed in The Washington Farmer. I enjoyed reading your letter to the children and thought it a very nice letter and that we should all try and be obedient; help our parents and do the best we can.—Euphemia McPherson, Colby, Wash.

A Nice Letter From Sunnyside.

Dear Aunt Nellie: This is the first time I have written to you. I have enjoyed the other little girls' letters, so I am sending one from Sunnyside as I never saw a letter from here. I am 11 years old. We live on a ranch about three and one-half miles from town. We have two ponies, one big farm horse and a young mule. We have a lot of bunnies and a nice dog. We call him Seal. He got bit by a rattlesnake the other day, but with good care he is getting well. We have 10 baby pigs. They are as fat as butter rolls. I have one big sister. Her name is Fern. My grandpa lives with us, too. Well Aunt Nellie, I think this is all. I hope to see my letter in print. —Eunice Bernia Brown, R. F. D. 2, Sunnyside, Wash.

Royetta Is a City Cousin.

Dear Aunt Nellie: This is the first time I have written to you. I have read the letters in the Children's Corner with a great deal of pleasure. I do not live in the country but live in the beautiful city of Tacoma, of which, I suppose, you have heard. I wonder if I have a twin. I am 12 years old and my birthday is on the 30th of September. I will enter high school this year when school starts, which is the 10th of September.—Royetta Scandrett 2135 South First, Tacoma, Wash.

Eva Lives on a Berry Farm.

Dear Aunt Nellie: My mama takes The Washington Farmer and I like it very much. I like to read the letters from the children. I live on a berry farm. I have a cow and a kitten. I am 9 years old. I have a cousin, one month younger than me. Her name is Virginia DeHart. She lives in Grandview, Washington. As this is the first time I have written to the Corner I will see if you print this and if so will write again some time.—Eva Zortman, Puyallup, Wash.

Tooty, Teddy, Tess, Chess and Nig.

Dear Aunt Nellie: I live on a big stock ranch but am going to move to town this summer. I have dark brown eyes and brown hair. I am 11 years old and in the sixth grade. My teacher's name is Miss Bowman. I like her very much. Our schoolhouse is a mile from where I live. I have five little kittens. Their names are Tooty, Teddy, Tess, Chess and Nig. I have a pet hen. Her name is Biddy.—Clara Jackson, Turner, Wash.

Wants to Care for Wounded Soldiers.

Dear Aunt Nellie: I am 11 years old and I am in the seventh grade. My birthday is the ninth of October. I have chosen the subject of What I Want to Be. I want to be a Red Cross nurse so that I can help care for wounded soldiers. I live on a farm about six miles from town. Have I a twin? I would like to correspond with some of the nieces and nephews.—Mabel Svenson, Cheney, Wash.

Emma Reads the Corner Every Week.

Dear Aunt Nellie: This is my first time to write to the Chilaren's Corner. My father takes The Washington Farmer and I read the Corner every week. We have a dog named Teddy and I have a pet chicken named Speckle and a duck named Dradie. I wrote to Lucile Bowers to ask what Aunt Nellie's address was. I think I will close.—Emma Brune, Route 2, Lynden, Wash.

"The Eyes of the World Will Be Upon You"

To the Soldiers of the National Army:

You are undertaking a great duty. The heart of the whole country is with you. Everything that you do will be watched with the deepest interest and with the deepest solicitude not only by those who are near and dear to you, but the whole nation besides. For this great war draws us all together, makes us all comrades and brothers, as all true Americans felt themselves to be when we first made good our national independence. The eyes of the world will be upon you, because you are in some special sense the soldiers of freedom.

Let it be your pride, therefore, to show all men everywhere not only what good soldiers you are, but also what good men you are, keeping yourselves fit and straight in everything, and pure and clean through and through. Let us set for ourselves a standard so high that it will be a glory to live up to it, and then let us live up to it and add a new laurel to the crown of America. My affectionate confidence goes with you in every battle and every test. God keep and guide you!

The White House, Washington. WOODROW WILSON.

Will not the above message, written by the president of the United States to the great new army of which he is commander in chief, take its place in the library of great utterances besides such words as Lincoln's Gettysburg address and Patrick Henry's liberty or death plea? Will it not become an example of simple and strong English in the schools and colleges of this land? Will its sentiment not inspire Americans on to better patriotism and better living long after the "soldiers of the national army" have returned to the industries of peace from which a world misfortune has drawn them? No American citizen would make a mistake were he to clip this letter and commit it to memory, opening his heart and soul to the sentiment that it contains.

Woodchopper's Bargain

By T. O. GREENE.

This, my story, is a human interest story, and concerns a lowly woodchopper and his benefactor. For obvious reasons the names of the two individuals will be withheld.

The time was the spring of 1916. The place was Central Ridge, in Lewis county, Idaho, between Peck and Steele.

In a deep canyon bordering the ridge lived Woodchopper in a dingy dugout. He had managed to eke out a bare living by cutting cordwood from the pine and fir trees that grew on the precipitous slopes of his canyon and selling the wood to the farmers of Nez Perce prairie.

One bright morning Woodchopper walked over to his neighbor on Central Ridge, which neighbor owned a fine farm of 400 acres, and said: "I understand you have 40 acres of bean ground to rent. How much would you give me of the crop of beans I would raise, you to furnish everything but the labor?" Benefactor replied, "Why, I never heard of such a proposition as that. Let me see. Why, I guess a fellow would have to get half the crop." Woodchopper accepted the terms, and an agreement was entered into upon that basis.

Then Woodchopper said: "I have but $11 between me and the poorhouse, so you will have to furnish me some flour, some spuds, etc."

The necessities of life were forthcoming, as Benefactor had a kind heart, as well as confidence in Woodchopper's honesty.

The ground was put in good condition, seed was secured and the crop was planted in due season and careful cultivation given to it.

Certain busybodies tried to discourage Woodchopper, telling him that his beans would not mature before frost, or that the fall rains would mold and decay. Woodchopper listened to this gossip, and thought the statements might be true. Going to Benefactor, he said: "That team o' mares of yourn, old Mag an' Nance, are worth $300, ain't they?" "I'd sell 'em for that." Benefactor answered. "Tell ye what I'll do: I'll trade you my half of the crop of beans for ol' Mag and Nance, even up. What do you say?" "Why, I don't want to take advantage of you, Woodchopper. I value my half of the beans at $750 or $800." Woodchopper was thus reassured, and his confidence in the value of his crop was restored.

In the meantime the price of beans began to shoot skyward. The crop looked most promising. In due time the beans were harvested, threshed, sacked and hauled to the warehouse. Finally the day came to market their beans.

Woodchopper and Benefactor went to the warehouse together. When the warehouseman figured up the crop he announced: "It foots up just $2375 for the crop, so I will give each of you a check for half that amount. "Give Woodchopper the odd dollar," said Benefactor, and it was done.

Use of Bacon Grease.

To the Editor: The most interesting saving in my home I think is the use of bacon grease. Used in the place of lard and about one-third less in quantity it makes delicious biscuits, is the most satisfactory of anything for frying and with care makes rich, tender pie crust.

We are using bread made of coarse graham flour. It took us a little time to get used to it, but now we prefer it to the fine grained white bread and we think it is keeping us wonderfully fit.

In cake making I have found that the juice of an orange or a teaspoon of lemon juice in a cup, the cup then filled with water, makes a delicious substitute for milk. The cake is more tender, keeps moist longer and the flavor is different.

MRS. G. E. THAYER.

Waluga, Ore.

Roethler Farm Sold.

The Roethler farm, located north of Haines, Ore., has been sold to Messrs. A. E. Rocky and R. A. Angell of Washington. The farm consists of 800 acres and was purchased a few months ago by Mrs. Leonard Taylor and Pete Roethler from the Roethler estate. The consideration is said to be in the neighborhood of $40,000.

"THE BARRIER"
By REX BEACH

One of the greatest romances of the wild, lawless days of the Klondike Country ever penned by this gifted author. A big, strong story that will sweep you along on a powerful current of intense interest from chapter to chapter.

NECIA

Her father, John Gale, is the trader at Flambeau. Her mother is a squaw. She has a little half-breed brother and sister. Also she has two lovers—a French Canadian—Puleon Dorat, and Lieutenant Burrell, in charge of the recently established barracks at Flambeau. Burrell is an aristocratic Kentuckian; proud of his family and ancestry. Could he think of marrying Necia — a half-breed Indian girl? There is the great barrier. Poleon Doret, knowing no social barriers, loves Necia with all the ardor of his great, clean soul. Which wins?

NECIA

"She was like some wood sprite—light-footed, slender and dark, with twin braids of hair to her waist, framing an oval face colored by the wind and sun. Her laughter was like the tinkle of silver bells. Every move of her graceful body was unrestrained and flowing with a hint of Indian freedom in it Beaded and trimmed like a native princess, her garments manifested an ornature that spoke of savagery, yet they were neatly cut and hold to the pattern of the whites."

THE BARRIER Is Not a Milk and Water Love Story

Rather it is a broad, sweeping narrative that carries you on the strong current of its action from California to the Alaskan wilderness of the early gold rush. "The Barrier" is a story that, when finished, leaves you the richer, spiritually, for having known these people, working out their ideals and fortunes, their loves, hatreds and misunderstandings, amid surroundings of rough grandeur and the unforgetable charm of the great northland.

The opening chapters of "The Barrier" will appear in the October 11th issue of this paper. A liberal instalment will be given each week thereafter. Tell your friends about it, for it will mean many an hour of keenest enjoyment for all who read this splendid story.

Live Stock Well Balanced at Yakima

(Continued from page sixteen.)

some of the greatest shows in America, and can again, down to the youngest heifer in the herd, was typical, perfectly fitted and a credit to the blocky beef breed.

The Washington State college had an instructive exhibit of fat cattle.

Professor H. H. Kildee of the University farm, St. Paul, Minn., judged dairy cattle and John L. Smith of Spokane the beef breeds.

The following are the cattle awards:

Shorthorns.

Two-year-old bull—1, A. D. Dunn, Wapato, Wash., on True Baron. Senior yearling—1, Washington State college on Village Excelsior. Junior yearling—Dunn on Escana Clipper. Senior bull calf—1 and 3, Dunn on Superb Clarion and Fair Cumberland; 2, Day & Rothrock, Sprague, Wash., on Supreme Chief. Junior bull calf—1 and 2, Day & Rothrock on Hercules Goods and Baron Cumberland; 3, Dunn on Baron; 4, W. S. C. on Achilles.

Cow, 3 years and over—1, Dunn on Scottish Jane 2d. Two-year-old—Dunn on Escana Blossom. Senior yearling—1, Day & Rothrock on Topsy 4th; 2 and 3, Dunn on Sweeter Yet and Sweet as Ever. Junior yearling—1, Day & Rothrock on Village Rose 4th. Senior heifer calf—1 and 2, Day & Rothrock on Perfection's Pearl and Lady Missy 10th; 3, Dunn on Dunn Maid. Junior heifer calf—1 and 3, Day & Rothrock on Hercules Topsy and Golden Light; 2, Dunn on Dew Drop.

Senior champion bull—Dunn on True Baron. Junior and grand champion bull—Dunn on Escana Clipper. Senior champion cow—Dunn on Escana Blossom. Junior and grand champion cow—Day & Rothrock on Topsy 4th.

Graded herd—1, Dunn. Young herd—1, Day & Rothrock; 2, Dunn. Calf herd—1 and 3, Day & Rothrock; 2, Dunn. Produce of cow—1, Washington State college; 2, Day and Rothrock; 3, Dunn.

Aberdeen Angus.

Congdon & Battles, North Yakima, Wash., were the only exhibitors in the bull classes. Their awards were: Aged bull—1, on Eileenmere. Two-year-old—1, on Cherokeer. Senior yearling—1, on Erica's Ito. Junior yearling—1 and 2, on Blackburr of Rosemere and Irenmere. Senior bull calf—1 and 2, on Heatherburr of Rosemere and Yakima Black. Junior calf—1, on Yakima Eric.

Cow, 3 years and over—1, Congdon & Battles on Idessa of Rosemere; 2, Washington State college on Inez of Woodlawn 3d. Two-year-old—1, Congdon & Battles on Heather of Rosemere. Senior yearling—1, Congdon & Battles on Pride of Rosemere 14th. Senior heifer calf—1 and 2, Congdon & Battles on Blackcap of Rosemere 10th and Blackbird of Rosemere 24th; 3, W. S. C. on Jerome's Queen 2d. Junior calf—1, W. S. C. on Pullman Inez 2d; 2, Congdon & Battles on Barbara of Rosemere.

Senior and grand champion bull—Congdon & Battles on Blackburr of Eileenmere. Junior champion bull—Congdon & Battles on Blackburr of Rosemere. Senior and grand champion cow—Congdon & Battles on Idessa of Rosemere. Junior champion cow—W. S. C. on Pullman Inez 2d.

Congdon & Battles were awarded first on graded herd, young herd, calf herd, get of sire and produce of cow.

Fat Cattle.

The Washington State college was the only exhibitor. Their awards were first on two-year-old steer, spayed or Martin heifer, yearling, and under a year and champion fat animal.

Holsteins.

Bull, three years and over—First and third, Carnation Stock farm, Seattle, Wash., on Hazelwood Sir Ormsby and Matador Segis Walker; second, William Bishop, Chimacum, Wash., on Canary Paul Loren DeKol. Two-year-old—First, Carnation, on Mutual Lad Fritomia; second, Bishop, on Segis Burke DeKol Pontiac. Senior yearling—First, Bishop, on Sir Bracelet Metchthilde. Junior yearling—First, J. H. Hulbert, La Conner Flats Stock farm, Mt. Vernon, Wash., on La Conner Pontiac Howtje; second and third, Carnation, on Mutual Lad Tritomia II. and Carnation Ruble Segis. Senior bull calf—First, Hulbert, on La Connor Pontiac Kim; second and third, Carnation, on Hazelwood Bergman Korndyke and Matador Segis Walker Delma. Junior bull calf—First and third, Carnation, on Matador Segis Walker Sixth and Korndyke Segis Klaver; second, Bishop, on Sir Wayne Marie.

Cow, four years and over—First and second, Bishop, on Bonnie Ormsby Lass and Hazelwood Ormsby Pasch Second; third, Carnation, on Nena Newman Cornucopia. Three-year-old — First, Carnation, on Korndyke Model Hartog; second, Bishop, on Riverview Cloe Metchthilde; third, Hulbert, on Mercedes Pontiac DeKol Elbage. Two-year-old—First, Carnation, on Matador Metchthilde Vera; second, Hulbert, on La Connor Pontiac Helene; third, Bishop, on Bonnie Ormsby Lass Third. Senior yearling—First and second, Carnation, on Korndyke Model Hartog and Segis Daisy Fern Second; third, Hulbert, on La Connor Pontiac Beatrice. Junior yearling—First and second, Carnation, on Matador Metchthilde Vera and Carlotta Metchthilde Rooker; third, Hulbert, on La Connor Pontiac Bess. Senior heifer calf—First, Carnation on name not given; second and third, William Todd and Sons, North Yakima, on Cascade Ormsby and Cascade Piebe; fourth, Hulbert, on La Connor Pontiac Lady Netherland. Junior calf—First, Hulbert, on La Connor Pontiac Grant; second, Todd, on Cascade May Korndyke; third and fourth, Carnation, on Abbekirk Segis Pontiac and Queen Tsussie Segis.

Senior and grand champion bull—Carnation, on Hazelwood Sir Ormsby. Junior champion—Carnation, on Matador Segis Walker Sixth. Senior and grand Champion cow—Bishop, on Bonnie Ormsby Lass. Junior champion—Hurlburt, on La Conner Pontiac Grant. Graded herd—1 and 3, Carnation; 2, Bishop. Young herd—1 and 3, Carnation; 2, Hurlburt. Calf herd—1 and 3, Carnation; 2, Hurlburt. Get of sire—1 and 2, Carnation; 3, Hurlburt. Produce of cow—1 and 2, Carnation; 3, Hurlburt.

Jerseys.

Bull, 4 years and over—1 and 2, Clifford Reid, Portland, Ore., on Violet's, Noble Fern and Onota Cotillion Boy.

Two-year-old—1, O. Erickson, North Yakima, on Sultan Star.

Senior yearling—1, Erickson, on Knight's Golden Prince.

Junior yearling—1, Reid, on Fussy's Fern Noble Boy; 2, Erickson on Belinda's Oxford You'll Do, junior; 3, H. T. Cutler, Parker, Wash., on King Rastus.

Senior bull calf—1 and 2, Reid, on Cotillion Boy's Premier and Noble Cotillion of Reid Farm; 3, Erickson, on Favorite's Sultan.

Junior calf—1 and 3, Erickson, on Wild Rose Sultan and Violet's Sultan; 2 and 4, Reid, on Fern's Carnation Fern and Glen Tana Martial.

Cow, four years old and over—1 and 3, Reid, on Lady Lecq and Maitland's Noble Maid; 2, Erickson, on Noble Peer's Violet.

Three-year-old—1 and 3, Reid, on Onota's Lady and Cowslip's Golden Begonia; 2, Erickson, on Raleigh's Sunbeam.

Two-year-old—1 and 3, Reid, on Eminence Wardress and Cowslip's Financial Maid; 2, Erickson, on Lass' Bonnie Sultana.

Senior yearling—1, Erickson, on Raleigh's Beauty of Jersey Home; 2 and 3, Reid, on Fuss' Fern Cowslip and Fuss' Fern Roseleaf.

Junior yearling—1, Erickson, on Sultan's Star Fancy; 2 and 3, Reid, on Fuss's Fern Lucy and Fuss' Fern Beauty.

Calf herd—1 and 3, Reid; 2, Erickson.

Get of sire—1 and 3, Reid; 2, Erickson.

Produce of cow—1, Erickson; 2, Reid.

Senior and grand champion bull—Reid, on Violet's Noble Fern.

Junior champion—Reid, on Fusse's Fern Noble Boy.

Senior and grand champion cow—Reid, on Eminent Wardress.

Junior champion—Reid, on Onota's Eminent Wardress.

Guernseys.

Calkins & Riggs, Middledale Farm, Goshen, Ore., the only exhibitors, received rewards as follows: Bull, 3 years and over—1, on McDonald Wakefield's Prince. Junior yearling—1, on Middledale Sir Julian. Senior bull calf—1, on Middledale Idlewise.

Junior calf—1 and 2 on Red Raider and Middledale Little Chief.

Cow, 3 years old—1 on Middledale Mabel.

Two-year-old—Middledale Marian.

Senior yearling—1 and 2, on Middledale Norma and Ugenia D. Junior yearling—1 and 2, on Middledale Queen of the May and Middledale Jewel. Senior heifer calf—1 and 2 on Middledale Jitney and September Morn. Junior calf—1 and 2 on Middledale Rosemond and Golden Maid.

McDonald Wakefield's Prince was made senior champion bull; Middledale Sir Julian, junior and grand champion. Middledale Mabel was made senior champion cow and Middledale Queen of the May junior and grand champion. They were also awarded first on graded herd, young herd, calf herd, get of sire and produce of cow.

Brown Swiss.

Ed Myersick, La Grande, Ore., the only exhibitor, received the awards as follows: Aged cow, 1 on Eleanor; two years old, 1 and 2 on Lydia M. and Ted's Lily; bull calf, 1 on Buckskin Jerry; yearling bull, 1 on Vixen.

Sheep awards were received too late to be published in this issue and will be published next week.

The Hog Show.

In the hog show, as well as elsewhere, quality was prominently shown. Berkshires, that have been a great feature at this show, were not so numerous nor so strongly represented as formerly, but other breeds had about the usual number and certainly the quality was even more than could be expected, this year of high priced feed.

J. M. Fruitts of Joseph, Ore., who has made the reputation for the Hampshires in the northwest equal to any other breed; Ray J. Fox of Lyons, Ore., whose Poland Chinas, with their high fitting and excellent type, have been universal winners, and Robert Nelson, of North Yakima, the young man who won grand champion barrow, all breeds, in the strongest competition two years ago, besides fully his share of awards in the breeding classes of Duroc-Jerseys, all made fine showings for these three popular breeds. There were other breeders, with small exhibits, and the hog sheds were the mecca of about as many visitors as any other barn. Two exhibitors had nearly full herds of Tomworths, and two others showed several animals, making an unusual and pleasing display of the bacon type hogs.

Professor E. B. Krontz, assistant professor of animal husbandry at the Washington State college, placed the ribbons.

Berkshires.

J. A. Simonson of North Yakima received all awards except on senior sow pig, which was won by Glen Chandler of North Yakima. Mr. Simonson's awards were: 1 on senior boar pig, 1 on junior yearling boar, 1 and 2 on junior yearling sow, 1 and 3 on senior sow pig, 1 on aged herd and young herd, get of sire and produce of dam, senior and grand champion boar and sow.

Chester Whites.

Aged boar, 1, Ed Shoel of Tangent, Ore.; senior yearling, 1, Ed Shoel; junior yearling, 1, Archie Conley, Cove, Ore.; 2, Shoel; senior boar pig, 1, Shoel; junior pig, 1 and 3, Shoel; 2, Conley; sow, 2 years and over, 1, Conley; 2 and 3, Shoel; senior yearling, 1 and 2, Shoel; junior yearling, 1, Shoel; 2 and 3, Conley; senior sow pig, 1, Conley; 2 and 3, Shoel.

Senior champion boar, senior champion sow and junior champion boar, Shoel; junior champion sow, Conley on Lena.

Aged herd and aged herd bred by exhibitor, 1 and 2, Shoel; young herd bred by exhibitor, 1, Shoel, and 2, Conley; get of sire and produce of sow, 1 and 3, Shoel; 2, Conley.

Hampshires.

Boar, 2 years and over—1 and 2, J. M. Fruitts, Enterprise, Ore. Senior yearling—1, Fruitts; 2, J. J. Oder, North Yakima, Wash. Junior yearling—1 and 2, Fruitts. Senior boar pig—1, Fruitts. Junior boar pig, 1 and 2, Fruitts; 3, Oder.

Sow, 2 years and over, senior yearling sow and junior yearling sow, 1 and 2, Fruitts. Senior sow pig—1, Fruitts. Junior pig—1 and 3, Fruitts; 2, Oder.

Senior and grand champion boar—Fruitts on Lead Me To It. Senior and grand champion sow—Fruitt on Rancho's Rosie. Junior champion boar and junior champion sow—Fruitts. Aged herd, young herd and herd bred by exhibitor—1 and 2, Fruitts; 3, Oder. Get of sire and produce of sow—1 and 2, Fruitts; 3, Oder. Fat barrow—1 and 2, Fruitts. Pen of barrows—1, Fruitts.

Duroc Jerseys.

Boar, 2 years and over and senior yearling boar—1, Robert Nelson, North Yakima, Wash. Junior yearling boar—1 and 2, Nelson. Senior boar pig—1, Albert Myer, Moxee City, Wash.; 2, Glen Chandler, North Yakima; 3, Nelson. Junior pig—1 and 3, Nelson; 2, I. J. Oder.

Sow, 2 years and over—1 and 3, Nelson; 2, Chandler. Senior yearling sow—1 and 2, Nelson. Junior yearling sow—1 and 2, Nelson; 3, Albert Myer. Senior sow pig—1 and 2, Nelson. Junior pig—1 and 2, Nelson; 3, Chandler. Senior and junior and grand champion boar and sow—Nelson. Aged herd—1 and 2, Nelson. Young herd—1 and 2, Nelson; 3, C. W. Shumate, Tumwater, Wash. Young herd bred by exhibitor—1 and 2, Nelson; 3, Shumate. Get of sire and produce of sow—1 and 2, Nelson; 3, Shumate. Fat barrow—1 and 2, Nelson. Pen of barrows—1, Nelson; 2, Nelson; 3, Shumate. Fat barrow—1 and 2, Nelson. Duroc special for best young herd—E. O. Erickson of North Yakima, Wash.

Poland Chinas.

Boar, 2 years and over—1, Ray J. Fox, Lyons, Ore.; 2, C. W. Shumate. Senior yearling—1 and 2, Fox; 3, Shumate. Junior yearling—1, Fox. Senior boar pig—1 and 2, Fox; 3, Shumate. Junior pig—1 and 2, Fox; 3, Shumate.

Sow, 2 years and over—1 and 3, Fox, 2, Shumate. Senior yearling—1 and 2, Fox; 3, Shumate. Junior yearling and senior sow pig—1 and 2, Fox. Junior pig—1 and 2, Fox; 3, Frank Dennison of Lyons, Ore.

Senior and grand champion boar—Fox on Fox's Model. Junior champion boar—Fox on Ike's Best Bet. Senior and grand champion sow—Fox on Maid of Honor 2d. Junior champion sow—Fox on Miss Ike Fox 1st. Aged herd, young herd, herds bred by exhibitor, get of sire and produce of sow—1 and 2, Fox; 3, Shumate. Fat barrow—1 and 2, Fox. Pen of barrows—1, Fox.

Tamworths.

Boar, 2 years and over—1, C. Starcher, North Yakima, Wash. Senior yearling boar—1, C. Starcher. Junior yearling—1, I. J. Oder. Senior boar pig—1, E. O. Erickson, North Yakima, Wash. Junior pig—1, Oder; 2, Marvin F. Thornton, North Yakima; 3, Earl Storaasli of North Yakima, Wash.

Sow, 2 years and over—1 and 2, Oder. Senior yearling—1, Starcher; 2 and 3, Oder. Junior yearling—1, Thornton; 2, Oder; 3, Starcher. Senior sow pig—1, Oder; 2, Chandler; 3, Erickson; junior pig—1, Starcher; 2, Oder; 3, Fred Fiske.

Senior and grand champion boar—Starcher on Iowa Chief. Junior champion boar—Oder on Jungle Chief. Senior and grand champion sow—Oder on Lady Bacon. Junior champion sow—Oder on Valley Choice. Young herd bred by exhibitor—1, Starcher; 2, Thornton. Get of sire—1, Starcher. Produce of sow—1, Oder; 2, Thornton; 3, Starcher.

The Sheep Show.

For years it has been usually possible to dispose of the sheep show at many of our northwestern fairs in a short paragraph. The one man who has kept up interest and brought out a representative showing of several breeds is J. G. S. Hubbard of Monroe, Ore. Mr. Hubbard was on hand as usual with his earload of Southdowns, Hampshires, Shropshires and Lincolns. But owing to the sheep sale put on by Professor Hislop, animal husbandman of the Washington State college, Hubbard had abundant company. Fine wools, as well as middle and long wools were well represented. Vaughn & Fox, Lyons, Ore., had an exceedingly well fitted flock of Shropshires, and Ed. Scholl of Tangent, Ore., showed both Shrops and Hampshires. C. C. Beers of Lyons, Ore.; George Pryor & Son of North Yakima, Wash., and Mr. Niven of Manhattan, Mont., as well as Mr. Hubbard, showed Hampshires. Lincolns were exhibited by Stanley Coffin, Pryor and Hubbard, and Rambouillets by John Seely of Mt. Pleasant, Utah; Hobbs & Gillett, Buhl, Idaho; Mrs. R. A. Jackson, Dayton, Wash., and Mr. Troub, Winona, Wash. Besides these Stanley Coffin had on exhibition imported Romneys and Lincolns from New Zealand, and a few Corriedales were shown. The show sheep and sale sheep filled two barns and the sheep sale Thursday and Friday was a decided success and is practically sure to be an annual event.

Professor C. E. Howell, assistant professor of animal husbandry, W. S. C., judged all classes.

News for Breeders

The Oregon Agricultural College, through Professor Ovan Nelson, sheep husbandman, has recently purchased a very fine yearling Shropshire ram from Frank Brown. It weighs over 216 pounds, is deep bodied and of true type. The college will not exhibit sheep this year, with the exception of a string of yearling wethers at the Pacific International.

Frank W. Connell is a young man who is making a success of dairying with pure bred Holsteins and believes that any one can do so. He got his first pure bred female about four years ago and now has about 35. He has bought one or more good ones from Charles Eldridge, Monroe, Canfield and Newall, and a richly bred bull from William Bishop. This bull, Chimacum King Segis, is a great grandson of King Segis, his granddam is Johanna DeKol Van Beers, with 40.07 pounds of butter in a week and his dam, Lady Aaggie Artis DeKol, has 21.89 pounds as a four year old. Mr. Connell is in the Washington Cow Testing association with 22 head and has official seven day records on ten, three made before he got them, the others by himself. He will continue official testing from time to time. H. A.

Buys Champion Sow.

George Swales of Johnson, Wash., bought from B. E. Snead the champion Duroc sow at the 1917 Spokane Interstate fair, bred to the well-known champion boar Traveler. Mr. Swales has promised to tell the readers of The Farmer how he proposes to use his summer fallow by raising red clover sown with timothy, field peas, beans and sweet corn for fodder, and to do this in a way to furnish continuous work for his workhorses as well as to furnish pasture and fodder for his stock.

Rutter's Pure Bred Herd.

R. L. Rutter Jr. of Ellensburg, Wash., has recently rented from J. Von Herberg of Seattle, the 27-months old Holstein bull, Colony Zarilda Newman, to use on his purebred herd. This young bull's dam, Zarilda Clothilde 3d DeKol, has an official record of 123.9 pounds of milk in one day and 831 pounds of milk and 28.87 pounds of butter in seven days, as a junior four-year-old. At 5 years of age her record was 855 pounds of milk

Jersey Sale Called Off

The sale of 42 head of Jersey cows, bulls and young stock of A. J. Johnson, which was announced in these columns last week to occur October 4, 1917, at Corvallis, Ore., will not be held. E. A. Rhoten, sales manager, announces, however, that he has a few choice bulls and heifers for sale. Address:

A. J. Johnson, Owner. Corvallis, Ore.

E. A. Rhoten, Sales Mgr. Salem, Ore.

SCRUB COWS

never were profitable, and as the price of feed advances it becomes more necessary to get the producing kind.

Our Register of Merit JERSEYS

would soon pay for themselves in the added production, to say nothing about laying a foundation for a future profitable herd. It is the PROVEN RECORD THAT COUNTS. Then when you not only have a producing cow, but her dam and her sire's dam were also producers and there are producing parents all the way back, you have a right to also expect that her calves will be producers. The 60 registered Jerseys that we are going to sell at auction are either Register of Merit animals or from R. of M. parents (excepting two heifers whose dam is untested). The offering is the dispersal of the herd of Frank Loughary & Son and a consignment from G. G. Hewitt, and includes Herd Bulls, Cows, Bred Heifers and younger Calves. The sale will be held on the Loughary farm near Luciamute station, about 7 miles southwest from

Monmouth, Oregon, Oct. 15, 1917

Complete catalog will be issued. Send name to either of the proprietors or to E. A. Rhoten, Sale Manager, Salem, Oregon, and one will be mailed when published.

Frank Loughary, G. G. Hewitt, } Proprietors, Monmouth, Oregon.

Col. J. W. Hughes, Auctioneer. Forest Grove, Oregon.

Grain and Produce Markets

Chicago Grain.

CHICAGO, Sept. 22.—Only a temporary set-back in the corn market resulted today from peace news and fine weather. Such bearish factors were later offset by week-end evening up of trades and by a revival of misgivings about eleventh hour danger from frost. The close was unsettled at $1.17 7-8 December and $1.15 May—3-8 cents off to 1-8 cent up, as compared with yesterday's finish. Oats declined 1-8 to 3-8@1-2 cent net. The outcome in provisions was an advance that ranged from 5@7 to 105.

The fact that oats for immediate delivery had lost the premium over future options had a depressing effect on the oats market. The trade anticipated more liberal receipts from now on.

Millers' requisitions for wheat continued far in excess of what the food administrator's subordinates here could obtain. Receipts at western centers in general totaled for the week but little more than half of last year's total for the corresponding period.

Scarcity of hogs carried provisions sharply up grade. Government buying was said to be in evidence.

Cash Quotations.

Portland Wheat.

PORTLAND, Ore., Sept. 22.—With the base wheat price fixed at $2.05 here dealers expect the movement now to begin in earnest. It is understood that all the export surplus will be milled and shipped as flour by water, the shipping board to provide the tonnage. Whether the grain will be bought by the grain corporation or by individual dealers has not yet been announced. Further reductions in flour and feed prices are imminent, but these commodities will naturally not sell as low as was expected before the higher wheat base was named.

There has been a firm market for barley and oats, but not much activity, as holders in both lines have held back.

Live Stock Quotations.

At Chicago.

Seattle Wheat.

SEATTLE, Sept. 22.—Telegraphic advices were received this afternoon from S. C. Armstrong, member of the committee from this state to protest against the Chicago basing price now in Washington for northwest territory that a terminal price of $2.05 bulk had been established for Seattle, Portland and Tacoma, or 5c per bushel over the level formerly fixed by the grain committee. This will cause an advance of 25 cents per barrel for soft wheat flour, and will increase the cost of millfeed. Puget Sound millers said today that final adjudication would now start the wheat crop moving heavily.

Puget Sound millers are keeping strictly to the letter of the law, which forbids storage of more than a 30-day supply, and will take on no more until their bins are scraped. This policy will be adhered to until modification can be secured officially from Washington. There is a risk in disobedience that manufacturers do not care to take. Rulings from Mr. Hoover on other points, wherein evasion was sought, have convinced them that Washington means business, although it will work a severe hardship in many essential points.

The Centennial mills this week took up with Washington the matter of whether it could buy enough grain to run them for a longer period than 30 days. Up to 90 days is urged. It was asked that the wheat be held in the country, and regardless of whether the grain corporation was the holder or otherwise that the millers be allowed to draw on the supply for 90 days or more as a protection for their trade for export to South America, the newly established markets of the southwest and the domestic division. They have undertaken to show Washington that the active part of the milling season is now on, that cars are accumulating in the railroad yards for the expected grain haul, that a shortage may occur at any time and for the grain and milling business to be healthy wheat should be moving. They assert that Washington can not fail but agree with their position, having in mind normal conditions of the industry as near as possible, and that ultimately assent to their program will be given. Asserting that they are willing to do their patriotic duty they are urging speed in the machinery of government. Messrs. Wilcox and Houser, who represent the government at the nearest source of authority, have been unable to decide these questions for the millers.

Seattle Market.

SEATTLE, WASH., Sept. 22.—Investigations through personal representatives in the apple orchards of Wenatchee completed today show that the movement of Jonathans, small sizes predominating, will begin next week, that thousands of boxes have not been sold and that outside cash buying is practically completed. The pick of other varieties will begin and the market congested. Under these circumstances a decline in Jonathans is expected, although quotations for other favorite brands will remain unchanged.

The Jonathan pick is 20 days late this year, causing the fruit to pile up into the season reserved for other brands. The sizes of Jonathans and Winesaps are smaller than produced for several years, there being but few four-tier apples. The fight on prices will come on because of inability of growers and distributors to get a large percentage of Jonathans under cover, due to their small size. The bulk of the better grades, it is reported, has been sold.

It is apparent that Seattle carlot jobbers expect to bear the spud market in order to buy easily for a brisk demand that is certain to come. They have let loose gloomy forecasts of the depreciated demand, inactivity of eastern buyers as compared with last year, and predictions that Washington consumers must eat their own product. Meanwhile Puget sound growers are refusing anything less than $35 f. o. b., even while in the midst of the digging season, and declare that they will pit their crop. It is noticable that there have been no breaks in the spud market. Similar sentiment prevails among growers as to carrots, for which $1.50 per sack is being demanded in the producing valleys.

The Elberta peach season has practically closed, with 65c as the dominating price for the bulk of sales for the year, or normal with a five-year average. Good clings are now being offered at 75c, but the movement is light.

The federal government came on the market today with an order for 500 cases of strictly fresh ranch eggs, and already stiff from insufficient receipts and a brisk demand, quotations may not stand the strain. Prices of 2c higher at 52c are forecasted for Monday, although not yet decided upon by a majority of the dealers.

Storage eggs are not selling. Retailers report that it is with great difficulty that they are moved at all. Consumers apparently will not have them, preferring small pullet eggs that are fresh but considerably under weight compared with the standard size of clean, white shell storage. The demand for storage eggs is lighter this year than ever before, notwithstanding that they are 7@9c cheaper.

Condensaries have been paying higher prices in the country for butterfat this week, reports of up to $2.90 per hundred pounds coming in from the Kent district. Quotations in the northern part of the state are firm at $2.60. Wholesalers are unable to see how butter can remain at its present level under the circumstances. Storage butter is dull, due in a measure to the secondary quality of some of the offerings.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 45c per doezn; pullets, 32@35c dozen.

Poultry—Live hens, fat, over 4 lbs., 20c per lb.; 4 lbs. and under, 16@17c; old roosters, 12c per lb.; squabs, large, $3.50 per dozen; geese, fat, live, 10c per lb.; springs, live, 20c per lb.

Butterfat—52c per lb.; dairy butter, 33c.

Beef—Buying prices. Prime beef, steers, 7@8c per lb.; cows, fat, 7@8c; heifers, 6@8c per lb.

Hogs—Light, 15@17c per lb.; do heavy, 12@13c per lb.

Veal—Fancy light, 14@16c per lb.; do heavy, 12@13c per lb.

Hides—Salted, 16c per lb.; salt kip, 16c per lb.; salted calf, 50c per lb.; green hides, 13c per lb.; salted bulls, 14c per lb.; dry hides (short trim), 40c per lb.; bull and dry salts, 4c per lb. less; green bulls, 11c per lb.; dry butcher full wool sheep pelts, 36@38c per lb.; green hides, 13c; green calf, 22c per lb.

Wool—Puget sound, 52c per lb.

SELLING PRICES.

Raspberries—Red, $2.75@3 per crate.

Feed—Scratch feed, $79 per ton; all grain, chop, $66 per ton; oats, $56 per ton; rolled oats, $57 per ton; rolled or ground barley, $56 per ton; clipped barley, $50 per ton; wheat, $75 per ton; bran, $38 per ton; wheat, $75 per ton; bran, $38 per ton; shorts, $41 per ton; soy bean meal, $70 per ton; whole corn, $87 per ton; cracked corn, $88 per ton; alfalfa meal, $35; chick feed, $8 per ton.

Cheese has firmed up again a ... Tillamooks are quoted half a cent higher, or at the price of a week ago. Butter is also firm with a very slim supply.

Egg receipts are very small, but sufficient at the high price. Poultry and dressed meats rule steady.

In the following list of quotations the grain, hay, mill feed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 1, $49 per ton.

Mill stuffs—Bran, $37 per ton; shorts $40.

Barley—No. 1 feed, $50; brewing, $52; rolled, $55@57.

Hay—Buying prices: Timothy, eastern Oregon, $27; alfalfa, $22.50@24; grain, $20.

Eggs—Oregon ranch, case counts, 41@42c per dozen; candled, 45@50c.

Poultry—Hens, 17½@18c; ducks, 11@20; turkeys, live, 20@22c; geese, 10@11c.

Butter—City creamery, prints, 48@49c per pound; cubes, extras, 46½c.

Cheese—Tillamook triplets, 25c; Young Americas, 26c.

Dressed meats — Veal, 15 1-2@16c; pork, 21½@22c.

Hops—1916 25@26c; 1917 crop, 40c.

Potatoes—New, 2@2½c per lb.

Wool—Eastern Oregon, fine, 52@61c; coarse, 60c; valley, 58@60c.

Beans — California small white, 15 1-2c; large white, 15c per pound.

Decrease in Hide Prices.

There has been a decline averaging 4 cents in hide prices at Portland. The market is weak and dealers look for a further drop. The reason given for the weakness in the Coast markets is the withdrawal of tanners from the eastern markets. Hide prices have been so high that any unfavorable development quickly affects it. All reports to the local trade indicate a dull leather market at the leading trading centers and furthermore there is known to be a large accumulation of hides in nearly all parts of the country. For these reasons hide dealers doubt whether the hide market has yet reached bottom. Current hide prices here are: Salted hides, 16 cents; green hides, 13 cents; salted bulls, 14 cents; green bulls, 11 cents; green and salted calf, 22 cents; green and salted kip, 18 cents; dry hides, 28 cents; dry calf skins, 30 cents; dry salt hides, 21 cents.

Sheep on Irrigated Farm Lands

Government Representative Gathers Wide-Spread Data

The irrigated farms of the northwest may in time do much toward supplying the public demand for mutton and wool. Already many such farms are producing small flocks, and the possibility of increasing the productivity of the watered districts in this regard is becoming a matter of scientific study.

With a view to gathering data on this subject, O. S. Jayne, formerly of the State College of Washington, but now with the U. S. government, is making a personal investigation of conditions and the experiences those now raising sheep on irrigated farms are having.

He told a representative of The Farmer the other day that he felt that the prospects were bright for the small farm flock as well as for the large flock where range and pasture conditions permitted the industry on a large scale.

Weed Exterminator.

Not only is the sheep a producer of mutton and wool, but he is as well a producer of fertility and clean fields. Mr. Jayne says there are only two common weeds that the sheep will not eat readily, and they are mullein and thistles. He reports having found them willing feeders on Russian thistle, however, and says that in some cases it has been found profitable in small degree to make silage out of the juicy, green weed. Although sheep eat and relish most weeds, a purely weed diet is considered a poor mutton producer. Some of the staple grasses or alfalfa, with a little grain, appear essential for the real growth of the animal.

Silage Is Popular.

Mr. Jayne reports finding the silo coming into popular use as an adjunct of the farm, where sheep are to be raised. He considers silage of some variety excellent as part of the sheep's ration, but does not think that it could be used exclusively for winter feed as has been the case with hay. In some instances that are found, however, large sheepmen are putting up or having put up silage for part of their winter feeding, and it is not impossible that the day will soon come when the flockmaster will contract his silage in the feed-growing district to be fed during the winter the same as he now contracts his hay supply. Both hay and silage should be fed. In some cases a dry feed, such as cured hay or straw, is cut up with the green, succulent feeds and run into the silo, and it is said the results are favorable.

One source of sheep pasture in the irrigated districts is the irrigation ditch or the canal banks. Owing to the presence of water these banks tend to grow up with vegetation of various kinds, frequently noxious weeds, on which the sheep do well for a part of the season.

Sell Purebred Rams.

One source of profit to the small sheep grower, if he is minded to make use of it, is the sale of purebred rams to the big sheep men. This is one of the ways R. Knaack of North Yakima, Wash., makes his little flock pay. He has been keeping sheep for 15 years, and now has about 90 head of purebred Hampshires built up largely from a grade flock foundation. He is fortunate in having 40 acres of brush pasture land in addition to his improved land. He sells his rams to the big sheep men for prices ranging from $15 to $25.

Mr. Jayne has found another interesting custom among sheep growers in the hop-growing districts. John Newenhoff, also of the Yakima valley, runs his sheep part of the time in his or his neighbors' hop yards, allowing them to "strip" the vines, thereby not only securing feed, but also relieving the owners of the necessity of doing the work by hand.

The keeping of sheep in the apple orchards is also being practiced, says Mr. Jayne. The animals will not damage the trees unless the pasture is very short. Alfalfa and orchard grass are made profitable in the orchards by the use of sheep.

One way many farmers have secured their first start in the sheep business is by adopting "bum" lambs from the large flocks as they pass through the country from one range to another. These lambs are sometimes made the basis from which are built up flocks of high grade animals.

Mr. Jayne is now in the midst of his investigations, and probably will prepare a pamphlet or bulletin for publication upon his completion of the work.

Apple Crop Reduced.

Robert Paulus, manager of the Salem (Ore.) Fruit union, estimates the central Willamette valley apple crop at about 40 per cent of normal. Fruit Inspector Constable estimates the prune crop of the valley at about 50 per cent of normal.

WHITE'S HOTEL AND RESTAURANT. Rooms, hot and cold water, 75c up. Breakfast 20c to 40c. Dinner, 25c to 50c. Sprague and Stevens, Spokane.

JOB PRINTING 372

OUR PRINTING WILL GET RESULTS for you. It will help to sell your goods and earn you profits. Send for samples and price list. G. C. Gallagher, 436 Sacramento st., San Francisco, Cal.

RUBBER STAMPS and SEALS 384

FOR RUBBER STAMPS, STENCILS, badges, numbering machines, checks, seals, etc., write Pacific Coast Stamp Works, Seattle and Spokane.

TAXIDERMISTS 426

MOUNTING OF HEADS, ANIMALS, BIRDS, fish. Skins tanned, made into rugs and furs. Mohr, 82 Bernard, Spokane.

OPTICIANS 462

EYES EXAMINED; GLASSES FITTED; perfect results guaranteed. Broken glasses repaired by mail. Postage paid. Dr. Sletto, Owl Drug Store, Spokane, Wn.

DR. I. M. RADABAUGH, SPECIALIST IN examining eyes and fitting glasses, 304 Jamieson bldg., Spokane, Wash.

BUSINESS OPPORTUNITIES 516

FOR SALE—WELL-ESTAB. RAWLEIGH business in the famous Puyallup valley. No competitors. W. C. Brown, Puyallup, Wn.

ARCHITECTS 558

BUILDING PLANS AND ESTIMATES. L. L. Rand, The Rookery, Spokane, Wash.

PLUMBING—STEAM FITTING 594

PLUMBING SUPPLIES AT WHOLESALE. Stark-Davis Co., 212 3d st., Portland, Ore.

SEEDS 620

VETCH, CLOVER AND FIELD SEEDS.

We carry a complete line of grasses, wheat, oats, barley, speltz and other seeds too numerous to mention. Our prices are right, and will be glad to send samples and quote prices.
CORVALLIS FLOURING MILLS.
CORVALLIS, ORE.

SEEDS—THE KIND THAT GROW. You can't keep them in the ground. Send for catalogue.
BUTZER'S SEED STORE.
188-190 Front St.
Portland, Oregon.

WHITE WINTER SEED WHEAT. Recleaned seed in new sacks, our own growing, $2.50 per bu., f. o. b. Salem.
RHOTEN FARM,
SALEM, OREGON.

VETCH. CLOVER. TIMOTHY. Choice recleaned seeds at direct to you prices.
RHOTEN FARM, Salem, Oregon.

VETCH, CLOVER AND OTHER GRASS seeds, grown in the heart of the Willamette valley. Prices low. Murphy's Seed Store, Albany, Ore.

WRITE FOR CATALOGUE AND FREE samples of timothy, alfalfa, clover and field seeds. Mark Means & Co., Lewiston, Ida.

FARM LANDS—FOR SALE 651

CUT-OVER-LANDS.
15 to 25 miles n. e. of Spokane; rich soil; abundance of soft spring water; good dairy and stock country; above frost; fine fruit; free lumber and use of stump puller. Price $10 and $25 per acre; 10 years' time. Write for book to owner. Consolidated Land Co., Elk, Wash., or call 109 Stevens st., Spokane.

FARM LANDS—FOR SALE 651

THIS LONG, DRY, HOT SPELL has proven the value of our subirrigated cut-over lands. Send for folder and ask for particulars.

Good lands of this character produced nearly as well as in ordinary seasons.

We have lands to suit nearly every requirement, from forty acres up, for grain, hay, stock and fruit growing, on a good state road and railroad; good communities, schools, etc. Send to either of the offices named below for folder containing pictures of some of the homes and lands, or come and let us show them to you.

THE FOLLOWING TRACTS GIVE AN IDEA OF WHAT WE HAVE TO OFFER. IF THEY DON'T SUIT YOU, LET US KNOW WHAT YOU WANT.

40 ACRES.

40 acres of raw cut-over land; very productive soil, with an abundance of moisture, as would be indicated by willow bush; in good locality, on public road, close to railroad; on easy terms.

160 ACRES.

25 acres cleared; on county road, rural free delivery, etc.; sandy loam soil; good subirrigation; lies fairly level; in good community. Price right and terms easy.

80 ACRES.

40 acres cleared; on state road and two county roads; very centrally located, in good community; would make an excellent home; would make some improvements for proper party. Small payment and very easy terms.

480 ACRES.

480 acres, within half mile of railroad; cordwood enough to pay for it; in dollar limit of Spokane; good soil; make stock proposition; more land could be had adjoining; $12.50 per acre, easy terms.

MILAN FARMS DEVELOPMENT COMPANY.
1322 Old National Bank Bldg.
or
ALLIN REALTY COMPANY.
"REALTORS."
408 West Sprague Ave.
Tel. Main 2750.
Spokane, Washington.

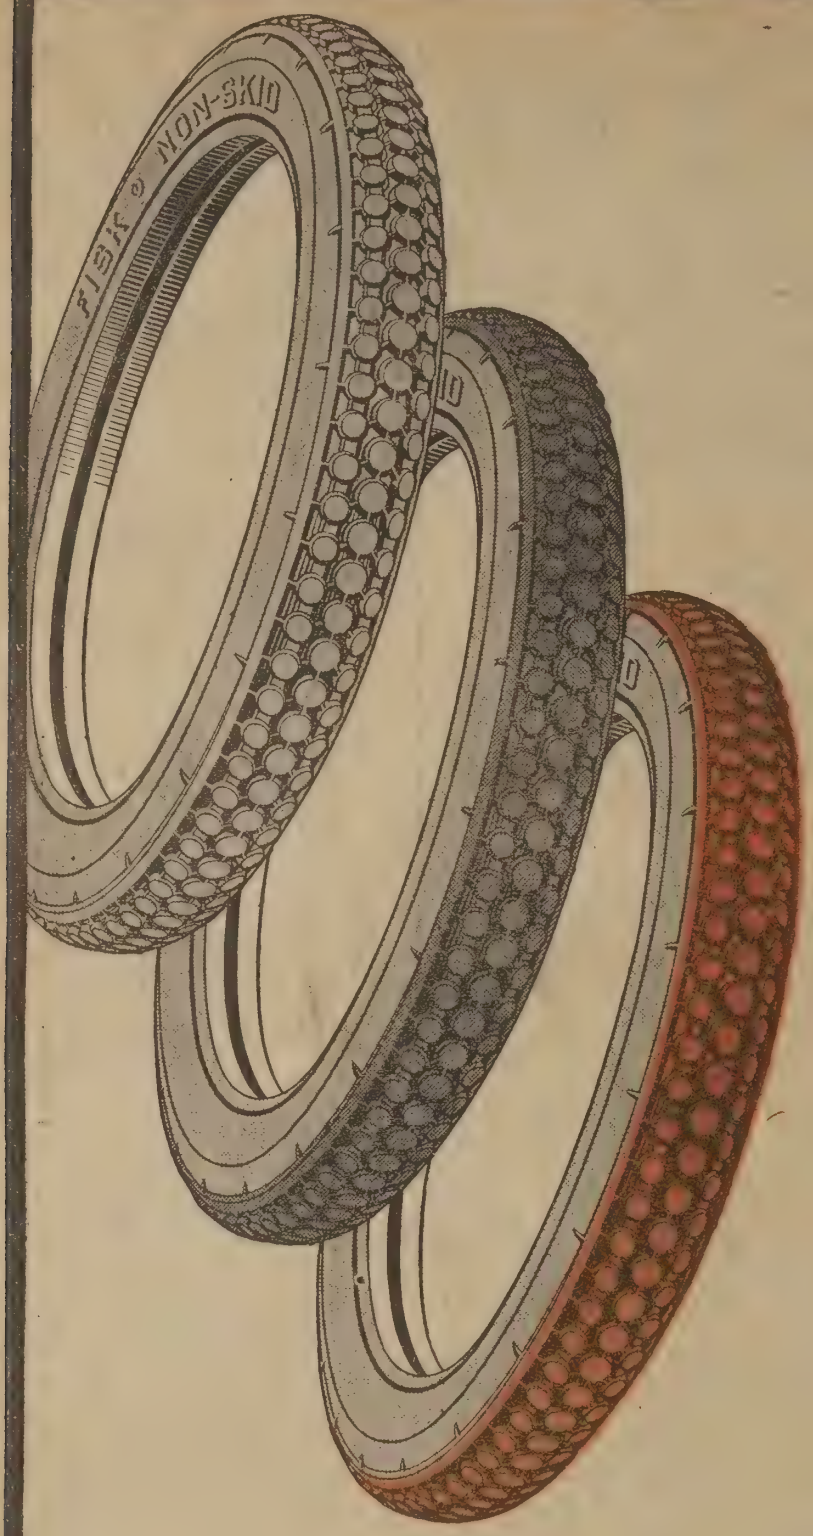
YOUR CHANCE IS IN CANADA—RICH lands and business opportunities offer you independence. Farm lands, $11 to $30 acre; irrigated lands, $35 to $50; 20 years to pay. $2000 loan in improvements, or ready-made farms. Loans of live stock; taxes average under 20c an acre; no taxes on improvements, personal property or live stock. Good markets, churches, schools, roads, telephones; excellent climate; crops and live stock prove it. Special homeseekers' fare certificates. Write for free booklets. Alan Cameron, Gen'l Supt. Land Branch, Canadian Pacific Ry., 93 Ninth ave., Calgary, Alberta.

HOG AND DAIRY RANCH, 200 ACRES, 12 miles from Chewelah; 20 acres in cultivation, in alfalfa, barley and potatoes; log and box house, log barn; considerable more can be farmed, balance timber and bunchgrass pasture. $8 per acre; half cash. Some farm tools included at this price. Sparks & Co., 616 Peyton blk., Spokane, Wash.

DO YOU WANT A GOOD FARM?
We have it—something to suit you—large or small, improved or unimproved—with stock and machinery if you want it—in Wash., Idaho or Mont. Call or write and tell us what you want. HEGE & WATKINS, 717 Paulsen bldg, Spokane, Wn.

BIG LAND OPENING—6000 ACRES A1 farm land in Snohomish county, $25 per acre; 10 yearly payments. Canneries, factories, mills, plenty of labor. Opportunity of your life. Send for literature. BROWNELL LAND CO., 904 Third ave., Seattle, Wash.

$30 AN ACRE WILL BUY A SPLENDID 200-acre farm, 3 miles from railroad town; high school on the land; fenced to four fields; over 100 acres in cultivation; good buildings. Long time on part. No trades. A. Z. Lucas, New Meadows, Idaho.



BOISE VALLEY—40 ACRES; GOOD WAter right; woven wire fences; alfalfa, clover, grain, pasture and family orchard; new bungalow; fair barn. Price $7500. Day Realty Co., Boise, Idaho.

IRRIGATED LANDS—For Sale 663

IRRIGATED FARM LANDS.
ALFALFA LANDS, under government irrigation; abundant water; low altitude; rail and water transportation to coast markets; good schools, good roads; products alfalfa, corn, cream, hogs, honey, fruits, vegetables; long growing season; unimproved land $30 to $60 per acre; improved $100 to $250. Write for further information and literature. Dodd & Knapp, Hermiston, Ore.

TO EXCHANGE—REAL EST. 705

FOR EXCHANGE—2-STORY PRESSED brick building, 50x150; steam heat; good condition; 3 store rooms below, 20 office rooms above; cost $26,000; in Cripple Creek, Col. Exchange for good ranch, plenty water. Address H. J. Chambers, Carson, Ore.

The "button" tread on Fisk Tires gives you real anti-skid protection ALL ways

ADDITIONAL SAFETY against side slipping is supplied by a rib of rubber extending around the whole tread, on both sides. Fisk Non-Skids are the only automobile tires that furnish such complete protection.

This graphic illustration explains Fisk Non-Skid features—protection from every direction.

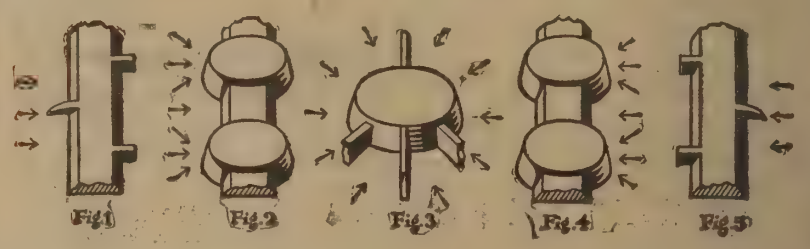


Fig. 1 *is the outside rib that makes an uninterrupted counter against direct side slipping or skidding—* ***Fig. 5*** *is the same protection on the other side of the tread.*

Fig. 2 *is the outside row of buttons connected by a second rib of solid rubber. The buttons, which are slightly higher than the connecting rib, offer perfect resistance against skidding and because they grip the road so firmly, make the pull forward in soft ground ever so much more positive and certain—* ***Fig. 4*** *has these identical qualities, but from the opposite directions.*

Fig. 3 *is the master button around which the Fisk Non-Skid tread is constructed. It supplies resistance against slipping in any direction—no matter which way there is a tendency to skid there is always a flat resisting surface to prevent that skidding, and to assist the sure forward movement of the wheel.*

Made in three styles—

The Grey, the Black Non-Skid and the handsome RED TOP, Tire De Luxe

Time to Re-tire?
(Buy Fisk)

Buy Fisk Tires and get the real protection. Price and mileage are right. You can't buy greater dollar-for-dollar value in tire quality—and no other tire offers such safety. You can buy them everywhere.

THE FISK RUBBER COMPANY
of N. Y.

General Offices: Chicopee Falls, Mass.

Fisk Branches in San Francisco, Oakland, Sacramento, San Jose, Fresno, Los Angeles, Riverside, San Diego, Hollywood, Pasadena, Reno, Portland, Tacoma, Seattle and Spokane. ***Fisk Dealers Everywhere*** (D)

Mill Wheat at Home

Save Freight and Feed, Urges Officer

A plea for both the milling industry and the dairy industry of the state of Washington was made recently by the Washington state public service commission through its chairman, E. F. Blaine, when he, at the request of western Washington granges, appealed to the national food commission to use its influence to have Washington wheat milled at home rather than shipped out to other milling centers. By so doing, it is argued that the feed by-products necessary for the maintenance of the dairy industry would be kept at home without the necessity of paying a double freight charge. Chairman Blaine's communication to the food commission reads as follows:

"The farmers, milkmen and stockmen of this state are exercised over the proposition that a large amount of the wheat of this state is going to be shipped east for milling purposes. If the wheat of the northwest is to be shipped east for milling we can readily understand that a great injury will be done the northwest and will result to the great disadvantage of the government in the prosecution of the war.

"The state of Washington produces a large amount of condensed milk. Its dairy herds are extensive and of a high order. These must be fed. The proposition of feeding them, however, is at the present time a very grave matter as alfalfa is now bringing $22 a ton f. o. b. cars at point of shipment, and the indications are that it will reach $40 a ton before new alfalfa is produced this coming season. While a large crop of hay has been produced in the western portion of Washington during the present season, it is not a milk-producing feed. The balanced ration in this section has always demanded alfalfa and a certain amount of grain or grain products. Bran is one of the essentials in the production of milk and dairy products. If our wheat is to be milled in the east we will not have the bran for the feeding of our cattle.

"Moreover, it is probably that never in the past has so much inferior wheat been produced in the state of Washington or the northwest as during the season of 1917. This poor wheat should not be shipped abroad, but should be consumed in the various ways at home. It will not produce flour of the quality that should go to the soldiers nor to the populace in general. It, however, has a feed value which in turn will produce elements of a high order for human consumption.

"We trust that this mater will be given your earnest consideration that an unnecessary injury shall not be done to the northwest as well as to the people of the United States in general."

Arthur D. Jones

To succeed R. L. Sparger as president of the Washington State Good Roads association, the convention of the association at Bellingham last week elected Arthur D. Jones of Spokane. Mr. Jones has been prominent in highway promotion, especially in eastern Washington. The following are the other officers elected:

Vice presidents—Frank Terrace, King county; F. W. Shultz, Chelan; Oliver Hall, Whitman; E. M. Gillette, Chelan and F. A. Fontaine, Columbia.

Treasurer—Percy L. Sinclair, Pacific.

Members of the executive committee—John P. Hartman, King county, chairman; Frank W. Guilbert, Spokane; E. C. Burlingame, Walla Walla; Hans Mumm Jr., Snohomish; N. B. Coffman, Lewis; Lee Monohan, King; Torger Peterson, Pierce; J. J. Donovan, Whatcom; Henry Parry, King; James Leslie, Yakima; J. E. Calder, Grays Harbor; F. J. Wilmer, Whitman; F. Wolf, Pend Oreille; J. C. Hubbell, Kittitas; J. G. Kulzer, Stevens; J. T. Cull, Grant, and W. H. Reed, Pierce.

Legislative committee—C. L. Morris, King, chairman; Eli Rockey, Pacific; W. A. Bolinger, Okanogan; L. E. Brown, Spokane; C. L. Mackenzie, Whitman.

Support Government

This Is Pledge of Highway Association

The Washington Good Roads association, at its annual meeting in Bellingham last week, went on record by unanimous vote as favoring the elimination of every activity not making for the successful prosecution of the war; the unquestioning obedience of every citizen at this time of crisis; coordination of all private and public resources. Every form of obstruction to the work the government is doing was severely condemned, while profiteering and strikes were alike classed as treasonable.

By a standing vote, which was enthusiastically unanimous the following patriotic resolutions were adopted as offered by Chairman R. H. Thomson of the resolutions committee:

"Be it resolved by the Washington State Goods Roads association, in 19th annual convention, that, in common with the other nations of the civilized world, the United States faces a danger which threatens her existence as an independent nation of free men.

"This danger menaces from both within and without. Until this menace is removed no other matter deserves our serious consideration. This danger can be met and overcome only by united practice of two things:

"1. All citizens must become obedient to law; and

"2. There must be collective coordination of our community and private forces and resources, together with the forces and resources of the nation.

"There is but one country and one flag, and every one who is not definitely for us is against us. As citizens of this republic, we do solemnly pledge ourselves and all we have to the service of our country, and we denounce as traitorous to country and flag every one, whether rich or poor, who does not stand ready so to serve.

"We brand every attempt to extort money from our country or its citizens, by reason of the opportunity opened by our present necessities, through profiteering or by strikes, as being selfish, dishonest and traitorous. For ourselves we declare all differences at an end and we do again pledge our organization and our individual efforts unsparingly and unselfishly to the service of our country."

President Sparger's address teemed with suggestions of patriotic endeavor by the good roads promoters. Especially was this true with reference to roads of military importance. He declared that there were great distances along the coast of Washington that troops could not travel because of lack of roads, and urged that the building program take into consideration the movement of troops that might before long become necessary.

"THE BARRIER"
By REX BEACH

One of the greatest romances of the wild, lawless days of the Klondike Country ever penned by this gifted author. A big, strong story that will sweep you along on a powerful current of intense interest from chapter to chapter.

NECIA

Her father, John Gale, is the trader at Flambeau. Her mother is a squaw. She has a little half-breed brother and sister. Also she has two lovers—a French Canadian—Puleon Dorat, and Lieutenant Burrell, in charge of the recently established barracks at Flambeau. Burrell is an aristocratic Kentuckian; proud of his family and ancestry. Could he think of marrying Necia — a half-breed Indian girl? There is the great barrier. Poleon Doret, knowing no social barriers, loves Necia with all the ardor of his great, clean soul. Which wins?

NECIA

"She was like some wood sprite—light-footed, slender and dark, with twin braids of hair to her waist, framing an oval face colored by the wind and sun. Her laughter was like the tinkle of silver bells. Every move of her graceful body was unrestrained and flowing with a hint of Indian freedom in it Beaded and trimmed like a native princess, her garments manifested an ornature that spoke of savagery, yet they were neatly cut and hold to the pattern of the whites."

THE BARRIER Is Not a Milk and Water Love Story

Rather it is a broad, sweeping narrative that carries you on the strong current of its action from California to the Alaskan wilderness of the early gold rush. "The Barrier" is a story that, when finished, leaves you the richer, spiritually, for having known these people, working out their ideals and fortunes, their loves, hatreds and misunderstandings, amid surroundings of rough grandeur and the unforgetable charm of the great northland.

The opening chapters of "The Barrier" will appear in next week's issue of this paper. A liberal instalment will be given each week thereafter. Tell your friends about it, for it will mean many an hour of keenest enjoyment for all who read this splendid story.

Farm Bank Saves Cash to Farmers

Remarkable Progress Is Made in Northwestern District

The federal farm loan bank for the rthwestern states is saving the rmers who have borrowed money rough it more than $200 a day, and as loans which it is making increase, they are doing with remarkable idity, this saving will likewise in- ase.

The bank, the central offices of ich are at Spokane, Wash., has ced in the hands of the farmers of ho, Oregon, Washington and Mon- a a little more than $2,550,000. This ch money, if borrowed from the al sources at 8 per cent, which is a al rate of interest, would cost the rrowers about $204,000 a year in in- est. The farm loan bank lends it at per cent, which costs the farmers ly $127,500 interest, or a saving of ,500 a year, which is in excess of 0 a day.

Greater Is Possible.

The bank has now appraised and ap- oved applications for loans in the r states totaling more than $11,000,- . If this were borrowed by the mers at 8 per cent it would require 0,000 each year to pay the interest. will require $550,000 at the 5 per t rate charged by the federal farm n bank, and will thereby result in a ing of $350,000 a year to the farm- , or nearly $1000 a day. The total lications for loans in the four states e reached more than $23,000,000, l it is apparent that the bank will rove actual loans on these applica- ns of probably $20,000,000, which uld mean a saving in interest rges of $600,000 a year to the bor- vers.

The speed with which the bank is ting its leading business under way the northwest is indicated by the t that it made actual loans during month of September of approxi- tely $1,046,000.

This is the first month that a million lars have been sent out to the farm- , and it is expected by officials that s sum will be increased a little with h succeeding month until winter kes it impossible for the appraisers pass judgment on the lands in some ts of the northwest. How the bank gaining speed is indicated by the t that it took the first four months operation to make loans of about $1,- ,000, but the fifth month saw more n $1,000,000 loaned. This was due several conditions; not only was it essary for all the organization work the bank still to be done when first ated in the northwest, but the farm- themselves had to be educated as the proper way to apply for loans l cooperate with the bank officials securing them. Now the bank is in ellent working order, and the bor- vers are able to place their applica- ns in better shape so as to prevent dless delays.

lustrating the point of the greater vity of the banking machinery and farmers, President O'Shea of the thwest bank cites one instance in ntana where fifteen persons had med an association and applied for ns. The bank's appraiser was sent that district, and while there he ived the applications of 73 persons iring to secure loans.

Business Extending.

The farm loan bank is making every rt to reach the people who desire ns, and if afforded the cooperation he farmers, expects to have a loan ciation in nearly every community the northwest by the end of the ," says President O'Shea.

Montana was the last of the four es to appreciate the advantages would come to the farmers from operation of the land bank, but it is now awakening to the situation, and its applications for September are greater than for the other three states combined."

Of the $23,117,648 applied for by the farmers of the four states, Idaho has asked $2,899,278, Montana, $6,804,591, Oregon $5,475,625 and Washington $7,- 938,154.

Of the loans approved, which total $11,072,395, Idaho has $1,590,615, Mon- tana $2,961,550, Oregon $2,860,865 and Washington $3,659,365.

The loans applied for during the month of September totaled $3,163,335, while the loans appraised and approved for that month totaled $2,331,300. The difference between these applications and the amounts approved does not in- dicate, however, rejection of that amount, but merely that scores of the applications are yet not reached in the regular course of the bank's business.

Up to the present time there have been 10,130 farmers applied for loans. There have been 209 local loan asso- ciations chartered, and 54 applications for charters are now in and being taken up by the bank as rapidly as possible.

Cover Crop

Alfalfa Considered One of Best

By C. H. TICHENAL, Cashmere, Wash.

I have raised less alfalfa since the trees have gotten large. I irrigate 25 acres and have five tons to the acre. There is some increase in acreage this year but it is all in orchards so does not yield as much as if there were no trees. I have two acres as pasture for my milch cows. I feed alfalfa to my horses, cows, pigs and chickens. It is the best hay that grows out of the ground. I consider it one of the best cover crops that can be grown in an orchard where a man has plenty of water for irrigation. I used to cut eight and one-third tons per acre when there were no trees. The crop will be short this season on account of the dry, long, hot spell, as the water will not go as far as usual.

Guernsey Breeders Organize.

The Guernsey breeders of Snohomish county met at Arlington the first of the week and organized the Snohomish County Guernsey Breeders association, reports C. C. Farr, agent for that coun- ty. Fifteen men were present. Mr. Carroll, Mr. Douglas and Mr. Hiliare of Whatcom county were present to as- sist in the organization. E. W. Soper has been secured to take charge of the Snohomish Valley Cow Testing asso- ciation to replace V. B. Riley, whose eyes gave out.

Feeding Problem Critical.

"The dairymen are putting in their supply of hay," says C. B. Sprague, county agriculturist of Kitsap county. "Alfalfa is costing them $26 per ton laid down on the dock at Port Orchard. One man told me he got the same grade hay of on the wharf last year for $14 per ton. The feeding problem is the one problem that seems to be the critical one now."

Are Farmers a Preferred Class?

Commerce Journal Talks Foolishly of Price Regulation

It is difficult to discern what good purpose the New York Journal of Com- merce can expect to achieve by making sneering allusions to "farm patriotism" and printing untrue editorial utter- ances like this:

> "The farmers' combinations are making every effort to get the last possible cent out of the govern- ment and the consumers. These same farmers who are demanding the highest possible speculative price for their product are demand- ing that other people's products shall be sold to them at forced low prices."

And in another column the same newspaper prints approvingly the as- sertion by a Wall stret broker that "the attitude assumed by farmers in some sections of the country is largely due to the government, which has been giv- ing them preferential treatment above all other industries in the country."

The truth is, as every one can see who will take the pains to read the law, that control bears more generally on the farmers than on any other class, with the possible exception of the pro- ducer of coal. In effect, it empowers the government to control and depress the price of wheat, flour, meal, beans and potatoes, and to regulate practi- cally everything the farmer grows.

So far the government has dealt only with wheat, but its power to control the prices of these other farm products is clearly fixed in the law.

A lot of loose thinking and wild statement is abroad in the land. It is often stated that the government was favoring and coddling the farmer when Dr. Garfield's commission recently fixed prices for the wheat harvest of 1917. The truth is that the government fixed the price far below the quotations the farmer would have received if the law had kept hands off the markets and allowed the natural laws of supply and demand to take their course. There is every reason to believe that the farm- er then would have received not less than $3 a bushel for his wheat, and some authorities think it more likely that the price would have gone well above $3.

There is not the least doubt that, if the government had not stepped in and fixed an arbitrary price, the wheat growers of the Inland Empire would have received a dollar a bushel more than they will now get. And we think it takes genuine patriotism for the farmer to accept that loss in loyal spirit, since it means a total sacrifice in the northwest of some $40,000,000.

The farmers will be entirely content if it turns out that the consumers get the benefit of that reduction, for they realize that the country's wage earners are having a hard struggle to make ends meet. We wish that we could be sure that it will turn out that way.

The fact is that it is the jobber and the retailer and not the farmer who has had preferential treatment in the food control law. As The Farmer has already pointed out, and as the Wall Street Journal now admits, the whole retail trade of the country, with the possible exception of the fuel dealers, is immune from regulation and con- trol. Commenting intelligently on that fact the Wall Street authority says:

> "The latter has prospered under war conditions in its own way. Trade fail- ures have dwindled to insignificant size; collections have been good, per- centages of cash sales have gained and there has been of course a correspond- ing diminution of commercial hazard.
>
> "Retail merchants may be as pa- triotic as other business men, but they are not more so. They have made no sacrificial efforts to escape "war prof- its." As commerce originates with the farmer, it ends with the retailer, who places the commodity in the hand and as near to the mouth or back of the consumer as it is humanly and humane- ly possible to do.
>
> "In a universal era of interest, price and wage regulation, and of strict standardization of manufactures, of stringent tests of quality and rules for grading, marking and branding, why should the retailer be a law unto him- self not only as to the window profit, gross and net, on turnover, but the profit concealed in imitations?"

Others are beginning to note a fact already pointed out in these columns, namely, that the government, which lays its hand on wheat and is trying to control the mills, lifts that hand from the product when it is ground into flour. Commenting on that weakness in the law, James R. Stewart of Min- neapolis, president of a large grain company, says:

> "Another weak link in wheat con- trol is at the farthest end from the farm. Fixing wheat prices and milling profits practically fixes flour prices at the mill, but the job- ber and retailer have a free hand."

And the baker has a free hand, too; and evidently, judging from recent utterances of S. F. McDonald, president of the National Association of Bakers, is making ready to charge high prices for bread and lay the blame on the farmer. Speaking before the national convention of the bakers at Chicago the other day, he said:

> "As an artificial stimulant to wheat production congress proposes to guar- antee a minimum price of $2 for the 1918 wheat crop. At the same time congress delegates to the farmer the right to hoard farm products. These are conditions tending to build up ex- cessive bread costs. The farmer, guar- anteed a $2 minimum, may quickly realize that a small crop is easier to handle than a large one. A high mini- mum without a maximum price tends to defeat the thing which the majority of the people are anxious to see, name- ly, a reduction in the high price of wheat. With a reasonable maximum price the farmer would know that he could not raise a short crop and hoard for an abnormal price, but would know that if he wanted a lot of money he would have to raise a lot of wheat to get it."

Think of peddling out that sort of nonsense! Yet there is danger that millions of consumers in the great cities, who do not make a close study of agricultural conditions and the law, will be deceived by it and hold a hard feeling against the farmers. Well in- formed people know that crop restric- tion is entirely beyond the farmer's control, and the farmer who ran his farm on the theory that he would make more money by cutting down his indi- vidual production would end in bank- ruptcy.

If the wheat acreage of 1918 is dis- appointing it will be because the gov- ernment has set the minimum too low to encourage increased seeding of wheat; because the farmer will feel that he can make more money growing other products.

Safety Suit for Aviators.

An Englishman has invented a safety suit for aviators which is covered with parachute-like pockets, by means of which the entire suit can be inflated, so that the force of the aviator's fall may be broken.

Milk Problem Puzzling

Food Administration Takes Up the Question

Shortage in the milk supply is creating nation-wide concern. The national food administration is asking producers to make only month-to-month contracts with distributors pending a promised reduction in the prices of cattle feeds. Semi-annual contracts are now expiring.

Food administration officials believe that stabilized grain prices and limited profits for millers will cut feed prices before January 1. They look for a general readjustment of contract prices, and are hopeful that distributors may be able to reduce the price of milk to the consumer.

Milo D. Campbell, president of the National Milk Producers' federation, said there was little doubt dairymen would approve the monthly contract plan.

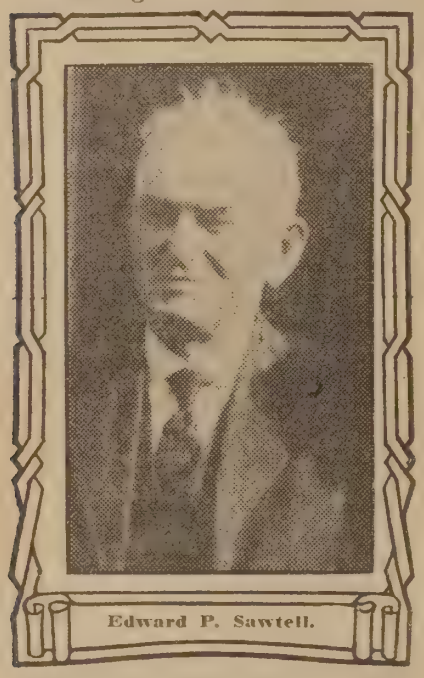
Mr. Campbell made this statement at Washington, where he had gone to confer with Food Administrator Hoover.

Meanwhile representatives of the New York distributors have also appealed to Mr. Hoover. The new schedule fixing higher milk prices recently issued by the dairymen's league will shortly receive attention from Food Administrator Herbert Hoover, according to I. Elkins Nathans, secretary of the New York State Milk Dealers' conference board. Mr. Nathans said:

"Mr. Hoover now has a clear understanding of the whole condition. He is most anxious to do anything he can. His only doubt is regarding his rights in the matter, but he promised the board to take it up with careful consideration. We asked for advice as to the course we should take and received assurances that we would hear from him."

Mr. Nathans also said that what Mr. Hoover could do to relieve the situation would be to inform the dairymen's league that he does not consider, in view of operating costs, that their higher prices are warranted. Such advice from the food administration to the dairymen, Mr. Nathans thought, would have good effect.

Would Start Famine.



A New York dispatch says that 120 milk dealers in New York and adjoining states plan refusal to renew their contracts with farmers this fall, hoping thereby to start a milk famine to bring the producers to terms. They object to the price of 7 1-2 cents a quart established by farmers and say a strike would compel the government to take drastic action. The dealers criticize the failure of Mr. Hoover to fix the price which farmers may charge for milk.

That reveals an unreasonable attitude on the part of the distributors. In the first place, neither Mr. Hoover nor any one else has the slightest authority of law to fix the price which the farmers may charge for milk. And in the second place, the dairy farmers will be heard from if the government should repeat the injustice against them that it laid on the wheat growers in fixing the price that the farmer must take, while leaving the distributors—the jobbers, the retailers and the bakeries—free to extract any profits they please.

Evidently the big New York distributors want government control of that one-sided kind—a law that would fix the price to the farmer while leaving them free to charge the consumer what they pleased.

The problem extends from coast to coast. Seattle dealers are saying that the retail price of milk will be advanced there to 14 cents a quart. The present price is 10 to 12 cents. Dealers predict 20-cent milk by Christmas. Increase in cost of production to the farmer and in cost of distribution to the dealer are given as the reason for the higher price.

Washington Portraits No. 31

Edward P. Sawtell.

Edward P. Sawtell came to Washington in 1881 from Kansas by wagon, stopping for the winter at Ogden, Utah. He at once settled in Chehalis county, Wash., close to what is now Independence Station on the Milwaukee railroad. The land was railroad land, and Mr. Sawtell had not a cent to pay down, but T. F. McIlroy of Olympia bought the land and gave him a bond for a deed. He was 10 years in paying it off in full, though he could have paid much sooner had Mr. McIlroy hurried him. His purchase included 160 acres and he cleared practically all of it. All but 90 acres has since been sold. He had nine children, six of them girls, all of whom have married and all living but one. Two of the boys are still living. About eight years ago he built a 10-room residence on the farm.

In 1904 he purchased his first registered Holstein and now has a nice little herd, besides having had a good sale of bulls and some females. Most of the herd is the offspring of one cow.

Mr. Sawtell served three years as a director of a cooperative creamery at Centralia. He was a school director when his district was in three counties, but he never liked public office. He is now a stockholder in the Farmers and Merchants' bank of Centralia. Mr. Sawtell is now nearing his three score years, but he still does much farm work.

How to Select Good Eating Apples

By Granville Lowther.

For cooking it makes very little difference whether an apple is approaching what we call the ripening period or whether it is fully mature, and has reached a fair state of development. There seems to be very little difference in the flavor and quality of the apple, even though it be firm and solid before cooking. But for desert or for eating out of hand, it is of prime importance that they should have reached a fair degree of ripeness, and at this point many consumers are disappointed in the fact that the apples are not as good as they expected.

The difference grows out of the fact that different varieties of apples ripen at different periods of time, and one of the very best apples for eating out of hand when it is fully ripe, at another period before it reaches that stage of ripeness is not fit for consumption.

It is difficult for consumers to determine this unless they are fully acquainted with the varieties of apples and the place and conditions under which they are grown. For instance, the Spitzenberg is considered by a majority of people one of the very best apples in its season, but its season is later than that of the Jonathan or the Grimes Golden. The Yellow Newtown is later yet than the Spitzenberg and the Arkansas Black, while not a first class apple at any period, does not reach a degree of ripeness when it is fit for consumption until some time in the spring or early summer.

Apples of the same variety grown in different circumstances ripen at different periods of time, and, therefore, the consumer, unless he is acquainted with this fact, or acquainted with the conditions under which the apples are grown, might be disappointed. For instance, when I was in Texas I found Jonathan apples on the market from the Ozark mountains the first of December, and they seemed to have reached their full period of ripeness when they were fit for consumption. The following February I found Jonathan apples grown in Colorado in as good a state of preservation as those grown in the Ozarks in December. Those grown in Colorado could not have been consumed and furnished the consumer satisfaction in December. Those grown in the Ozarks would not have kept until February.

In the Yakima valley we have the same conditions, only not so marked. For instance, in the lower valley, about Granger and Zillah, the Jonathans are ripe for the market about two weeks earlier than those grown at North Yakima, and at North Yakima they are ten days earlier than those grown in the upper Natchez or on the higher lands nearer the foothills above North Yakima.

The consumers are not supposed to be acquainted with these facts. Therefore, the grower should mark upon the boxes about the time his apples are ready for consumption, and by this means better satisfy the consumer and thereby extend his markets and create a greater demand for his products.

There is considerable agitation now in the northwest states, Washington, Oregon and Idaho, about "Apple Day." The tocsin in Washington is "Buy a Box of Washington Apples"; in Oregon "Buy a Box of Oregon Apples"; in Idaho, "Buy a Box of Idaho Apples." This is all right, and will call attention to the home products and stimulate buying, but if when the buyer purchases what he deems to be a first class variety of apples and pays a first class price, and then discovers that it is not what he expected, he will not feel inclined to buy again, and this disappointment may not be due to the fact that the apple is not a good variety, but that it is not the particular variety or apple for the season in which he bought it and for which it was consumed.

If we are going to get the most possible out of this campaign called "Apple Day," we must guide the buyers as to the best time to purchase for consumption any particular variety grown in any particular locality, for it must be borne in mind, and therefore, I repeat, that the same variety grown in different sections ripen at different periods of time. Therefore there is no general rule that will apply to any particular variety which would guide the consumer and enable him to say that the Jonathan can be consumed in December, for instance, and the Spitzenberg in January, the Newton in February, the Winesap in March and the Arkansas Black in April. While these varieties may come in the order named, yet so much depends upon the elevation and the environment under which they are grown that only the producer can give correct rules.

It Begins Next Week.

The nights are now longer than the days. Very soon there will be long winter evenings, and the chores will have to be done by lantern light. Then—then "The Barrier." Plan to spend one evening a week with it. It is a wonderful story of a wonderful land inhabited by wonderful people. It is a Klondike story, written by Rex Beach. It begins next week in The Farmer, and will run in weekly instalments until its 19 chapters and 310 pages of stirring narrative are finished. Read the first chapter at our suggestion. You'll read the second and third and the rest of them because you can't help it.

CHILD WELFARE

League Is Well Featured at Fair.

An entire building was given over to exhibits placed by the Child Welfare league, under the supervision of Mary A. Grupe, psychologist at the Ellensburg normal school. Displays showing the proper clothing for infants and growing children were in evidence, as well as the right kind of food, books to read, etc. Attention was called to the harm done by patent nostrums, and home-made toys were shown. A day nursery was maintained throughout fair week.

The woman's building at the state fair housed a pretentious showing of art and handiwork. The state fair woman's department has been under the direction of Miss Sue Lombard for many years, and Miss Lombard has made her part of the fair an institution of intense interest and great educational value.

QUALITY EXCELLENT

Districts Show Good Exhibits.

While district representations we few in number at the Washington St fair the quality of the fruit and veg table exhibits was well up to stan ard. In some quarters the consens of opinion was that these showings celled those of previous years in sp of the late growing season and t earlier dates of the fair. This depa ment of the fair was under the sup vision of John J. Miller of North Y ima.

Yakima valley district exhibits w fewer in number than in former ye due largely to the fact that the f came at a season when every prod found it necessary to attend to harvesting and marketing of his crop

Stevens county had an attractive hibit under the direction of W. Hughes of Colville. Grains, grasses a vegetables from this section w shown in profusion, and attested to splendid agricultural development that locality. Mr. Hughes also had noteworthy individual exhibit.

Squashes Volunteer.

C. Starcher of Fairview, Yaki county, exhibited six hybrid squash which, placed end to end, measured feet in length. The squash were v unteers and are the result of the seed the mammoth variety and from Boston marrow having been sown cl together the previous years.

In charge of John E. Hanson, Gra Harbor county sent a a splendid exhi of grains, grasses, celery and oth vegetables. Ripe corn in quantit made up a part of the interesti showing.

A large exhibit of fruit and vegeta products from Benton county was charge of Luke Powell, district h ticultural inspector.

Pierce county's practical showing home-canned and dried fruits and v etables was interesting and instructi as well as its big collection of gene agricultural products.

Grains and grasses were features Clarke county's showing, which was charge of County Agent Fletcher.

The general fruit displays not tered on a competitive basis were ma and served to enhance the general be ty and attractiveness of the hortic tural building.

Garden Truck Shown.

King county's importance as an ag cultural county was demonstrated by especially noteworthy exhibit of tru garden products and an array of fr grains and grasses which would credit to any district in Washingt and in many cases excel it.

Yakima county had its us attractive display of fruit and ve tables, as well as an endless variety other products, attesting to its won ful adaptability to diversified farmi Besides the agricultural displays Yakima county exhibit gave place to interesting exhibit of game fish fr the Yakima trout farm, which annua hatches thousands of fish for the Y ima county game commission.

Commercial representatives from parts of Washington were in charge novel booths, many of an educatio character.

Boys' and Girls' Work.

Work of the second division of t canning clubs of the boys and gir industrial department at the state f proved fully as interesting as that co by the first division earlier in the we Clallam county canned carrots; Ada made crabapple jelly; Thurston cann beef; Klickitat made pear preserve King county canned salmon; Yaki county canned fried and stewed chic en; Whitman canned oranges; Frank canned cauliflower; Grant made pea butter; Snohomish made combinati jelly of prunes, apples and black be ries; Island made watermelon pr serves; Walla Walla made tomato pr serves and Jefferson made plum jel

Construct Silo at Goshen.

With the assistance of J. N. Pri state college of Washington, and H. Carroll Jr., county agent of Whatc county, a 10 by 32 wooden stave si was constructed recently for H. Mize of Goshen. The staves were c at a local mill according to specifi tions. The doors were made of stav as outlined for the continuous do type of silos in Extension Bulletin N 24, state college of Washington.

Live Stock Best Ever Seen at Boise

Idaho Is "Off for a Good Start" on Constructive State Fair Program

By E. J. IDDINGS

A really state-supported state fair has ome to Idaho, and the start made at Boise last week undoubtedly spells nuch for the future.

Exhibitors of Horses.

The exhibitors of horses were as follows:

Thoroughbred—W. A. Jenkins, Boise.

Standard Breds—A. Waite, Boise; Villiam Howell, Boise; Frank S. D. mant, Boise; G. E. Noble, Boise; O. H. Hutchins, Boise; Peter Weber, Boise.

Percherons—P. A. Sorenson, Kuna; V. H. Thompson, Boise; Walters Brothrs, Twin Falls; Frank Taylor, Meridan; C. Matlock, Meridian; Perry D. Hadsall, Middleton; Frank Sullivan, Rupert; N. W. Booth, Meridian; W. F. Howard, Parma.

Belgians—W. H. Thompson, Boise; H. McClanahan, Boise; Frank Sullivan, Rupert.

Shires—G. E. Noble, Boise; Walters Brothers.

Shetlands—Mrs. H. T. Baker, Bench; Perry D. Hadsall, Middleton.

The greatest strength by far was in he Percherons. Nearly all the classes were filled and some with six to ten ntries. One exhibitor alone, Soreno. had 25 head on the grounds. The wo closest contests were in the aged tallion class and in the final contest f championship of the stallions. In ne former a chestnut four-year-old hown by Sullivan was closely pressed y a much older and a popular horse mong mare owners exhibited by Perry adsell. The four-year-old won on his etter lines and evener conformation. he ringside opinion was divided in lacing the championship between the our-year-old mentioned and threeear-old from the Walters string. The hree-year-old was preferred by the udge. Professor C. W. Hickman of the niversity of Idaho, for his outstandng performance when in action and ecause of a nearer approach to the ccepted Percheron type of today. The rst prize aged and champion mare as a big, well-balanced black from the Valters stables. In most of the classes nose who achieved the most courted wards were closely pressed by other nimals of merit.

Beef Cattle Exhibit.

The great strength of the beef cate exhibit was in the reds, whites and oans. A. H. Eagleson & Sons of oise exhibited an Aberdeen Angus erd and met with no competition, and ne highly capable and efficient fair ecretary, O. P. Hendershott, sent some erefords for display but not entered or competition.

The following exhibitors made a total splay of approximately 120 head of northorns:

W. H. Thompson, Boise; Caldwell attle company, Caldwell; G. W. DeLay, ot Lake, Ore.; W. J. Townley, Union, re.; E. H. Gaine, Caldwell; Frank Sulvan, Rupert; Boone Brothers, Rupert; mes Rush, Rupert; P. A. Sorenson, una: University of Idaho, Moscow he latter not entered for competition.)

The Oregon cattle were not only careully selected and typy individuals, but addition were fitted and carried the eat to put them forward to best adntage for the fray. With Townley ading over DeLay, every first went to regon. The Sorenson cattle were editable but thin and took one first. ll championships went to the Oregon erds. The university exhibit consisted f a yearling steer that had won grand hampionship honors at the Interstate ir at Spokane and six head chosen om the varsity's Shorthorn breeding erd. Judging was most competently ne by H. R. Smith, Union Stock Yards, hicago.

There has never been a stronger daho show of Holstein-Friesians. here was a splendid herd from the Indstrial institute at Weiser, formerly he Hulbert herd of Nampa. These cate, particularly the string of five aged ows, huge of barrel and tried and roved producers of great yields of ilk and butterfat, were mighty good to ok at. The institute won the larger hare of the awards, with the Avalon rchard company of Kuna and F. O. Johnson, Meridian, pressing close for their respective shares of the awards. The University of Idaho had on the grounds for display only three especially good looking two-year-old heifers. The three head average better than 1000 pounds of milk per month each for periods of six to eight months and one had produced 8700 pounds of milk in eight months.

Jerseys were represented by a small herd of J. H. McClanahan, Boise, and the yearling herd sire of the university. The Guernseys of Carlton Holt and Waukesha Guernsey Farm, both of Boise, represented the other Channel Island breed. The dairy show as a whole marked a distinct step of progress toward a state fair dairy cattle exhibit entirely worthy of the state's possibilities in milk, butterfat and cheese production.

There were sheep to represent the various breeds and two highly fitted flocks, but the sheep pens did not contain entries fittingly representing the great importance of mutton and wool production in Idaho. From the flocks of Idaho could be picked a state fair exhibit of outstanding merit and one worthy to enter the oldest and best sheep shows of America. Only a comparatively few of the best ones were on the state fair grounds.

Southdowns and crossbred Cotswold —Southdowns all wethers—were shown by the university. Here the state institution was permitted to compete and was awarded championship on fat wether.

The only Shropshire was a single ram by Brown Brothers, Twin Falls. The Hampshire exhibit of Brown Brothers was highly fitted and was deserving of keen competition. The remaining exhibits were in field condition only. While creditable, the lack of special show fitting did not permit the more pleasing outline that might have been presented to the visiting public. Other exhibits were as follows:

Oxfords—K. G. Berry & Sons, Boise; Charles A. Cairns, Meridian.

Cotswolds—J. M. Flack, Meridian.

Lincolns—W. N. Booth, Meridian.

Rambouillets—T. S. Kennedy, Nampa.

The sheep were judged by E. J. Fjeldsted, field animal husbandman of the university.

The Swine Show.

The swine show, including the futurities of the Poland-China and Duroc-Jersey breeds, was one of the strongest features of the entire live stock show. Polands were shown by A. N. Moss, Caldwell; Wilson Brothers, Greenleaf; E. C. Vahlbert & Sons, Emmett; H. S. Randall, Boise; W. F. Howard & Son, Parma; Howard & Royston, Parma; Wilson & Vahlberg, Emmett.

In nearly every class all exhibitors were represented. The fight for highest honors, both in the open classes and futurity, was a three-cornered one between Wilsons, Howard and Royston. Royston and Howard & Royston had the more growthy and more highly finished young stuff and showed heredity in the younger section of the show. Five of the champion ribbons, including both grand champion boar and grand champion sow went to Howard & Royston. Wilson had junior champion boar. It was a showing strong in numbers and in quality. Roy Davis of the American Poland-China Record association looked after record association interests in the futurity.

The Duroc-Jersey show was likewise closely contested and highly creditable. The popular and accepted blood lines of today prevailed in the animals shown. The Richards Live Stock company of Virginia was the principal winner, taking all boar championships and junior champion on sow. Senior and grand champion on sow went to H. S. Fest of Emmett. The grand champion boar was Richard's Defender. Other exhibitors were C. McClelland, Boise; J. A. Wagner, Meridian; H. C. Polly, Burley.

Creditable displays of Tamworths were made by the Round Knoll ranch, Bliss, and a nice lot of Chester Whites were exhibited by the Boise high school. The judge of Poland China and Duroc Jersey open and futurity classes was E. J. Iddings of the University of Idaho. Other swine classes were placed by C. W. Hickman.

On the whole, it may be said that Idaho is "off for a good start" on a constructive program for a really great state fair.

The following are the live stock awards at the Idaho state fair:

BEEF CATTLE.

Shorthorns.

Bull, 3 years, G. W. DeLay, Hot Lake, Ore., first; James Rush, Rupert, second; W. H. Thompson, Boise, third.

Bull, 2 years, W. J. Townley, Union, Ore., first; Caldwell Cattle company, Caldwell, second; P. A. Sorenson, Kuna, third.

Bull, jr. yearling, Townley, first, second; Boone Brotherson, Rupert, third.

Bull, sr. calf, Townley, first; Sorenson, second, third.

Bull, jr. calf, Townley, first; Sorenson, second, third.

Cow, 3 years, Sorenson, first and third; Townley, second.

Heifer, 2 years, Townley, first; DeLay, second, third.

Heifer, sr. yearling, Townley, first.

Heifer, jr. yearling, Townley, first; DeLay, second, third.

Heifer, sr. calf, Townley, first; E. A. Grimm, Caldwell, second.

Heifer, jr. calf, DeLay, first; Sorenson, second, third.

Graded herd, Townley, first; DeLay, second.

Breeders' young herd, Townley, first.

Breeders' calf herd, Townley, first; DeLay, second; Grimm, third.

Get of sire, Townley, first, second.

Produce of one cow, DeLay, first; Townley, second.

Exhibitors' young herd, Townley, first; DeLay, second.

Sr. champion bull, DeLay.

Jr. champion bull, Townley.

Sr. champion cow, Townley.

Jr. champion cow, Townley, first.

Grand champion bull, DeLay.

Grand champion female, Townley.

Aberdeen Angus.

All awards in the Aberdeen Angus were made to A. H. Eagleson & Sons of Boise, who had excellent entries in about every contest offered for this breed.

Herefords.

All Hereford awards went to the Hendershot Land & Live Stock company.

DAIRY CATTLE.

Guernseys.

The Waukersha Guernsey Farm of Boise was given all the awards on Guernseys.

Jerseys.

J. H. McClenahan of Boise received all the Jersey awards.

Holsteins.

Bull, 3 years old or over: Avalon Orchard Tract company, on Hartwood Heilo Hengerveld, first.

Bull, 2 years old and under 3: Intermountain Institute, Weiser, first, on Segis Walker Hartog.

Bull, junor yearling: F. O. Johnson, first, on King Segis Walker Pietertje Vale.

Bull, senior calf: Avalon Orchard Tract company, first, on King Segis Spofford Again; Intermountain Institute, second; Avalon Orchard Tract company, third.

Bull, junior calf: Avalon Orchard Tract company, first; Intermountain Institute, second; Avalon Orchard Tract company, third.

Cow, 3 years old or over: Intermountain Institute, ou Susie DeKol Pauline, first; second on Tiriania Johanna Machtilde. P. O. Johnson, on Viola Shadeland, third; Intermountain Institute, on Buckeye Grace Merley, IL, fourth; Intermountain Institute, on Queen Gerbon Spofford, fifth.

Cow, 2 years: F. O. Johnson, on Viola Dale Netherland DeKol, first; Intermountain Institute, second, on Ivy Colantha; third on Gem II.

Heifer, senior yearling: Intermountain Institute, first and second; Avalon Orchard Tract company Hartwood Pauline Karon II, third.

Heifer, junior yearling: F. O. Johnson, first, on Queene Johanna Hetherland De Kol; Avalon Orchard Tract company, second.

Heifer, senior calf: Intermountain Institute, first and fourth; Avalon Orchard Tract company, second and fifth; F. O. Johnson, third.

Heifer, junior calf: F. O. Johnson, first; Intermountain Institute, fourth, fifth and sixth; Avalon Orchard Tract company, second and third.

Aged herd: Intermountain Institute, first.

Breeders' young herd: F. O. Johnson, 1st; Avalon Orchard Tract company 2d.

Calf herd: Avalon Orchard Tract company, 1st; Intermountain Institute, 2d.

Get of sir: Avalon Orchard Tract company 1st; Intermountain Institute, 2d.

Produce of dam: F. O. Johnson, 1st and 4th; Avalon Orchard Tract company 2d and 3d.

Senior champion bull: Intermountain Institute, 1st on Segis Walker Hartog.

Junior champion bull: F. O. John son on King Segis Walker Pietertje Vale.

Senior champion cow: Intermountain Institute, on Susie De Kol Pauline.

Junior Champion cow: Intermountain Institute, on Fernsdale Alice Mercena.

Grand champion bull: Intermountain Institute, on Segis Walker Hartog.

Grand champion cow: Intermountain Institute, on Susie De Kol Pauline.

Reserve grand champion bull: Avalon Orchard Tract company, on Hartwood Heilo Hengerveld.

Reserve grand champion cow: Intermountain Institute, Tiriania de Kol Johanna Machtilde.

HORSES.

Percherons.

Stallion, 4 years—Frank Sullivan, Rupert, 1st on Roland; Perry D. Hadsall, Middleton, 2d on Leota Jane; P. A. Sorenson, Kuna, 3d on Krepin.

Stallion, 3 years—Walter Brothers, Buhl, 1st on Carsino, 2d on Dijon; P. A. Sorenson, 3d on Cocardis.

Stallion, 2 years—W. F. Howard, Parma, 1st on Brilliant; Walter Brothers, 2d on General Wayne; P. A. Sorenson on Madere.

Stallion, 1 year—P. A. Sorenson, 1st on Grenadian, 2d on Gremaud, 3d on Hebru.

Mare, 4 years—Walter Brothers 1st on Detroit, 2d on Carnona; P. A. Sorenson 3d on Liquation.

Mare, 3 years—P. A. Sorenson 1st on Barodet.

Foal, under 1 year—P. A. Sorenson 1st on Kouperose 2d; Frank N. Taylor, Meridian, 2d; P. A. Sorenson 3d on Kurdas 2d.

Mare with foal—P. A. Sorenson 1st on Liquation, 2d on Kourbelle 3d.

Four animals, get of one sire—P. A. Sorenson 1st and 2d; Frank Taylor 3d.

Draft mares—P. A. Sorenson 1st and 2d; G. W. Noble 3d.

Champion stallion—Walter Brothers on Carsino.

Champion mare—Walter Brothers on Detroit.

Group, stallion with two mares—Walter Brothers 1st on Carsino, Detroit and Carnona; P. A. Sorenson 2d on Krepin, Liquation and Courbelle.

Group, stallion with four mares—P. A. Sorenson 1st.

Percheron Society of America Specials.

Stallion 3 years old or over, bred and owned by exhibitor—P. A. Sorenson, Kuna, 1st on Colardos.

Stallion, under 3, bred and owned by exhibitor—W. F. Howard, Parma, 1st on Brilliant; P. A. Sorenson, Kuna, 2d on Germaud, 3d on Madere.

Champion stallion, bred and owned by exhibitor—W. F. Howard 1st on Brilliant; P. A. Sorenson 2d on Germaud.

Mare, 3 years or over, bred and owned by exhibitor—P. A. Sorenson 1st on Borodette.

Champion mare, bred and owned by exhibitor—P. A. Sorenson 1st on Borodette.

Get of stallion, four colts, either sex—P. A. Sorenson 1st on Corcordos, Borodette, Madere and Rouera; 2d on Grenadian, Gremaud, Hebrau and Houleux.

Produce of mare, two colts, either sex—P. A. Sorenson 1st on Madera and Kouperose 2d; 2d on Kocordas and Houleux.

Five stallions, owned by exhibitor—P. A. Sorenson, Kuna, 1st on Krepin, Corcordas, Madere, Romea and Grenadian.

Best three mares, owned by exhibitor—P. A. Sorenson 1st on Kurdes, Kouperose and Kourbette; 2d on Liquation, Korde and Borodette.

Champion stallion, open class—Walter Brothers 1st on Corsino; reserve champion, W. F. Howard on Brilliant.

Champion mare, open class—Walter Brothers 1st on Detroit; reserve champion, Walter Brothers on Corona.

Belgian.

Stallion, 4 years—J. H. McClanahan, first, on Avenir de B. C.; W. H. Thompson, second, on Max.

Stallion, 3 years—Frank Sullivan, Rupert, first, on Artabon.

Champion stallion—J. H. McClanahan on Avenir de B. C.

Shire.

Stallion, 4 years—G. W. Noble, first, on Birdsall Duchsler.

Stallion, 3 years—Walter Bros., first, on General Logan.

Stallion, 1 year—G. W. Noble, first, on Gold Line; second, on Red Line.

Mares, 4 years—G. W. Noble, first, on Lazella, second on Martha III.

Mare, 2 years—G. W. Noble, first, on Elnora Barta.

Mare with foal—G. W. Noble, first, on Martha III.

Four animals, get of one sire—G. W. Noble, first.

Champion stallion, 3 years—Walter Bros., on General Logan.

Champion mare, 2 years—G. W. Noble, on Elnora Barta.

Stallion, with two mares—G. W. Noble, first.

Stallion with four mares—G. W. Noble, first.

American Shire Association Specials.

Champion stallion, Walter Bros., on General Logan.

Champion mare—G. W. Noble, on Martha III.

Standard Bred.

Stallion, 4 years, G. W. Noble, first; Peter Weber, second; A. Waite, third.

(Continued on page twenty-eight.)

THE WASHINGTON FARMER

Trade Mark Registered U. S. Patent Office.
PUBLISHED WEEKLY ON THURSDAY.
REVIEW BLDG., SPOKANE, WASH.

Subscription price: $1.00 a year—special 3-year rate $1.50. Canada and foreign, 1 year $1.50.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Stick to the Standard Crops

"The friends thou hast, and their adoption tried, grapple them to thy soul with hoops of steel."

This is what a great poet said a great many years ago. He was not musing for the benefit of the farmers in the production of crops, but the philosophy he uttered is applicable.

"The friends thou hast" are bluestem, little club, turkey red, red Russian, Baart, a few hybrids, blue flower alfalfa, red clover, blue barley, white dent, yellow dent, little flint, netted gems, Burbanks, early rose, late flat Dutch, cow kale, white navy and the like. We can't name them all. They differ in different localities, but every farmer knows what they are in his particular district.

"Grapple them to thy soul with hoops of steel." Don't try something just as good, even though it is recommended as much better. Stick to the standbys. Raise the crops that you know will produce reliably. This is no time to listen to the fellow who has some wonder-working seed to sell, something new that produces enoromous crops. Sometimes these "discoveries" are real. Sometimes they are of something actually worth while. But too often they are pure fiction or suitable for production under certain very particular conditions of soil, climate or moisture. It is a safe rule to avoid anything that looks too good. Get-Rich-Quicks are still in the field looking for folks to get rich quickly on. Stand by your "friends," the standard crops that have produced the wealth of this great northwestern farming district.

Extracting Honey From the Gall

There is a lot of adversity being felt these days on the farms of the northwest. Conditions are puzzlingly abnormal. Neither the grain or fruit farmer nor the stockman knows exactly which way to turn. The cost of production has gone up to a point that requires unusual prices to make it pay to produce at all. The government is doing its best to solve the problem of regulation, of how and what to regulate, but so far the farmer is inclined to doubt the benefit he derives from the early steps taken.

But of one thing there is no doubt. The strenuous times are making a vigorous assault on America's entrenched enemies, wastefulness and inefficiency. We are waking up to the fact that we can not afford to waste either products or the possibilities of production. We are rapidly coming to realize that we can not conduct our farming business successfully in slipshod fashion. We are finding out that quality rather than quantity is the thing greatly to be desired.

And as a result we are going to profit from the adversity of the present period. We are going to emerge as better farmers. We are going to tighten up the screws in our farming machine, and get rid of the methods that don't pay. There is an ill wind blowing our way, but it is going to bring us more good than ill in the long run.

One Word More, Lest We Forget

There is certainly no man or woman in the northwest who, having heard James W. Gerard, former ambassador to Germany, tell in his recent speeches the truth about Germany and her diabolic propaganda against this country and all civilization, can neglect longer to begin to do his or her bit to help win the war. We have been loath to believe the stories of frightfulness concerning Germany; of her utter lack of all the elements of humanity; of her consuming egotism and craving for world domination. But no longer can we ever hope to be convinced that these stories are untrue or even exaggerated. Men like Gerard—men who know from personal experience and whose word is unquestionable—tell us they are true. And, convinced, there remains nothing for us to do but to do our little individual parts toward destroying the Prussianism out of which this world disgrace has grown.

Eat less wheat. That is the first thing each of us can do. Don't do it merely because Hoover and the food administration say so; do it because food for the soldiers is the first essential to winning the war. Eat less meat, fats, sugars. Do it because thousands of men, women and children are dying every day that the war continues, and because insufficient supplies to the forces of the allies means prolonging of the war. There are millions of men facing shrapnel, poisoned gas, disease, bombs and bayonets to save those of us who remain at home from Prussian dominance, with all the horrors that it would mean. A wheatless or meatless meal is a small thing compared to even one day in a wet, cold trench, with shells bursting and guns booming and perhaps rain or sleet driving down. Eat less wheat; eat less meat; help win the war.

Will Hold Pacific International

The decision of the official board of the Pacific International Live Stock association to hold its complete exposition again this year, including the breeding, as well as the fat stock, should be received by stockmen and the food administration with satisfaction. Owing to lack of suitable housing facilities the board had decided to show only fat stock, but pleas from the breeders caused a reconsideration, and indications now are that an unusually fine exposition of live stock will be held.

It would have been a misfortune for the show to have been cancelled this year, above all years. The live stock industry needs stimulating as it seldom has. Anything that tends to reduce the foundation herds and flocks should be met with formidable determination and resistance. The breeders and the business interests, especially the latter of Portland, should rally to the shows this year as never before.

Good Land Is Often Wasted

The northwest is so new and its natural resources so boundless that its citizens have not yet learned to conduct their businesses intensively. This is true in all lines, perhaps, but one example of it is the lack of intensive cultivation of the farms.

A concrete example of this lack of cultivation is found in the waste land that is to be seen on nearly all farms. Sometimes a farmer will spend much money and much wearying labor clearing a few acres of land. He continues to clear, adding to his acreage. Yet in a majority of cases he has good land going to waste on his place. He has more room taken up with farm yard than is necessary, perhaps though plenty of room is a thing greatly to be prized. He has fence corners and division fences grown up to weeds and shrubbery. He has a plot of ground growing, or trying to grow, a crop for which it is not fitted. He has his land improperly cultivated or improperly fertilized, and he doesn't have his rows or hills the proper distance apart.

This is an excellent time to correct these faults where they exist. An extra rod of well cultivated soil would produce enough food stuffs to carry a life a considerable time, and there are lives ebbing away because of lack of food. Let the anti-waste campaign extend to the things that might be grown as well as to the things that are grown.

Washington Gleanings

At least two Walla Walla county farmers have 100,000 bushel wheat crops this year. Henry Vincent has one and George Drumheller the other.

An order was received the other day by J. H. Denge from E. Wagner for a shipment of 15,000 boxes o Jonathans and King Davids to Australia.

A. B. Nystrom, professor of dairy husbandry at the state college, will resign to accept an appointment a county agricultural agent for Lewis county.

Several farmers of northern Kittitas county have associated themselves together under the name of the North Kittitas National Farm Loan association.

County Agriculturist A. M. Richardson of Dougla county has purchased for $32,000 a half section of land near Pullman. His successor has not yet been named.

E. E. Maupin of Lynden has sold his 100-acre ranch on the river bottom, three and one-half miles from Lynden on the Guide Meridian road, to S. P. Ritch of Bellingham for $18,000.

J. W. Bell of Yakima has sold 200 tons of alfalfa hay for $22.50 per ton f. o. b. cars in the lower valley The hay is on his ranch on the Indian reservation. It will be shipped to Montana.

The Lynden farmers received approximately $15,000 for their raspberries at the Lynden cannery this summer, according to a statement made recently by Manager Creamer. Approximately 300,000 pounds of raspberries were handled by the cannery.

"It is my opinion that before many years the Skagit valley will produce annually a million dollar seed crop," were the words of Alfred Christianson, an expert seedsman and a member of the Charles H. Lilly company of Seattle, in Mount Vernon recently.

War conditions are affecting boys' pig clubs in the Inland Empire sections, in that animals that the boys were able to purchase last year for $6 apiece now cost them $15. The Exchange National bank of Spokane is financing a number of boys in the Chattaroy, Freeman and Rockford districts, buying the hogs—mostly pure-bred Duroc Jerseys—from the Waikiki farm and selling them to the boys at cost.

Announcement made in Salt Lake by directors of the Utah-Idaho Sugar company that the company will offer a profit-sharing contract for 1918 crop is expected to result in doubling the beet acreage in the Yakima valley next year. Under the terms of the offer growers will get $7 a ton for beets containing 15 per cent of sugar and share in profits over a certain amount.

hat Others Say

Vidette, Montesano: The cattle industry of the world is in an eclipse and it is our opportunity during the war and a long time thereafter.

Tribune, Pullman: The time is approaching when every possible pound of food products must be provided and it lies with the farmer to say whether or not such necessities will be available.

Gazette, Colfax: We must produce, and produce, and keep producing. In time past this passion of production was based largely on desire; we desired the fruits of our labors for our gratification and pleasure. Now, however, we must produce as a matter of self-preservation. Indeed, the issue of the great European conflict will turn largely upon the producing capacity of the United States.

Herald, Concrete: Farmers would do well to not only establish farm standards, but neighborhood standards as well. Organize your productive plans with a view to systematic and profitable marketing. Get together and decide on the most profitable crops the community is adapted to, and then as to the variety of each. When such an agreement has been reached, much of the difficulty in marketing will have been overcome.

Dairymen Cooperate in British Columbia

Frazer River Valley Association Controls the Market in Its Territory

By PAUL E. TRIEM

Some two or three years ago a number of dairy farmers in Fraser valley, B. C., formed an association. Nothing more happened for some time. The farmers continued to produce milk and to sell it where and how they could. The dealer continued to make the price, as he has been doing since the dawn of agricultural history.

Then, almost imperceptibly at first, a world war began to tighten its hold on producer and consumer alike. Millions of men who a few years ago had been feeding themselves and helping feed the world were withdrawn from creative occupations and were set to destroy, rather than to build up. Soon this distant valley on the western coast of North America knew that the old order was not simply changing, it was going to pieces. The price of mill feed and of hay went up and up and up. Labor became not only tremendously expensive, but almost unobtainable. Feed and labor are the raw materials out of which milk and its products are created, and when these raw materials increase beyond a certain point the producers' habitually narrow margin of profit is wiped out. At this point either the price must be advanced or production will cease.

Becomes Dynamic Order.

And so, to meet a condition created by the gerat war, the Fraser Valley Milk Producers' association changed from a static to a dynamic organization. It is not easy to advance prices in such a way that the producer shall secure a fair share of the advance. Only organized effort on the part of the farmer will ever enable him to secure his proportion of the net profits. The Fraser Valley dairymen discovered this, and the discovery led to concerted and unified action.

Today, after approximately a year's experience in the milk-selling business, the association controls practically 90 per cent of the mild production in the territory surrounding Vancouver. Eight hundred farmers are members, and every one of these dairymen is not only pledged to sell solely through the organization, but has agreed to forfeit $500 as damages to the association in case he violates this pledge. It is this matter of "teeth" in the contract which changes it from a scrap of paper to a working platform, and which has enabled the officers of the association to reverse dairy history by making the retailer consider the producer as a vital element in the business.

By the terms of the contract the milk producer agrees to sell to the association for distribution and sale all the milk and cream produced by him for the period of one year from the date of the agreement. The producer further agrees to deliver the milk or cream in good condition at the farm or nearest shipping station, as may be the custom in the locality where he resides.

On the other hand, the association agrees to receive from the producer all the milk or cream produced by him and to sell the same where it will be most advantageous to all the members of the association and to distribute the proceeds on the basis of market prices obtained for each month, f. o. b. Vancouver, for sour cream, sweet cream or whole milk as the producer may choose to deliver. Market prices are determined by the wholesale price of butter each month in Vancouver.

The association agrees to make payments semi-monthly for all milk and cream purchased on the 10th and 25th of each month.

Tests for butterfat content are made by men holding government certificates of qualification, or in lieu of such government official, by a qualified person employed by the association.

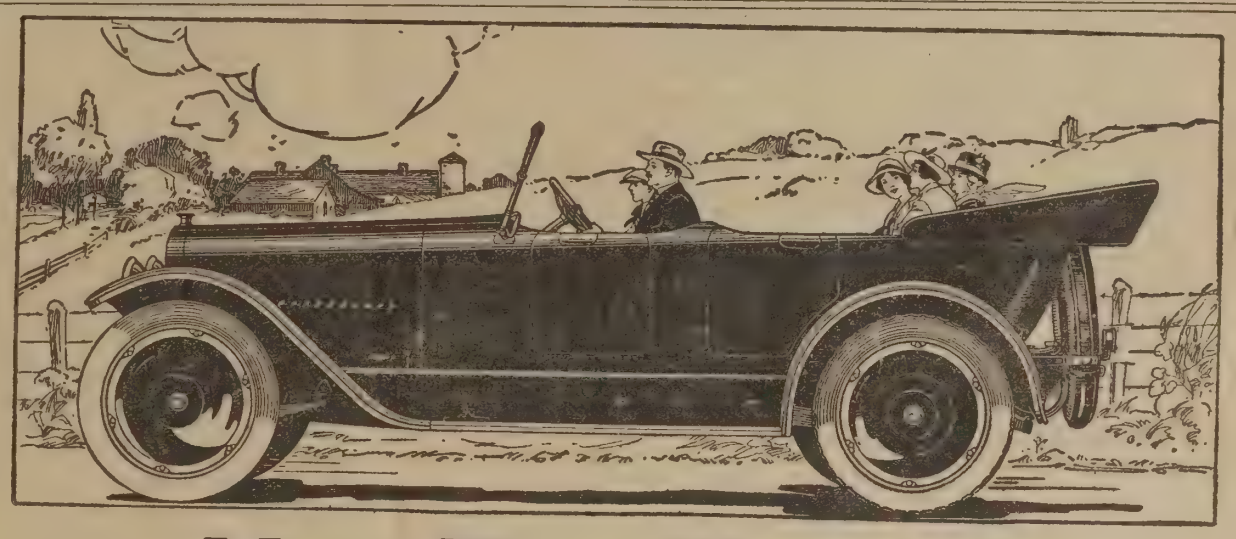
If the milk producer sells any of his milk or cream outside of the association or in any other way fails to carry out the terms of the contract he obliges himself to pay to the association $500 "by way of liquidated damages and not as a penalty."

It is also agreed that all profits made by the association shall be distributed proportionately among the shareholders every three months or other such periods as the directors may agree upon on the basis of butterfat delivered by the producer after providing for a cash dividend of 6 per cent per annum on the paidup capital stock.

All of the affairs of this thriving organization are carried on strictly according to business principles. The first step which the board of directors took in this journey toward selling efficiency was to secure the services of an experienced dairy salesman. Ernest G. Sherwood, the present manager, had for some time been in the dairy business in the city of Vancouver. He knew the intricacies of selling milk and its products and knew just how the farmers would have to go to work to secure for themselves that fair profit which at last they had determined to secure. In addition to this, Mr. Sherwood was one of those natural coordinators who can induce many men to work together with the least possible friction.

Frazer Valley Conditions.

"And the strongest feature in the entire situation," Mr. Sherwood points out, in commenting on the success of the association, "is that we are so situated as to be able to control and organize production here in Frazer valley more thoroughly than this can usually be done. Remember that we are largely surrounded by natural or political boundaries—to the east the mountains, to the west the ocean; south of us the international boundary, with its tariff wall. This means that when we bring into our organization 90 per cent of the Frazer valley dairy farmers we are practically controlling the local field. And without this control no association is able to do much. In a larger territory, very evidently, the task of securing unity in production and marketing would be much more difficult.



Method of Finance.

"We have no membership dues. We finance our association by requiring a stock subscription of $50 for average shipments of 100 pounds per day. In other words, a member shipping 400 pounds of sweet milk a day, average for the season, would subscribe for $200 worth of our capital stock. In this manner we raise finance necessary to carry on the business, and there is no further charge on our members."

Movement Has Its Dangers.

This matter of bringing the producers into one body, however, has its dangers. The public has been educated to be suspicious of every movement

(Continued on page seventeen.)

More Than You Ask

In a Car—But You Need It

It is evident that Mitchells offer more than buyers ask. Were it not so, all fine cars would need to have these extras.

The usual margin of safety is 50 per cent over-strength. Mitchells are built to the standard of 100 per cent over-strength. That is, each part is twice as strong as need be.

That means costly steels. It means oversize parts. It means toughened steel in more than 440 parts.

It means $100,000 yearly for radical tests and inspections. Gears are tested for 50,000 pounds per tooth. Springs are so tested that in two years not one rear spring has broken.

But it means to you a lifetime car. Two Mitchells that we know of have already been run over 200,000 miles each. And it means repair cost reduced by at least 75 per cent.

Other Wanted Extras

There are 31 features in Mitchells which nearly all cars omit. Things like a power tire pump, reversible headlights, shock-absorbing springs, etc. They are more than you ask, but every feature is something that you need.

There is beauty and luxury in costly extreme. We build our own bodies, and thus save a vast amount. All of that saving goes into added luxury. In the Mitchell you find every known attraction.

Yet a Lower Price

Yet the Mitchell prices are far below other cars of like size and class. Note that $1250 buys a 40-horsepower Six, with a 120-inch wheelbase.

The reason lies in a model factory, built under John W. Bate. By efficiency methods he has cut our labor cost in two. Every machine is designed to build this one type at the lowest factory cost.

With our mammoth output, this saving is enormous. Part of it goes into extra values—into over-strength, extra features, added beauty. And part of it shows in the lower price.

Here is the greatest value to be found in the fine-car field. You can see that at a glance. But the years will show you more than you can see.

Our latest models will amaze you by their beauty and completeness. For your own sake, go and see them. If you do not know our nearest dealer, ask us for his name.

More Per Acre, Not More Acres

Colfax Man Is Convinced an Injury Has Resulted from Cropping Land When It Was Due to Be Given a Rest

COLFAX, Whitman County, Wash., Sept. 24.—Winter feed prospects are not very bright, as farmers did not cut much hay. The usual acreage or more was cut, but the yield was only 50 per cent. Straw is being conserved as never before, but as yet I have heard of no quotations as to price. The potato crop is only fair. Dry weather has reduced the prospective yield considerably. I doubt if there will be an increased acreage in crop next season. Last spring farmers attempted to increase the acreage, and many lost some good hard cash in the effort. Land that should have been summer fallowed was plowed and seeded, with the result that it made only poor pasture. I hardly think farmers will try a third straight crop again next year. If they don't an increased acreage of summer fallow will result, as it will necessitate the fallowing of the land that should have been fallowed this year as well as the land that should be fallowed next summer. I believe the government is making a mistake in urging increased acreage; rather should it urge increased yield per acre and more intense cultivation. An increased acreage availeth little if the yield is sacrificed. E. C. HUNTON.

Fed During Summer.

KELSO, Cowlitz County, Wash., Sept. 21.—The hay and other winter feed prospects have been cut down by the necessity of feeding so much this year during the long dry spell. There is a decided tendency on the part of farmers to sell everything in the way of live stock that will not be producing this winter. That there is some extra feed on hand, however, is indicated by the fact that a few farmers are planning to buy milking stock this fall. The dairy stuff that is being sold to the butcher mostly deserves no better treatment. Baled straw has sold as high as $8 per ton f. o. b. Kelso this fall. Even at that there is much straw not yet taken care of. The potato crop is still more or less "in the air," but the prospects are that the year's increased acreage will only serve to make up for the decreased yield. Last year's shipment of potatoes from Cowlitz county was around 35,000 sacks. Winter wheat and rye are in demand for fall seeding, but as is the case with so many crops this year, the seed is hard to obtain, especially at reasonable prices. LYNN S. KEYER.

Can Make Feed Suffice.

TWISP, Okanogan County, Wash., Sept. 24.—While the yields of most crops are below normal this year, we believe that with care and good management in feeding we have sufficient feed for the local stock. The price of hay has advanced along with other products, and the demand is greater than the supply. Most of the straw will be utilized in some way; but haven't heard of any movement to make any special use of it. It usually sells at about $2 to $3 per ton, loose. Potatoes on dry land are low both in yield and quality. Some farmers that could irrigate raised a good crop. Considerable planning and some plowing is being done in preparation for next season's crop. The high price of butter fat is causing an increased interest in dairying. Two-dollar wheat is sending a wave of enthusiasm to the wheat grower. GEORGE LA RUE.

Cut Corn for Ensliage.

WAPATO, Yakima County, Sept. 22.—There is a heavier acreage of corn than usual and farmers are cutting for ensilage or fodder a great proportion of it. Alfalfa is not a heavy crop and the demand is very strong. It is expected that the less fortunate section will draw heavily on the surplus here. Alfalfa is now selling at $20 to $22 f. o. b., and it is expected that it will reach $30 before spring. There will be very little feed wanted and there is but little straw sold here except baled. Potatoes are not up to expectation and are now selling at $30 a ton. Hogs are very scarce and there are not enough on the reservation to clean up the grain fields after the harvest. There will be, undoubtedly, a heavy acreage planted next spring, but the fact that we have one beet sugar factory in operation here and the promise of another for next season, will possibly curtail the acreage that ordinarily would go into other crops. It can hardly be expected that the new acreage coming under cultivation the coming season will be enough to offset the acreage planted to sugar beets. J. F. M'CURDY.

Everybody Is Careful.

CENTERVILLE, Klickitat County, Wash., Sept. 14.—The winter feed is about normal this year, with the exception that all spring-sown feed was a very short crop, but winter-sown stock feed is good, in fair quantity. Everybody is a little more careful and is preparing to get straw feed under cover as soon as possible. It is getting quite common to cut the corn fodder and where there isn't a silo to just stack rows of bundles of corn and then a layer of straw, which preserves the fodder, even if it is quite damp when put in, producing feed that will be slicked up by the stock. The potato crop here is nearly a complete failure, with a few exceptions, of course. There is an effort being made now to get in as much crop as possible, but the draft on our young men, principally farmers, is a severe job on the extra crop. Also a good many young men here are going to volunteer now instead of waiting for the draft. Straw feed is about $2 per load and alfalfa and wheat hay are high. CLARENCE A. LESTER.

Little Fall Seeding So Far.

METHOW, Okanogan County, Wash., Sept. 21.—The winter prospects for feed are poorer than they have been for years. Hay is now selling here for $20 per ton, delivered. The straw will be all fed up. The potato crop will be as large as the 1916 crop, owing to increased acreage, but the quality will not be as good, owing to them taking second growth. Owing to the dry summer and fall not much has been done for next season's crop. The prospect of getting rain enough to put in fall wheat is very poor. The last two seasons the wheat was put in in the dust and a big per cent of the grain was lost, so I don't think any wheat will be put in this fall, unless it rains before October 1.

CHARLES GRANT.

Feed for Home Use.

MEAD, Spokane County, Wash., Sept. 21.—While there will not be as much hay or feed grain for sale this year as usual there will be no great shortage for home use. There is more demand than usual for straw, which sells at about a 25 per cent advance over past years. As farms here are worked about their capacity, there will be little increase in acreage planted next season. Small additional acreage will be cleared and put to some spring crop on those farms not yet entirely cleared and broken out. Some will be guided in this by what they think they can handle by their own families and in cooperation with their neighbors. They are going to do away with all I. W. W. labor as fast as possible.

GEORGE HINGSTON.

Plenty of Seed Grain.

BICKLETON, Klickitat County, Wash., Sept. 27.—Threshing is about over, and grain hauling is half through. The price discrimination in favor of the east has had a depressing rather than an encouraging effect on grain raisers here. They would have been more eager to put in a large acreage next year if they had given us the same price this year as the eastern farmer. Winter feed conditions are not as good as last year at this time, and very little hay was cut and scarcely any is for sale. There is a fair supply of straw on hand, and every one seems to be making a special effort to save it; loose straw is selling for $3 to $5 a load, against $1 a load last year. The potato crop is about the poorest known for many years, most of them taking a second growth. There is plenty of seed wheat on hand and a fair supply of barley and oats for feed.

BERT H. FAULKNER.

Oat Crop Is Good.

DARRINGTON, Snohomish county, Wash., Sept. 9.—The prospects for the winter's supply of food is about up to normal for men and stock also in this section. The drouth was broken by a few light showers of rain on the seventh of this month. Roots and potatoes have suffered some, and those crops will probably be a trifle below normal. Oats was good, all harvested and a good deal of it is threshed. Yield is about 70 bushels per acre on the average. Stock is looking fine, and pasture will improve now since the rain fell. One silo was erected this summer, the first one in this section. Likely more will be built in the near future. A good many are now burning slashings and clearing up more land for the coming season. Nothing is going to waste around here. The ladies are canning and drying all the fruits and vegetables they possibly can to help their country in time of need. The demand for beef is not as great as it was a year ago, as some camps have not resumed operations yet. Some of them have started with small crews. What apple trees there are here seem to be well loaded down with fruit.

C. B. NEIDERPRUM.

Busy With Fruit.

PROSSER, Benton County, Wash., Sept. 23.—The weather is fine for this time of year, with no frost as yet. The farmers in the valley are busy looking after their fruit crops and the last cutting of alfalfa hay. We have plenty of feed for our stock this winter in the valley. The wheat farmers will be short on feed this winter on account of a short crop of wheat. All of the straw will be fed at home, so will not have any to ship. The potato crop is not as good as it was last year, but there is more ground planted to potatoes, so the crop will be about the same or more than last year. Some of the wheat men are going to summer fallow all of their ground next season, while others will put in all the wheat they can. There will be little or no change in the valley in crops.

G. W. WILGUS.

Peas Instead of Wheat.

FAIRFIELD, Spokane County, Wash., Sept. 25.—Feed will be plentiful here owing to the pea and fall wheat straw. Good hay is scarce and has been selling for from $20 to $22 per ton. There have been rumors of good pea straw selling at $15 per ton baled, but personally I believe that is a little high. The potato crop will be short and of poor quality. Early in the fall, when the prospects were good for $2.50 wheat, farmers were making preparations for an increased acreage, but at the present price the crop will not be increased, and peas will be grown instead. ROY G. ADAMS.

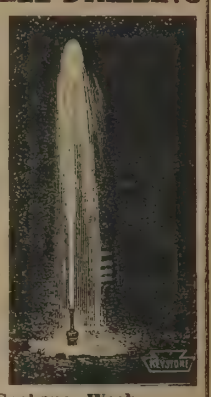
Hoping for Rain.

RITZVILLE, Adams County, Wash., Sept. 19.—Winter feed for stock is very short indeed and not a pound of straw can be bought in this community. The potato crop is also unusually bad. Every available acre will be planted for next year's crops of various kinds. Pastures are also in poor condition and we are hoping for plenty of fall rains which, if they come, will solve the shortage of feed to a great extent.

JACOB HARDER.

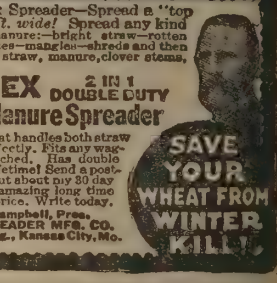
Feed High; Cattle Cheap.

GRANDVIEW, Yakima County, Wash., Sept. 21.—There is plenty of hay for all the stock if the farmers don't sell off too close. I think those that have straw will feed it. There are a few new silos being built. The potato crop is only a little over one-half a crop. Some are selling off their cattle because feed is high, and others are buying cattle because they are cheap. E. H. FAULKNER.



Another Mystery Cleared Up.

One reason for the nonappearance of sharks at the bathing beaches this year is that most of them are now in the business of selling food at war prices.—Seattle Post-Intelligencer.



POTATO SEED BALLS WANTED OR cleaned seed. State quantity and price. I can use any amount this year and next. Ask your friends. Preserve this. A. T. Cook, Seedsman, Hyde Park, N. Y.—Adv.

Cut-Over Lands
in the
Upper Columbia Valley
of
Stevens County, Washington
Beginning October 1 we offer for sale several thousand acres of splendid cut-over land in the vicinity of Northport and located on both sides of the Columbia river.
Having unusual transportation facilities and being close to an ample market, these lands offer exceptional opportunities to actual settlers.
We offer these lands in tracts from 40 acres upwards and at very low prices, with easy payments.
Write to us for full information and illustrated booklet.

Save Food One Week

Food Administration Makes Appeal

Every citizen of the United States is being called upon by Food Commissioner Herbert Hoover to observe food pledge week October 21 to 28. In a statement just issued Mr. Hoover points out that the harvest of this year is less than that of previous years, while the demands this year are far in excess of any previous period in the history of the world's war.

In Europe food conservation is controlled through strict adherence to restricted food supplies, while in this nation it remains with the indivdual to judge for himself how best he can serve his country and aid in winning the present struggle. "This is a duty of necessity, humanity and honor," states Mr. Hoover, "and I appeal to every householder, hotel, restaurant, dealer in foodstuffs, schools, churches, social and civic agencies, and to every individual to join with the administration for food conservation in this work for the fundamental safety of the nation."

More Liberty Bonds.

The second Liberty bond issue, which opened Monday, October 1, assigns as the quota from the Pacific coast district $210,000,000, although this amount will probably be passed by over $100,000,000 as indicated by the record set in the first Liberty loan issue sold last June. The total loan, officials expect to pass the $5,000,000,000 mark with the minimum amount set at $3,000,000,000. The apportionment for this second loan has been based in a general way upon the banking resources, the assessed valuation of property, the income tax collections, and the amount subscribed in the previous loan in the respective districts. Close to two-thirds of the entire amount is expected to be drawn from New York, Boston.

Regulate Coal Prices.

Following recent action on the part of the food and fuel administration fixing the selling prices for coal at the mines, the administration has now issued a ruling governing the profit that the dealers may make. This profit is to be based on the selling price of coal during the early summer of 1915, at which time the price was considerably lower than it has been since. That period was just before the shortage began to manifest itself and the prices to shoot upward. The dealers are required to file with the government a statement of the grounds upon which they have fixed their selling prices to the consumers, and if this statement is not satisfactory to the government supplemental rulings will be made. The government officials declare that the ruling will result in an early reduction of the price of coal, though the price will vary with the different districts owing to mining costs and freight charges.

May Impeach La Follette.

Bitter resentment grows against Senator La Follette of Wisconsin, and more persistent demands are being urged by his constituents that congress take definite action in unseating the senator. Petitions are being circulated in the copper districts of Michigan urging the expulsion from the senate of La Follette on the grounds that he is "traitorously lending aid, assistance and comfort to the enemy." Six communications demanding the expulsion of La Follette have been presented before the senate, including one from the Governor of Minnesota, that from the Wisconsin state public safety commission, and the Washburn Loyalty league of Wisconsin. Senator La Follette was absent from the senate chamber when the communications were presented.

Deal Blow at I. W. W.

A second smashing blow was dealt the I. W. W. order last week by the government when the federal grand jury at Chicago issued indictments against 166 national leaders of the movement, the action of the jury being followed immediately by the arrest by government marshals of more than 100 of them. Practically all of them have now been arrested and will be brought to trial as quickly as possible. They are charged with actions seditious and traitorous under the terms of the new espionage law and the national criminal code. Their opposition to industry, illustrated by their methods of sabotage in which they wilfully destroy property is the basis for the government's action against them.

Among the leaders arrested is William D. Haywood, national secretary-treasurer and perhaps the most rampant of the national I. W. W. officers. He was placed under $25,000 bail; which he had not been able to produce at the time of this writing. Other officers were required to place bail of lesser amounts, many of them $10,000. A large number of them went to jail in default of bail.

Everybody to Pay War Tax.

Under the new war tax bill of $2,700,000,000 under discussion this week in congress appears a list of items to be taxed so inclusive that practically every class will be called upon to share the burden. War excess profits, as provided by the bill at this writing, will meet about one-half of the amount, while the excess profits of corporation, partnerships and individuals, and the income taxes will bear a large proportion of the tax. Reading matter, music, cameras, automobiles, stamps, parcel post packages, amusements, syrups, extracts, soft drinks, playing cards, and hundreds of other items are included.

Will Flour Drop?

Millers are promising reduction in the cost of flour at an early date as the result of the fixing of a definite price of wheat for the northwestern country. There has already been shown a tendency to reduce the price, but no definite reduction has been announced.

Price of Wheat

Is $2.05 Less Freight to Coast

Since the action of the food administration in giving the Pacific northwest a basic wheat price of $2.05 bulk at coast points the wheat market has been practically at a standstill owing to uncertainty as to the meaning of the ruling. It appears now, however, that the point is definitely decided, and that wheat at interior northwest stations will sell for $2.05 a bushel, bulk, less freight to the coast. The $2.05 at the coast is interpreted to be about $2.10 for sacked grain there.

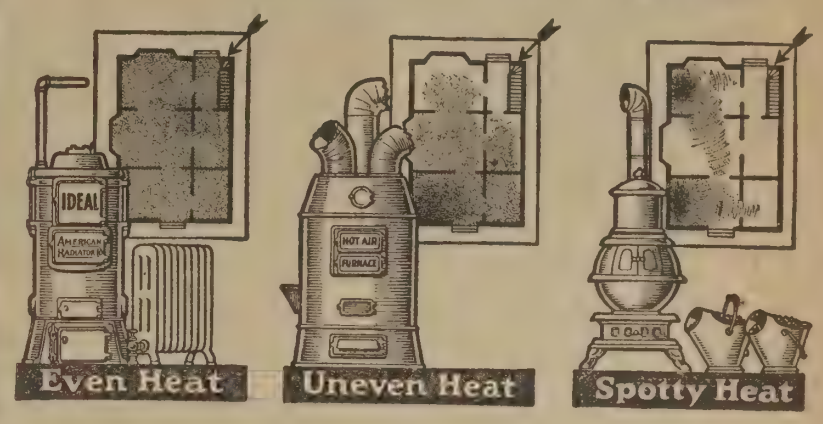
A. A. Elmore, national representative of the Farmers' Union, who was a member of the committee that went from this section to Washington to press this district's claims for a basic price, upon his return gave the above interpretation to the ruling.

"We are much pleased with the results of our conference with the price-fixing committee at Washington, and have really gained a greater victory for farmers of the northwest than we are given credit for," said Mr. Elmore.

"Not only have we gained a set price of $2.05 for wheat delivered at coast points, but we have established a Pacific coast market, and have caused the farmer to gain approximately 10 cents more on each bushel. The set price is for bulk grain, and the farmer, if he chooses to ship in sacks, may either accept four cents more a bushel for his sacks or have them returned to him."

A similar interpretation is placed upon the action by R. Insinger of Spokane, also a member of the committee.

"We are entirely satisfied with the results of our mission," Mr. Insinger said. "We met the officials and went over the situation, and in the end it was decided to establish $2.05 at Coast points as a basic price, just as $2.20 is the basis price at Chicago.



"The price of wheat at interior points will be the basic price at Coast points less the handling charges from that point to the Coast. Sacked grain is considered at a premium, so I suppose that in view of past conditions sacked grain will be rated at $2.10 at Coast points.

"I am not sure, but I doubt whether shipping wheat from the northwest to Chicago would be permitted," he said. "There has been nothing definite on that point so far as I know, but it was intended to arrange things so as to prevent the movement of wheat from one zone to another.

"This plan was decided on largely to encourage the milling of wheat in the territory where it was grown, in order that the feedstuff might be derived from the byproducts. This is a factor that must be taken into consideration and a point which caused considerable discussion."

M. H. Houser of Portland, northwest grain representative for the national food administration, has charge of the market regulations for the northwest.

RADIATOR HEATING
ahead of all others—

The outline plan of the house shows heat distribution when winter wind is blowing, as shown by arrow. Notice that heat is even in all rooms with IDEAL Boiler and AMERICAN Radiators.

The above diagrams give a clear idea how your home should be heated. The "spotty" heating of stoves is disagreeable, dirty, and uncertain. Furnace heat is somewhat satisfactory, but not always to be depended upon and is wasteful of fuel. Radiator heating is cleanly, sure, safe, and the outfit lasts a lifetime.

AMERICAN RADIATORS & IDEAL BOILERS

The slight difference in first cost of Radiator heating is very soon repaid to you in the great fuel savings over other kinds of heating, the greater comfort of your whole house and the increased satisfaction and better health of yourself and family.

Buy this heat that saves the most

IDEAL Boilers will get the most heat from the fuels of any localities. Scientifically constructed and the most wonderful heat producers known—never need repair or overhauling, not necessary to have water pressure or a basement—place the boiler in side room or leanto. One fire heats the whole house and one charge of fuel will last from eight to twenty hours, depending upon the severity of the weather.

A No. 1-22-W IDEAL Boiler and 422 sq.ft. of 38-in. AMERICAN Radiators were used to heat this farm house.

IDEAL Heating outfits are made in units or sections to fit any size building and are the best investment you can make for the success of your farm. Write us or go to your dealer today and talk with him about it.

Heating book (free)

Write today for copy of our book "Ideal Heating" which is the best one published on the subject. Full of illustrations and valuable information which you should read whether your house is *new* or *old*, or large or small.

Sold by all dealers. No exclusive agents.

Apple Pulp Silage

Makes Excellent Dairy Cow Feed

By J. R. SHINN,

County Agriculturist, Spokane County, Washington.

Silage crops are generally short this year and because of this condition attention of dairymen and stockmen should be turned to little used products that they may be converted into profitable silage. Perhaps no other single product offers a better source for silage than apple pomace. A great many apples will be converted into cider during the present fall and winter. Dairymen should make preparations to care for this pomace and thereby greatly reduce the cost of feed this winter.

As far back as 1840, apple pomace when fresh was known to give excellent results when fed to dairy cows. A Massachusetts farmer, who discovered this fact in his herd, found also that pomace could be kept fresh by placing it in a pit under his barn and could then be fed to his cows throughout the winter. The experiment stations of Illinois, Massachusetts and Vermont have proved that apple pomace can be kept in the modern silo without difficulty and that it has a feeding value comparing favorably with corn silage.

Silage Constituents.

The following table gives the constituents of apple pomace silage and of corn silage:

Constituents.	Kind of Silage. Apple Pomace Per Cent.	Corn. Per Cent.
Water	80.2	74.4
Ash	.9	1.5
Protein	1.6	2.2
Fiber	4.5	5.8
Sugars and starches	11.8	15.0
Fat	1.0	1.1
	100.0	100.0

The digestibility has proved to be fully as good as of corn silage.

Several experiments have been conducted to determine the amount of silage which cows can handle to an advantage. A herd of 20 cows at the Vermont station have been fed amounts varying from 10 to 30 pounds of apple pomace silage. At Massachusetts their herd has been fed from 25 to 35 pounds of silage for a period of five months without injuring the quality of milk or butter. In all of these experiments the use of apple pomace silage has resulted in keeping up the flow of milk and at the same time the cows have remained in a thrifty, healthy condition.

Put in Silo While Fresh.

To secure good results in handling apple pomace for silage, it is essential that it be placed in the silo at once when taken from the cider mill. As with any other silage, good results need not be expected after the silage has spoiled before it enters the silo.

Cows should be accustomed to apple pomace silage by feeding them sparingly at first, and the allowance of this material may be increased daily until 25 to 30 pounds of it are allowed each cow per day. My investigations show that corn silage in the non-irrigated sections of Spokane county, Washington, costs in labor from $2.50 to $4 per ton. From this, it will be seen that apple pomace has a value approximating the same figures, since its feeding value is practically the same.

To get the best results in feeding pomace silage, it should be supplemented with alfalfa or clover hay or pea straw and grain feed.

During the last two or three years several of the dairymen in the northwest have used apple pomace for silage. Probably no other man is more enthusiastic over such silage than J. C. Graham, who used this silage last year at Palouse, Wash. He reports very favorably on it and his commendation of it should lead others to try it this fall.

There will be quantities of cider this fall. Sweet cider is in great demand as a beverage and for these reasons cider making will be an important industry. Great quantities of pomace will be wasted unless dairymen and stockmen make provision to silo it for their stock.

Cottage Cheese Campaign.

To make every drop of milk useful to the food supply, the dairy division of the United States department of agriculture will launch an active campaign to promote the making and use of cottage cheese. A corps of cheesemaking specialists will demonstrate the creamery methods of turning their waste skim milk into this valuable product. Milk producers will be encouraged to send as much whole milk as possible to the creameries which undertake to manufacture cottage cheese, and efforts will be made ot induce the public to eat more of that attractive and nutritious food.

To help individual farmers utilize their skim milk, groups of specialists cooperating with state agencies, particularly demonstration workers in home economics, will give practical instruction in cottage cheese making in the home and on the farm. The specialists will demonstrate the process before groups of farm women and in connection with regular short courses, while in certain sections they will give individual instruction.

Cost of Keeping Cow.

At a recent meeting of a committee of dairymen, who were asked to estimate the cost of producing milk to report to the Portland milk investigating commission, Jacob Luscher, W. K. Newell and Thomas Carmichael reported after careful estimates that the total cost of keeping a cow for a year is $195, including interest on investment, upkeep and the like. According to the federal estimates the average cow produces 4200 pounds of milk in a year. The committee allowed more for Oregon cows, however, believing that 6000 pounds is a fair average here. On this basis the cost of producing 100 pounds of milk is $3.25. The dairymen are now receiving $1.80 to $2.50 per hundredweight.

The committee believes that these figures are fair and average, if anything showing the dairymen to be in a better position than they actually are.

H. H. B.

Dairying Arouses Interest.

The dairy buildings at the Washington State fair proved an attractive spot for a large number of persons. Dairying throughout the state has assumed such prominence during the last few years that interest in this exhibit was keen. Excellent samples of cheese and butter were displayed and the dairy division of the state department of agriculture lent its cooperation, placing exhibits to show the proper care of milk and emphasizing the impossibility of turning out good dairy products with dirty and inferior grades of milk. The Selah cheese factory won first prize on American cheese.

The apiary department occupied one end of the dairy building and a large showing of comb and strained honey was in evidence. Bee colonies at work formed an interesting part of the display.

Stillaguamish Cows.

According to Will W. Henry, official tester of the Stillaguamish (Wash.) Cow Testing association, there were 550 cows tested during the 30 days ending August 30. The average pounds of milk per cow was 697.6; average pounds of butterfat, 30.4; average cost of feed, $3.63. In spite of the continued hot weather in August, some of the herds made a very good showing. Max Eitzenberger's herd of 26 cows averaged 41.5 pounds of butterfat. Anthon Kraetz with 14 cows had second high average at 40.5 pounds. Carsten Thomson, King, Grimm and C. Olson had herd averages of 37 pounds. Three cows, owned by Carsten Thomson, Grimm and Eitzenberger made over 60 pounds of butterfat. Six cows produced over 50 pounds of fat. Two were owned by Anthon Kraetz, Eitzenberger, two; Grimm, one, and C. Olsen, one. Seven-two cows produced over 40 pounds of butterfat during the August period. Three members of the association are feeding a small allowance of mill feed to supplement the short pasture. Shorts, bran and oil meal are being used with good results. Seven cows were sold for beef last month.

Excursion Proves Valuable.

O. T. McWhorter, county agent for Clallam and Jefferson counties, reports that four auto loads made the trip from Clallam and Jefferson counties to the western Washington experiment station on the annual excursion date, a distance of 180 miles, for two of the machines. Comments from the farmers indicated that they considered the trip to be of no small value. There was a general feeling among them that Clallam and Jefferson counties offer many advantages to the farmer not to be found in the counties throuhg which they traveled in going to Puyallup.

Visit Experiment Station.

F. W. Rader, county agriculturist of King county, reports that on August 6, 1917, the farmers of that county were invited to join in an excursion to the Western Washington Experiment station at Puyallup, Washington, and made a study of the line of work being carried on. Approximately 400 King county farmers (men and women) took advantage of this opportunity and made good use of the day. The station staff handled the King county delegation in splendid shape and served the 400 with an excellent dinner.

CUTTER'S
BLACKLEG PILLS
"California's Favorite" for nearly 20 years
For the Prevention of Blackleg in calves and young cattle

Their superiority is due to nearly 20 years of specializing in "Vaccines and Serums only."

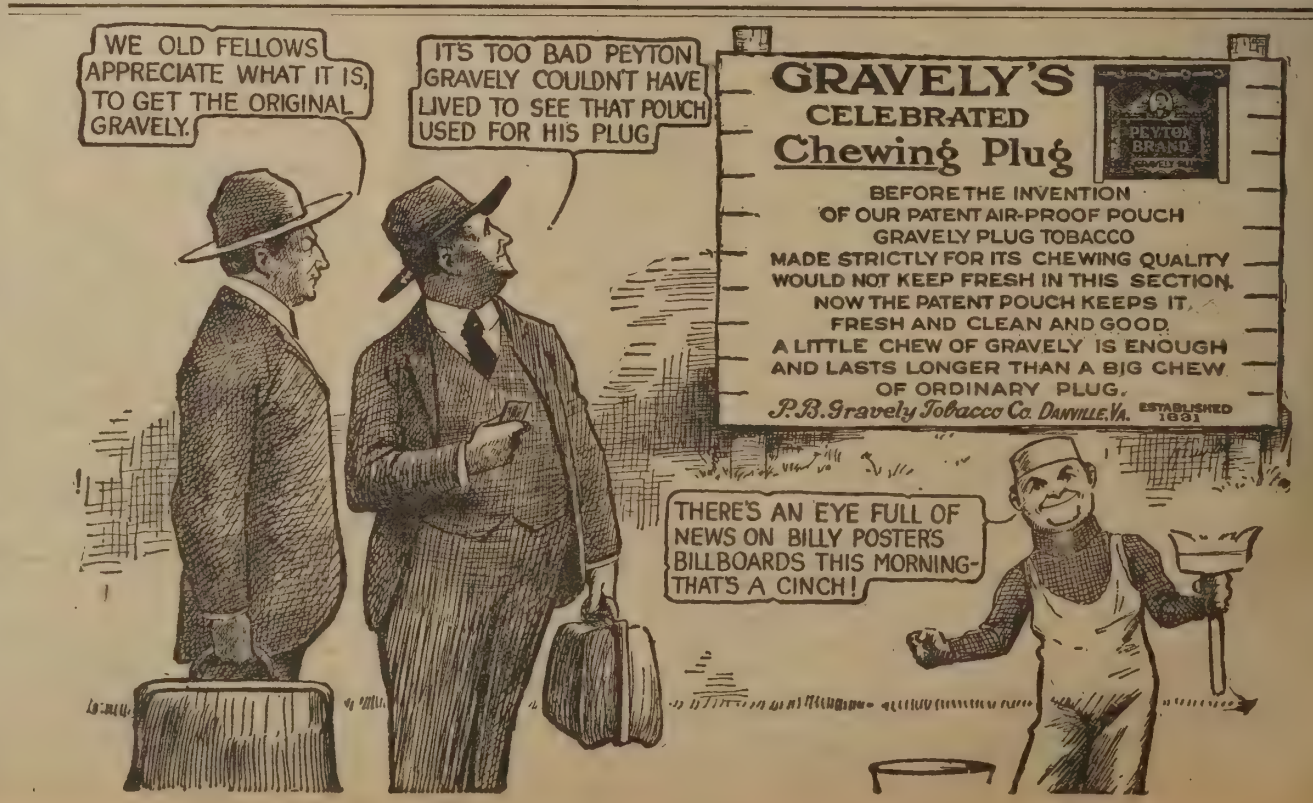
Year in and Year Out they give better satisfaction than any other vaccine made, and the cost of a few cents per dose is cheap insurance against a disease that always takes the fattest and best.

Single Pills may be used for ordinary and range stock.

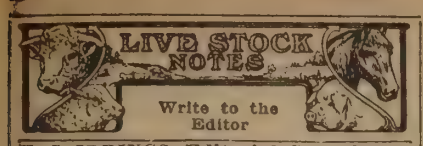
Double Pills should be used for pure bred and high grade stock.

Use any Injector, but Cutter's simplest and strongest.

Prices:
10 dose pkge. Single pills $1.00
50 dose pkge. Single pills 4.00
10 dose pkge. Double Pills 1.50
50 dose pkge. Double Pills 6.00
Cutter's Pill Injector.... 1.50



Insist on Cutter's. If unobtainable, order direct.



Write for new booklet, "The Control of Blackleg." It tells about Anti-Blackleg Serum which cures Blackleg and may be used simultaneously with vaccine to combat outbreaks and safely protect valuable stock.

Hogs or Grain?

It Doesn't Pay to Sell Thin Hogs

By E. L. POTTER.

Many of our farmers are getting scared at the price of feed and are sacrificing their hogs. In some places feeder hogs are being sacrificed at 12 cents a pound because grain is high priced. On the other hand, local butchers are buying these pigs and finishing them off at a big profit. They pay $12 for a 100-pound shoat, put on 100 pounds more meat which, with present high priced grain, costs another $12. When through the finished pig has cost $24 and is worth $32, a profit of $8. The farmer who sacrifices thin pigs is making a big mistake since the price of hogs is just as high as the price of grain. They are as foolish as the dairymen who are trying to save $50 grain by feeding more $25 hay. The present prices of pork should encourage the farmer to finish his pigs in good shape. The thin pig sold for 12 cents a pound will ordinarily lose money, while the fat pig sold for 16 cents a pound will make money.

It should be further remembered that wheat is not the only pig feed. Barley is just as good as wheat and unless used in too large amount shorts, middlings and oats are good.

Conditions are too unsettled to justify many forecasts of the future but just now no one need complain of hog prices, they they have increased fully as much in proportion as grain prices.

Northwest Show

More Entries and Better Quality

Secretary Paul Clagstone of the Northwest Live Stock association makes the announcement that the coming show at Lewiston, Idaho, November 8-15, will far surpass any ever conducted by the organization, both in number of entries and in quality. The show will open on Thursday, November 8, with a big free barbecue at which the six northwestern governors who have accepted invitations will be entertained. The chief executives will then address the assembled farmers and stockmen on the live stock situation in the western states.

Very heavy consignments have already been received for the two great sales to be conducted by the American Hereford Cattle Breeders' association and the National Shorthorn association, the former on November 12, the latter on November 13. For the Hereford sale 104 head of the choicest cattle have been entered by the leading breeders of the west. These two sales, as well as those of dairy cattle, sheep and swine, conducted by the Northwest Live Stock association on November 15 and 15, will furnish an unusual opportunity to farmers and stockmen to obtain the best of foundation stock. The show will be more representative of the entire northwest than ever before, as entries are coming in from extreme southern Idaho and other far away points.

A PROBLEM OF WOOL

Experiment Causes Much Interest.

By R. A. BLANCHARD.

The live stock display at the Morrow county (Ore.) fair at Heppner, while not as large as former years, contained an especially interesting exhibit in sheep. Jack Hynd, the largest exhibitor, showed a cross-bred ewe of exceptional qualities. The animal was of special interest, inasmuch as it represented the typical range problem. The animal was the product of range Merino ewe, and purebred Lincoln, crossed again with Lincoln blood. Mr. Hynd sheared 15 2-3 pounds of wool from the animal, compared with eight to 10 pounds realized from the usual range flock. Just what line of breeding to follow now is the problem, not only of one man, but aptly illustrates the sheepman's quandry, after an individual of superior merit and qualities has been secured, the trick is to retain those characteristics under range conditions. The animal received considerable attention from the visitors and representatives of the agricultural college at Corvallis.

Handling Hogs in Transit.

Every hog that is killed in transit, due to overcrowding or mishandling, means a loss, at present prices, of probably more than $30 to the shipper, as well as a waste of meat needed by the nation. Mortality in transit or after arrival at the central market can be lessened greatly in hot weather by the practice of the following simple precautions on the part of shippers and dealers:

1. When hogs are very hot, during or after a drive, never pour cold water over their backs.

2. Before loading clean out each car and bed it with sand, which, during dry, hot weather should be wetted down thoroughly. Hogs in transit during the night only are not so likely to be lost from overheating as are the animals shipped in the daytime. With day shipments in hot weather it is highly advisable to suspend burlap sacks of ice from the ceiling in various parts of the car in order to reduce the temperature, and incidentally to sprinkle the animals with cool water. The ice sometimes is placed in sacks on the floor, but the animals are likely to pile and crowd around the cakes, so that only those close to the ice are benefited. The ice should be sufficient to last to the destination.

3. Do not overload. Crowding hogs in a car during warm weather is a prolific source of mortality.

4. The feeding of corn, because of its heating effect, before and during shipment in hot weather should be reduced to a minimum. Oats are preferable where a grain is necessary. The maximum maintenance requirements of hogs in transit for 24 hours is one pound of grain a hundredweight, or approximately three bushels of corn to a car. In the past thousands of bushels of corn have been wasted in live stock cars.

Veterinary

Dr. S. B. Nelson

Constipation—I have a three-year-old horse that is subject to constipation when eating dry feed.—W. R. G., Trout Creek, Mont.

Answer—Try giving your horse a tablespoonful of artificial Carlsbad salts in his feed night and morning.

Iron sulphate for worms—How much iron sulphate should be used for sucking colts and grown mares for long white worms, six to eight inches in length? R. N. R., Prosser, Wash.

Answer—Regarding the dose of iron sulphate, 15 grains is a dose for a three or four moaths old colt. Grown mares will take two drachms morning and evening.

Udder Is Swollen—I have a cow that has a swollen udder. The right back side is hard and the milk from that teat is ropy. H. S. O., Deer Park.

Answer—Try giving your cow a pound and a half of Epsom salts in two quarts of water. The next day begin giving her a tablespoonful of fluid extract of phytolacca morning and evening. Give this in a pint of water. Rub the udder after each milking with liniment and two parts of tincture of iodine.

Discharge from nose.—We have a heifer that is very fat, seems perfectly healthy, but she has a bad discharge from the nose and her eyes matter.

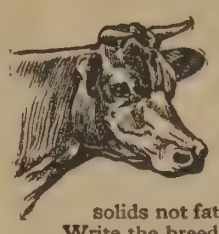
J. W. P., Republic, Wash.

Answer.—The condition that you mention of the discharge from the nose may be caused either from catarrh, tumors in the nose or from bad teeth. I am not able to say which it is. You have a very good veterinarian, I believe, at Molson, Wash., and if at any time he should have occasion to go to Republic, he might make a personal examination of the cow and find out which of the three troubles it is.

Clothesline Invention.

A rod to be attached to clotheslines has been invented which increases the carrying capacity of the lines to a considerable degree. It is so arranged that it joins two lines transversely.

ABSORBINE
TRADE MARK REG. U.S. PAT. OFF.



Reduces Strained, Puffy Ankles, Lymphangitis, Poll Evil, Fistula, Boils, Swellings; Stops Lameness and allays pain. Heals Sores, Cuts, Bruises, Boot Chafes. It is a SAFE ANTISEPTIC AND GERMICIDE

Does not blister or remove the hair and horse can be worked. Pleasant to use. $2.00 a bottle, delivered. Describe your case for special instructions and Book 5 M free.

ABSORBINE, JR., antiseptic liniment for mankind, reduces Strains, Painful, Knotted, Swollen Veins. Concentrated—only a few drops required at an application. Price $1 per bottle at dealers or delivered.

W. F. YOUNG, P.D.F., 371 Temple St., Springfield, Mass.

Jerseys for Net Profits

You're in the dairy business for profit—the *net* profit that your herd has made you at the end of the year will determine the size of your bank account. Jerseys yield the largest returns from every ounce of feed—proved by tests at two great expositions. Jersey milk averages 5.3% butter fat, 9.1% solids not fat—highest of all breeds. Buy a Jersey bull. Write the breeders advertised below for prices, pedigrees, etc.

The American Jersey Cattle Club, 314 West 23rd Street, New York City

Jersey Isle Stock Ranch

Herd headed by Bright Light's Knight 103741, a line-bred Gamboge Knight-Combination. Castilian Lady 26628 made 603.3 lbs. fat (715.3 lbs. butter) and 11,530 lbs. milk in 11½ mos., and my herd has highest average test of 399.8 lbs. fat in Buhl Cow Testing association. Young stock for sale.

C. E. LONG, Buhl, Idaho.

Two Choice Bull Calves

From cows with official records of 914 and 663 lbs. butter in a year. Prices in proportion to production and quality.

ED CARY. P. O. Carlton, Oregon. Station, Lafayette, Ore.

Pearl Riga 206648

dropped bull calf July 10, 1917. Her record 458 lbs. butter in 297 days. Sire, Upright's Chief, sire of 6 in R. of M.; half bro. to Golden Glows Chief, sire of 31. Calf's sire, Dominus, out of 817-lb. cow and by bull out of 853-lb. cow. $75 if taken soon.

JOHN B. STUMP & SON, Monmouth, Ore.

1120 Pounds of Butter in a Year

by St. Mawes Poppy is the sixth highest official record of a Jersey cow in the world. She is dam of my herd bull, and his first heifers in milk are heavy producers. Write for prices on young bulls by him out of register of merit dams.

F. E. LYNN. Perrydale, Ore.

Every Cow a Record

Fifty per cent of our cows that have dropped more than one calf have records above 700 lbs. butter, 85 per cent fat. Golden Glow's Chief and Adelaide of Beechlands blood predominates. Special prices on bull calves under 9 months old.

LADD FARM. Oswego, Ore.

Green Meadows Farm Jerseys

Young bull out of dam on official test making good record. Sire a grandson of Goldon Glow's Chief, out of dam with official test of over 700 lbs. butter in a year. Other bull calves from register of merit dams. Also cows and heifers.

HENRY STEWART, Prop., Albany, Ore.

Fit for Herd Headers

Young bulls of good individuality, ready for service, sired by Landseer's Tormentor Boy, a strongly bred Tormentor bull, with high-producing cows in his pedigree. Dams of Brown Bessie and Tormentor breeding, with register of merit records. Price reasonable.

J. C. BROWN & SON. Shedd, Ore.

Wynoochee Home Farm

Home of
The Gold Medal Jerseys.

Young stock whose dams or granddams in my herd have won gold medals from the A. J. C. C.

JOHN H. TAYLOR, Montesano, Wash. Box 426.

BUTTER AND EGGS UP.
High Prices Predicted at Chicago.

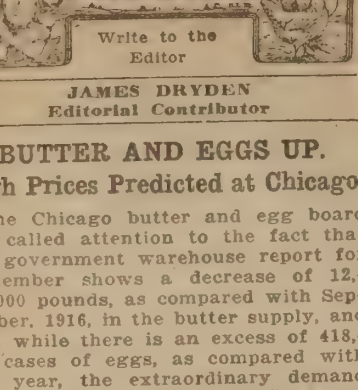
The Chicago butter and egg board has called attention to the fact that the government warehouse report for September shows a decrease of 12,320,000 pounds, as compared with September, 1916, in the butter supply, and that while there is an excess of 418,000 cases of eggs, as compared with last year, the extraordinary demand will quickly absorb that. Compared with two years ago there is a shortage in eggs, says the board's statement.

At the present time there are 71,262,000 pounds of butter in storage, compared with 83,582,000 pounds in September, 1916. There are 3,794,000 cases of eggs, compared with 3,376,000 cases.

"Butter will be higher in price this year than we have known it to be in this country since the civil war," reads the statement.

The poultry situation is serious, the farmers having killed practically all spring chickens for food, while only one-tenth of the usual supply of milk-fed chickens is now available.

There are few live turkeys for market, but there is a supply in cold storage sufficient for Thanksgiving feasts.



The Motor Car
On the Farm

Money Saving Tire Facts.

By W. D. ALBRIGHT.

Inside Protectors.

The owner of tire at the right in the accompanying illustration had applied an inside protector to a new tire, thereby hoping to lengthen its life. Instead it has reduced the resilience of the tire, added more thickness to it, which created excessive heat, and has finally so weakened the adhesive qualities of the rubber between the plies

of fabric that it became badly blistered and beyond repair. Inside protectors should be used only as a means of prolonging the life of old and practically worn out tires, or in cases of emergency with new ones and then temporarily only.

Clincher Tire on Straight Side Rim.

At the left in the illustration is shown a clincher tire that has been used on a straight side rim. In spite of the fact that such a mistake seems impossible, it happens quite often. The toe of the bead has become flattened and the abnormal strain has resulted in the bead being torn loose, rendering the tire useless and beyond repair.

Lubricating Exposed Parts.

At this season of the year the car owner should devote some attention to the lubrication of exposed parts of the mechanism, which invite the entrance of mud and water during the storms of fall. The various connections from the steering post to the front wheel spindles need lubrication, just as much as other moving parts, and if they are not cleaned periodically and given a good supply of grease, they may fail at the time when they are most needed. Leather boots on the steering drag link ends help somewhat, but even boots do not protect the joints from the entrance of water. The steering connections should be well cleaned and greased. Moreover from this time on through the winter, these exposed parts of the mechanism should have a careful inspection every few hundred miles of running.

A No-Wheat Ration

A satsifactory egg yield may be obtained without the feeding of whole wheat. The egg yield depends more on the proper variety of food than on any one single grain. Owing to the frequent changes in the prices of feed at the present time, it is hard to say what will be the most economical ration to feed during the coming year. At the prices at present oats and barley may be made to take the place of wheat in this state. Corn, as well as wheat, is too high to be used, but when the new crop of corn is available, the prices may be such that corn can be very largely used.

Another method of reducing the cost of the feed bill is to feed heavily on ground grain or mash. The by-products, bran, shorts or middlings, and linseed meal, as well as cottonseed meal are comparatively cheap.

The following is a suggested ration, taking into account present prices of feed.

	Pounds.
Oats	25
Barley	15
Bran	10
Middlings or shorts	8
Ground oats	5
Ground corn	5
Charcoal	4
Linseed meal	5
Buttermilk	45
Meat scraps	5
Kale or other greens	44
Grit	3
Shell	2

These are average amounts of feed for one hen for a year. Should the price of corn get down to $1.50 per bushel or less, as much corn as oats and barley should be fed to advantage.

The whole grain should be fed in a deep litter of straw to make the fowls exercise. In feeding a heavy mash, it is better to feed it in the evening rather than the morning as the fowls will keep busier during the day than they would if they have a heavy feed of mash in the morning. About as much ground grain or mash in the dry state may be fed as of whole grain. The mash should be mixed with skim milk or buttermilk if this is availaable. If not, water should be used. The amounts of whole grain should be regulated so that the fowls will eat enough of the ground grain or mash. It will be best to keep the meat scrap in a hopper or box before the fowls all the time and allow them to use it at will. If it is desirable to feed the mash in a dry state instead of moist, the meat scrap should be added to the mash, using more meat scrap when no milk is fed. About 20 to 25 per cent of the weight of the dry mash should then be meat scrap or fish scrap. J. D.

War Compelling Study

A few days ago I noticed a banner on one of the coaches of a troop train, on the way to the Atlantic coast and later presumably to France, on which was displayed the slogan, "To Make the Kaiser Wiser." We hope the kaiser may be wiser before they get there. It is an astounding cost to pay for knowledge, but the kaiser has made us all wiser. We are seeking knowledge with an intensity never before known. The producer is seeking knowledge as to production and the consumer knowledge as to conservation of food. There is more studying and more figuring than ever before. It is a good sign when men stop to think and study and to take out a pencil and do a little figuring on costs. Necessity is the mother of invention, some one said. The necessity for additional knowledge as to costs and as to food and feeding values and cultivation values has made of the farm a laboratory where university extension work is carried on, the farmer himself testing new theories. Never before has knowledge been so eagerly sought by the producer as to the behavior or plants and animals, or by the consumer as to nutritive values and various substitutes for high priced foods.

No one, of course, would venture to say that this acquisition of knowledge was worth the cost or that it was necessary that we should pay such a price in blood and treasure for the knowledge of how to produce and how to consume. If that were the object of creation there would be justification in the cost.

The poultry industry, like other industries, will no doubt be benefited by the war. When farmers and poultrymen begin to study and to figure on costs of production there is bound to be a lessening of costs and an improvement in production. When a poultry keeper is feeding high priced feed he begins to figure, does it pay? A little figuring will soon show him that he will have to change his methods or get out of business pretty soon. He can not stand it very long. He must get rid of a lot of prejudices as to feeds, as to breeds and as to breeding. He must eliminate some of the feeds and seek cheaper substitutes. He must give more attention to the manner of feeding and he must select better laying stock. He must by all methods known cull out the nonproducers and increase the yield. Out of it all we may be wiser and the poultry industry a better and more profitable industry. J. D.

Number of Fowls on Farm.

How many fowls any given farmer should keep will be governed by the size of his farm and the per cent of the total ration the farm can spply, as well as the personal attitude of the farmer toward chickens, said J. E. Dougherty at the O. A. C. poultry convention. Every farm can handle up to 50 fowls, at least, because this number is sufficiently small so that even with a minimum of care they should be able to pick a good living about the barns and fields and steal enough nests and hatch enough young each year to keep up the flocks and furnish quite a few table fowls. Even though fowls raised in such a way lay largely in spring alone and are not the most profitable to keep, yet they cost the farmer almost nothing in the way of feed and care and they do contribute considerable poultry meat and eggs to the family larder, which represents practically clear profit.

Life in the Northland.

"The Barrier," Rex Beach's wonderful story of Alaska and her people, begins in next week's issue of this paper and runs through its full 19 chapters of 310 pages. Read the first chapter. Then the rest will take care of themselves.

DR. HESS Instant Louse Killer Kills Lice

Use Freely For Poultry and on Your Live Stock

For Poultry—Seize the hen and dust Instant Louse Killer into the feathers. Sprinkle it in the nests, on the roosts and floors. For convenience sprinkle Instant Louse Killer in the dust bath occasionally—your hens will do the rest. This means louse prevention.

For Stock—With one hand stroke the hair the wrong way, with the other sift in the Louse Killer. It will do the rest.

GUARANTEED. The dealer will refund your money if it does not do as claimed.

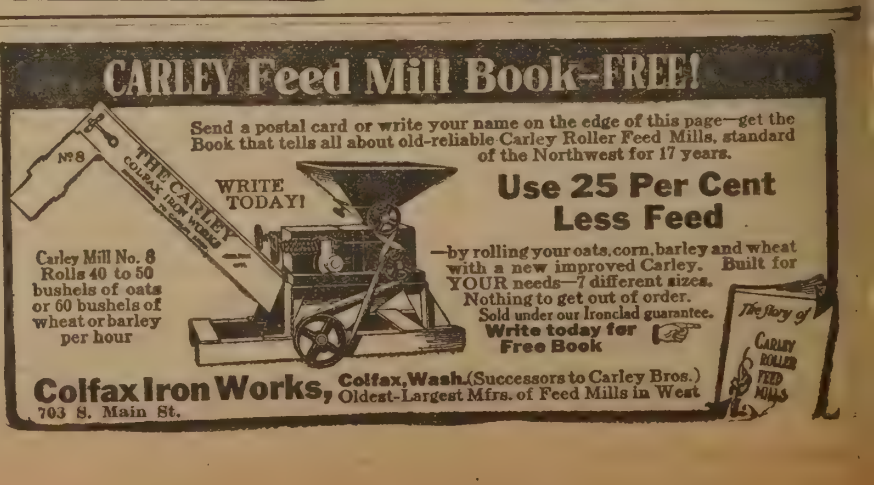
FEDERAL
DOUBLE CABLE BASE **TIRES**

This is the tire for our car hereafter.

See that strong gripping tread. It wears remarkably well and acts the same as the strips on the wheel of a tractor.



Another good thing about Federal Tires is their stay-on security. They can't leave the rim even on the roughest and toughest roads. Yet they slip off easily when necessary.

Built into the base of each Federal Tire are four strong steel cables which anchor the tire securely to the rim against the hardest service strains. It is an added strength and safety feature found only in Federal Tires.

Made in white Rugged and black Traffik non-skid treads. For sale by leading dealers.

The Federal Rubber Company of Illinois
Factories, Cudahy, Wis.

ORCHARDING AN ART.

Success Requires Real Application

By GRANVILLE LOWTHER.

In two brief articles Dr. Lowther has told of th eart of fruit growing. Here he gives further suggestions along the same lines and draws interesting conclusions.—Editor.

Picking fruit is an art. Generally there should be more than one picking. At a certain period of development the ripest, reddest and most highly colored may be picked off, while the smaller, greener specimens are left to grow and take on better color. By this means the orchadist gets a larger per cent of high-grade fruit, and fewer culls. The skin of the apple should not be punctured by pulling out the stems, nail prints, bruises, nor should the fruit spurs be pulled off. We hired two I. W. W.s once without knowing their philosophy. That is, we did not know they belonged to that order. We told them what not to do, and by that means educated them in what to do in order to carry out their general program to "make the labor unprofitable."

Assorting requires a quick motion, a clear vision, a knowledge of grade rules, color, size, form, scale, codling moth, stings, punctures, bruises, rust, water core, etc.

Packing is an art. Some of the finest works of art I have ever seen were carefully packed boxes of highly colored fruits. How to arrange them in reference to shape, size, color blendings, and to make an artistic effect requires artistic taste.

Marketing is a business. I do not know whether it is in any sense an art, but it requires a knowledge of crop conditions, of the supply in all parts of the world, the demand in the different countries, the financial conditions and the probable purchasing power of the masses. The farmer and orchardist have never yet mastered these conditions. They have organized granges, alliances, cooperative associations and unions by hundreds, but the combinations of marketing agencies have always beaten them.

My Conclusions.

First; if a man has a good education to begin with, say a college education, it will require as many years of special and technical study to prepare for a successful orchard career, as it does to prepare to practice law or medicine. He may go into it without this education, but he will pay the penalty in losses of different kinds. I figure I lost $300 on 10 acres one year, by not knowing how to irrigate. It was my first year of orchard work in the northwest, and it was only after the leaves of the trees began to turn yellow in places, that I discovered I was not giving my trees enough water. It takes practice, and no amount of reading is sufficient. As Joseph Cook used to say, it is efficient, but not sufficient.

Second; the folks who have bought orchards and live in some other part of the country, entrusting their orchards to persons who do not know, or who do not care, will fail. There are orchards drying up, dying in every fruit growing section I have visited. I stop and inquire the causes. Nine cases out of ten, the owner lives in Seattle, Portland, St. Paul, Chicago, Alaska, or some where else. There is a hired man or a renter taking care of it.

Third; the average man will not produce the best, and it is left for the intelligent, studious, and industrious who rise above the average to furnish our high grade fruits.

Fruit as Food

There has been considerable discussion, since the war began, as to the value of fruits, especially apples as food. England has discriminated against apples in deciding what food products may be shipped in English vessels to that country, and in recommending the kinds of foods to be brought as necessities.

Did England Make a Mistake?

I will not claim that fruits have the nutritive value of wheat, corn, rye, rice, meats, etc. From that viewpoint England is right. The fact remains, however, that fruit acids furnish chemical qualities necessary to a balanced ration and that without them no person can for a long period of time enjoy normal health. The reason why the loggers, frontiersmen and others who live in camps, eating flesh foods, fats and "flap jacks" crave intoxicating liquors more than the average of men, is that they have not a balanced ration and need acids. If they had been abundantly supplied with fruits, this craving for wine, beer, whisky and other intoxicants would not have existed. I know what I am saying is true, and know it from experience.

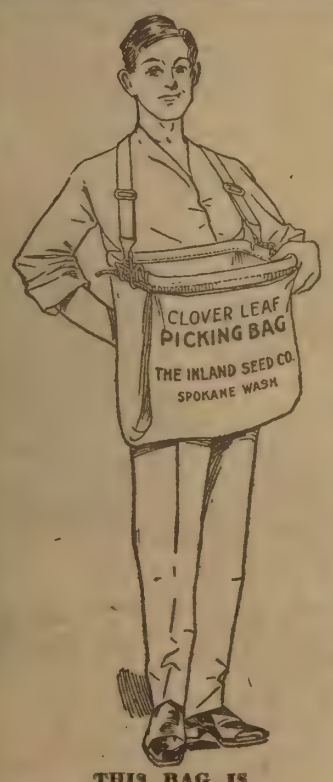
Prohibition and Fruit Consumption.

In New York city some 20 years ago fruit was scarce and high priced. Dr. Buckley, one of New York's great thinkers and observers, noted that during that period the consumption of alcoholic liquors was doubled, and crime increased in about the same proportions. The next year, in the United States there was an abundant fruit crop. During that year the consumption of alcoholic liquors was greatly reduced and crime proportionately.

When the state of Georgia voted prohibition and the law began to be enforced, it was observed that the relative consumption of fruits greatly increased. The same fact has been noted in other southern states and has become so well known to fruitmen that almost universally well-informed fruitgrowers favor prohibition as an economic measure, aside from any moral considerations.

Now, if we insist that alcoholic liquors should not be sold to our boys on the front, because the tendency of such a practice is toward demoralization, degeneration and lower efficiency, we should furnish them in the form of fruit acids that which is necessary to their health and will supply that place in food rations which is intended to be supplied by alcoholic liquors.

Composition of Apples.



Varieties of apples differ considerably in their chemical composition and food values; but the following is the average as tested by government and agricultural chemists:

Water, 82.5; Carbo-hydrates, 12.5; Proteids, .4; Nitrogens, .4; Fats, .5; Acids, 1; Cellulose, 2.7. G. L.

PLANT WALNUT TREES.

Walnut trees planted 40 feet apart use only a small part of the ground for the first few years. Cultivated crops, such as corn, beans and potatoes, grown between walnut trees will produce more food and income than grain grown on the whole ground. Our grafted FRANQUETTES are the best grown. Wholesale and retail.

Alfalfa Men Learn by Experience

Many Report Their Methods and Results to Aid Others

In last week's issue of The Farmer the first instalment of letters from alfalfa growers written in response to inquiries designed as a partial survey of the industry was published. Since that time others have been received, presenting interesting and helpful facts and suggestions concerning the value and the methods of culture of alfalfa. The following are excerpts from some of these letters:

CHARLES GRANT, Methow, Wash.—Alfalfa has been a grand success with me. My acreage this year is 32 acres, nonirrigated. The yield was two and a half tons per acre, the lightest yield in 10 years, owing to freezing out and the field being 12 years old. Ten years is the active life of an alfalfa field. I always pasture after the second crop is cut, about the first of August, and find it excellent pasture for milk cows and work horses. With bunch grass or grain stubble to run on, it is good for beef cattle too. As feed for cattle it beats grain hay, but I prefer grain hay for work horses. It is good for hogs as pasture, but I don't find it profitable to feed as hay for sheep. Poultry don't seem to care for it except when very tender. I have had no experience with alfalfa ensilage.

My way of raising alfalfa is as follows: I give the land a good coating of manure the winter previous to plowing. In the spring I disk the land to mix the manure and the soil and bring up the weeds. I plow in June and keep clean of weeds. The next spring I disk the land. This makes a good gauge to sow by. As the average man by hand will sow nine feet, I sow 10 pounds per acre. This is easily gauged by just taking up what seed you can hold between your thumb and two forefingers. I then harrow it once, then clod wash it to make the seed bed firm and smooth to mow. By this plan I have never failed to get a good stand even on sandy south slopes. No inoculation is needed here. Cultivate, disk and harrow every spring. I grow no alfalfa for seed. Dodder is the only pest we have here. We take some old trash and burn it out. When a field of alfalfa gets so thin it has to be plowed up, oats are generally sown and the field reseeded to alfalfa.

G. W. WILGUS, Prosser, Wash.—I had nine acres of alfalfa four years ago and have added two more. I planted the nine acres 13 years ago and I cut about two and a half tons per acre each cutting, making seven and a half tons for the season. But it won't go more than one ton per acre to each cutting, making three tons for the season now. It is running out and must be plowed up. I think 10 years is as long as alfalfa ought to be grown on one piece of ground. Then plow it up and plant it to corn or potatoes for two years, then resew to alfalfa. By this time the ground will be enriched and more alfalfa can be raised.

J. F. SHERWOOD, Valleyford, Wash.—Under the present conditions one crop a year is all we can figure on, but with irrigation could raise two good crops. I tried to pasture hogs on it, but the second year killed it out, so I find about two months in spring—May and June—and about one month, say October or November, is about all we should try to pasture without irrigation. Another thing I find if I pasture through the dry part of the summer, it fills the hogs full of worms. I could guess at a good deal more, but as you want facts I have given it to you as I find it.

JAMES ALEXANDER, Boyds, Wash.—I have about 13 acres in alfalfa and cut about 45 tons of hay. I never baled it out so it is guess work. I had 18 head of stock and sold $157 worth of hay last year. I don't believe in sowing too much seed to the acre, but I believe in doing lots of work on the ground and then a little more work.

IRVING PAGE, Denison, Wash.—My experience in raising alfalfa is limited to narrow strips between the rows of orchard trees on my ten acre tract. I keep about half the tract in alfalfa, plowing up some and seeding other rows nearly every year. It is then fed on the place and nearly keeps two cows, the manure being applied to keep up and build up the soil.

I plant it in rows two feet apart and cultivate, as I find that causes practically no injury to the trees, while broadcasting it dries out the trees unless one uses lots of water. By the above method, using a small quantity of water, I get three good cuttings a year and some pasture in the fall. I notice that where they do not use water they ordinarily get only two cuttings.

A. C. RUBECK, Mica, Wash.—For the past five years I have had very good success in growing alfalfa. I have no trouble in getting a stand where the ground is especially prepared with fall plowing. High ground is preferable to low ground.

E. MAHR, Spangle, Wash.—I had a good stand the first year, but the next spring the frost pulled the most of the alfalfa six inches out of the ground and dried it up, and the next year the same thing happened, until I saw it was no use to trouble with it any more. So I seeded it to timothy. The rest of the alfalfa I had grew up this last spring. After all the care I gave it, I only got one load and that was most dried up before blooming, where I got three big loads last year. So I think alfalfa is not the best crop for this soil here. I have raised it in the Walla Walla country with success, but I can't do it here.

L. P. ZIMMER, Addy, Wash.—The Addy country experienced a heavy fall of snow the fore part of the winter and a January thaw with a sudden freeze formed an ice crust over the alfalfa and smothered the old plants. That was on level land. Poung seeding did not suffer greatly. My acreage was reduced, and again, owing to the very late cold spring, which turned hot and dry, I had a very light crop, not much more than one-third a normal crop. I use alfalfa for pasture, but little except for hogs. I have never had any experience with a silo. I consider alfalfa as a soil builder better than any manure or fertilizer, and can show the goods after three years' cropping. I had wheat and barley this very dry year as good as I ever have seen. For ordinary farm work I consider alfalfa splendid horse feed. I have raised seed one year and harvested it with a stripper designed by the United States agricultural department, with fairly good results.

AUGUST BELHUMEUER, Springdale, Wash.—I have had good success with alfalfa, as I have only a small acreage. But it has done splendidly and is thick. Most any one can have a good crop of alfalfa if they attend to it. Of course, this year has been very dry, and not as good as last year.

GEORGE JORDAN, Winona, Wash.—We are still cutting our alfalfa. It has been the most profitable 10 acres on the ranch. It is subirrigated, though, and I would not advise dry land in this section for alfalfa, as it runs out too quick.

OSCAR NELSON, Granger, Wash.—I am now growing about 10 acres of alfalfa and that we grow bumper crops in this irrigated valley goes without saying.

A. L. VAN TINE, Elberton, Wash.—My alfalfa all winter killed last winter. I have been raising alfalfa for the last 20 years and find it a very profitable crop. The only objection I have to alfalfa raising is the cheat grass. We have to cultivate so heavy that it injures and helps to kill the alfalfa. I have been growing 25 and expect to seed this anew just as soon as possible—15 acres of it next year. Would be very glad if you could give me some information on alfalfa raising, also as to keeping the cheat grass out.

W. W. PECKENPAUGH, Opportunity, Wash.—Our alfalfa was plowed up three years ago. I would consider it a very good crop in our vicinity were the land not so valuable, but when you consider land selling at from $500 to $750 and often as high as $1000 per acre, it is not a consistent money maker. We were getting two good cuttings a season, but the third or last cutting was more or less of no particular food value.

W. F. DE LONG, Wallula, Wash.—I have been growing alfalfa for several years in the Wallula district and can say that with plenty of water for irrigation this district grows more alfalfa than any section of the northwest per acre. By this section I mean all the Columbia river basin for 100 miles. We generally cut four crops. Sunshine and water is all alfalfa needs here. We do not inoculate the soil. We get six to eight tons per acre on well seeded land.

P. HAUSKEN, Freeman, Wash.—I have raised some alfalfa and clover the past eight or nine years with good results. I had from two to three tons per acre the first cutting. Alfalfa never failed to have two crops except this year's second crop which is too light to be mentioned. Nevertheless

Y. M. C. A. Meets the Soldier Boys

Due perhaps to the quietness with which the well oiled machinery of their highly efficient organization runs, few people realize the part being played by the Y. M. C. A. in the nation's hurried preparation for war. Thousands of mothers who spend many anxious moments thinking of the temptations bestrewing the path of her son in the great training camps would be greatly relieved if she knew of the work being done by this organization to safeguard that boy; if she knew that for every temptation to which he is subjected the Y. M. C. A. offers a clean, wholesome sport; that for his every idle moment there is some clean attraction.

"It has occurred to me," said Secretary George Forbes of the Spokane Y. M. C. A., "that The Washington Farmer can do a good work by alleviating the anxiety of mothers and fathers of the northwest who are greatly concerned as to the life being lived by their sons in the army cantonments. A wise government has thrown around its youthful warriors a protective arm and sternly wards off vice so far as possible to do so by this means, but it would doubtless relieve parents still more to know that a great organization with almost unlimited facilities is taking a keen and personal interest in their sons, and with all resources at its command directing him aright.

"The Y. M. C. A. stands as a friend at court for every one of these boys. In every cantonment there is a Y. M. C. A. fully equipped. At American Lake there are six buildings, and we are now arranging a schedule of activities. In addition to a physical director and organized sports, we will conduct there a veritable university. High school students and those preparing for college may continue their studies, while schools for mechanics, salesmen, law students and those preferring other trades and professions will be maintained. There will be hundreds of instructors with class rooms open from reveille to taps, and at the head of this work will be some of the most noted educators of the west, Professor N. F. Coleman of Reed college, directing.

"The Y. M. C. A. buildings are models of convenience. There are comfortable lounging rooms, well stocked libraries, writing rooms, gymnasiums and auditorium for plays and vaudeville, while every evening motion pictures will be shown with accompanying lectures.

"And locals of the Y. M. C. A. are doing their bit. Their doors are always open to the boys from surrounding towns and rural communities. Recently when a contingent came through Spokane en route from American Lake to the bigger training camp in the south, they were marched 328 strong to the Y. M. C. A. and given soap, towel and shower bath. They appreciated that.

"We have letters from men at the front telling of what the Y. M. C. A. means to homesick men over there, of men who become so disheartened and lonesome as to make them worthless as soldiers, being sent by their officers to the Y. M. C. A. to be cheered up, to be given a better opportunity to write back home, and to come away feeling that they are not entirely forsaken, that they have a friend at court.

"Work in the army cantonments is directed by the national headquarters, the locals throughout the country contributing the funds. The Spokane branch contributed $2700 to the fund, and will continue to contribute all we can raise."

Watch Grasshopper Districts.

Persons who were asked by W. A. Holt, county agriculturist of Okanogan county, to watch the developments in the grasshopper districts, report that the hoppers are now breeding and laying the eggs for next year's young. In this connection information will be sent to the farmers of the hopper districts, by Mr. Holt, explaining the life history of the grasshopper and urging all to keep a lookout for the laying grounds of the pest. By locating the areas in which the eggs are laid much can be done toward lessening the damage that will be done next year, for by working the soil in which the eggs are laid, many eggs can be destroyed this fall and winter, as well as next spring.

Women Win Prizes.

Yakima valley women proved their versatility at the state fair. Miss Mary Remy took prizes in floriculture and cooking, as did Mrs. A. H. Heubner and Mrs. Wallis Williams. Mrs. R. R. Peden of Lower Naches, the champion butter maker, was also the champion cooky maker at the fair.

Mushrooms.

A good mushroom, properly cooked, is a luscious morsel and as such is a wholesome addition to the dietary. If you are absolutely sure that the variety that grows on your lawn or in the neighboring fields is of the edible kind, by all means cook it and eat it.

Alfalfa Men Learn by Their Experiences

(Continued from preceding page.)

I believe this will be an excellent alfalfa country in coming years.

AMOS G. CUMMINGS, Walilula, Wash.—Alfalfa culture is a success wherever you can have moisture, either by subirrigation or otherwise. We have river land that produces 3 and 4 crops according to the season, although the crop is poor this year. Hay is very high and scarce.

GEORGE RAND, Irrigon, Ore.—This is a fine place to raise alfalfa. Part of the ground I had in alfalfa four years ago is now in corn, about three acres of which is making a fine showing. One acre in muskmellons last year brought me $350. I have some in now which are beginning to ripen, and am selling them in 100-pound crates at 4 cents a pound. I also have 14 acres of alfalfa, part sowed in the spring of 1917. Barley is doing fine. I only have 23 acres of land and feed all my hay, mostly to dairy cows. We cut four crops of alfalfa, and sometimes five.

P. D. SMITH, Conconully, Wash.—My alfalfa acreage is 80 acres and the yield 400 tons. I use it only for pasture for beef in the fall. I find it is unexcelled for feed. I have had no experience with alfalfa silage. The theory of hard seed bed, I have found to be wrong. No special preparation of the ground is necessary more than for any other crop. I raise alfalfa for hay only.

Making Every Day "Fire-Prevention Day" Piles Up Dollars for Northwestern Mutual Policyholders

Governor Lister patriotically sets October 9 apart as "Fire-Prevention Day" and urges war against the fire waste that each year costs America $250,000,000.

"While conflagrations are serious in normal times, their seriousness is many times enhanced in time of war," declares Governor Lister.

"Fire frequently destroys greatly needed supplies of foodstuffs, lumber and other vital staples. It strikes at the foundation of national wealth. Fire danger is greater this year than ever before."

FIRE PREVENTION PAYS

The 40,000 policyholders of the Northwestern Mutual Fire association observe 365 fire-prevention days a year. These policyholders are all joining hands through the association for the prevention of fire. It is due to this cooperation and fire prevention that the Northwestern Mutual has been able to return to policyholders cash dividends and savings of more than $2,500,000.

Eternal vigilance will conquer the fire demon, for fire is a preventable evil.

Visualize what this means—a pile of silver dollars almost four miles high—it would tower a third higher than Mount Rainier!

Fight fire; observe Fire-Prevention day all through the year—by conserving waste you are helping to win the war. But get the benefits of your efforts through the Northwestern Mutual; convert your energies into cash dividends. Take out your next fire insurance policy in the Northwestern—and then concentrate with the Northwestern. We will show you how it pays YOU.

If your telephone won't reach us a postal will.

There Is Some Good Live Stock in the Chehalis Valley

By HORACE ADDIS

The Willamette valley in Oregon has by no means all the good Jerseys in the northwest. The Chehalis valley in southwestern Washington rightly lays claim to some of them.

A. Adolphsen of Chehalis, Wash., has with his little herd, completed nine official records.. Three of these are by cows with first calf. St. Mawes of Grassmere began at exactly two years of age. In 328 days she produced 7104.1 pounds of milk and 544.37 pounds of butter in a year, with an average test of 5.86. She is of Ed Cory breeding.

Golden Lactea 3d, purchased from the Ladd farm, produced 94 pounds of fat or 112 pounds of butter in one month. She has been on test eight months and, in spite of the fact that the herd was moved from one farm to another ard pastures have been poor, reducing the production of all the herd she promises a big record.

Diploma's Nellie, a daughter of Diploma, a cow bred in the old Stevens' herd at Ellensburg, began at exactly 2 years old and produced 68 pounds of fat, or 80 pounds of butter in a month. Diploma, the old cow, had 88 pounds of fat in a month.

All these cows were milked only twice a day and Mr. Adolphsen has good reason to believe that even so, but for the moving, Diploma's Nellie would stand among the leaders of the country.

John H. Taylor.

Picture No. 2 in the accompanying layout, snapped by the Farmer camera, shows a Jersey cow, 13 years old, owned by John H. Taylor of Montesano, Wash., whose performance and that of her offspring entitle her to a niche in the hall of fame. She is Gertie's Lily and was bred by A. M. Stevens of Ellensbuhg, Wash., now dead, whose herd made good records with only fair advantages and furnished foundation for a number of good herds. Gertie's Lily was sired by Gertie's Stoke Pogis and out of Diploma's Lily. Beginning at the age of 3 years and 6 months, Mr. Stevens gave her a record of 517.5 pounds of fat, or 608.8 pounds of commercial butter. At 9 years of age, Mr. Taylor gave her a record of 845 pounds of butter, thus entitling her to an A. J. C. C. gold medal.

One of Gertie's Lily's daughters, Gertie's Son's Lass, has given Mr. Taylor a record of 632 pounds 9 ounces of butter at 2 years and 11 months, and Gertie's Son's Bess, 386 pounds of buter, at 1 year 8 months. Mr. Taylor has two more heifers, a yearling and a calf, offspring of this grand old cow. Unfortunately her three bulls have all gone into grade herds.

Golden Massy Polo, Mr. Taylor's other gold medal cow, who produced 877.9 pounds of butter as a 4-year-old —then a world's record—is by the same sire as Gertie's Lily. She has one daughter, Massy Polo's Dimple, with an official record of 436 pounds of butter, begun at the age of one year and 10 months. Another is on test and will make a much larger record.

Mr. Taylor has eight cows with completed tests and 12 more on test. At the Altman sale he purchased Jacoba Irene Prince, a bull with 75 per cent the same blood as the great long distance butter cow, Jacoba Irene, and is using him on most of his herd.

Mr. Taylor had a fine crop of hay this year. His two silos are filled with oats and peas, which make a very satisfactory silage and yield well in the Chehalis valley. He believes in feeding well, but uses his good pastures as much as practical.

John R. Martin.

John R. Martin of Satsop, Wash., has 17 Jerseys in the Montesano Cow Testing association, seven of them pure bred. Mr. Martin had the highest grade cow in the association for June and July, though it was a different cow each month. Each cow produced 68 pounds of fat. The average of the herd was 43 pounds of fat for June, 51 pounds for July and 41 pounds for August.

Mr. Martin is the owner of Amateur Amy, a registered Jersey, that in 1914 made an official record of 698 pounds of butter, as a senior 2-year-old. It was the highest record made that year in her class and is still the state record for senior 2-year-olds.

Mr. Martin has two silos. His plan is to put into them practically anything that is ready when he is ready to fill them. This year he has put in wheat and oats together and rye, vetch and oats mixed. He considers the cost and uncertainty of corn in this region and the greater labor of making the crop prohibitive, or at least not as preferable as the small grains and legumes.

E. L. Brewer.

E. L. Brewer of Satsop, Wash., the man who developed Olympia's Fern and gave her her world's record of 1107 pounds of butter in a year as a 4-year-old, has now 12 Jerseys on official test, besides eight more in the Montesano cow-testing association. Mr. Brewer has been making some remarkable records and for a time it looked as if he might establish two new world records. But he had a severe case of sciatic rheumatism and was away from home nearly a month just when pastures were failing and the result is reflected in decreased yields.

The Owl's Golden Queen freshened February 16. For March, she produced 110.38 pounds of fat or almost 130 pounds of butter. Her April record was 109.71 pounds of fat and her May record, 109.69 pounds; June, 100.68, but for July she was down to about 85 pounds. Lad's Brown Beauty began her test April 22. For May she produced 101.77 pounds of fat, for June 109.54, and for July about 70 pounds. Lad's Juno is a great young cow that produced 80.65 pounds of fat her first month and 307.43 pounds in four months, but she is so nervous she can not be depended upon.

Mr. Brewer, who is the Washington representative of the American Jersey Cattle club, was recently sent on a trip through California and delivered a number of lectures on the subject of feeding and other matters. He reports conditions good and a strong demand for Jerseys down there.

Murphy Brothers.

Pansy, No. 5 in the layout, has a cow-testing association record of 12,324 pounds of milk and 595.4 pounds of fat, or a little over 700 pounds of butter in a year. Pansy is a grade Jersey probably fifteen-sixteenths pure, but still a grade. She is the highest producer in the herd of Murphy Brothers, successful dairymen near Montesano, Wash., who milk about 50 head, all high-grade Jerseys. They bred Pansy themselves, as well as her mother. They use high-class purebred bulls, their present herd sire being a son of Golden Massy Polo, with a record of 877.9 pounds of butter in a year as a 4-year-old.

Murphy Brothers own a place of 270 acres, about 150 of which is in use. They pasture their meadows until about June 10, usually, then cut hay about the middle of July and pasture again until about the first of October. Their meadows are of timothy and clover, pure clover, alsike and rye grass and red clover. During the time pasture is good, from about the middle of April to October, they feed no grain, except a little to some of the heaviest milkers. The herd averages during some of the summer months over $500 profit per month.

These gentlemen, three brothers, belong to the Montesano Cow Testing association. This is their second year, so they know just what the cows are doing. They have many beautiful animals in the herd and others besides Pansy that produce over 500 pounds of fat. Not a mature cow in the herd produces less than 300 pounds of fat and the herd average is over 350 pounds.

The Messrs. Murphy have a 100-ton home-made silo. Last year it was filled one-third with oats and vetch and the balance rye grass and clover. This year for the first time clear clover showed a heavier tonnage than oats and vetch. In the winter season these gentlemen plan to feed one pound of grain a day for every pound of butter fat a cow produces per week. They feed about 30 pounds of silage a day, or 40 pounds of rutabagas, and all the hay a cow will clean up, which is four or five pounds per cow. They milk with a mechanical milker, which they have used for three yars with no injury to the udders. They always strip a cow after using the milker. They do their own milking and most of their farm work, but employ some help in summer.

E. R. Brady.

Admiral Togo is a Guernsey bull dropped in February, 1904, that was brought into southwestern Washington when 1 or 2 years old. He got good calves and headed several different grade herds. Some time ago a cow testing association was formed in Thurston county, Washington, and the tester found that Admiral Togo had sired all the best cows in the association. He also had two or three purebred daughters and they are both high producers and very typy. He communicated this fact to E. R. Brady of Satsop, Washington, and as the bull was then owned by a farmer who had sold his herd and was intending soon to turn Admiral Togo off to the butcher, Judge Brady got him at a very low figure.

Admiral Togo's sire is Glenwood's Reputation, one of the best sons of the great sire Glenwood Mainstay, whose dam is Glenwood Girl, with A. R. record of 593.6 pounds of fat. Admiral Togo's dam, Emilie N,, also has some quite famous Guernseys in her pedigree. As Judge Brady is breeding the bull on all his best purtbred Guernsey cows, and as he is still vigorous, he may yet secure fame before his career is ended.

S. M. Mears.

S. M. Mears, whose father is a wealthy business man of Portland, is farming at Woodland, Wash., and is a real fancier of Poland Chinas. His boar, Snops, has extremely large hams, great long, good feet and good, typical head. He was bred by H. A. Willard and is a son of Herbert Willard's high class sire, Meddler IV. Mr. Mears' sow, Peerless Trixie, would be hard to beat in any show ring. Besides every point of a good hog she has the fancy points of the Poland China breed.

Mr. Mears is a feeder as well as a breeder. He has a fine lot of spring pigs, nearly twice the size of many of the same age and in good growing condition. He uses alfalfa meal as one of his principal rations and likes it for almost any stock. He finds he gets good results from feeding it to chickens, as well as horses, cows or hogs.

J. A. Scollard.

J. A. Scollard of Chehalis, Wash., believes there is money in beef cattle on a highly cultivated farm in the Coast country and especially in the Chehalis valley and is starting out to demonstrate the truth of his belief. Mr. Scollard owns 430 acres of the finest of bottom land on the edge of Chehalis. This year he has 80 acres in barley that was cut when I was there and estimated, by those who should know, to thresh out 80 bushels per acre. He has 360 acres under the plow and the remaining land, woods pasture, is being cleared and put in cultivation. Mr. Scollard has 24 acres in corn and has two silos to receive it. Other silos will be built as needed.

Mr. Scollard has purchased from the famous Congdon and Battles herd of North Yakima, Wash., a herd of seven females and a bull of registered Aberdeen-Angus cattle, paying $2500 for the bull and a total of $5800 for the eight head. He had to wait until this fall's fair circuit and the Chicago International were over before the bull would be delivered, because he is a great show bull. Several of the number were bred in the original Battles herd in Iowa, one of the foremost Angus herds in the United States. Mr. Scollard has a herd of grade Angus cattle now and this very high class sire will be used on them. He will also keep a show herd of pure bred cattle.

Mr. Scollard argues that Chehalis, with two markets, Seattle and Portland, competing is advantageously situated for beef cattle. It is his intention to confine the cattle rather closely and feed not grass but corn silage. This, together with the heavy crops of grain the land produces, will form the principal feed and Mr. Scollard considers the manure no small consideration in reckoning the profit on feeding beef cattle. He has named his farm "Broadmead," which considering the broad, sweeping view it gives from his house or the road, is an appropriate name.

George Bertrand.

The first picture in the accompanying layout shows Gold Mine, a Shorthorn bull dropped April 18, 1916, owned by George Bertrand, Olegna, Wash. Gold Mine is by Chief Goods, a son of the great sire, Golden Goods, and his dam, Cecile, is by Minority's Welcome. He has a broad, straight back, good underline, straight hind leg, is deep and round, has a deep loin and a head showing good breed type. Mr. Bertrand was giving this young bull, his sire and two other yearlings some little preparation for the southwest Washington fair, where, with some of Mr. Bertrand's good females, they proved a big attraction. He will also show at North Portland this winter.

Mr. Bertrand has been breeding purebred Shorthorns only a few years, but he got good cows from Gibson, Cornett and others and is rapidly building up a herd to be proud of.

Mr. Bertrand was formerly a grower of hops, but where the hop field was now feed for the Shorthorns and Berkshires are grown, and Mr. Bertrand finds the Shorthorns give good returns for feed and labor expended.

E. P. Sawtell.

E. P. Sawtell, a pioneer farmer of Independence, Wash., many years ago purchased a registered Holstein bull. He was building up a good grade Holstein herd, but became discouraged because he could not sell the bulls or steers, even for beef. He then got an Angus bull and afterwards a Shorthorn, but they were not what he

(1) Gold Mine, Shorthorn bull owned by George Bertrand of Olegna, Wash. (2) Gertie's Lily, Jersey cow, owned by John H. Taylor. She was 13 years old when the photo was taken. She has an official record of 608.8 pounds of butter at three years and six months and 845 at nine years old. (3) Holstein heifers owned by E. P. Sawtell of Independence, Wash., on hillside pasture. (4) Trixie, a show sow in the Poland China herd of S. M. Mears, Woodland, Wash. (5) Pansy, a grade Jersey owned by Murphy Brothers of Montesano, Wash., has a cow-testing association record of 12,324 pounds of milk and 595.4 pounds of fat in a year.

wanted. Some few years later, a friend in the butcher business agreed to take all the Holsteins he would furnish at the same price as any other beef cattle, and Mr. Sawtell returned to his first love. He got the best Holstein bull he could in 1904, but has always realized that he had lost time and money when he bred away from Holsteins.

Mr. Sawtell purchased his first registered Holstein cow in 1905, but she was bred to a Jersey by the man who sold her without his knowledge and he lost another year, as her first pure bred calf was dropped in February, 1908. Most of his herd is her offspring and, while he bought one cow with an A. R. O. record from Tiffany Brothers of New York, his own stock were so much better he let her go. Lady Belle Washington has milked nine gallons a day for months at a time, with ordinary care. Her only test, made by a creamery, showed 5 per cent fat. Her daughter, Flora Belle Netherland, tests 5.1, but is not as heavy a milker. All but two animals in his herd are related to her. He always buys good bulls and has found a ready sale for his young stock.

Dairymen Cooperate

(Continued from page seven.)

which tends to eliminate competition. It was not long before the newly awakened dairy organization in Fraser valley had reason to know that its work was being watched by curious and perhaps unfriendly eyes. Having nothing to hide, however, the farmers courted the public investigation which was finally determined upon by the city council of Vancouver. The result was, of course, a complete vindication of the farmers. The gist of the report offered by the "special milk committee" was that the price of 6 3-4 cents per quart paid the farmer was far from excessive when the cost of production under the sanitary regulations imposed by the city was considered; and that if the price to the consumer was to be lowered some way of simplifying and cheapening distribution and the handling of the milk subsequent to its descent into the milk pail must be found. A suggestion made by the association that it should sell direct to the consumer, distributing through a single delivery system, was considered by the council and indirectly approved in the following words:

Unit Distribution.

"The Fraser Valley Farmers' Cooperative company, which supplies some 80 per cent of the needs of the city of Vancouver, has written the committee that they are prepared to deliver their pasteurized products to the consumer at 10 cents per quart upon a system of unit distribution. This, your committee understand to mean, that the milk bylaws of the city would have to provide for milk routes in order to do away with overlapping in deliveries. While the direct result would be a reduction in cost to the consumer without lessening the return to the producer, the principle of interference with competition and freedom of trade is of such importance that your committee hesitates to recommend such a course. As the cooperative company which makes the offer controls such a large proportion of the milk supply of the city, it seems reasonable to suppose that a unit distribution arranged by the producing company themselves will work out its own success and the waste in overlapping of deliveries will be reduced to a minimum."

The committee adds that a special investigation into this feature has convinced them that the loss in the city of Vancouver, due to overlapping distribution, is about $80,000 per year—this in a city of 140,000 inhabitants.

Having passed through this acid test so favorably, it can hardly be doubted that the association will go forward more vigorously than before. Every precaution has been taken to make the business mechanism not only as efficient as possible, but also to keep it above reproach in the matter of clarity and openness in its dealing with its members. Checks are issued twice monthly, the first check being based on an estimate, while the second makes settlement in full, on the basis of business actually transacted by each member.

Is a Selling Bureau.

Technically speaking, the association does not buy the milk produced by its members and does not fix a price for the milk it sells. It is simply a thoroughly organized and thoroughly informed selling bureau, which directs the movements of its members. John Jones, for instance, a member in good standing, ships his milk to a buyer specified by the association. The check for this milk goes to the association, not to the individual shipper. In this way the matter of checking up invoices and certifying figures, a detail which the farmer has always neglected, is taken care of by the business office, which in turn pays the producer. The cost of running this head office, including directors' fees and traveling expenses, amounts to a trifle less than 1 cent per pound on the butterfat handled.

As a final element in securing harmonious cooperation among the members of the association may be mentioned the publication of the Fraser Valley Milk Producers' News. The News is a small, but well edited trade paper, mailed to the members of the association with their final pay checks each month. Through the columns of this paper it is possible to keep the members informed of the problems and progress of the organization, and in this way to secure intelligent action toward a single objective on the part of 800 producing farmers.

Wheat Price Fixing and the Farmers

While Everything the Farmer Produces Is Put Under Regulation and Control, How About the Steel Manufacturers and Others?

"Our Landed Aristocracy" is the term sneeringly applied to the American farmers by the New York Journal of Commerce. "The farmer," asserts that journal, which is particularly edited for the commercial classes, "must have high prices guaranteed to him by the government in order to induce him to work his farm, the impression seeming to be that if he were not guaranteed about twice as much as he ever got before he would live on the interest of his investments and allow his farm to return to the wilderness."

It would be difficult to pack more ignorance and class prejudice into a few words.

Let us begin by setting this question straight. The farmer has not asked the government to control the price of wheat. His pocketbook would have been better filled if the government had kept hands off his products and permitted prices to be governed by the usual laws of supply and demand. Under government price-fixing, the wheat growers of this country will receive for this year's short crop prices ranging from $1.75 to $1.85 in the Pacific northwest to $2.30 on the Atlantic coast.

If the government had not set an arbitrary price, the wheat market in all probability would have gone to $3 or $4 a bushel this year. Louis Hill, president of the Great Northern, is confident that the price would have been $4. Certainly it would have been more than the price the government has set.

In a spirit of patriotism the American farmers have accepted this heavy loss almost without a murmur anywhere.

The wheat price guarantee is a war measure, conceived and initiated by the government to stimulate increased production of that cereal, and not solicited or urged by the farmers. The guarantee applies only to that one product. It does not cover oats, barley, rye, potatoes, corn, cotton, hay or any of the scores of other products of the soil. The government, realizing the urgent need of stimulated wheat production, fixed a $2 guarantee for the 1918 wheat crop. It adopted that expedient in order to induce the farmers to grow more wheat—to sow lands to wheat that might be more profitable if put into other crops. The motive was national welfare, not profit-making for the farmers.

The New York newspaper then further clouds the facts by intimating that while the farmers are favored by legislation, the steel manufacturers are wronged by government action. The farmers, it says, "are furious that steel-makers should get higher prices than they did before the war."

Now let us examine the facts of the law. The enabling clause defines the necessaries that may be controlled by the government. They are "foods, feed, fuel, fertilizer and fertilizer ingredients, tools, utensils, implements and machinery, and equipment required for the actual production of foods, feeds and fuel hereafter in this act called necessaries." Apparently steel is exempted from the direct control provisions of the law, but everything the farmer produces is put under regulation and control, because the farmer grows essentially foods and feeds.

The distinct purpose of the law is to hold down the prices of farm products, to interfere with the normal play of the laws of supply and demand. As a partial offset (the government could not in fairness have done less) it also put under control a few of the necessaries that the farmer must have.

To hold down prices the law empowers the president to fix prices and purchase and sell—what? Wheat, flour, meal, beans and potatoes—products of the farm. And what else? Coal and coke. These products and these only.

The other necessaries enumerated in the law can be indirectly controlled by the licensing provisions of section 5; but the machinery is cumbersome and may or may not satisfactorily effect the purpose of the law.

In all of America's wars the farmer has borne loyally his part. It was the "embattled farmers" at Lexington who "fired the shots that were heard around the world." Patriotism is not dead on the farms of America today, and our farmers will do their part loyally and well in this great struggle for world freedom and democracy. They are making high sacrifices in every county in the land. They are giving their sons to the flag, and they are toiling early and late that our people and our allies, our armies and our allies' armies, may be nourished for the great ordeal.

Sheepmen Have Banquet.

On Wednesday evening of state fair week sheep breeders and others interested in the sheep sale gathered in the Commercial hotel at North Yakima, and partook of an enjoyable banquet. Professor William Hislop, who had charge of the sale, introduced State Commissioner of Agriculture E. F. Benson, who acted as toastmaster. Brief addresses were made by A. G. Butterfield of Weiser, Idaho, who emphasized the importance of purebred sires; Mr. Fiske of Spring Valley, H. Stanley Coffin of North Yakima, Mr. Wexler of Pasco, Grover McDougal of Kiona, Mr. Gabbert of Ellensburg, Eugene Hubbard of Monroe, Ore.; O. M. Plummer of the Portland Union stock yards, "Farmer" Smith of the O.-W. R. & N., George Gue, who auctioned the sheep, and Horace Addis of the Washington Farmer. H. A.

WAR TIME SAVING

In these strenuous war times, when the ever thought of saving in every way possible is foremost in each mind, mighty few real opportunities are placed before the farmers of this glorious Pacific Northwest. No real bargains, when any big saving worth while can be made, are offered to the reading public. Right now, when prices of all things are mounting skyward, here comes a bargain offer that should appeal to every one that it reaches. Instead of adding to the increased expense of our readers, we are making them an offer that they can not and should not hesitate to grasp. Read this big bargain offer and see for yourself the saving you are making.

THE WASHINGTON FARMER

(A Three-Year Subscription.)

(Annual Subscription Price $1.00)

Included in this special saving offer is a three-year subscription to The Washington Farmer, the biggest and best exclusive farm paper published in your own state, for your own interest and of such value to the farmer that he can not afford to be without it. Its various features, its many departments, its interesting and educational items and facts, and its general farm news are worth their weight in gold to the farmer. It's the most complete farm paper published.

The Twice-a-Week Spokesman-Review

(One-Year Subscription.)

(Annual Subscription Price $1.00)

There is also in this same bargain another paper—a twice-a-week newspaper, which keeps you accurately posted on local, state, national and world affairs. Its news is complete and reliable—condensed for the busy readers. Its connection with the largest daily newspaper in the Inland Empire, its membership in the Associated Press, the greatest news gathering service in the world, give it news value that no other similar paper can claim.

HERE YOU ARE!

The Big Offer—Save Two Dollars

THE WASHINGTON FARMER.		Our
Three years' subscription at $1.00 a year	$3.00	Special
TWICE-A-WEEK SPOKESMAN-REVIEW.		Price
One year's subscription at $1.00 a year	1.00	For
Total value	$4.00	Both

$2.00

THAT'S THE BARGAIN—$4.00 value of real reading and news for just half the amount. Do your saving right now by getting in on this good thing and get your order in before it is too late.

Feed Supplies and Stock Outlook

Much information is contained with regard to the feed situation in the Inland Empire in letters received in reply to inquiry made by the Spokane Chamber of Commerce:

Better Care of Straw.

William Weatherford, Weatherford-Wallace company, Dayton, Wash.—From my observation and investigation it is my opinion that we will not have one ton of hay that can be spared from this county, in fact I am quite positive that we will not have sufficient hay to carry us through the winter and care for the seeding of the crops and summerfallowing the land for another season. We believe, however, that the most of the grain farmers will take better care of their straw than heretofore and that will be of a great benefit in getting our stock through the winter. I am almost led to believe that the government may have to guarantee a minimum price on beef to keep our people in the business.

Getting Rid of Young Stock.

O. K. Kennedy, Editor The Standard, Fairfield, Wash.—In this section about 25.000 acres of peas were raised. Though the crop was about half normal, account of heat, dry weather, there will be abundance of pea straw, a good roughage when fed with other feeds. Split peas for chickens and pea waste in the fields for pigs will help some. All the same our farmers are getting rid of young stock rapidly. "After us the flood" seems to be the slogan. All the advice and pleading goes for nothing to a man who has a lot of young calves in fine shape for veal. Estimates are hard to get, but I will say that there will be no surplusage of stock feed to ship out of this section except possibly some baled wheat straw and pea straw.

Seeking for Range.

P. A. Gaul, Cottonwood Mercantile company, Cottonwood, Idaho.—I believe Cottonwood and the immediate vicinity will be fairly supplied as to the hay situation for their own use, and what surplus they will have will be taken by the Salmon river cattlemen. The Salmon river country, west of here, is where the cattle industry is suffering mostly; they are selling their stock now, which is not thoroughly prepared for market as it should be, in order to preserve the feed for the cows and younger stock. A number have been trying to get range where they can drive their cattle for the winter, as it is impossible to get hay in this country.

Hog Industry Neglected.

W. H. Miller, State Bank of Connell, Wash.—There is little or no feed raised for live stock aside from wheat hay and the farmers were very reluctant to cut their wheat for hay. I believe that it will be necessary for the farmers in this locality to ship in considerable hay from other districts. Some of the sheep men have prepared to meet the winter months by cutting considerable of wheat hay. However, they too will have to ship in hay from outside. The hog industry has been neglected for the last two years to some extent on account of the prevailing high prices of wheat which is the feed for hogs in this locality. The sheep industry goes on as usual and where it is possible to get grazing a considerable number of cattle is being raised.

Stock Feeding Points.

O. B. Shoemaker, Pasco Flour Mills company, Pasco, Wash.—The writer has made a special effort to get some information on the alfalfa hay situation and taking Attalia, Burbank, Kennewick, Richland and Pasco districts we feel that 250 cars would be a conservative estimate on the amount of hay that would be shipped out of these communities. As Pasco and immediate vicinity is a very favorable winter feeding point and as it is showing some increase from year to year along this line, more of the hay grown in these districts is being consumed at home each year, and with the location of the stockyards at Pasco this feeding feature will be further stimulated, consequently the Pasco district will probably draw more or less hay from the other districts.

Surplus of Hay.

J. F. Sears, State Bank, Prosser, Wash.—At first it appeared that the Yakima valley would have a large surplus of feed at reasonable prices, but the past 30 days hay has been in a very strong demand from Idaho and Montana. We are not in the habit of furnishing much feed to those states, particularly Montana. We, of course, will have considerable hay and some to sell as our crop is normal. There is no outside range as that is all utilized by the sheep men, thousands of head being wintered here each year.

Making a Dairy Country.

C. A. Haskins, Farmers & Merchants State bank, Eureka, Mont.—Regarding the feed and stock proposition in this part of the county, I would say that we will need considerable hay where usually we ship out quite a little. We are trying to make a dairy country of this immediate section and will need alfalfa hay if it is possible to secure it at a reasonable price.

Plenty of Feed.

F. H. Haupt, The First National bank, Ritzville, Wash.—The stockmen in this community have plenty of feed for their own needs, as a usual thing they do not raise for shipment, and therefore will have none for sale.

Alfalfa for Others.

W. A. Harrison, Sunnyside, Wash.—The Yakima Valley has plenty of hay for her own need and for the neighbors also. Alfalfa is one of the principal products here, and shipments are being made daily to your eastern county of that product. The corn crop will be large here from all indications. Alfalfa is selling for from $20 a ton to $23. It has occurred to me that if the stock were shipped to the feed instead of the feed to the stock it might help considerably. Freight rates on alfalfa are high. The price named above is to the farmer for alfalfa.

Feed Will Be Short.

Hy W. Rieke, Odessa Commercial Club, Odessa, Wash.—This being a wheat country, all surplus productions are sold in the shape of grain, threshed, so that no feed in the shape of hay or otherwise is found for export purposes, with the exception of some alfalfa hay, which is grown in the valley. While considerable grain will be sold and shipped out from this point, the feed will be short this year, possibly barely enough to supply local needs.

No Surplus of Feed.

E. C. Davis, Grant County Bank, Ephrata, Wash.—There will be no surplus of feed and hay in this county. Last year considerable hay had to be shipped in to take care of the sheep industry. This winter it is very likely that more hay will be needed. I understand, however, that several of the sheep men who have heretofore wintered in this vicinity, expect to winter in Okanogan county, principally on account of the scarcity of hay.

Alfalfa Producers.

L. E. Johnson, The First National Bank, Kennewick, Wash.—I will state that roughly speaking, 20,000 to 25,000 tons of alfalfa hay are shipped from this point and Richland, nine miles north of here. The price at the present time, ranges from $15 to $18 in the stack and $20 to $22.50 baled, F. O. B. cars, Kennewick. It is a fine climate to winter and quite a number of stock are fed here every year. The present prices are a little higher than usual, although last two years it has been good, ranging from $15 to $20 per ton. There is not very much other feed supply available.

No Sacrifice Sale of Stock.

S. A. Anderson, Grangeville, Idaho.—There will be no feed to ship out from here. Some herds on Salmon River will be cut down, that is beef and some feeders, but no sacrifice sales will be made. Owing to some loss last winter principally in calf crop in this section we will go into winter with somewhat smaller aggregate number than last winter. I cannot now state any exact percentage. The hay and feed supply on the prairie cannot be estimated exactly not knowing yet how much of the spring seeding will make grain and if not what it will make in the way of hay and pasture. Whatever surplus there may be on the prairie will go to care for some Salmon River herds and the situation is gradually adjusting itself so as to preserve equilibrium and support the live stock industry without loss. Isolated cases of rushing unfit stuff on the market and some discrimination of the herds will be the result, but in the main conditions are as satisfactory as could be expected.

Little Hay Cut.

Charles P. Whalen, Genesse Exchange bank, Genessee, Idaho.—In relation to feed for cattle will say there has been a very short spring crop and consequently very little hay cut and very little hay will be for sale for shipment to outside points. In fact, should we have a winter similar to last winter there will be a shortage for home consumption.

Close Skimming—Long Service

YOU find both the farmer and the housewife, after many seasons of experience with the **Lily** or **Primrose,** ready to sing the praises of these good cream separators of which we are proud. If you have to be shown, write us for all kinds of proof. Also ask any farmer or housewife who has used these machines.

The reasons for this popularity—boiled down—are that **Lily** and **Primrose** separators separate all your cream from your skim milk, and do it for years, always keeping up to the same level of close skimming, run with surprising smoothness and ease, and are very easy to keep in clean, sanitary condition. Across the double center of our **Lily** catalogue and our **Primrose** catalogue is a large, clear picture showing the working interior of these separators, explaining and indicating by arrows why they save you so much cream money. These catalogues are complete, fully illustrated, and very interesting and instructive, if we do say so ourselves.

Choosing the right separator in these days of high prices is so important a matter that the careful farmer and dairyman will sidestep risk by putting his trust in a good, reliable, tried-out and proved Harvester product—a **Lily** or a **Primrose.** Do you know the dealer? If you are not sure, write us.

Storing Root Crops

Vegetable crops harvested for storage should be in prime condition. It does not pay to store culls, says J. L. Stahl, horticulturist at the Western Washington experiment station.

Potatoes should be well matured, if stored for table use, and as free from disease and fork injuries as possible. Blighted or cut tubers should be otherwise disposed of at once. Maturity is not so important when storing potatoes for seed, and some growers prefer immature seeds. Boxes or crates are the best containers for moving potatoes from the field, as they are less apt to be injured than when moved in sacks.

Root crops such as beets, carrots and turnips should be harvested when they reach a desirable size and before they become overgrown and lose their quality. The tops should be removed close to the root with all such crops except beets. An inch or two of the leaf stems should be left intact when removing beet tops. Root crops should be firm and free from rot.

Potatoes need moist, cool, well ventilated conditions. For best table quality they must be kept dark. These conditions can usually be met in a cool cellar, cave or well built pit.

While a continuous draft or forced air circulation is not essential, the ventilation should be adequate so that a complete change of air can be had when necessary and the temperature more readily controlled. If it is too warm the tubers are likely to sprout, and if the air is too dry they are apt to wilt.

The best temperature for potatoes in storage is between 33 and 40 degrees. Crates or trays as containers are preferable to sacks or bins, as better air circulation is possible. This is particularly important when storing seed potatoes.

Root crops such as beets, carrots and turnips may be stored under much the same conditions as potatoes, except they are best away from direct contact with circulating air.

If a cellar or other type of room is not possible for storage, it is better to pit potatoes and most root crops rather than leave them in the ground and trust that they are planted too deep to be frozen.

HOW TO CONSERVE
Foodstuffs Told by Pierce County.

Home conservation of agricultural food products and how it may be accomplished at small expense was a feature of the Pierce county exhibit at the fair. Under the direction of Jacob Stelling, William Schulz and District Horticultural Inspector Henry Huff, all of the Puyallup valley, an exhibit showing an excellent array of canned and evaporated fruit and vegetable products was placed. It attracted no small amount of attention from thoughtful and thrifty homekeepers.

The evaporated fruit and vegetable displays were especially interesting when it was learned that Mr. Stelling, with the assistance of his wife, had dried both fruit and vegetables in a home-made drier, operated on a kitchen range.

Mr. Stelling failed to bring his drier along, much to the disappointment of those interested, but he described it as an iron framework, in which were placed 10 trays, 12 inches wide and 24 inches long. The drier is so built that it can be placed on any ordinary kitchen range and used while the remainder of the top is being used for some other purpose. The trays, when all are in use, have a capacity of two crates of berries, and are changed from top to bottom in such a manner that all receive an even temperature and the fruit is uniformly dried. Samples of the dried product were shown, and they proved the practical use to which the home-made contrivance may be put.

"Drug Store" Exhibit.

Carrying out the "do-it-at-home" idea Mr. Stelling showed samples of herbs grown on his place this season as an experiment. He called the display his "drug store."

"My idea in conducting the experiment," said Mr. Stelling, "was to ascertain whether or not I could produce herbs in variety and volume sufficient to make the undertaking a profitable one. The demand has been especially keen since the opening of the war, and there is no doubt but that we can market them in a highly profitable fashion. I am not sure whether the herbs I have produced are of an acceptable character. Many who have seen the samples pronounce them up to standard in every way, but until I learn a little more about the subject and the requirements I am not in a position to say."

As to variety Mr. Stelling seems to have met all requirements. He had on display samples of anice. balm, coriander, spearmint, safron, peppermint, thyme, marjorean, summer savory, wormwood, tansy, dill, florence fennel, catnip, lavender, rue, borage, taragon—all important in the manufacture of drugs and food products. His experiment was conducted on a plot of ground for each variety four by six in dimensions. The plants yielded heavily, and apparently are in first-class condition for marketing purposes.

BENTON COUNTY WINS
Yakima and Thurston Come Close.

Benton county was awarded first prize for its state fair school display, Yakima second and Thurston third. Other competing counties in their ranking order are Grays Harbor, Pierce and Kittitas. The winning exhibitors will pro rata a $100 prize, while awards of $15, $10 and $5, offered for the most artistic displays, were given in the same order as the school county sweepstakes.

Agricultural awards were made Friday. Clarence Starcher of Fairview won first for his display of corn. Mrs. J. H. Spoolman of North Yakima won first for the best 10 ears of corn, and C. F. Monroe of Grays Harbor won first for the finest single ear. E. M. Medaris is the grower of the best 10 stalks of corn exhibited.

Beet Prizes Are New.

Prizes were awarded for the best sugar beets, a new departure of the Washington State fair. Fred Piske of the Yakima valley displayed the prize-winning six beets, with John Olson's display a close second.

Awards for the five-tray exhibits of fruit were made with difficulty. In outline they were: Jonathans, O. S. Hansen; Spitzbenburg, J. H. Spoolman; Yellow Newtown, E. W. Bailey; Arkansas Blacks, C. Starcher; Delicious, E. W. Bailey; Rome Beauty, E. W. Bailey; Winter Banana, E. W. Bailey; most nearly perfect apple, J. A. Webber; most nearly perfect pear, C. Starcher.

In the displays representing the various districts of Yakima county Tieton, a section reclaimed by the United States government reclamation service during late years, scored highest, with 79 points out of a possible 100; Toppenish Commercial club, second; Ahtanum, third.

King county won the prize for the best county display, making a total score of 894 points out of a possible 1000. Pierce county was second with 820 points, while Benton county was third with 798 points.

The judges were E. F. Gaines, C. B. Sprague and J. L. Stahl.

PIG CLUB HOLDS SALE
Boys Sell Twenty-four at $30 Each.

On Wednesday of state fair week the auction sale of the hogs exhibited by the McKinley Registered Poland China club was successfully held. Twenty-four spring pigs were sold, the highest price received being $49 by Hildreth Lawrence of Toppenish, and the lowest $15, the total being $717, or almost $30 each.

McKinley school is four miles from Toppenish, and the club consists of 20 boys, with Professor W. E. Weir, principal of the school, as leader. Some of the pigs were shown in the regular Poland China classes and won some prizes. Three special prizes of $25, $15 and $10 had been offered by the Central bank of Toppenish. First prize was won by Herschel May, second by Oval Coffin and third by Earl Storaash, all of the Toppenish section.

The club is believed to be the largest of its kind in the United States, and Professor Weir justly takes great pride in it. All the pigs owned are registered Poland Chinas, and there are several noted animals, including Royal Lady, that was grand champion at the 1916 state fair and also a first prize gilt.

The school is one that was successful in winning a good library in The Farmer's contest last spring. The club has nine acres in potatoes and 14 in corn. Mrs. Weir had a sewing club at the state fair. She takes the same deep interest in the club work that her husband does, and her girls have won a good number of prizes.

Mixed Blood.

Only a third of South America's population is of pure white blood.

No Redress for Stockholders.

Davenport Tribune: The last act in the tangled events of the Northwest Trading company is being staged in the Spokane city jail. Gale Smith, former president of the company, Stephen T. Knudson, sales agent and president of the Olympic Trading company of Seattle, a subsidiary of the Spokane concern, and Clyde L. Davies, another officer begun serving their sentences pronounced by the federal court after trial by jury last winter. In addition to the jail sentences each man must pay a heavy fine if he has the money, and while they are paying the penalty exacted by law there is no redress for the hundreds of stockholders who lost their money by investing in stock that proved worthless, and cooperative concerns, that should prove beneficial to their members have been given a setback.

Community Church.

Wilbur Register: The congregations of the M. E. and Presbyterian churches voted nearly unanimously, last Sunday, in favor of a federation of the two to be directed by a single pastorate. The federated congregations will worship in the Presbyterian building and will be served by the Rev. Mr. Purdy of the M. E. church. The title of Community church was adopted by the consolidated membership.

Discovers Cave and Digs for Buried Treasures

The Ups and Downs of a Bunch Grass Boy---No. 29

By JOE L. ASHLOCK

Copyright, 1917, Joe L. Ashlock.

PART I.

Here is a story I have never written or told before, not even to my mother when in the most confidential moods of boyhood.

It all happened because my chickens ran out of bone one summer and commenced to lay soft-shelled eggs. Bone was a rather difficult part of a hen's ration to obtain in those pioneer days of the eastern Washington bunchgrass. We had to go out on the prairie and hunt for a cow or steer that had died a few years before, gather up the sun and rain bleached bones, bring them home, burn them and, with a hammer, beat up the brittle pieces of bone, so that the hens could eat the small pieces.

On this occasion I scoured the country far and near, but could find no bones. I found a couple of coyote skeletons, and took these home. Unfortunately, the coyotes had not been dead very long, and my mother would not let me eat at the table that evening. Anyway I got a few bones out of the deal, which afforded temporary relief. But I needed a real bone pile with which to relieve the distress of my loved hens, who now laid practically none but soft-shelled eggs. Driven by this necessity, I was led to do a very unprecedented, if not a sacrilegious, thing.

The beginning circumstance of my bone quest was a race after a coyote that had sneaked up in sight of our henyard, with a mouth that itched to grab a hen. I espied the gray, nimble creature, and it chanced that at that very moment I had my pony saddled to hunt up the cows which had strayed away during the night. Instead of going after the cows I went after the coyote as hard as my buckskin cayuse could go.

In the third mile of this contest the coyote began to get the better of the race. Also the animal was leading me into the rocky, scab land west of our place, where the rocks and the badger holes made my pony's footing insecure.

Suddenly, the horse shied violently, sidewise, at a black, circular hole in the rock. The hole was in the central part of a smooth, bare exposure of hard basalt, which was surrounded on all sides by sagebrush and tall bunchgrass. The flying pony had shot out of the bunchgrass with the black hole right in his path, and but for the quickness of his eyes and feet he would have gone into it.

This interruption to the chase gave the coyote decidedly the better of the game, in fact, almost in a flash he had vanished in the tall grass and sage. In was queer, I thought, to find that kind of a hole in that kind of a place. My first notion was that some one had started a well there. I saw at a closer glance that it couldn't be a well, for it was scarcely three feet in diameter. Also, a man who would start to dig a well in the middle of a patch of solid rock would certainly be crazy. I dismounted, tied my panting steed to a sagebrush and inspected this unusual hole. Immediately I became greatly excited, and forgot both the coyote I had been chasing and the cows I was supposed to be bringing home.

My mother, whose folks had moved from Kentucky to Illinois in pioneer days, had told me a good deal of the wonderful caves of Kentucky, particularly of the great Mammoth cave, which was somewhere near our ancestral stamping ground. Also, I had read a good deal of hidden treasures found in caves. These two things instantly ran together in my mind. I doubted not that I had found a cave, and that in the cave was just about such an assortment of wonderful things as I had read of in "The Arabian Nights."

I began my exploration with various precautionary measures against the presence in the cave of possible animals or rattlesnakes. It was an ideal lurking place for both. First, I cast stones into it, and waited there, ready to swing the bone handle of my quirt at anything that came forth. Nothing came.

Then I cast more stones and listened intently for the shell-like, metallic, purring sound which meant that a disturbed rattlesnake was giving me fair warning with the end of his tail. Nothing stirred—not even a mouse.

I then held myself over the hole by reaching out and grasping each rocky side with my hands, and craned my neck as far down into the dark opening as I could, remaining in that position till my eyes became accustomed to the blackness of the hole.

From what I saw it now appeared that the rock patch was in reality a huge, unbroken slab of solid basalt, partly circular and 20 to 30 feet each way. This big slab was two to three feet thick. It lay on a sort of gravel formation, which had settled under it, leaving the big slab serving as a roof over the hole made by the settling of the gravel and stones. The hole, almost exactly in the middle of the slab was circular, less than three feet in diameter, and pierced the slab where it was about two feet thick. I examined the sides of the hole very carefully. I noticed that the sides of this hole were discolored by the weather precisely as was the top of the rock, which indicated to me that the hole had been there about as long as the rock itself. Long and seriously I pondered the problem of how this hole got there and decided that some time, long ago, a meteor must have dropped out of the sky and made the hole. That explanation, as a matter of fact, may be as plausible as any.

Of course, the riches I had my mind set upon were concealed in the gravel under the big slab. Getting them was merely a matter of securing a spade and digging them out, which I decided to do at once.

However, the cows claimed prior attention. So I rode at top speed till I found them, and took them to their home corral at a rate of speed which was not good for their milk, I fear. It was quite late before I had finished milking them, so late that mother reminded me of it, and told me not to be so late again. Other tasks claimed my attention till after the noonday meal, and in the afternoon, when the coast was clear and I was unobserved, I saddled, rested the spade over my shoulder and struck out for the cave at a lively gait. As well as the spade, I had a couple of gunnysacks, the holes in which I had carefully sewed up; and each sack I meant to fill with the treasures of the cave.

Community Cooperation

Trading at Home Town Stores Aids Development

We have frequently heard the statement from folks living near a small town that they did most of their trading in some larger city. They explained that they did this because there wasn't a large enough assortment of goods in the small town stores. Some even said they could "do better" in the matter of prices by trading at the big city stores.

Granting the soundness of both these reasons for not trading with home town merchants isn't there another side to the matter? How can the local merchant expand his business and increase his assortment unless he has the trade support of the community around him? How can he meet the prices of city merchants unless his volume of trade will permit him to buy in larger quantities?

Such a condition makes a sort of deadlock. The local merchant can not offer you a good assortment because he doesn't get enough of your own and your neighbors' trade to permit his investing in a big stock for you to choose from. And because he is handicapped for the want of your cooperation, you continue to build up the business of the city store, thus continuing to hold back the advancement of your own community.

All of us are fundamentally selfish. Our first thought is to promote our own interests. Yet such are the basic laws of our modern civilization that each of us can obtain a greater measure of success by taking active part in community team work than we can working alone.

If you live on a farm you want good roads, schools, churches, telephone service, mail delivery and a convenient market in which to dispose of your products and from which to supply your wants.

If you live in a town you want, in addition to the above, good streets and sidewalks, wholesome amusements—those things that go to make a community worth living in.

These advantages are limited to the growth and condition of your locality, which is in turn dependent upon the extent of local trade activities.

Did you ever see a really good town that did not have good stores? The two go hand in hand.

Bear in mind that home trade is a most vital element in community welfare and progress. Consider carefully the fact that a portion of each dollar spent in local stores finds its way to some essential function for the support and development of the neighborhood, the general prosperity of which you must necessarily share.

Increased local business means the possibility for securing additional modern public conveniences and luxuries, additional trading, educational, religious and social advantages, consequently increased individual wealth and opportunity.

Your local merchants are entitled to your patronage provided they offer you the right kind of merchandise at the right price, and you owe it to yourself and your community to extend it to them.

SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

What You Ought to Do If You've Frequent Headaches

Dr. Hirshberg

When you begin to realize that you have a forehead or even the back of a head, it means that all is not well along the corporate limits of the human Wabash. Health is as it should be only when there are no ailments and complaints in or about the head and you are scarcely aware that a "dome" surmounts your shoulders.

Two of the most general sources of headache are late hours or loss of sleep and nocturnal eating. Other things being equal, the individual who retires, even if he does not sleep, at 8 or 10 o'clock without a bite to eat, seldom complains of these abominations

Next in the list of causes is constipation. The victim whose stomach and intestines are not emptied once or twice a day, drags a burden of decomposed waste around with him, relatively as heavy as Sinbad's little old man of the sea. A headache comes as a warning symptom, a red-light, to notify you that if help is not obtained, in the slang of the day, "the worst is yet to come."

Various Other Headaches.

Fevers of almost any origin, if they rise much above 99 or 100 degrees, or last more than a short time, may give rise to headaches. Loss of rest, exhaustion and fatigue cause a dull headache. The headache of fever usually throbs very intensely.

The "unbearable" headache is one common to excitable, emotional women, whose overwrought feeling and strenuous, monotonous life give them little sunlight, counter-irritants of relaxation or recreation in the open.

There is also a headache, not by any means rare, due to too much pleasure, excitement and high pressure in the blood channels and in the glands. This appears frequently in the post-Apollo days, namely, after 30 or 40 years of age.

Affections of the nose and its passageway, the sinus or chamber of the forehead bone above the eyebrows and in the cheeks, invite headaches, particularly when there is an obstruction to the outlet of mucous.

Various maladies of the nose, teeth, kidneys, ears and nearby structures, give rise to headaches. If pus and microbes invade any of these places, their poisons and other excess products may be the origin of headaches.

Methods of Cure.

Anemias and deficiencies in the quality of the blood are at times accompanied by headaches. The treatment of the pain calls for rich rations, iron in foods, sunlight, fresh air and sleep in the open.

Ice bags, rest, much sleep, especially out of doors, cold showers or baths, a diminution in the quality of pabulum, with omission of soups, coffee, tea, tobacco and liquors, is a plan, if followed, that will relieve a headache more successfully and with less possible injury to the human anatomy than almost any "ready relief," "headache cure," pill, powder, tablet or drink.

Salt, laxatives and drinks of such natural waters as will cleanse the intestines and stomach of all accumulations, proper illumination for work, reading and study, and eye glasses that will correct any possible error of sight, these are all aids in the treatment of the symptom recognized as a headache.

Vassar Girls

Grow 4000 Bushels of Potatoes

Twelve Vassar college girls have a record in food production this year that may lead opponents of college education for women to change their minds. Vassar is the long-time famous girls' college at Poughkeepsie, N. Y. It has extensive gardens this season, and 12 students cultivated them. Superintendent L. P. Gillespie reports that the produce of their labors will carry the 1100 students, the faculty and live stock over to another harvest. The girls grew 4000 bushels of potatoes, and have six acres of white beans, four acres of soy beans, four greenhouses of lettuce, 600 bushels of tomatoes, eight acres of sweet corn for drying, four acres of asparagus, 10 acres of field corn for meal, and a great hoard of carrots, eggplant, turnips and other garden truck.

The news dispatches omit saying whether the girls employed men laborers, but even if they did, their achievement is most creditable, and will make the girl students in our western agricultural colleges "sit up and take notice.'

Butter Price Doubles in Holland.

That butter has more than doubled in price in the Netherlands since the war began is indicated by the present government order fixing the maximum retail price at 1.30 florins, or 52 cents, a pound. Before the war the price ranged between 20 and 36 cents a pound, according to variety or quality. The prescribed maximum price of 52 cents is also the actual minimum (for sellers in present circumstances will charge the full allowance), and can be compared with the 20 cents of peace days.

Premium on Best Things

For Best Thoughts, Best Crops and Best Stock

Nothing should ever be done to bring the efficient man, the industrious man, the intelligent man and the man who takes the utmost care to produce the best and put it up in the best way, down to a level of the average. Nature puts her premium on the best; it is God expressing his approval of honesty and efficiency.

By GRANVILLE LOWTHER.

The minimum, the average or the best—which?

When we read the government's reports of averages in the fruit business they seem discouraging to the man who is trying to bring his orchard up to the highest standard of production and profit, because they present so many factors necessary to success—so many natural conditions in which there must be proper adaptation. There are so many labor problems, so many marketing conditions, so many transportation problems, so many weather conditions, and at last the financial situation of the world which gives to the masses purchasing power or lack of it. Yet this man striving for the best is the one who will survive and at last succeed where others fail, because he informs himself by means of reading, observation and experience while the minimum man or the average man will not study the conditions under which he is placed, the laws that insure success and become adapted to his environment. "The survival of the fittest," a law announced by Charles Darwin, is eternally true; and no objections on our part, no grumbling, no statute laws, no social organizations, no political movements can repeal it, reverse it or avert the coming of its consequences.

Here is where certain labor organizations are working against natural law, and where they will eventually be beaten at that point; because no man, no organization of men, no nation nor all the nations combined can beat nature. With her an an hill or a nation, an atom or a planet, a combination of nations or systems of worlds are alike in this, that all must keep the laws or die.

Now this is not against organized labor as such; for I believe in labor organizations, farmers' organizations, organizations of capital, trusts, combines, the coordination of small governments with big ones, as steps in the evolution of society toward a more equitable distribution of the profits of labor, steps in the elimination of nonproductive labor, destructive labor, speculators and parasites; so that the road between producers and consumers will not be lined with confidence men, hold-up men and robbers. But when the labor union fixes a standard of efficiency beyond which its members must not go, no matter what his ability, and that standard adapted to the capacity of the minimum man or the average man, they are attempting at their own peril to reverse the engines of the world's progress.

England had this condition to meet when the war broke out; when the strong men wanted to work more than eight hours and were not permitted to do so; when they wanted to do piece work and do more than the average in order to meet the strenuous demands of war conditions; but if they did they were disgraced by their organizations and their lives endangered. At a time when it would seem that patriotic motives would require every one to do his best, the strongest men were not permitted to work up to more than half their labor power, for the standard fixed was a standard rather below than above the average.

An Average in Orcharding.

Now suppose we had an organization of orchardists based upon the idea that no orchardist should exceed a certain quantity of fruit per acre, nor exceed the average in quality, in order that the section not well adapted to fruit growing and the men not intelligent or efficient might put their fruit on the market at a profit. What would be the effect on the fruit industry? In such a case a box of apples is a box of apples. No one is required or even permitted to market better apples than the standard adopted. No one is permitted to grow more per acre nor to sell for a higher price than the average. This might happen if the fruit growers of the country were as well organized as some other industries; bit if it did it would be the end of progress until the rule was revoked.

Pooling Fruits.

There are certain fruit associations, horticultural unions and marketing institutions that have adopted a plan of pooling that is open to the objections I have urged against certain labor organizations. According to the plan adopted the grower loses his identity entirely, and the marketing agency becomes the responsible guarantor for the quality of the fruit. Under this plan the member of the marketing agency who produces fruit that will barely pass and the one who produces fruit that might take a premium at a fruit exposition are sold at the same price, notwithstanding the fact that if the quality of the fruits could be known by the purchaser one would bring in the markets twice as much as the other. The trouble with that system is that it destroys the incentive to the production of better fruits in so far as a money consideration can destroy it, and makes a grower feel that if he is only to receive an average price he will produce only average fruits. In fact, there is an element of injustice in allowing a man to put on the markets an average pack and quality, at the same price as that received for a superior pack and quality, because he is getting more than he deserves; or, if he is not, the other is getting less than he deserves. I know the arguments on the other side and appreciate their force; but I know, too, that they are violating the laws of progress, fighting against a natural law, and that the consequences are destructive in their nature. Nothing should ever be done to bring the efficient man, the industrious man, the intelligent man and the man who takes the utmost care to produce the best and put it up in that way down to a level of the average. Nature puts her premium on the best; it is God expressing his approval of honesty and efficiency.

According to the United States census of 1910, the number of apple trees of bearing age was 151,322,640. The number of bushels reported from those trees was 147,522,318, or less than one bushel per tree. Our orchard that year yielded us about five bushels per tree, and we would be very sorry to have been reduced to the average. The value of those apples was $83,231,318, or a little more than 50 cents per bushel—to us less than the cost of production.

The same year there were reported 94,506,675 peach trees of bearing age, producing 35,470,276 bushels, at a value of $28,781,078, or less than 30 cents per tree. This to us would not pay the cost of pruning, spraying and boxes.

That year the report for the pear crop of the United States was 15,171,524 trees of bearing age, producing 8,803,885 bushels, valued at $7,910,600; or a little more than 50 cents per tree. W. P. Sawyer of Parker, in the Yakima valley, reports that the lowest returns he has ever received from his pear orchard was $148 per acre. Mr. Sawyer says: "For the period of eight years my average returns were $585 per acre, and then for a period of six years I averaged $647 per acre." What shall we do, bring ourselves down to the average, or try to reach the high standard reached by Mr. Sawyer?

A few days ago I saw a man from the Horse Heaven country, and he reported that wheat was burning up on account of drouth. One wheat grower there had 600 acres he would not cut. Last Sunday I rode past a field of about 20 acres that I am sure will yield 80 bushels per acre. It had been irrigated, had grown a large stem—had long, large, well-filled heads of ripened, yellow grain. There is a condition of dry land farming on the one hand and irrigation on the other; but they all go into the averages of production. I am told that there have been grown in the state of Washington 117 bushels of wheat per acre, but the average crop for the United States is 17 bushels per acre.

A farmer in the state of Washington is said to have produced 184 bushels of oats per acre, but the average in the United States is 38 bushels per acre.

The yield of white potatoes in the United States is 96 bushels per acre, covering a period of 10 years. California has produced, according to department figures, 790 bushels, Washington 743 bushels, and one man reports that he saw last year on the Yakima reservation 833 bushels per acre.

Jerry Moore of North Carolina, "the corn king," grew 212 bushels of corn per acre on land that had only produced under ordinary treatment 19 bushels per acre.

Lee Booth of North Yakima made boxes for us last year during the apple-picking season; and one day he made 800 boxes in 10 hours. This is so much above the average that the average man will not believe it; but I can prove it, and that ends it.

What Is All This About?

I am trying to stimulate to greater effort for greater efficiency in all departments of work and to discourage any effort to standardize efficiency, labor power, land production or anything else requiring skill, industry, care, intelligence, etc. I argue that we should pursue a course that will develop all that is best within us rather than discourage its development.

Socialists are charged with trying to reduce all persons and all production to the same level. That may be true with some of them, but not of all. I am somewhat socialistic in my philosophy, believing that the fundamental principles embodied in socialism are the most equitable, just, ethical and Christian of any of the philosophies of government, and that in the process of evolution we are approaching it. But if socialism were the policy of human governments today, and if the "dead level" theory of standardization were adopted, the race of mankind would start on a downward course of degeneration. We must have a premium on the best things; we must read the best books, think the best thoughts, produce the best crops, breed the best stock and attain to the highest possible standards. This is the law of "Eternal Progress."

What Kind of Team Do You Drive?

By PAUL E. TRIEM

When Jim Gardner came home from the city to spend his first vacation he brought with him novel ideas concerning life. Jedro Gardner, the bachelor uncle with whom Jim had lived for months at a time during his boyhood, looked with kindly interest upon these evidences of a changed viewpoint.

"You aren't getting fast, or wild, are you, Jimmy boy?" he asked dubiously. "I don't know—some of these things you talk about don't strike me as being just exactly connected with business, and getting ahead, and all that."

Jim smiled tolerently. "A man can't put in all his time trying to get ahead, Uncle Jed," he explained. "The modern doctrine is that recreation is just as important, in its place, as work. Every man must have a hobby as a sort of corrective or team-mate for his regular business."

Mr. Gardner nodded, apparently convinced, and said nothing more about the matter for the time.

A few days later, when the two men started out on a fishing expedition in Jedro Gardner's buckboard, Jim flicked the whip toward one of the horses.

"A new one, isn't he?" he inquired. "I don't remember your having a strawberry roan before, Uncle."

"Yes, he's a new one. Old Bill had to be retired on a pension, and I bought this fellow from a trader. Ought to have known better, I suppose—hello—look out for your head, Jim!"

Jim ducked without waiting for this warning, for the strawberry roan, without so much as a squeal, had launched a pair of steel-shod hoofs at the dashboard. Next moment, having failed in his purpose of wrecking the rig by a direct attack, he stopped with precipitate suddenness.

"Go on, you sulky beast!" Uncle Jedro roared, slapping the roan with the lines. "Come—move, will you?"

The recalcitrant's ears settled back and he arched his neck.

"Why, he's balked!" Jim said. "Now what are we going to do?"

He followed his uncle out of the buckboard, and together they applied such emergency remedies to the balker as custom suggested. Jim pried his mouth open and threw in a handful of road dust, then tried to stampede the roan into starting while his mind was occupied with this indignity. Mr. Gardner whistled in his car. Then they both tried to pull him forward by main strength. The strawberry roan had planted his hoofs immovably, however, and merely stretched out his long neck as they tugged, puffing, at the strap. Afterward they sat down by the side of the road to await his pleasure.

By the time the roan finally shook himself and began to paw restlessly at the dusty road the time for fishing had passed. Silently the two men climbed into the buckboard and turned back toward home.

"I can't see why you tried to drive that outlaw today," Jim mumbled disgustedly. "You could have hitched one of the other horses in with Mike."

"Well," his uncle replied, "maybe I was thinking of that theory of yours about hitching a good horse in with a bad one to act as a corrective. Yes, Jim, I guess it must have been that!"

Jim stared. "I never said anything about horses," he declared.

"No, I guess not. Of course the team you were talking about was recreation and work, but the principle is the same. I wanted to see how it would work—Mike, here, has always been a good horse, and I thought he might kind of counteract the roan's cussedness."

Through bushy brows his eyes twinkled out upon this companion.

"Jim," he said, "it's too bad to have spoiled your fishing trip, but the same thing happens on a bigger scale sometimes and spoils a man's life. Work isn't just the right sort of horse to drive single, perhaps, but work and dissipation, even if it isn't anything worse than late hours and 'sporty' neckties, is lots worse. To succeed in this world a man has got to make work the big horse in his team; and the light horse has got to be one that pulls in the same direction, too—a man's hobby can be constructive, and must be if he is to drive this team of work and play to the goal of success."

Jim grinned sheepishly.

"And you think my hobbies are strawberry roans?" he commented. "Well, if they are, I guess I'll get rid of them. Life isn't long enough for balkers."

GREAT STORY BEGINS NEXT WEEK

So important is it for a reader of a serial story to begin with the first chapter, The Farmer wishes to call special attention now to the opening next week (October 11) of its great winter story, "The Barrier," by Rex Beach. In order to assist those who miss the beginning, a synopsis will be printed each week for a few chapters. But no reader can afford to miss the actual words of this famous author—the scenes he depicts and the gripping manner in which he depicts them. Plan an evening with "The Barrier" next week. Read one chapter and we'll never have to remind you of its coming the following week. It is a stirring, engrossing narrative of the cold, rigorous northland and the rugged people that braved it.—Editor.

CONSERVE BIRD LIFE.

Exhibit Is Shown to Fair Crowds.

An appeal for the conservation of bird life was made by a most interesting exhibit in charge of Mrs. Granville Ross Pike at the Washington State fair this fall. Still-life birds of every description make a beautiful booth. These, surrounded by evergreen trees and other plant life, bring into vision the wonder and beauty of Washington bird life. The exhibit contained models of garden bird-feeding devices, bird houses and other devices designed to attract and protect the feathered creatures from destruction. Women's hats, made beautiful without the use of bird plummage were shown as well as a large collection of aigrets recently confiscated by federal authorities. Among these was a whole bird of paradise which at one time was worn by a prominent society woman. In this exhibit was a collection of mounted Washington rodents loaned by George G. Cantwell. This proved especially interesting to farmers and a study of their habits and the means of destroying them proved especially profitable.

Besides the still life exhibits under Mrs. Pike's supervision was the fine collection of live game birds from the state game commission.

Our Duty To Do Our Bit.

To the Editor: At the present time we see the need of saving and making the most of everything in general and I will give my way of doing some things on a ranch.

Every one should have a good vegetable garden to supply the table during the summer and also prepare a supply for winter use. I can green peas, beans, corn, tomatoes and rhubarb, also dry all of the same. Those who have never tried drying vegetables would be surprised how easily it can be done and how delicious they are. For drying I prepare them same as I would to cook and serve. Then I pour boiling water over them and let them stand for about one minute at the boiling point. Then I drain them well and place on plates and place about the range where they will be warm, but not hot. When dried put in paper sacks. When preparing them to eat, cook the same as when green, only cook longer. Potatoes can be dried also. Cook, mash and place on plates to dry same as vegetables and this will often help a tired housewife out with a nice bowl of potato soup for supper. I have never tried drying tomatoes, but believe they would be equally as good for soup. Squash and pumpkin, I always dry, and find the pies made from them are always relished during the winter months. The last winter I kept squash until May. I picked out nice ripe ones, with no bruised spots. I put them on shelves in a warm stairway. They will not keep so well in a cellar, but need a warm dry atmosphere.

For a substitute for citron I take the hard part of water melon, cut it up in small pieces, put on plates, sprinkle with sugar, give it all the sugar it will absorb while drying. I dry all kinds of fruit. Where one has no fruit drier they can make frames, tack their cloth over them and hang them above the stove. I use the dried, sweet cherries for raisins. I cook them thoroughly, then drain them, sprinkle with sugar and let them remain in sugar for a time. I use them for every purpose as I would the ones I buy at the store. I never let any vegetables go to waste and I also make the most of every foot of ground. When I plant my radishes I also sow onions in with them and when the radishes are gone the onions have a nice start. Between the rows of lettuce I plant beans and when the lettuce is gone I have my row of beans and with the early potatoes as soon as they are used I replant the ground again. This way I always have the two crops of potatoes from the one piece of ground. The pole beans I plant among sunflowers. Plant the sunflowers so they will get a start before planting the beans. Take off the lower leaves so the beans will not be too shaded from the sunflowers. In this way it saves the sunflower seed for chicken feed and the stalks make good firewood.

Every one should have a good supply of sauerkraut in their cellar. I find some object to it as being hard to digest. I believe that largely is because it is not properly cooked. It should be boiled for two hours at least, seasoned with a little piece of pork. I find no bad results from it when so cooked.

I see no reason why every one should not have plenty and to spare if they but make an effort. Make our homes attractive at the same time with flowers and shrubbery. I receive compliments every day on the beauty of my flowers as well as on my nice garden. Those much younger than I am could certainly do as much. It is a duty to ourselves and others that we all do our "bit."

Grape Juice

By Mrs. H. W. Reaugh.

Grape juice may be made from several varieties of grapes, but the best is made either from the Concord or Warden variety. Wash the grapes thoroughly and remove any spoiled ones. Put in a large pan and mash with a potato masher, then put grapes on the stove and let them heat very gradually until the grapes get to 150 degrees, then do not let them get any hotter. Let them remain at this temperature until the juice is well colored then strain through a jelly bag or lard press. Heat in top of double boiler for 20 minutes, seal in sterilized jars put juice in sterilized jars and heat for 40 minutes in wash boiler. Be careful that the water does not boil, but remains at about 180 degrees. When it is steaming well seal and store in a cool place.

After juice has stood for some time a sediment is found in bottom of jar; the juice can be carefully poured off and reheated and sealed.

The reason for not boiling the juice is that when heated for a longer time at a lower temperature the natural flavor of the grape is retained.

I love to muse o'er meadows newly mown,
Where withering grass perfumes the sultry air;
Where bees search 'round, with sad and weary drone,
In vain, for flowers that bloomed but newly there;
While in the juicy corn the hidden quail
Cries, "Wet my foot"; and hid his thoughts unborn.
The fairy-like and seldom-seen land-rail
Utters "Craik! craik!" like voices underground.
Right glad to meet the evening's dewy veil
And see the light fade into gloom around. —John Clare.

Electric Light in Aquarium.

The old-fashioned aquarium is giving way to pretty shaped tanks, sometimes illuminated with electric lights which change their color automatically.

Crochet and Tatting Designs

By WINIFRED WORTH

BATH TOWEL

Easy to make and with the edging will make a most beautiful gift. Medallions are of French knots with lazy daisy stitches.

Detail of work. Beginning in center make 5 rings equal distance apart. For these a 25c piece was used. Fill rings very compactly with French knots. Connect rings, and finish each end of towel with lazy daisy stitches. Any color can be used; or two contrasting colors. Also feather stitching can be used instead of lazy daisy.

Detail of Edges on Bath Towel.

It lends completed beauty to this attractive piece of toweling.

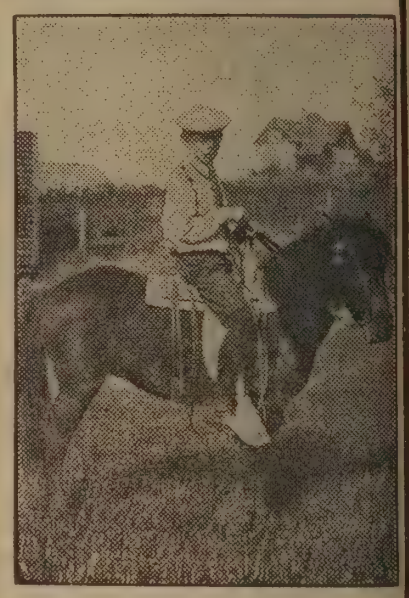
1st Row—Fill end of towel with dc. for foundation.

2d Row—Ch. 8, skip 2 dc., 1 tr. in 3d dc., ch. 2, 1 tr. in next 3d dc., repeat length.

3d Row—Ch. 3, 2 tr. over last ch. 2, 1 tr. in top of tr., ch. 2, skip 1 open mesh, fill next mesh and repeat to end.

4th Row—Chain 3, 2 double tr. in first open mesh, ch. 2 double tr. in same mesh, fasten by sl. st. in center of 4 treble in preceding row; repeat to end of work.

5th Row—Using some color, 2 dc. 1 p. 2 dc., 1 p., 2 dc., 1 p. 2dc. in each shell of preceding row.



Taking Pictures

is lots of fun if it don't cost too much money. You can begin to take pictures without spending a cent by getting one of our

Premo Junior Cameras

which we are giving away absolutely free if you secure two **yearly** subscriptions to this paper for one year each, at $1.00.

This little camera takes very good pictures and it is manufactured by the Eastman Kodak Co., so it must be good. You will have lots of fun with it and you won't find it expensive to operate. Get one today—it's easy.

Takes picture this size.

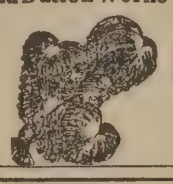
Ham Scraps With Tomatoes.

Ham scraps, four tomatoes, salt, pepper, flour, one cup milk.

Cut into tiny pieces the fat that was removed from a slice of ham, and try out in a frying pan. Remove scraps to a plate, and in the fat saute tomatoes. Tomatoes should be cut in halves, sprinkled with salt and pepper and thoroughly dredged with flour. When heated through, but not too soft, remove to a plate, and to fat in pan add two tablespoons flour. Stir until smooth, add milk, stir until boiling point is reached, season to taste with salt and pepper, and pour into a hot platter. Sprinkle with the reserved ham scraps, and on top arrange slices of tomato. Put in the oven a moment and reheat before serving.



Scorch Stains.

To remove scorch stains wet the scorched place with soap and bleach in the sun.

Sampson's Feather and Button Works

Baste your garments and parcel post to us. We will hemstitch and picot them and make buttons to match. Special attention to mail orders. All work guaranteed.

Standard Oil Company (California)

PERFECTION OIL HEATER

My Dear Corner Children: I want to say just a few words about laughing. I like to hear boys and girls laugh. It sounds cheerful and seems to say they are happy. It is healthful, too. The doctors say that laughing is good for us. But that isn't the reason we laugh. It is because we feel good.

But there is one kind of laugh that I do not like, and that is the laugh that is intended to make fun of somebody—the laugh of ridicule, it is called. Did a little boy slip and fall down in the mud? I have heard children laugh at him, but he did not feel like laughing. If a little girl is embarrassed or hurt, the laughter that others make isn't the right kind of laughter.

Let us laugh a lot, but let us always laugh the kind sort. Write me what you think about it. Your loving
AUNT NELLIE.

Evis' Pet Dog, Ponto.

Dear Aunt Nellie: I have not written for a long time, but will try again. I have written two letters, and both have been printed, for which I am glad, and I hope this one will be put in print, too. We have five milk cows, whose names are Tutsey, Nova, Daisy, Flossy and Beauty. We sold two this summer, whose names were Pansy and June. Our heifers' names are Dell, Lily, Fern and Deena. We have two calves named Jean and Pride. The picture I am sending you is of my dog, Ponto. He can do many tricks, such as open and close a door, walk on two legs, sit on a chair, and cry, creep, sit on his haunches and hold his nose still till we put a piece of bread on it, when he throws it up and catches it, and many other things. We have two cats and five kittens, of which only one is named. We call it Etta Would-Be. The cats' names are Millie and Harriet. I am 11 years old and my birthday is February 22. I am in the seventh grade at school. I have three teachers, whose names are Mr. Stewart, Mr. Jager and Miss Strech. I like Mr. Stewart best. My vacation was not of the very best, as we all took down with measles. I have had them twice.—Evis Erickson, R. R. 2, Box 108, Lynden, Wash. (Aunt Nellie was very much pleased with the picture of your pet dog. Thank you for it, and be sure to write again.)

June, the Faithful, Is Their Cow.

Dear Aunt Nellie: I love to get The Farmer so I can read the letters in the Children's Corner. I am very interested in the letters I read and would love to be one of the writers. I live on a 40-acre farm five miles east of Farmington, Wash. I live in a brown house. I am 13 years old. My birthday was the first of August. I am in the eighth grade. I have one and one-half miles to go to school. My teacher's name is Miss Rawson. I live one-half mile from the tall mountains. I have one cow. Her name is June the Faithful. We call her that because she comes home so faithfully every night. I have one sister. Her name is Clarine and she plays the piano. I have two brothers, one six years old, named Carl, and one brother 10 months old, named Darrel. I have a fair complexion, have blue eyes and brown hair.—Cora Agnes Draper, Route 11, Box 84, Farmington, Wash.

Hazel Likes Outdoor Work.

Dear Aunt Nellie: I am a little girl 12 years old the 26th of February. I am in the sixth grade. I live on a 640-acre farm. We have 15 head of horses and mules and 20 head of cattle. We have thoroughbred Poland China hogs. There is a large lake near our house in which my sisters and I bathe. I can swim a little. I have four sisters. I can do all kinds of housework and field work, too, but I prefer outdoor work. I shocked hay for papa while he ran the binder. I cooked for him and six other men while they were putting up hay. Do any of you want to know how I look? I am tall and thin, have big, blue eyes, brown, curly hair and freckles. I like to dance, ride horseback, read, draw and make playhouses. I have rabbits, a little colt, little calves, cats, chickens and ducks for pets. I would like to hear from any of my cousins.—Hazel Colbert, Lake View Farm, Tonasket, Wash.

There's No Place Like Home.

Dear Aunt Nellie: I have written to the Children's Corner several times before. I am 12 years of age and in the seventh grade. I live on a farm of 840 acres. The subject this time I have chosen is "Home." Some people are dissatisfied and leave home to seek pleasure; but pleasure may be found at home. Some people think of home as just a place to exist, but it is far more than that. Home is father, mother, brothers and sisters, and a place which will always hold fast in our memories. We must enjoy our time while we are at home. Then when we grow older we can look back to our happy childhood days. When we are away from home we get lonesome for our folks and for home. Thus it is as the author John Howard Payne has written, "Mid pleasures and palaces though we may roam, be it ever so humble, there's no place like home! A charm from the sky seems to hallow us there, which, seek through the world, is ne'er met with elsewhere. Home, home, sweet, sweet home!"—Harvey Norris, Goldendale, Wash.

Awfully Glad to See Father Again.

Dear Aunt Nellie: I am a girl 10 years old and will be 11 November 29. I have light brown hair, light blue eyes, light complexion, weigh 120 pounds and am four feet 11 inches in height. I am very big for my age, but not stout. I can not hoe in the garden, so I get out of that. Have I a twin? If I have I should like to hear from her or him, whichever it happens to be. I wish some of the girls and boys of my age in the Corner would write to me, for I like to get letters. I thank Aunt Nellie for trying to help the cousins keep the Children's Corner in The Farmer. I will try to make my letter long this time and have a good one, for I want to earn a prize. One of my little classmates got thrown off a horse in the mountains when hauling wood and got his leg broken. He is the same age as I am. His name is Colby Wilkins of Grangeville, Idaho. I am sure he would be glad if some of the cousins or Aunt Nellie would write to him. My pape is in Spokane, but is coming home tonight. I will be awfully glad to see him.—Eveline Vida Dahl, R. F. D. No. 1, Box 24, Grangeville, Idaho.

Much Fun in the Country.

Dear Aunt Nellie: This is the third time I have written. I think the Children's Corner is the best page in the paper. Our school started the 17th of September. We have two teachers. Mr. Stram has the higher grades and a lady teacher has the lower grades. Our school has 10 windows on the scuth and a folding door to divide the room. I wish I could win a prize. I will try to win. I asked my friends to write, but I do not know whether they will or not. I am going to try to get the kodak if any one will subscribe for The Farmer. Since I wrote to you the last time the thresher came and threshed our wheat. We got 1800 bushels and some sacks. Papa hasn't hauled any wheat yet. He is hauling straw now. I help mama with the cooking and other things. I like to cook. Saturday Elsie, Victor and I picked pears. I have very much fun in the country.—Marie Ganguin, Goldendale, Wash.

You Are Welcome, Eddie.

Dear Aunt Nellie: I have never written to the Children's Corner before, but I think I will be welcome. I have just started reading the Children's Corner recently and am much interested in it. I am 14 years old and am now in high school. My birthday is the 19th of February. Have I a twin? If so, I would enjoy hearing from them. There are 10 acres on our farm. I have 32 rabbits, 35 hens, one dog and one cat. I wish that every little boy and girl would do something for their country. If it wasn't more than raising a small garden it would help. I am proud of the soldier boys of Uncle Sam and we who stay at home should be willing to raise food for those that go to Europe and fight. So next spring let's each one of us raise a garden and do our bit in winning the war.—Eddie Blakeslie, Wauna, Wash.

Vacation at Home on the Farm.

Dear Aunt Nellie: It has been some time since I wrote to the Corner, but have enjoyed reading other children's letters. I haven't noticed but one letter, besides my own, from Waitsburg. School closed May 22. I spent my vacation at home on the farm. I was promoted to the fifth grade. I will be very glad when school starts again, then I can study my new books. I am nine years old. I ride horseback to school. There were four other horses besides my pony. Those two stories that are now being printed in the Farmer are very interesting and I can hardly wait till the day the paper arrives.—Laura E. Hatley, R. F. D. 2, Waitsburg, Wash.

Of Course You May Be a Cousin.

Dear Aunt Nellie: This is my first time to write to the Children's Corner. I am a little girl, nine years old, and in the fifth grade. I have five brothers and two sisters. Their names are Frederick, Anton, Carl, Melvin, Richard, Delma and Eveline. I never have written to the Children's Corner before, but hope I may join and be one of the cousins too. I would like to have all my letters put in The Washington Farmer because we get the Washington Farmer, although we live in Idaho. I live on an 80-acre ranch. We have 30 head of horses and 20 head of cows. I have two calves and one cow. I call my cow Lindy and my youngest calf Spotty and the oldest one I call July. We milk five cows. Their names are Lily, Beauty, Blacky, Buttercup and Lindy. We have four calves.—Violet Dahl, Grangeville, Idaho.

A Picnic at Horseshoe Bend.

Dear Aunt Nellie: I have been visiting my sister-in-law at Roo's Mill and next week I am going to visit my sister in Seattle. Now I am going to tell about our Sunday school picnic at Horseshoe Bend. We started quite early in the morning. We had a large dinner at noon and as much ice cream as we could eat. In the evening we went home at 4. We have three horses. Their names are Prince, Kit and Dolly. Prince and Kit are coal black and Dolly is brown. We are renting this farm with 20 cows. We are milking 24 cows, for we have five of our own. We have about 50 chickens of our own and four ducks. We were trying to raise three turkeys and seven more ducks this year, but they all died. We have 10 calves of our own. Their names are Pansy, Sweetpea, Darling, Blossom, Lily, Bell, Star, Queen, Molly and Fanny. I am going to have two bantam of my neighbor, because I helped her this summer. I have six brothers and five sisters. Two of my brothers are married and one of my sisters. One of my brothers who is married lives at Roo's Mill and one at Seattle. One of my other brothers works in Montana.—Emma Brune, R. R. 2, Lynden, Wash.

Earns Money Selling Onions.

Dear Aunt Nellie: I have been reading the Children's Corner for some time. This is the first time I have written. I hope to see my letter in print. I will now tell you how I earned my spending money. My father has a large onion patch and he told me if I would help weed and thin them I could have all the money I could make selling them. I soon got a regular customer who took 25 cents worth every Saturday, so I got 25 cents a week for spending money. For the last two weeks I have been picking hops, making $10 a week. I start to school next Monday. I am in the seventh grade and am 13 years old the 12th of September. Have I a twin? I would like to correspond with any one of my age. I may write again.—Helen Calkins, R. F. D. 1, Box 136, Sunnyside, Wash.

Lives Near the Lewis River.

Dear Aunt Nellie: I am a girl in the seventh grade. I go to Marble Creek school, which is situated on a hill. There are only nine pupils going to our school this year. My teacher's name is Miss Edna Hammarlund and I like her very much. We live one-half a mile from the Lewis river. I like to go boat riding, but not fishing.—Pearl Waldren, Reno, Wash.

Raymond's Second Corner Letter.

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I am 8 years old. My birthday is the 7th of March. I am 4 feet and 11 inches tall. I weigh 75 pounds. I have dark hair and blue eyes. I live on a 750-acre farm. I have one brother. His name is William. He is 16 years old. The crops around here are not good.—Raymond Geissler, Odessa, Wash.

Lila Rides Horseback to School.

Dear Aunt Nellie: This is my first time to write to the Children's Corner. I like to read their lettrs very much. I am a little girl 11 years old. I have a brother seven years old and a sister nine. Their names are Wesley and Viola. I live on a farm of 1560 acres. We have 47 head of cattle, 11 calves, 11 horses and 22 pigs. We live two miles from school. I am in the fifth grade. We ride horseback to school. Our teacher's name is Miss Laura Brown. I like her very much.—Lila Muriel Smith, Mold, Wash.

Picnics Up in the Mountains.

Dear Aunt Nellie: I love to read the Children's Corner and I would like to join it awfully well. I am 11 years old. My birthday is in August. I live one and one-half miles from school. My teacher's name is Miss Rawson. I am in the sixth grade. I live on a 40-acre farm. We have two horses. Their names are Queen and Maud. I have 24 chickens. They follow me all around. We have two cows, their names are Cherry and Dinah. I have one sister and three brothers. I have brown eyes and brown curly hair. We have great sport up in the mountains hunting cows and having picnics. The winter months are spent by skeeing and coasting.—Eva Hickman, R. R. 1, Box 68, Farmington, Wash.

Gladys Is a New Cousin.

Dear Aunt Nellie: This is the first time I have ever written to the Corner. I enjoy reading my cousins' letters. I live on a 750-acre farm, eight miles from Waterville. We have a large grain elevator. It was built last summer. I have one brother and two sisters. Their names are Charles, Edna and Ethel. Charles is 7 years old, Edna is 10 years old and Ethel is 5 years old. I will be 13 the 12th of October. I am 5 feet and 3 inches tall. Have I a twin? I like to read the stories that are in The Farmer.—Gladys Slusser, Waterville, Wash.

Which Road Is Yours?

An Earth Road which requires at least a 218-pound pull to each ton

A Concrete Road which requires an average pull of only 27.6 pounds to each ton

IT takes a pull of 218 pounds on your team to get a 1-ton load over the road on the left, when you can get over it at all. In wet weather you can't get over it at all; even in dry weather it is rough and dusty. On the right, where the road has been paved with concrete, it takes a pull of only 28 pounds. It never takes more than that in the worst kind of weather—winter or summer—because it is hard, clean and even.

Which Road Do You Want?

Tests showing how many pounds in pulling power per ton of load is required on various types of road surfaces were made for the Good Roads Bureau of the California State Automobile Association by Prof. J. B. Davidson, Division of Agricultural Engineering of the University of California. They are summarized as follows:

	Pounds
Over a level, unsurfaced concrete road	28
Concrete base, ⅜-inch skin top asphaltic and screenings	49
Waterbound macadam, level, good condition	64
Concrete base, 1½-inch Topeka top, level, good condition	68
Gravel road, good condition, level	78
Earth road, fine dust, level	92
Earth road, stiff mud on top, firm underneath, level	218
Loose gravel, not packed down, new road, level	263

CONCRETE ROADS
Their Advantages
No Mud—No Dust
No Ruts—No Holes
No Slipping
No Skidding
Easy Hauling
Smooth Riding
Long Life Safety
Always Ready for Use
Low Maintenance
Moderate Cost

Big difference, isn't it? You pull on a concrete road, where you pull against an unimproved, rough or boggy surface. Where one wastes power, the other saves. Power costs money, whether you feed a team or buy gasoline. Your saving in power will pay your share of the cost of a concrete road.

Be sure you know what a concrete road is. Concrete is made of portland cement, sand and pebbles or crushed stone, and water. It is hard and durable. Concrete is the material used in dams, factories, bridges, and big engineering works like the Panama Canal requiring great solidity and strength.

While you are thinking this matter over, write us for Bulletin 136. It will help you decide the matter in a way that will cost you less—everything considered—than the old type of road is costing you now.

CONCRETE FOR PERMANENCE

Waste of Straw and Stover

Sufficient to Maintain Thousands of Animals

By WILLIAM HISLOP, W. S. C.

Whether one goes east or west, north or south, the most contented and the most progressive farmers are those who have handled some class of live stock continuously year in and year out, utilizing it to convert the grass, hay, straw and some grain into a more concentrated farm product. Happily one notices a growing desire on the part of farmers to feed on the farm the unmarketable roughage which is a necessary adjunct to grain farming. They are beginning to realize the tremendous waste of straw and stover—the by-products of such crops as wheat, peas, oats and corn—which takes place annually throughout the country. Such raw materials are sufficient to maintain thousands of animals in good, thrifty breeding or store flesh. Their real cash value is as yet an unopened book to 95 per cent of farmers. In America milk and meat are produced largely by the use of grain. In Europe, grain has a higher comparative value as a human food, consequently meat and milk are produced largely from cheap, bulky feeds. To students of the economic phases of this grave question, it is very plain that live stock feeding operations will have to be conducted with the minimum of grain and the maximum of roughage because of the ever-soaring trend of grain values.

In the Fairfield district of Washington, where pea growing has been much in vogue, many men have burned the straw when they might well have utilized it in wintering stock cattle, wether lambs or beef breeding cows. The following rations will give a more definite idea of how straw can be used economically:

DAILY RATIONS.

Stock Cattle:

Straw ....8-10 lbs.
Silage ....15-18 lbs.
Cotton seed cake .....1.25 lb.

Beef Breeding Cows.

RATION 1.

Straw ....12 lbs.
Shock corn .....8 lbs.
Cotton seed cake .....1 lb.

RATION 2.

Straw ....20-22 lbs.
Cotton seed cake .....1 lb.

Wether Lambs.

Straw ....4-5 lbs.
Cotton seed cake .....2-3 oz.

Breeding Ewes.

Straw ....6 lbs.
Cotton seed cake .....4 oz.

Farmers with quantities of straw on hand should plan to purchase late-born lambs when they come out of the forest reserves in September and October. Likewise, store cattle can be bought about the same time. The average 2-year-old steer will increase his weight by 300 pounds, provided he is furnished good grass in summer and an abundance of roughage in winter. Oat straw and some of the wheat straws will give equally good returns if fed in the above manner. A great many feeders of fattening cattle make it a practice to keep straw before their steers at all times. Straw has splendid corrective properties and offsets the heating effects of heavy grain feeding, such as is followed by growers of baby beef or prime mutton.

Each fall thousands of sheep are "stubbled" in the Palouse and Big Bend sections of Washington. Why? Because range sheep owners know their great salvaging power. A well-stubbled band of ewes will have a bigger lambing percentage, produce stronger lambs and go into winter quarters in better condition than one that has not grazed the imperfectly harvested grain fields.

Farmers themselves can buy sheep for this purpose and can unquestionably get greater returns than by leasing to flockmasters. A herd of fattening barrows will wax fat on pea or wheat stubble. However, they have had but few opportunities to do so, not because of the farmers' inability to purchase or breed them, but because it is not customary.

Ideal Farmer's Garden.

"While visiting with the county agent A. M. Richardson at Waterville," says J. R. Shinn, county agent of Spekane county," he showed one of the best gardens that I have seen this year, one in which he can justly take pride. He has what I should say is an ideal farmer's garden for the Waterville section, having practically every vegetable growing for which the climatic and soil conditions are suited. Undoubtedly it would be a revelation to many of the people in his section to know what great variety he has introduced into his garden and if some means of keeping and rendering an accurate account of outlay and income from this area were used, I have no doubt but that it would show a much greater net return than any half acre of wheat land in Douglas county. Mr. Richardson owns his own home and has introduced a great variety of plantings of flowers about the place. These have been tasefully arranged and make an excellent pattern for the other residents of Waterville to follow."

Farmers Wide Awake

Garfield County Preparedness

The following extract from the report of Fire Inspector Captain W. A. Groce, who is representing H. O. Fishback, state insurance commissioner, in his capacity as ex-officio state fire marshal, will show the spirit of the farming community of eastern Washington:

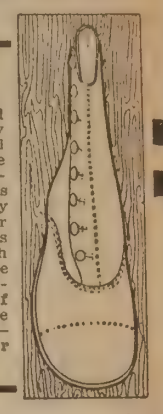
"I wish to inform you of the efficiency of the Pomeroy council. The following is what took place at 11 p. m., August 2. I arrived at Pomeroy that night, going to bed about 10:30 p. m., and about 11 p. m. the siren began to whistle, which is a signal of a grain field fire or a disturbance of I. W. W.s. I got into my clothes as fast as possible and got down on the street. By the time I got on the street, automomiles were coming from all directions and men were running from all directions toward the courthouse. In less than five minutes, 60 men with Winchesters and a bag of cartridges to each man were lined up answering roll call. A number of other men were assembled ready with the fire fighting outfits in automobiles. There were enough machines to carry at least 400 people. The chairman informed me that he wanted to find out just how many men he had in his organization that he could depend on in case of an emergency. The following morning, about 9 o'clock, the siren whistled again, but this time for a fire. About the same number of men responded to the call, going to the fire and extinguishing same with very little loss. At this fire the hose reel was tied to the rear end of my machine as I happened to be the nearest one to the fire house. If I had not been there, they would, in all probability, have tied it to the machine any way and taken it to the fire. I wish to state that the Pomeroy organization is the most efficient and best equipped to handle any emergency that may arise of any that I have come in contact with."

Remarkable Yield of Wheat.

H. G. McNeil, R. F. D. 1, one of the Kittitas county commissioners, and an interested state fair visitor this year, told of a remarkable yield of wheat on his place this year. He had 10 acres which he said averaged 75.6 bushels to the acre.

New Corn Champion.

William Starkey of Prosser, last year the champion juvenile corn grower of the Yakima valley, was bested at the state fair this year by Arthur Rosenkrantz of Nob Hill, who won first prize on his exhibit of yellow dent.



Favors Alfalfa

Makes More Money Than Wheat?

By C. S. West, St. John, Wash.

I have grown five to 15 acres of alfalfa on my place for 10 years. Two years ago I plowed up 12 acres on account of it getting set to cheat and blue grass. It choked the alfalfa out a good deal. It was a piece I could irrigate after the fall rains started. I usually got three cuttings at an average of a ton to the cutting. Five years ago I sowed 10 acres on upland. The next year I cut twice and got a ton and a half of alfalfa to the acre. Last year I cut twice; the first cutting I got one and one-half tons, and the second cutting one-half ton. Last winter a big percent of it froze out—the first I ever had freeze out. There is 12 acres adjoining me that was sown two years ago last spring on hill land. Last year it produced one and one-half tons per acre in one cutting. This year I have it leased. I could only sow once, on account of dry summer. I got 15 tons of hay off the 12 acres, and it was of fine quality. I disked and harrowed the ground good early last spring. At the present prices of grain and hay, taking the yield into consideration, one acre of the alfalfa will make me more clear money than an acre of wheat. I think it would do it one year with another. I don't think all of our land is good alfalfa land, but a big percent of it will grow good alfalfa.

Service Shoes for Children

ACROBAT SHOES give splendid service for play and general wear — made from high-grade leathers with especially tanned leather soles. No tacks or rough seams to chafe feet or stockings. Plenty of room for five growing toes—"great" for comfort.

Sent Postpaid on Moneyback Guarantee

at the following sizes, styles and prices.

Pearl or White Horse leather, sizes 5½ to 8, $3.50; 8½ to 12, $4.00.

Smoked Horse Leather, sizes 5½ to 8, $3.25; 8½ to 11, $3.75.

Black Gunmetal Calf, sizes 6½ to 8, $3.25; 8½ to 12, $3.75.

Patent Leather, patent kid top, sizes 6½ to 8, $3.25; 8½ to 12, $3.00 pair.

News for Breeders

Northwest Herd to Show in Ohio.

Carnation Stock farms of Seattle and Oconomowoc, Wis., whose grand herd of Holsteins has been winning the lion's share of the blue ribbons on the north Pacific fair circuit, have decided to exhibit at the national dairy show at Columbus, Ohio, the week of October 22. Most of the herd is of their own breeding, and practically all the balance were purchased in the northwest and were bred here. The winnings of the herd will be watched with intense interest by the Holstein breeders of the northwest, who are freely predicting that the herd will bring back its full share of the ribbons.

Duroc-Jersey Awards.

Prizes in the Duroc-Jersey hog division were awarded as follows:

Aged boars—First prize, Richards Live Stock company.

Boars, junior yearling—First prize, H. C. Polly; second and third, Richards Live Stock company; fourth, J. A. Waggoner.

Boars, senior pigs—J. A. Waggoner, first and second.

Boars, under six months—Richards Live Stock company, first, third, fourth, fifth, sixth, seventh, eighth ninth; H. C. Polly, second.

Sows over 2 years — Richards Live Stock company, first; J. A. Waggoner, second and third.

Sows, senior yearlings—H. L. Fest, first.

Sows, junior yearlings — Richards Live Stock company, first, second and fourth; H. L. Fest, third; C. M. McClelland, fifth.

Sow, senior pig—J. A. Waggoner, first.

Sows, under six months—Richards Live Stock company, first, second, third, fourth, sixth, eighth and ninth; H. C. Polly, fifth; H. L. Fest, seventh.

Boar and three sows over one year—Richards Live Stock company, first.

Boar and three sows under one year—Richards Live Stock company, first and second; H. C. Polly, third; H. L. Fest, fourth; J. A. Waggoner, fifth.

Boar and three sows over one year, bred by exhibitor—Richards Live Stock company, first.

Boar and three sows under one year, bred by exhibitor—Richards Live Stock company, first and second; H. C. Polly, third; H. L. Fest, fourth; J. A. Waggoner, fifth.

Four animals, any age, get of one boar—Richards Live Stock company, first, second, fourth, fifth and seventh; H. L. Fest, third; H. C. Polly, sixth; J. A. Waggoner, eighth; C. M. McClelland, ninth.

Four animals, any age, produce of one sow—Richards Live Stock company, first and second; H. C. Polly, third; H. L. Fest, fourth; J. A. Waggoner, fifth; C. M. McClelland, sixth.

Champion boar over one year—Richards Live Stock company.

Champian boar under one year—Richards Live Stock company.

Champion sow over one year—H. L. Fest.

Champion sow under one year—Richards Live Stock company.

Grand champion boar—Richards Live Stock company, on Richards Defender.

Grand champion sow—H. L. Fest, on Gem Bess II.

The Futurity Awards Were:

Spring boars—Richards Live Stock company, first, third and fourth; H. C. Polly, second; H. L. Fest, fifth.

Spring sows—Richards Live Stock company, first, second and third; H. C. Polly, fourth; H. L. Fest, fifth.

Litter of four—Richards Live Stock company, first and second; H. C. Polly, third; H. L. Fest, fourth; J. A. Waggoner, fifth.

Evening Capital News silver trophy, awarded to exhibitor winning greatest number of points in Duroc futurity, won by Richards Live Stock company.

Poland China Futurity Awards.

Senior boar—Wilson Bros., first; Vahlberg & Son, second; Howard & Son.

Senior boar—Wilson Bros., first, third, fourth and fifth; E. C. Vahlberg & Son, second; Howard & Son, sixth.

J. M. Flack of Meridian, Idaho, won all awards on Cotswolds.

Lincolns.

The few Lincoln awards that were made went to W. N. Booth.

Fat Sheep.

The University of Idaho won all awards on fat sheep.

Purebreds Win in Contest.

A remarkable exhibit at the Washington state fair this year was staged by Professor Donahue of the State agricultural department and Professor N. C. Jamison, field dairyman of the Washington State college. Three daughters of a grade Holstein sire, Duke, were in one group. Their dams were good grade Holsteins, yet two of them were red and the production of butter in a year of seven of his daughters was 2800 pounds, valued at $1120. The other group of three were all daughters of Lakeside Cornucopia, a pure bred Holstein bull, bred by H. C. Davis. Seven of his daughters produced in a year 4056 pounds of butter, valued at $1622.40, or a difference in favor of the daughters of a pure bred sire of $352. The butter boxes necessary to hold each amount of butter were piled alongside the cows. The interest exhibited by fair visitors showed that the lesson contained was being taken home. H. A.

Nothing Uncommon About That.

A Kansas man seeks damages because a tombstone fell on him. Sooner or later a tombstone falls on every man, but it is seldom he has a chance to object.

FOR SALE--Percherons, Shire Stallions and Mares

Jerico 110196, a dark iron gray Percheron stallion, 3 yrs., wt. 1850; sire Jube 81251 by Coco, dam, Bird 81977 by Brilliant Jr. His 1st, 2d and 3d dams are close descendants of Brilliant. Winnings at Northwest Live Stock Show, Lewiston, as suckling colt, first in class and Percheron society gold medal as best stallion under three years owned and bred by exhibitor As 2-yr.-old, 1st in class and champion under 3 years, three Society medals, best under three years owned and bred by exhibitor, grand champion and best stallion owned and bred by exhibitor and in open class reserve grand champion.

Aaron 117566, a 2-yr.-old half-brother, dark bay, wt. 1550. Sire Salvador 51340 by Calypso. Equally good (some say better). He has never been shown.

Callie 88642, a dark gray mare, 6 yrs. old, wt. 1750. Sire Apollon 26130. She is very strong in Brilliant blood; has mare colt by Halicite.

Lady Grace II., 15452, a 3-yr.-old Shire, bay, white face and white hind legs, wt. 1650. Sire Imp. Toga VII. 9283; dam Bay Lily 13577, by Imp. Greenham Champion.

All first class in every respect, mostly our own breeding, reserved for our own special use.

On account of the death of one of the partners, must sell to close estate.

FOLLETT & SCHOOLER. Genesee, Idaho.

BUY JERSEYS

because it will pay YOU. In buying, remember that it is the producers that pay. This is the kind that we are going to sell at public auction on October 15, 1917, on the Luckiamute farm, seven miles southwest of Monmouth—See catalog for directions how to reach farm.

This offering consists of proven producers or their offspring. They have

Register of Merit Records

This is the dispersal of the herd of Frank Loughary & Son and a consignment from the herd of G. G. Hewitt. Both herds have been noted for prize winning (type) and official butter records (production). This sale includes three great proven herd bulls, Register of Merit cows, bred heifers and younger animals, both sexes. Sixty head in all.

Catalog giving full details of the offering is ready to mail. Send name to either proprietor, or to E. A. Rhoten, Salem, Oregon, and one will be mailed.

FRANK LOUGHARY, Monmouth, Ore.
G. G. HEWITT, Monmouth, Ore.
} Proprietors.

Fifteen fine individuals; registration papers if desired.

C. H. DUNNING. Ellensburg, Wash.

In answering advertisements don't fail to mention this paper.

Grain and Produce Markets

Chicago Grain.

CHICAGO, Oct. 1.—Indications that damage by frost last night had been done to the quality of corn rather than quantity led to a reaction today from an advance that first took place in prices. The market closed unsettled at 118 3-4 December and 115 1-4 to 115 3-8 May, 1-2 off to a shade up as compared with Saturday's finish. The outcome in oats was unchanged to 1-8c lower, and for provisions 47 cents down to a rise of five cents.

Assertions current late in the day that a petition was being circulated here to have the maximum price on corn removed were without any substantial basis.

Business in oats was narrow and simply reflected the changes in the corn market.

Provisions, like oats, swayed with corn. A small demand from commission houses was quickly submerged by offerings from stock yard houses.

Cash Quotations.

CHICAGO, Oct. 1.—Corn—No. 2 yellow, $1.96@2; No. 3 and 4 yellow, nominal.

Oats—No. 3 white, 59¼@60c; standard, 59½@60½c.

1916-17	3076	887	112	1461

San Francisco Grain.

SAN FRANCISCO, Oct. 1.—Barley—December, $2.50 bid, $2.53 asked.

Minneapolis Grain.

MINNEAPOLIS, Oct. 1.—Wheat—Receipts, 707 cars, compared with 745 a year ago.

Corn—No. 3 yellow, $1.90@1.91.

Oats—No. 3 white, 56 3-4@58 1-2c.

Flax, $3.30 1-2.

Flour unchanged.

Shipments, 71,914 barrels.

Rye, $1.87@1.88.

Barley, $1.14@1.36.

Bran, $30@31.

The Wool Market.

BOSTON, Sept. 28.—The Commercial bulletin will say tomorrow:

"While the past week has probably seen a smaller volume of wool business, there still has been a very fair trade for almost everything and prices have held very firm. In addition to fair purchases for civilian requirements, there also has been a further demand from the government for wools suited to its needs. Some buying of bunch lots in the middle west is reported also at the level of full recent quotations here.

"The goods market is showing a better call for light weight civilian goods and the government is also placing further orders for the army in suitings."

Scoured basis:

Texas: Fine 12 months 165@170; fine 8 months 155@160.

California: Northern 170@175; middle county 145@150; southern 135@140.

Oregon: Eastern No. 1 staple 180; eastern clothing 150@160; valley No. 1, 160@165.

Territory: Fine staple 180@182; half blood combing 170@175; ⅜ blood combing 145@150; fine clothing 160@165; fine medium clothing 155@165.

Complexions Going Out.

Complexions aren't nearly so popular as they were once, or else complexions aren't being worn any more. Anyhow, internal revenue figures for 1917 show Uncle Sam's return on cosmetics has shrunk from four million dollars to $671,968.

Live Stock Quotations.

At Omaha.

OMAHA, Oct. 1.—Hogs—Receipts, 1500; market 10 to 15 cents higher. Heavy, $18.90@19.30; mixed, $19@19.25; light, $19.15@19.50; pigs, $17@18; bulk of sales, $19@19.25.

Seattle Wheat.

SEATTLE, Sept. 29.—Grain buyers here are hoping that the confusion regarding the price for wheat fixed by the grain committee to farmers will soon be cleared up so that business of grain moving and milling, long delayed, may be inaugurated.

In place of clarifying the situation the change in the program at Washington to $2.05 tidewater basis has led farmers to believe, as millers of this city are advised, that they will get $2.05 country. Members of the merchants' exchange who assisted in getting the extra money for farmers declare there should be no mystery about it. Nevertheless, growers are advising millers that they will sell no more grain until they are thoroughly satisfied that the last word has been said about the maximum price and officially settled for all time. On the other hand, millers say they can not entertain such a level under any circumstances, due to difficulties that have already arisen in the selling end, and the business is at a standstill.

Manufacturers say there is a tendency among farmers who have not sold to await the outcome of the demand by those who let go on the old price for the extra 5c from those to whom they sold.

Portland Wheat.

PORTLAND, Ore., Sept. 29.—The announcement by M. H. Houser, grain administrator, that the Grain corporation would begin buying wheat at the opening of the week came as a relief to farmers and dealers here. Selling by farmers has become more general and the mills are now getting all the wheat they can carry under the government's 30-day limitation. The Grain corporation will take over all the surplus offerings by farmers and carry the wheat until the mills need it.

Although millers have bought all the wheat they are allowed to hold, deliveries have not kept pace with the buying. The railroads' delay, however, is expected to be remedied soon.

Flour prices have been adjusted to the government wheat price, fixed at $2.05 a bushel at seaboard terminals. Northwestern millers, at a meeting here, announced a quotation of $10.20 on patents to prevail throughout October at least. After that as the carrying charges on wheat increase, this may be added to the flour price. The new price was a 40-cent cut from the old quotation.

The millers also made a $3 reduction in millfeed to $30 for bran and $33 for shorts, net for carload lots. On minimum quantities mills and dealers quote $1 over this. These millfeed prices are not fixed, like the flour price, but the market will be governed by supply and demand. As a great quantity of millfeed is to be turned out by the northwestern mills this winter, lower feed prices seem assured. The north Coast mills have a capacity of about 20,000 tons of feed a month, and as not much is expected to go to California, a large surplus is probably in the northwestern markets.

The oats and barley markets were very dull during the week.

Portland Market.

PORTLAND, Ore., Sept. 29.—Butter production is now at the low point, and as the make is expected to increase very soon, a break from the present high market is anticipated. Creamery men are already shading their prices on prints, as the steep quotations have materially curtailed consumption.

Cheese on the other hand, is tending higher, influenced by advances in the eastern markets.

Eggs, poultry and dressed meats are steady. Receipts in all lines are small, and the demand is not heavy.

Four or five cars of Yakima Elberta peaches have come in and with the market bare of local stock they sold well at 75@90 cents. Salways are due the latter part of the week.

A few cars of potatoes have been shipped to the southwest, but dealers report the demand in that section limited. They are paying the farmers $1.25@1.35. Front street is jobbing potatoes in a small way at $1.50@2.25.

There has been no advance in hops, but the market holds strong. Offerings by growers are very small.

In the following list of quotations the grain, hay, mill feed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 1, $49 per ton.

Mill stuffs—Bran, $31 per ton; shorts $34.

Barley—No. 1 feed, $50; brewing, $51; rolled, $55@57.

Hay—Buying prices: Timothy, eastern Oregon, $27; alfalfa, $22.50@24; grain, $20.

Eggs—Oregon ranch, case counts, 42c per dozen; candled, 45@50c.

Poultry—Hens, 17@18c; ducks, 13@20c; turkeys, live, 20@22c; geese, 10@11c.

Butter—City creamery, prints, 48@49c per pound; cubes, extras, 47c.

Cheese—Tillamook triplets, 25c; Young Americas, 26c.

Dressed meats — Veal, 15 1-2@16c; pork, 21½@22c.

Hops—1916 25@26c; 1917 crop, 41@42c.

Potatoes—New, 1 1-2@2 1-4c per lb.

Wool—Eastern Oregon, fine, 52@61c; coarse, 60c; valley, 58@60c.

Beans — California small white, 14 1-2c; large white, 14 1-4c per pound.

Spokane Market.

The wholesale prices quoted in the list below are not the prics paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer.

Potatoes—New local potatoes, $2 cwt; sweet potatoes, $3.75 cwt.

Apples—Large eating apples, $1.25 box; crabapples, $1.25; cooking apples, $1.50 box.

Butter—Blanchard cartons, 48c lb; Medo-Maid, 48c lb; Cascade, 48c lb; Gold Leaf, 48c lb; Better Butter, 48c lb; Attalia, 48c lb; Diadem, 48c lb; Hazelwood, 48c lb; Solid Pack, 47c lb; Jersey Bell 47c lb; Peerless, 44c lb; Snowcap, 38c lb; cooking butter, 38c lb.

Cheese—Wisconsin full cream, twins, 28c; triplets, 25c; Hazelwood full cream, triplets, 27c lb; Hazelwood Young America, 28c lb; Wisconsin limburger, 29@30c lb; brick cheese, 30c lb; domestic Swiss, 33c lb; Young Americas, 26c lb.

Eggs—Fresh local ranch eggs, $13 case; fresh eastern eggs, $13 case.

Live Poultry—Hens, 13c lb; broilers, 20c lb; old roosters, 8c; ducks, 12½c lb; geese, 10c; turkeys, 20@22c.

Dressed Poultry—Hens, 18c lb; broilers, 28c lb; old roosters, 12½c; ducks, 18@20c; geese, 16c; turkeys, 25@30c.

Hide Quotations.

Green Cows and Steers—25 lbs and up, 13c; salted cured, 16c; green bulls and stags, 11c; salted cured, 13c; kip, 15 lbs to 25 lbs, 22c; calf skins up to 15 lbs, 16c; dry flint hides, 30c; dry salted, 26c; dry calf skins, under 7 lbs, 30c; dry sheep pelts, 35@40c; dry shearlings, 10c@$1 each; green horse hides, $1@2 each; dry horse hides, $2.50@4 each.

Butter and Eggs.

PORTLAND, Sept. 29.—Butter prints, extras, 48@49c; cubes, extras, 47c; prime firsts, 45 1-2c; dairy, 35c.

Butter fat, Portland delivery; No. 1 sour cream, 49c; No. 2, 47c.

CHICAGO, Sept. 29.—Butter unchanged. Eggs lower; receipts, 9963 cases; firsts, 37@37 1-2; ordinary firsts, 36@36 1-2c; at mark, cases included, 35@37 1-2c.

Seattle Market.

SEATTLE, Sept. 29.—Puget Sound Gravensteins, which heretofore have sold at practically the same level as eastern Washington C grades, are moving at as high a level this year as the best fruit from Yakima and Wenatchee at $1.50@2. Gravensteins alone have mounted to the top, or the best price ever known on the Seattle market for local fruit.

Breaks in the potato market are believed to be imminent and buyers are uniformly holding off. Little effort is being made among car lot shippers to get stock pending some kind of predicate for values. On the Mt. Vernon flats, where limited digging has been in progress, growers are demanding $28 f. o. b. Dealers look for a minimum price of $25 or a selling level here of $30 for locals and $35 for eastern Washingtons.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 45@49c per dozen; pullets, 32@35c dozen.

Poultry—Live hens, fat, over 4 lbs., 21c per lb.; 4 lbs. and under, 16@17c; old roosters, 12c per lb.; squabs, large, $3.50 per dozen; geese, fat, live, 10c per lb.; springs, live, 21@23c per lb.

Butterfat—53c per lb; dairy butter, 33c.

Beef—Buying prices. Prime beef, steers, 7@8c per lb.; cows, fat, 7@8c; heifers, 6@8c per lb.

Hogs—Light, 15@16c per lb. do heavy, 9@13c per lb.

Veal—Fancy light, 14@16c per lb.; heavy, 12@13c per lb.

Hides—Salted, 16c per lb.; flint-dry hides, 27c per lb.; salt kip, 16c per lb.; green hides, 13c per lb.; green calf, 22c per lb.; dry calf (under 6 lbs.), 25c per lb.; bulls and dry salts, 4c per lb. less; green bulls, 11c per lb.; dry full wool sheep pelts, 36@38c per lb.

Wool—Puget sound, 52c per lb.

San Francisco Produce Market.

SAN FRANCISCO, Sept. 29.—Butter—Prime extra, 44½c; prime firsts, 43½c.

Eggs—Fresh extras, 46½c; extra firsts, 46c; fresh extra pullets, 43c; extra firsts pullets, 42½c.

Cheese—New firsts, 21c; young Americas, 25c.

Seed Wheat

Stories of Untried Varieties

The United States department of agriculture has issued its annual warning to farmers to be on guard against the exaggerated claims of commercial distributors of new and untried varieties of seed wheat.

"Wheat is attracting at the present time greater attention than perhaps ever before, owing to its comparative scarcity and high price and the necessity of sowing a large acreage this fall," says the department statement. "As might be expected, therefore, various persons are offering to the public varieties that they describe as far superior to the kinds now being grown. These varieties are usually given some catchy name and extravagant claims are made for them.

"A favorite scheme employed by those having wheat for sale for which they wish to obtain exorbitant prices is to claim that their variety requires but a small amount of seed per acre. A peck of seed, 20 pounds, and a half bushel per acre are amounts frequently mentioned. Of course, the claims of maximum yields from these small seedings are not substantiated by fact. Only on dry lands or under very special conditions is the seeding of as little as even 45 pounds per acre of wheat advisable. On nearly all of the wheat lands of the country it is more profitable to sow from a bushel to two bushels of seed per acre than to sow less than a bushel."

SHEEP AWARDS.

Go to Owners in Three States.

The following are the awards in the sheep division at the Washington State fair this year:

Rambouillets.

Ram, 2 years and over—1 and 2, Mrs. R. A. Jackson, Dayton, Wash. Yearling—1, Mrs. Jackson; 2 and 3, John H. Seely, Mount Pleasant, Utah. Ram lamb—1 and 2, Mrs. Jackson; 3, H. F. Traub, Revere, Wash.

Ewe, 2 years and over—1 and 2, Mrs. Jackson; 3, Ed Scholl, Tangent, Ore. Yearling—1 and 2, Mrs. Jackson; 3, H. F. Traub. Ewe lamb—1 and 2, Mrs. Jackson.

Champion ram and ewe—Mrs. Jackson. Get of sire—1, Mrs. Jackson; 2, Traub. Pen—1, Mrs. Jackson. Flock—1 and 2, Mrs. Jackson; 3, Ed Scholl.

Fat Sheep, Fine Wools.

Wether lamb—1 and 2, Washington State college; 3, Mrs. Jackson.

Shropshires.

Ram, 2 years and over—1 and 2, Vaughn & Fox, Lyton, Ore.; 3, Francis Kizer, Harrisburg, Ore. Yearling—1, A. J. Knollin, Soda Springs, Idaho; 3, Vaughn & Fox. Ram lamb—1 and 2, Vaughn & Fox; 3, Kizer.

Ewe, 2 years and over—1, Vaughn & Fox; 2 and 3, Felzer Bros. Yearling—1, Fox; 2 and 3, Felzer Bros. Ewe lamb—1 and 2, Fox; 3, Felzer Bros.

Champion ram and ewe—Vaughn & Fox. Get of sire—1 and 2, Vaughn & Fox; 3, Felzer Bros. Pen—1 and 2, Vaughn & Fox; 3, Felzer Bros. Flock—1 and 2, Vaughn & Fox; 3, Felzer Bros.

Shropshire association specials for flock and pen—1 and 2, Vaughn & Fox.

Hampshires.

Ram, 2 years and over—1 and 2, C. C. Beers, Lyons, Ore. Yearling—1 and 2, J. G. S. Hubbard, Monroe, Ore.; 3, William W. Niven, Manhattan, Mont. Ram lamb—1 and 2, Hubbard, 3, Nevin.

Ewe, 2 years and over—1, Hubbard; 2, Scholl; 3, Beers. Yearling—1 and 2, Hubbard; 3, Scholl. Ewe lamb—1 and 2, Hubbard; 3, Scholl.

Champion ram and eye—Hubbard. Get of sire—1 and 2, Hubbard; 3, Scholl. Pen—1 and 2, Hubbard; 3, Scholl. Flock—1 and 2, Hubbard; 3, Scholl.

Hampshire association special on flock—1 and 2, Hubbard.

Oxfords.

Ram, two years and over—1, C. P. Kizer, Harrisburg, Ore.; 2, Niven. Yearling—1 and 2, Kizer; 3, Niven. Ram lamb—1 and 2, Kizer; 3, Nevin.

Ewe, two years and over—1 and 2, Kizer; 3, Niven. Yearling—1, Kizer; 2 and 3, Niven. Ewe lamb—1 and 2, Kizer; 3, Niven.

Champion ram and ewe—Kizer. Get of sire—Kizer; 2, Niven. Pen—1, Kizer; 2, Niven. Flock—1, Kizer; 2, Niven.

Specials by Oxford Down association for ram, ewe and pen—Kizer.

Fat Sheep—Middle Wools.

Yearling wether—1 and 2, Washington State college, 3; Hubbard. Lamb—1, Washington State college; pen—1, Washington State college.

Fat Sheep—Long Wools.

Yearling wether—1, Hubbard. Lamb—1, Pryor. Pen—1, Pryor.

Champion Fat Sheep.

Champion pen of three wethers, any breed—Washington State college.

Lincolns.

Ram, 2 years and over—1 and 2, George and Archie Pryor. Yearling—1 and 3, Hubbard; 2, Pryor.

Champion ram—Pryor. Get of sire—1, Hubbard; 2, Pryor. Pen—1, Hubbard; 2, Pryor.

A Floating Island.

A section of land became detached from the shore at Dexter, Me., during recent severe storms and has become a floating island in Lake Wassoaokeag. The land bears many trees.

FARM LANDS—FOR SALE 651

THIS YEAR HAS BEEN EXtremely out of the ordinary in the length of the hot dry weather, but if you will come and look over some of our farms you will find what subirrigation means. Of course you can write and ask us, but that's not like seeing it for yourself.

You know we have improved farms in running shape, and we also have raw cut-over lands, on which we can make arrangements to put up small improvements and add the cost of them to the price of the land on long terms basis at the 6 per cent interest, which gives a chance for an ambitious person of small means to "dig in." Also we need help in clearing more land and if you want to take one of our places and spend part of your time working for us, you can do so—our work is steady and our wages are fair.

Cordwood is worth good money, and we have lands with lots of cordwood on them, like the 480 acres mentioned below, close to railroad and within the "dollar limit" of Spokane.

HERE ARE SOME IMPROVED PLACES:

30 acres, all in cultivation, fenced, some clover, timothy, alfalfa, etc., and balance of land for diversified crops. Nice improvements. Only $2250. We will take FOUR or five hundred dollars down and give ten years on the balance at 6 per cent. You will be close to school, close to good town, have daily R. F. D. This is a nice little home.

50 acres, about 45 in cultivation, all fenced, nice rustic bungalow; this place has its own water system that puts water in the house; nice large barn, chicken runs, etc. This has all community advantages. We will take $3750 for this place and give good terms.

RAW LANDS:

80 acres of willow brush land, volcanic ash soil, on county road, lies fairly level, can be easily cleared, has close neighbors. We will take $2000 for it; $200 cash, balance ten years, 6 per cent, and if you want a little house, we will build it and add the cost of it to the price of the land and give you the advantage of long time.

480 acres of cordwood land, no improvements; close to loading station, in good range; the cordwood should pay for it; $12.50 per acre.

We have most anything you want along this line. Ask for folder.

MILAN FARMS DEVELOPMENT COMPANY.
1322 Old National Bank Bldg.
or
ALLIN REALTY COMPANY.
"REALTORS."
408 West Sprague Ave.
Tel. Main 2750.
Spokane, Washington.

CUT-OVER-LANDS.
15 to 25 miles n. e. of Spokane; rich soil; abundance of soft spring water; good dairy and stock country; above frost; fine fruit; free lumber and use of stump puller. Price $10 and $25 per acre; 10 years' time. Write for book to owner. Consolidated Land Co., Elk, Wash., or call 109 Stevens st., Spokane.

IRRIGATED LANDS—For Sale 663

IRRIGATED FARM LANDS.
ALFALFA LANDS, under government irrigation; abundant water; low altitude; rail and water transportation to coast markets; good schools, good roads; products alfalfa, corn, cream, hogs, honey, fruits, vegetables; long growing season; unimproved land $30 to $60 per acre; improved $100 to $250. Write for further information and literature. Dodd & Knapp, Hermiston, Ore.

TO EXCHANGE—REAL EST. 705

A GOOD TRADE.
88 lots in a live railroad and manufacturing town in the Puget Sound country to trade for improved or unimproved property. The town is a division freight point and handles all freight from the east as well as north and south, being a transfer point. The lots are only a short distance from the center of town and surrounded on all sides by good homes. They are level and city water and electric light are in. Streets have been graded through the property and a paved street runs through the center of it. Owing to other interests the owners are not able to give this property the attention it needs. This is a good opportunity as an investment, as houses can be readily rented. The price is $25,000 with a mortgage of $4000 running three years. The mortgage has a release clause providing for the release of any lot on payment of $70. If you have something to trade that matches this let us hear from you.

All You Can Ask in a Car —the Maxwell

The day's work is done.

The lamps shine cheerily. All is quiet and serene in the home.

Now—let's sit down and talk about that motor car you want to buy.

You are exacting in your ideas about motor cars. You demand mechanical efficiency, economy, and a smart appearance.

That is why we affirm that the Maxwell is *your* car, above all others.

Mechanical efficiency! We are pleased and proud to discuss Maxwell efficiency with you.

The Maxwell builders have only one chassis model, which is never fundamentally changed, but constantly improved and refined.

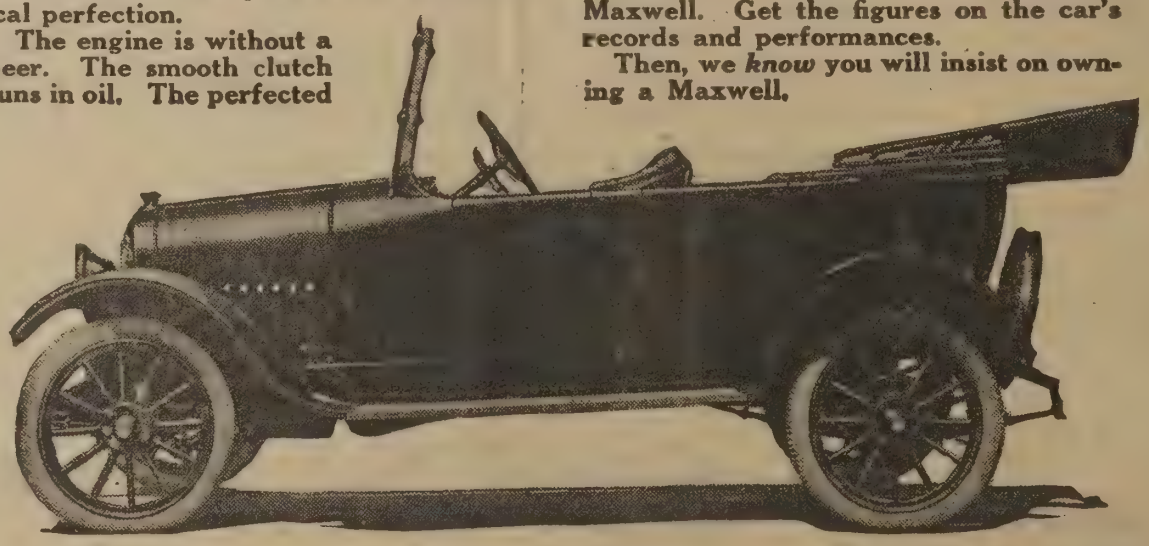
Four years of concentration by one of the largest organizations in the motor car business has brought the one Maxwell model to the pinnacle of mechanical perfection.

The engine is without a peer. The smooth clutch runs in oil. The perfected transmission is efficient and trouble-proof. The mighty axles laugh at strains of the road.

This mechanical efficiency bears fruit in economy of operation. Thousands of Maxwell owners run their cars at a cost of $6 to $8 a month.

This year we have lengthened the wheelbase six inches and have put in 6-inch instead of 3-inch steel frames.

But we have not added one pound to the lightweight Maxwell.



And, having perfected the Maxwell mechanically, we are now enhancing and perfecting its beauty.

This year the windshield is sloped, the body lines more graceful, and the body roomier.

The Maxwell has the same style today as the up-to-date models of the highest priced cars.

Visit your nearest dealer. See the Maxwell. Get the figures on the car's records and performances.

Then, we ***know*** you will insist on owning a Maxwell.

VOL. XL. NO. 41. OCTOBER 11, 1917. ** WEEKLY.

Ready to Buy Wheat

Houser Announces U. S. Buying Plans

M. H. Houser, northwestern agent of the United States food administration, makes the following announcement:

The Food Administration Grain Corporation is now ready to purchase and pay for wheat delivered in approved licensed warehouses, elevators and docks as per schedule listed below:

Astoria—Port of Astoria.

Portland—Albers dock, Albina dock, Globe elevator, Irving dock, Montgomery dock No. 2, Municipal dock No. 1, Municipal dock No. 2, North Bank dock, Pacific Coast Elevator company dock, Mersey dock.

Seattle—Albers dock, Port of Seattle, Smith's Cove elevator, West Seattle elevator.

Tacoma—Balfour dock, Milwaukee dock, Northwestern dock, Northern Grain & Warehouse company.

Note—These may be changed or added to as conditions require.

Wheat Grades Fixed.

"Wheat shall be purchased on basis of federal grades, Nos. 1, 2, and 3 wheat.

"No. 4, No. 5, sample wheat and mixed wheat will be handled by sample on merits.

"We will not buy wheat that has been treated, graded or scoured.

"Will appoint this week an advisory committee to determine the value to be placed on all wheats not covered by 1, 2 or 3 grades.

"Payment will be made here on presentation of separate invoice covering receipt and official weight and grade certificates. Be sure and invoice each car separately.

"Grade certificates must be signed by a licensed federal inspector and graded in accordance with the United States grain standards act.

"An allowance of the 4 1-2 cents per bushel will be made on sacked wheat where sacks are in good condition and with the prevailing allowance for bad order and worthless sacks.

"All docks upon which wheat is stored must maintain a day and night watchman. The premises must be kept reasonably well lighted at night and free from all inflammable, combustible, or hazardous material or merchandise.

"The Food Administration Grain Corporation reserves the right to direct and control the distribution of wheat direct to the mills or to any of the docks, that are now or later designated."

Buy a Liberty Bond

What it would mean to the farms of America if the United States were to submit to the demands of Germany that led to the present war is the argument used forcefully by Secretary William G. McAdoo of the United States treasury department to induce the farmers of the country to subscribe liberally for bonds in the second Liberty loan issue now being offered.

The German demand was that the United States cease shipping foodstuffs to England and France, and Secretary McAdoo says if that demand had been heeded, or if Germany were yet to force this country to cease such exportation, wheat and corn and potatoes and live stock would be drugs on the market.

What It Would Mean to the Farms.

"Should we submit to the kaiser's demand," says the secretary of the treasury, "by one stroke of his pen he would bring about more destruction on our farms and in our factories and mines than all the armies and navies of the German empire could do in 50 years.

"I want the farmers of this country to take a large part of this Liberty loan. They have been benefited by the prosperity of this time, and I thank God they have, because the farmer never has got any too much. But he has derived a proper benefit from the prosperity of the nation. He is as patriotic as any other class of people, but the value of these loans has not been brought to his attention."

Big Cut in Price to Farmers.

You are naturally interested in saving money; and in helping to add to the available supply of labor in this state. You can do both of these things by acting on the unusual offer outlined in this issue. **See pages 16 and 17.**

Costs Half as Much

To Eat Bread in England as in America

The National Association of Master Bakers held its annual convention September 20 at Chicago, and an address by William C. Edgar, editor of the Northwestern Miller, gave the bakers the sort of talk they wanted—an appeal to class prejudices against the farmer, dressed up to mislead the consumer into the belief that the wheat grower is responsible for the high price of bread.

"It has been asked of the bakers," said this speaker, "that they perform the miracle of producing cheap bread from expensive wheat."

The speaker ridiculed the assertion by Dr. Charles R. Van Hise, president of the University of Wisconsin, that the "workingman of this country is paying more today for his loaf than the English or French workingman."

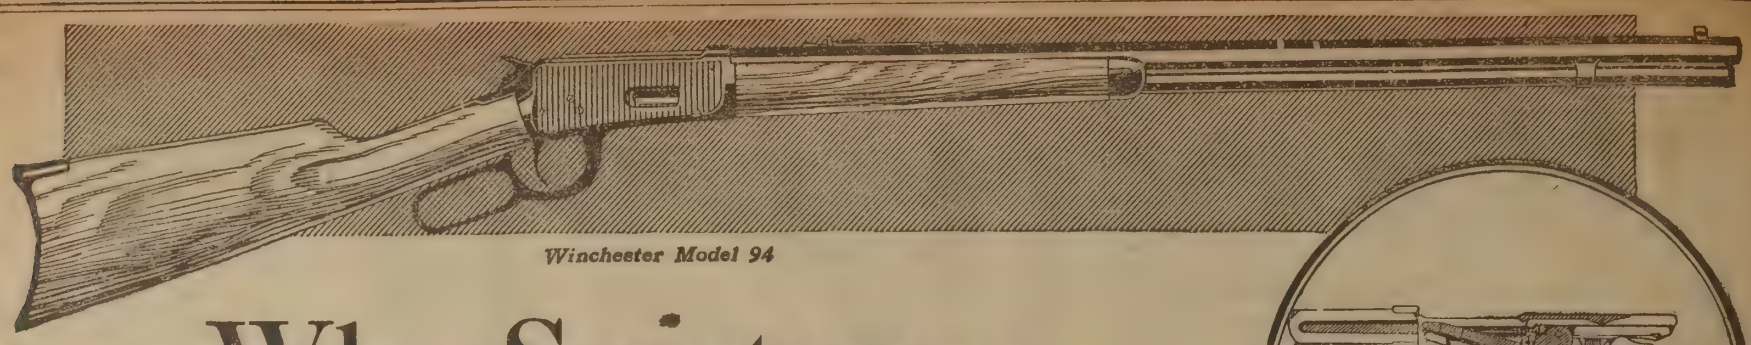
The Farmer has conclusive proof that Dr. Van Hise was right; that first-class wheat bread, not war mixtures, is selling in Great Britain at just half the price that is charged the American workingman and in some cases at less than half.

The proof consists of the new maximum prices of flour, wholesale and retail, and bread as fixed by the British food controller. We find this news in a London news letter to the New York Journal of Commerce, a daily journal published especially for commercial readers. We quote:

"On and after September 17 wheat meal and flour manufactured in the United Kingdom will be sold wholesale at 44s 3d per sack of 280 pounds at the mill door, subject to a discount of 6d a sack for cash within seven days. Imported flour will be sold at higher prices according to quality. The price of 44s 3d has been fixed with a view to allowing the retailer a reasonable, and not more than a reasonable, profit. If it is found that in practice the profit is unreasonably high or unreasonably low the wholesale price of flour will be varied."

A shilling is approximately 24 cents in American money. The British government wholesale price of 44 shillings 3 pence is therefore $10.62 for 280 pounds of wheat flour, or $7.60 for an American barrel of 200 pounds.

This brings us to the British retail prices:



The maximum retail prices for flour are to be:

Sack of 280 pounds or half sack of 140 pounds, 50s per sack (sack charged for extra).

Seven pounds or more, but less than half a sack, 2s 3d per stone of 14 pounds.

Winchester Model 94

Why Sportsmen choose the "94"

Strong, smooth action, few working parts of the Model 94

The Winchester Model 94 repeating rifle is chosen by more sportsmen than any other because of its wide variety of uses.

The Model 94, as nearly as any rifle on the m rket, is an all-'round rifle.

Deer hunters choose it because it is a sure game-getter within the range that most shots at deer come.

Campers and canoe hunters take it because it is accurate even for birds, makes very little noise, and will stand all sorts of rough handling.

New shooters prefer it because of its lightness and very slight recoil.

Farmers demand it because they can get it in the exact caliber they need, at a low price, and can buy the ammunition for it anywhere that firearms are sold.

Because of this wide adaptability the Winchester Model 94 is the gun for the one-gun hunter; but for the same reason it is also a great favorite with sportsmen who own many guns.

The Winchester Model 94 is furnished in a great variety of styles, in five different popular calibers, (.25-35 and .30 Winchester, .32 Winchester Special, .32-40 and .38-55 cartridges), and in an extra lightweight model (weight about 7½ lbs.). For the high power cartridges this rifle is fitted with a nickel steel barrel.

The barrel *is* the gun

Men who know guns realize that the accuracy and durability of a rifle lie in the barrel. On the quality of the barrel depends the quality of the gun. There is absolutely no difference in the standard of quality of the barrels on the highest and lowest priced Winchester guns. With Winchester the barrel *is* the gun and the s ngle standard of quality has been attained only by the most unremitting attention to the boring, finishing and testing of the barrel.

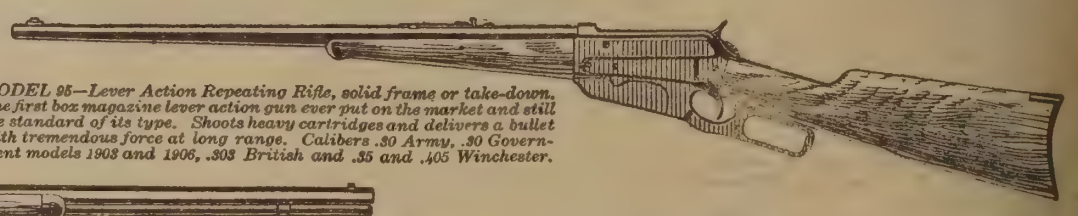
The Winchester barrel

The barrel of the Winchester Model 94 has been bored to micrometer measurements for the cartridge it is meant to shoot. In rifling the barrel, the exact twist that is necessary to produce the best results with a given cartridge has been mathematically calculated and is verified by exhaustive practical tests before leaving the factory.

A bullet fired from a Winchester barrel spins point on with unerring accuracy to the limit of its range. The Bennett Process, used exclusively by Winchester, gives the Winchester barrel a distinctive blue finish that, with proper care, will last a lifetime.

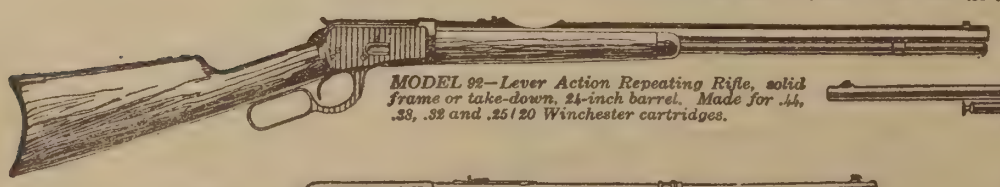
What (W) means

This mark on the barrel means *Viewed and Proved Winchester.* This stamp stands for Winchester's guarantee of quality, with 50 years of the best gun-making reputation behind it.



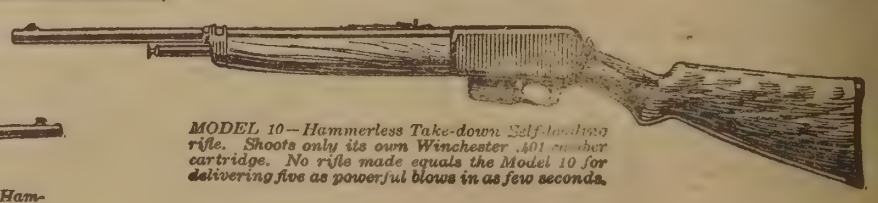
Every rifle that bears the name "Winchester" and that is marked with the Winchester Viewed and Proved stamp has been fired many times for accuracy and smooth action, and with excess loads for strength. At every stage of Winchester manufacture, machine production is supplemented by human craftsmanship. It is a *test and adjustment process.*

It is this thoughtful care in manufacturing that has produced in the Model 94 a rifle of unsurpassed game-getting qualities and that has made it the favorite with hunters the world over.

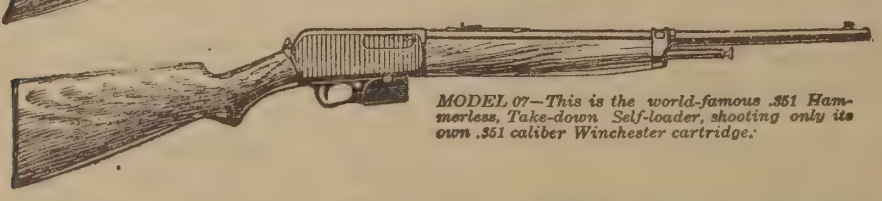


Write for details of Winchester rifles, shotguns and ammunition

The Winchester catalog is an encyclopedia on rifles, shotguns and ammunition. Every hunter should have one. It gives detailed specifications of the Model 94 and describes at length the principles on which every one of the world famous Winchester rifles and shotguns is built. Write today. We will mail you a copy free, postpaid.



WINCHESTER REPEATING ARMS CO.
Dept. W. T.-2. New Haven, Conn.



MODEL 95—Lever Action Repeating Rifle, solid frame or take-down. The first box magazine lever action gun ever put on the market and still the standard of its type. Shoots heavy cartridges and delivers a bullet with tremendous force at long range. Calibers .30 Army, .30 Government models 1903 and 1906, .303 British and .35 and .405 Winchester.

MODEL 92—Lever Action Repeating Rifle, solid frame or take-down, 24-inch barrel. Made for .44, .38, .32 and .25/20 Winchester cartridges.

MODEL 10—Hammerless Take-down Self-loading rifle. Shoots only its own Winchester .401 caliber cartridge. No rifle made equals the Model 10 for delivering five as powerful blows in as few seconds.

MODEL 07—This is the world-famous .351 Hammerless, Take-down Self-loader, shooting only its own .351 caliber Winchester cartridge.

Buy a Liberty Bond!

Ten Million People Must Share Big Issue

(Continued from page one.)

A nation-wide campaign to run four weeks is now on for the selling of the second Liberty loan, which is authorized for the further finance of the war against Prussianism. The government has appropriated the amounts each district is to raise and is making a systematic campaign to secure the entire amount before the expiration of the period.

The total is to be not less than $3,000,000,000, with a maximum of $5,000,000,000. The first Liberty loan was for $2,000,000,000, but the people oversubscribed it to such extent that more than $3,000,000,000 was subscribed, and it is expected that the present issue of bonds will far exceed the $3,000,000,000 that has been set as a minimum.

The sale of bonds is to be by federal reserve bank districts, and the San Francisco district, in which the northwest is included, is allotted a minimum of $210,000,000, or a maximum of $350,000,000. In each smaller district the organization is being made effective for reaching into every community and every home of every community where small bonds may be sold. As was the case with the first Liberty loan, bonds are issued as low as $50, so that hundreds of thousands of small investors may play a real part in financing the government in its warfare against inhumanity. It is the government's hope that at least 10,000,000 people will buy bonds. Some of the subscriptions of wealthy individuals are running as high as $10,000,000 each, but it is the desire of the administration that as many small bonds be sold as possible so that the largest number of people possible may become personally a part of the national war machinery.

Makes Speaking Tour.

Secretary McAdoo is now on a nation-wide tour speaking in behalf of the loan. He is now in the west, having been in the northwest this week. His largest audience in the west so far, and probably the largest single audience he will address outside the largest cities, was at American Lake, where he talked to more than 30,000 soldiers of the new national army the other day.

The bonds will bear four per cent interest, payable semi-annually. They run for 25 years unless the government desires to redeem them, or part of them, after 10 years.

Not only is it greatly to be desired that the bonds be quickly subscribed for, but it is one very real way for the masses of American people to help win the war. The eyes of the world are upon this Liberty loan. It should succeed overwhelmingly to convince doubters at home and abroad that America is out to win.

Explains Land Bank

Things It Can and Things It Can Not Do

Leonard G. Robinson, president of the federal land bank at Springfield, Mass., delivered an address before the recent convention of the American Bankers' association at Atlantic City that was a model of candid, constructive, educational discourse. While he frankly criticized the banking interests for their short-sighted opposition to the land bank system, he avoided abuse throughout his entire discourse.

Their open hostility, he declared, not only deprived them of the opportunity of shaping the course of the legislation, but their most reasonable suggestions were impregnated with the taint of suspicion. The banks had thrown themselves out of court in so far as anything pertaining to rural credits was concerned.

While there were exceptions to the rule, bankers generally had opposed this beneficial legislation on the contention that their own facilities adequately supplied our agricultural industry with all the credit that it needed, or at least all that it was entitled to.

As proof that the old banking machinery did not provide sufficient credit for the farmers, President Robinson showed, from reports of the interstate commerce commission, that while the total investment in the railroads of this country is $17,000,000,000, the bonded indebtedness of these roads is $12,000,000,000, or 65 per cent.

On the other hand the physical valuation of the farms of the country is $40,000,000,000, while the total indebtedness on them has been estimated at $6,000,000,000, that is only 19 per cent of their value.

The speaker refuted the persistent assertion that the enactment of the federal farm loan act was class legislation because the government subscribed to the capital stock of the land banks. He reminded his audience that—

"The same provision, it must be remembered, was included in the federal reserve act, the only difference being that the possible maximum subscription in the case of the land banks was $750,000 for each bank, while in the case of the reserve banks it was $4,000,000, or nearly five and a half times as much.

"If the federal farm loan act is class legislation because it was directly de-

The War Brought to Every Home

October 21-28 to Be Special Food Conservation Week

Pledge Card for United States Food Administration

If you have already signed, pass this on to a friend.

TO THE FOOD ADMINISTRATOR:

I am glad to join you in the service of food conservation for our nation and I hereby accept membership in the United States Food Administration, pledging myself to carry out the directions and advice of the Food Administrator in my home, in so far as my circumstances permit.

Name .....

City ..... State .....

There are no fees or dues to be paid. The food administration wishes to have as members all of those actually handling food in the home. Any one may have the home card of instruction, but only those signing the pledge are entitled to membership window cards, which will be delivered upon receipt of the signed pledge.

The war will be brought to every home in this country.

"Food will win the war," is the battle cry of the nation for the one week, the slogan in all of the 48 states that are to bear the brunt of the war for democracy.

The message is to be carried direct to every one of the 22,000,000 homes in the United States.

The campaign will put every one of the 22,000,000 homes on the Hoover conservation basis.

Multiply by millions the small amount each individual is asked to save through substitution and avoidance of waste and the whole problem is solved.

The foods to be saved are:

WHEAT,
PORK,
BEEF,
DAIRY PRODUCTS,
SUGAR.

The foods to be used generously are:

FISH,
POULTRY,
VEGETABLES.

Herbert C. Hoover, United States food administrator, in the following rigorous statement inaugurates the food pledge campaign:

"The week of October 21 to 28 has been selected for a nation-wide campaign to complete the enrolment of our forces in conservation of our food supply. The harvest is now in hand and we can measure the world's resources. The available supplies of this harvest are less than last year. The demand upon us is greater than last year, and from the last harvest we exported more than we could really afford. We can only meet the call upon us next year by the savings and by substitution of commodities which can not be transported.

"The allies are our first line of defense. They must be fed and food will win the war. All Europe is on rations or restricted supplies. Only in our country is each one permitted to judge for himself the duty he owes his country in food consumption, although the world depends upon us to guard and provide its food supply. This is a duty of necessity, humanity and honor. As a free people we have

(Continued on page eleven.)

Condenseries Voluntarily Submit to Price Control by Government

The sensational development of the past week was the action of the big canned milk interests of the country in voluntarily putting themselves under the protection of Uncle Sam's price-controlling umbrella.

At the conference and agreeing to the arrangement were the following western manufacturers:

Alpine Evaporated Cream Co., San Francisco.

Carnation Milk Products Co., Seattle.

Colorado Condensed Milk Co.

Federal Condensed Milk Co., Seattle.

Pacific Creamery Co., Phoenix, Ariz.

Scio Condensed Milk Co., Scio, Ore.

Utah Condensed Milk Co.

Western Condensed Milk Co., Newberg, Ore.

Manufacturers of canned milk representing 95 per cent of the entire industry in the United States, in conference with the United States food administration, agreed voluntarily and unanimously to submit their business to the supervision of the food administration during the period of the war and to take no war profits; also to make the profit on their goods sold to the public as same as on goods sold to the army and navy.

Since the first of May they have been furnishing supplies to the army and navy at a price and on a basis of profit determined by the federal trade commission. This they obligated themselves to continue throughout the war, and they further agreed to supply the commission for relief in Belgium and the American Red Cross at the same price as that made to the government.

The milk men expressed their willingness to limit the price to the public so as not to return to the industry a greater profit than was received before the war, during which period a profit of 30 cents a case on evaporated milk and 40 cents a case on condensed milk was considered fair. The manufacturers said they had found difficulties in the increased price of fresh milk and the high cost of tin plate which had forced the increased prices during the last 18 months. The only way in which they can limit the cost to the public is through the limitation of profits, since they can not control the cost of the raw materials upon which they depend.

HOLSTEINS ARE SOLD.

Nearly Sixty Head Go at Yakima.

Fifty-nine head of Holstein cattle were sold at the recent sale of the Yakima Valley Holstein Breeders' association, averaging about $160 each. The sale totaled nearly $10,000.

A heifer calf consigned by E. B. Marks brought the highest price, $500, while $450 was paid for an animal from the herd of Todd & Sons by D. B. McKelheer. S. V. Butchart of Granger bought the five-hundred-dollar animal. Messrs. Gue and Cranke, auctioneers, conducted the sale.

Young Folks Harvesting.

Kennewick Courier-Reporter: The opening enrolment in the high school was only 80 or only half of the enrolment of 160 last year. Enrolment in the two eighth grades is likewise light, buth the seventh is up to the usual opening enrolment. The shortage in the high school and the eighth grade is due to the urgent need for workers in the fruit harvest. In many instances parents of high school pupils have called up to say that their children will be in school just as soon as they can possibly be spared from work in the orchards.

Dairy Show Date Changed.

Announcement has been made of a change in the date of the Pacific National Dairy show at Portland from November 16-23 to November 7-15. This change will permit breeders to appear at both the dairy show and the Pacific International Live Stock show, which will be held the week of November 19-24.

Is a Model to Any Fair of Its Size

Western Washington Fair Closes One of the Most Successful Exhibitions in Its History

By PAUL E. TRIEM.

The model fair of all western Washington closed its gates October 7, after one of the most successful exhibitions in its history. The Puyallup people have every reason to be proud of this big institution, which for promptness and courtesy and up-to-the-minute service to the public might serve as a model to any fair of its size in the United States.

The date selected for this year's fair, coming practically two weeks later than usual, proved an innovation of merit, in that it enabled a number of people who ordinarily are not able to take in the fair without considerable personal sacrifice to attend one or two days without inconvenience. This class included school children and hop and berry pickers, all of whom are fully occupied earlier in the fall.

The largest and most important single exhibitor, in all probability, was the Washington State college, with its auxiliary organization, the Western Washington experiment station. Professor Linklater's exhibits are always managed in such a way as not only to attract attention, but to reward it with something substantial in the way of useful information. Numerous wall cards displayed boiled-down information on every branch of the farming and gardening business, while various models showed just how some of this information was being applied at the station farm. A model of a potato pit summed up the information on potato storage presented on various wall cards. A cold frame and long rows of vegetable and grain exhibits carried out this plan of practical teaching in other departments. Professor Shoup's poultry department was one of the features of the fair. The comparative egg-preserving tests, showing results secured by the lime water, water glass and grease preservative methods caught the eye of the thrifty housewife and also of her husband, while a model of the Pupallup laying house and a full-size oat sprouter of the type used at the experiment station drew a steady fire of questions from poultrymen and farmers.

The Dairy Extension department maintained, as part of this year's exhibit, one of those "fatal comparisons" which do so much to make practical and convincing the teaching of scientific dairymen. Ranged side by side were a number of productive and non-productive cows, varying from "Bonnie," who produced 446 pounds of butterfat at a cost for feed of $74.45, to "Runt," who consumed $49.56 worth of food and returned 98 pounds of butterfat. In this same display also appeared the record dairy cow for this state for the year 1916, E. L. Brewer's "Emanous Annie West." Her feed bill came to $102.34, and for this she gave Mr. Brewer slightly over 723 pounds of butterfat. This display was completed with a series of wall cards and exhibits bearing on the production of forage and grain food in western Washington. The entire display was not only highly creditable to the extension department, but was of dollars-and-cents value to the spectators.

In the cattle department, the Holstein entries of the Carnation Farms had things all to themselves among the black and whites, while E. L. Brewer's Jerseys and A. L. Gile's Chicona Farm Guernseys did much to impress the public with the merits of the Channel Island breeds. The only showing of beef breeds was made by the state college and by George Bertrand, whose Olequa stock ranch Shorthorns were as sturdy a bunch as is often entered by one man.

The swine barn was filled to capacity. C. W. Shumate of Tumwater made a strong showing with his Berkshires and Poland Chinas, while W. F. Yeck of Edgewood, with O. I. C.s; the Pacific Meat compnay of Seattle, with Durocs and Hampshires; Morrill Delano, Puyallup Boys' Pig club member, and the Olequa stock ranch of Castle Rock, both of the latter with Berkshires, helped round out the show. M. P. Eggers, route 3, Tacoma, entered a few Toggenberg goats and the state college showed two pens of sheep, but it was apparent that western Washington is not at present a wool or mutton producing district, in the broadest sense.

In the horse barn William Tracy of Kennewick, with his Percherons, and the Ruby stock farm of Portland, with Percherons, Shires and Belgians, had things pretty much to themselves. Both breeders put up a good showing of heavy horses, with the Portland entries particularly noticeable both for numbers and quality.

In the poultry department, a tendency toward diversity, which has been growing for the last few seasons, was more than ever in evidence this year. There was a time when a poultry show in western Washington was made up of about 90 per cent White Leghorns. The little white egg machines are still deservedly popular, but they are forced in most modern shows to divide honors with the heavier breeds. Probably Leghorns of various colors were in the majority at Puyallup this year, but there were many entries among the Rocks and particularly among the Wyandottes and Rhode Island Reds.

In fruit and vegetables, especially the former, the Puyallup fair would prove a surprise to many people who do not look upon this side of the state as a really serious contender for honors along these lines. Two displays in particular—those of Alderton and of Puyallup Heights—would rank well among community displays at any fair, while Mr. Howard's apple display was up to his usual high standard.

Among the miscellaneous features on the fair program, the trotting and running races, airplane flights and fine band music, taken in connection with the extra fancy brand of golden sunshine and outdoor weather which President Paulahmus had on tap for his visitors, combined to keep everybody busy and happy. Many of the displays, in conformity with the spirit of the times, took on a military tone, while groups of soldiers, both American and Canadian, were scattered about over the grounds. Both the Canadian and United States government maintained enlistment booths at the fair.

The upper left picture shows one of the prize horses ready to enter the show ring at the Southwest Washington fair. The lower left picture is a section of the Y. M. C. A. booth. The Multiple Egg tester was an exhibit which attracted much attention at the fair.

Dairy Stock Bring $33,000

Three at Washington Sale Bring $1000 Each

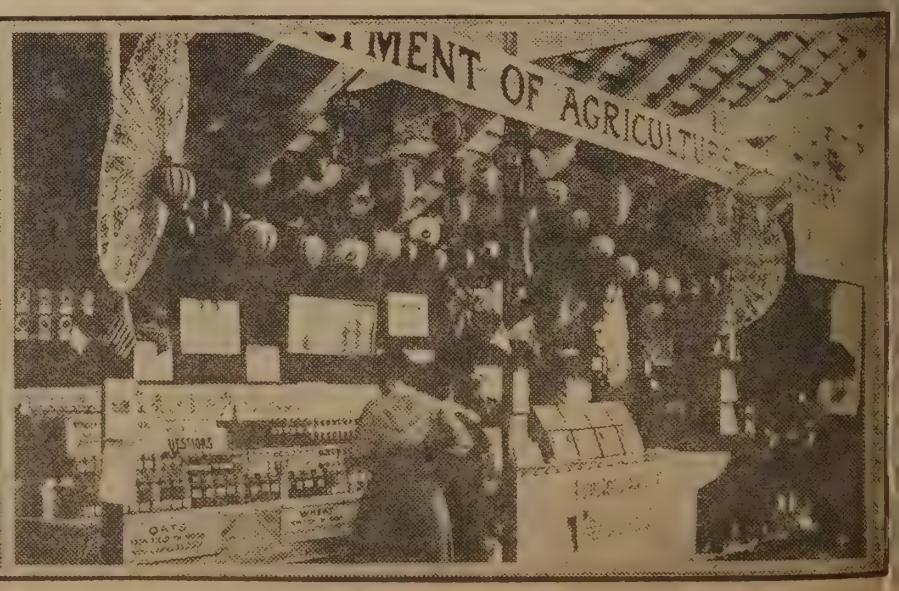
Approximately 120 head of registered Holsteins were sold for approximately $33,000 at the combination Carnation-Hazelwood sale, in the Carnation Sales pavilion, Kent, Wash., October 3 and 4. Breeders and farmers from many parts of the northwest attended the sale, one result of which will be a wider distribution of choice breeding animals throughout this part of the country.

Auctioneer George A. Gue, in his opening address to the assembled buyers, declared that never before has the world been so depleted of good registered breeding stock. If the war continues, he said, American farmers will find it difficult to feed their own countrymen and at the same time to furnish their share of food for the men across the water. With the closing of the war, Europe must look to the United States for breeding stock with which to replenish her wasted herds.

One of the big features of the sale came during its closing minutes, when a calf, donated by John L. Smith to the Red Cross, was auctioned off half a dozen times in about as many minutes. G. J. Keda, a Japanese farmer living near Kent, finally secured the calf, having bid it in and donated it back to the Red Cross a couple of times. The total proceeds from this source were $500, which went to the Kent Red Cross.

The record price for the sale went to John L. Smith's "Hazelwood Alban Ormsby," a splendid young cow which brought $1325.00 from E. A. Stuart. Henry Lindley of Seattle was one of the most persistent bidders, and to him were knocked down more than 30 head of Carnation stock. The average price

(Continued on page twenty-nine.)



Win Prizes at Palouse.

In the department of farm products at the Palouse Harvest Festival the following persons were given prizes by the judgs, E. F. Gaines, cerealist at W. S. C., and J. H. Stephens, W. S. C. instructor in botany:

R. T. Cox, M. Jacobson, C. J. Dilts, Ray Hanson, J. R. Crow, Dean Ickles, Mrs. Charles Goetz, C. W. Deerkop, James Milton, Wesley Goddard, J. A. Hayton, W. James, Mrs. Ernestine J. Rohlf, Frank Daily, S. T. Cox, I. H. Turnbow, George Ickles Jr., J. W. Shreve, J. W. Johnson, O. E. Randall, Andrew Lynd, W. Wery, E. R. Wilcox, T. J. Farris, A E. Alden, C. A. Hammond, F. E. Cash, O. E. Lynch, O. C. Butterfield, Freeman Cash, T. H. Farnam, Pearl Curtis, Paul Bockmier Jr., Frank Tempero.

President Paulhamus always provides an abundance of clean side shows.

Part of the agricultural department display at the Southwest Washington fair.

CHAPTER I.

The Last Frontier.

MANY men were in debt to the trader at Flambeau, and many counted him as a friend. The latter never reasoned why, except that he had done them favors, and in the north that counts for much. Perhaps they built likewise upon the fact that he was ever the same to all, and that, in days of plenty or in times of famine, his store was open to every man, and all received the same measure. Nor did he raise his prices when the boats were late. They recalled one bleak and blustery autumn when the steamer sank at the lower ramparts, taking with her all their winter's food, how he eked out his scanty stock, dealing to each and every one his portion month by month. They remembered well the bitter winter that followed, when the specter of famine haunted their cabins, and when for endless periods they cinched their belts and cursed and went hungry to sleep, accepting, day by day, the rations doled out to them by the grim, gray man at the log store. Some of them had money belts weighted low with gold washed from the bars at Forty Mile, and there were others who had wandered in from the Koyukuk with the first frosts, foot-sore and dragging, the legs of their skin boots eaten to the ankle, and the taste of dog meat still in their mouths. Broken and dispirited, these had fared as well through that desperate winter as their brothers from up-river, and received pound for pound of musty flour, strip for strip of rusty bacon, lump for lump of precious sugar. Moreover, the price of no single thing had risen throughout the famine.

Some of them to this day owed bills at Old Man Gale's, of which they dared not think; but every fall and every spring they came again and told of their disappointment, and every time they fared back into the hills bearing another outfit, for which he rendered no account, not even when the debts grew year by year, not even to "No Creek" Lee, the most unlucky of them all, who said that a curse lay on him

Necia and Captain Burrell.

so that when a pay-streak heard him coming it got up and moved away and hid itself.

There were some who had purposely shirked a reckoning in years past, but these were few, and their finish had been of a nature to discourage a similar practice on the part of others and of a nature, moreover, to lead good men to care for the trader and for his methods. He mixed in no man's business, he took and paid his dues unfalteringly. He spoke in a level voice, and he smiled but rarely. He gazed at a stranger once and weighed him carefully, thereafter his eyes sought the distances again, as if in search of some visitor whom he knew or hoped or feared would come. Therefore, men judged he had lived as strong men live, and were glad to call him friend.

This day he stood in the door of his post staring up the sunlit river, absorbing the warmth of the Arctic afternoon. The Yukon swept down around the

Necia and Her Foster Father, John Gale.

great bend beneath the high, cut banks and past the little town, disappearing behind the wooded point below, which masked the upcoming steamers till one heard the sighing labor of their stacks before he saw their smoke. It was a muddy, rushing giant, bearing a burden of sand and silt, so that one might hear it hiss and grind by stopping at its edge to listen; but the slanting sun this afternoon made it appear like a boiling flood of molten gold which issued silently out of a land of mystery and vanished into a valley of forgetfulness. At least so the trader fancied, and found himself wishing that it might carry away on its bosom the heavy trouble which weighed him down and bring in its place forgetfulness of all that had gone before. Instead, however, it seemed to hurry with news of those strange doings "up-river," news that every downcoming steamboat verified. For years he had known that some day this think would happen; that some day this isolation would be broken; that some day gerat hordes of men would overrun this unknown land, bringing with them that which he feared to meet, that which had made him what he was. And now that the time had come he was unprepared.

The sound of shouting caused him to turn his head. Down-stream, a thousand yards away, men were raising a flagstaff made from the trunk of a slender fir, from which the bark had been stripped, heaving on their tackle as they sang in unison. They stood well out upon the river's bank before a group of well-made houses, the peeled timbers of which shone yellow in the sun. He noted the symmetrical arrangement of the buildings, noted the space about them that had been smoothed for a drill-ground, and from which the stumps had been removed; noted that the men wore suits of blue, and noted, in particular, the figure of an officer commanding them.

The lines about the trader's mouth deepened, and his heavy brows contracted.

"That means the law," he murmured, half aloud, while in his voice was no trace of pleasure nor of that interest which good men are wont to show at sight of the flag. "The last frontier is gone. The trail ends here!"

He stood so, meditating somberly till the fragment of a song hummed lightly by a girl fell pleasantly on his ears, whereupon the shadows vanished from his face and he turned expectantly, the edges of his teeth showing beneath his mustache, the corners of his eyes wrinkling with pleasure.

The sight was good to him, for the girl approaching down the trail was like some wood sprite, light-footed, slender and dark, with twin braids of hair to her waist framing an oval face colored by the wind and sun. She was very beautiful, and a great fever surged up through the old man's veins till he gripped the boards at his side and bit sharply at the pipe between his teeth.

"The salmon-berries are ripe," she announced, "and the hills back of the village are pink with them. I took Constantine's squaw with me and we picked quarts and quarts. I ate them all!"

Her laughter was like the tinkle of silver bells. Her head, thrown back as she laughed gayly, displayed a throat rounded and full and smooth, and tanned to the hue of her wind-beaten cheeks. Every move of her graceful body was unrestrained and flowing, with a hint of Indian freedom about it. Beaded and trimmed like a native princess, her garments manifested an ornature that spoke of savagery, yet they were neatly cut and held to the pattern of the whites.

"Constantine was drunk again last night, and I had to give him a talking to when we came back. Oh, but I laid him out! He's frightened to death of me when I'm angry."

She furrowed her brow in a scowl—the daintiest, most ridiculous pucker of a brow that ever man saw—and drew her red lips into an angry pout as she recounted her temperance talk till the trader broke in, his voice very soft, his gray-blue eyes as tender as those of a woman:

"It's good to have you home again, Necia. The old sun don't shine as bright when you're away, and when it rains it seems like the moss and the grass and the little trees was crying for you. I recken everything weeps when you're gone, girl, everything except your old dad, and sometimes he feels like he'd have to bust out and join the rest of them."

He seated himself upon the worn spruce-log steps, and the girl settled beside him and snuggled against his knee.

"I missed you dreadfully, daddy," she said. "It seemed as if those days at the Mission would never end. Father Barnum and the others were very kind, and I studied hard, but there wasn't any fun in things without you."

"I reckon you know as much as a priest now, don't you?"

"Oh, lots more," she said, gravely. "You see I am a woman."

He nodded reflectively. "So you are! I keep forgetting that."

Their faces were set toward the west, where the low sun hung over a ragged range of hills topped with everlasting white. The great valley, dark with an untrodden wilderness of birch and

Necia and the Gale Children.

spruce and alder, lay on this side, somber and changeless, like a great, dark-green mat too large for its resting place, its edges turned up towards the line of unmelting snow. Beyond were other ranges thrust skyward in a magnificent confusion, while still to the farther side lay the purple valley of the Koyukuk, a valley that called insistently to restless men, welcoming them

(Continued on page twenty-three.)

Producer Gets 70 Per Cent

British Dairyman's Share of the Consumer's Money

The Farmer has secured a copy of the British food controller's latest order fixing the wholesale and retail prices of milk in Great Britain for the winter period from October 1 to March 31. The wholesale prices are those paid the producers by the distributors; the retail prices are those paid by the consumers.

From these prices we draw some interesting comparisons. For example, under the British system the farmer gets 70 per cent of the price paid by the consumer, while in the United States he seldom gets more than 50 per cent and often not that much.

Under the British order two schedules of retail prices are set—one for rural communities, the other for large towns and cities. We shall take for analysis the higher schedule for city delivery.

The highest winter retail price is 2 shillings 6 pence per imperial gallon (60 cents in American money). But since the imperial gallon is a fifth more than the American gallon the price is equivalent to 50 cents for the latter, or 12 1-2 cents per quart, delivered. Where milk is delivered in bottles, however, the dealer may charge 2 cents additional per quart.

Where milk is sold wholesale by or on behalf of the producer the maximum price chargeable shall be as follows:

(a) For milk delivered during the month of October, 1917, the rate shall be 1s 4d per imperial gallon; for milk delivered during the month of November, 1917, the rate shall be 1s 7 1-2d per imperial gallon, and for milk delivered thereafter until the end of March, 1918, the rate shall be 1s 9d per imperial gallon, together in each case with a sum equal to the net amount of the charges for railway transportation incurred by the seller.

The highest winter wholesale price is, therefore, 1 shilling 9 pence, or 42 cents per gallon. In other words, of the consumer's 60 cents the distributor takes 18 cents and the farmer takes 42 cents.

Under the British system the obvious endeavor of the government is to deal fairly with all three factors in the trade—the producer, the distributor and the consumer.

Perhaps if we had government control of the milk industry in this country there would be a better deal for both the producer and the consumer. There certainly would be if the distributor were held down to a 30 per cent rake-off.

Increased Costs in France.

The increased cost of agricultural production in France has been studied by an agricultural engineer of that country in the department of Seine-et-Oise. This increase, he says, is due to the increased cost of raw machinery and labor. He points out that since 1913 the price of nitrate of soda has risen 113 per cent; coal, which cost 25 francs per ton, now costs 108 francs. An automatic binding machine which could be purchased for 800 francs four years years ago now sells for 1175 francs. The price of lubricating oil has increased 100 per cent. The wages of farm labor is estimated over the country as averaging over 42 per cent more.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

No Wheat From Australia

Mr. Hoover told the delegation that went to Washington to represent the grain growers of the northwest that the food administration feared competition from wheat of Australia, Argentina and India, much of which, he said, could be laid down at San Francisco for 90 cents and $1 a bushel.

The delegation must have found it difficult to repress a broad smile at that.

Australian granaries are bulging with old wheat, but the distance from market is so great and shipping so scarce and high that Great Britain, much as she wants to trade with her own commonwealth, and much as she wants that grain, has been unable to transport it across the wide seas.

It is 12,000 miles from Australia to England —24,000 miles for the round voyage. It is only 3000 miles across the Atlantic—6000 miles for the round voyage. Which means that four times as many ships would be needed to carry grain from Australia as from the United States.

It is ridiculous to talk about dollar wheat from Australia. Mr. Hoover should confer with the authorities of the United States department of agriculture before he makes such statements to men who are well-informed on the subject that carried them to Washington.

World conditions all pointed to unprecedented wheat prices this year. These conditions were illuminatingly reviewed by Charles J. Brand, chief of the bureau of markets of the department of agriculture, in an address last week before the American Academy of Political and Social Science at Philadelphia. Mr. Brand said the allies' wheat supply must come largely from America. The hazards of shipping and the long haul from Australia require too much tonnage to make shipments from that country. For the same reasons considerable quantities of foods from India can not be depended upon. Transportation conditions in Russia are likely to keep crops out of market even though they were otherwise available. The Argentine crop is small and the outlook for the next harvest is not encouraging, and the United States has a short harvest, produced at heavy costs by our wheat growers.

Dollar wheat this year from Australia is a dream, and the farmers of the Pacific northwest will smile at Mr. Hoover's professed concern lest they suffer from that kind of competition. They would like to buy Australian grain at that figure and turn it into pork, poultry and dairy products.

Help the Land Bank Help You

The federal farm loan bank has before it now applications for loans to the farmers of the northwest at five per cent interest totaling more than $23,000,000. It has approved these loans to a total of more than $11,000,000. It has actually sent the money out to the borrowers to a total of more than $2,500,000. More than 10,000 farmers have applied for loans.

The officers and working forces of the bank are rushing the work of making these loans. They have made remarkable progress. Organized less than half a year ago, they have already made more loans than all the state rural credit orgnizations in the country have ever made. They have the machinery working so smoothly and at such speed that more than $1,000,000 was loaned last month. The bank is doing its best to satisfy the wishes of every applicant, but it is manifestly impossible to do it all at once. There is a great mass of work to be done in case of each application before the money can be sent out. The serviceability of the farm loan system depends upon the sale of the bank's bonds, and these bonds can not be sold if there is the slightest doubt of the soundness of the security behind them. The security behind them is the mortgages to the land on which loans are made. Therefore the bank's officers are determined that no loan shall be made until title to the land is absolutely clear, and that no loan shall be made in excess of the amount that the mortgage is unquestionable security for.

The borrower himself can do much to speed up his own loan and that of others. He should never try to borrow more than the value of his land will justify. He should never misrepresent his property in any way. He should state fully and clearly the actual truth in answer to every question asked in the application blank which he fills out. He should follow out carefully and accurately every step required of him by the bank's regulations. He should have the papers to his property in the best possible form, and his title as clear as possible. These things will often save weeks of delay. A misunderstanding or an incorrect answer of an application for an excessive amount is certain to result in letters back and forth or unnecessary visits by the field representative of the bank, while a little care would make it possible for the bank to put the application smoothly through the regular course of appraisal, approval, recording and settlement.

Important Announcement

The two center pages of this issue carry a message which we feel sure will strike a responsive chord in every farm home reached by this paper. The labor shortage has been acute in the harvest fields, orchards, dairies, fruit packing sheds and elsewhere throughout the state. We know that our readers are in full sympathy with the request of the government that employers release as many men as possible for productive labor. We feel sure that our plan to dispense with a big force of agents will appeal to the common sense of our readers, and that all our friends will support it loyally. We hope you will realize that this is a personal call to you as well as to others. Every one must respond if the plan is to prove truly effective. So we urge you to turn to our double page announcement in the center of the paper today, and after reading it to act quickly.

Believes in the Silo

One of the most earnest and steadfast believers in the value of the silo is County Agent C. F. Monroe of Grays Harbor. The latest item of news from Mr. Monroe is that J. P. Fairbanks of Pullman spent an entire week in that county on the construction of a wooden hoop silo as a demonstration, 15 farmers attending. Two wooden hoop silos have just been completed, one of them 12x28, costing $140, including material and all labor except that of the owner, says Mr. Monroe.

Too Many Directors

The Jefferson county cow testing association has been reorganized. Only three directors were elected. The members of the association have come to believe that seven directors are too many to get efficient service, and that the responsibility should be centered upon a less number. County Agent McWhorter reports that the association now has some 300 cows signed up, and will test in conjunction with the Whidby Island association, which has a like number, each association using the man half of the time. Ralph Erskine has been hired to do the testing.

Washington Gleanings

A $13,000 fruit-drying plant is to be built at Wenatchee.

A new fruit evaporator at Zillah will employ 100 women and youths.

Conrad Schmick of Colfax has purchased the J. C. Faires farm of 565 acres near Endicott for $50,000.

T. F. Kennedy of Ethel has just threshed 121 bushels of wheat from one and one-fourth acres of land. This is believed to be a record for Lewis county.

Storage capacity of the Okanogan warehouse has been doubled. It will now hold 50 carloads of boxed apples. Conveyors installed in the packing room eliminate trucking.

A bean crop will alternate with wheat on the Cosgrove ranch at Mayview, and Japanese labor will be secured to grow and harvest this crop, according to Attorney Howard G. Cosgrove.

About 300 pounds of beans to the acre are being harvested on the hills north of Pomeroy. E. C. Cluster, who has 50 acres in beans this year near Pomeroy, will plant from 50 to 100 acres next year.

A bean threshing machine has been bought by Nels Linstrom of Pomeroy, who is raising 160 acres of beans on the farms of Bert Green and Lee Garren. The machine cost $600. It is equipped for threshing beans and peas.

The Tieton irrigation project will return more than $1,000,000 for the 28,000 acres under cultivation, according to a report made to the trustees by Secretary R. H. Hayden. The secretary figures this season's crop worth $1,375,000.

The fruit-drying plant at the state prison, Walla Walla, will be ready for handling the surplus apple crop this fall. When the apples are dried it is probable that potatoes will be evaporated. The plant can handle 20 tons a day.

A shipment of six pure-bred rams has been made through the First National bank of Pullman for the various breeders about Pullman, who have engaged in sheep raising. The animals were splendid types of the Shropshire breed and are all registered. Those who received them are: W. E. Lawson, Mallory, Farley, Christopher Brothers, E. L. Moys and Carson Taylor.

Reports of earnings made by pupils during vacation taken in the North Yakima high school showed the 551 pupils worked a total of 24,358 days and earned $40,045, the average earnings for each pupil, notwithstanding the fact that many worked at home and received no pay, was $72.65. Waldo Kelso, a senior, made the largest sum, earning $300 at farm work, and many others earned above $250 on farms and in orchards.

What Others Say

Herald, Concrete: The weeds and thistles are now going to seed. Unless they are cut and burned at once, a bigger crop next year will be assured.

Monitor, Monroe: It can not be too often repeated that if you think the farmer is making an exorbitant profit, there is plenty of idle land which you can put under cultivation and share in the golden harvest.

Mason County Journal, Shelton: That the Old World stock is practically gone and this county will offer great profits for farmers for years to come in supplying the world, give assurance to the farm investment and development in this country.

Globe-Republican, Auburn: The many farmers i nthis vicinity who put up silos last spring and during the summer are to be congratulated on their foresight, in view of the prevailing—almost prohibitive—prices of feed. They are fortunate, too, in the fact that this has been a season of prolific growth of clover, corn and other profitable silo products. The filling of all these silos will materially reduce the high cost of living for many a dairy herd nereabouts.

There's your weapon!

It's up to you, Mr. Northwest Farmer, to soldier with the Tractor, so that our boys can soldier with the rifle in France on full stomachs. They're in France fighting for humanity and freedom, and they need your backing at home.

Our success in this great war is just as dependent upon the Northwest Farmer, as it is on the men that the Northwest has sent to the front.

More acreage! Bigger crops produced economically, will do more to win this war than anything else. There's where the

BIG BULL TRACTOR

Burns Kerosene or Gasoline

comes in; saves you money in your plowing and saves you money in your harvesting. It is both a patriotic and selfish duty for every progressive farmer to own one.

BULL TRACTOR INCREASES CROP YIELD

Hundreds of Bull Tractor owners will tell you that it has actually increased crop yield 10% to 30%. This is done by the exclusive Sub-Soiling feature—big five-inch lugs of the big Bull wheel running in the furrow plows from two to four inches deeper than you can with horses or other tractors.

SOME THINGS THE BULL TRACTORS CAN BE USED FOR.

Clearing Land	Spreading	Threashing	Hulling Clover	Shelling Corn	Husking
Digging Ditches	Dragging Roads	Moving	Hauling Crops	Digging Potatoes	Hauling
Plowing	Grinding Feed	Baling Hay	Loading Logs	Filling Silo	Pulling Stumps
Discing	Sawing	Loading Hay	Grinding Tools	Shredding	Stretching Wire
Harrowing	Irrigating	Spraying	Pumping	Fall Plowing	Operate Machinery
Drilling	Harvesting

Dairy Exports

Figures showing the extent to which the United States has lately been exporting dairy products to Europe make pre-war records seem insignificant. Here are some facts based on compilations of the U. S. food administration which point out the striking increase in our trade.

Exports of condensed milk which for a three-year period before the war averaged 17,792,579 pounds annually have increased to 259,102,213 pounds. This figure is for the fiscal year ending June 30, 1917. The European allies received 2.27 per cent of the condensed milk exported from this country in the three pre-war years. In 1917 they received 57.2 per cent, or considerably over half of the total.

Cheese exports for the three pre-war years averaged 3,788,065 pounds. For the year ending June 30, 1917, they reached 66,087,213 pounds, a 17-fold increase.

Exports of butter which for the three years previous to the war were 4,457,144 pounds increased in 1917 to 26,835,092, which is more than a six-fold increase.

It is noteworthy that Holland took 84.9 per cent of all the condensed milk shipped by the United States to European neutrals. However, a large proportion of the amount—15,134,084 pounds in all—consigned to neutral countries during the last fiscal year unquestionably reached Germany through indirect channels.

Obviously the enormous increase in our dairy exports calls for a statement on home production and conditions. Two years are required to raise a dairy cow and five years to bring her to maximum yield. Under normal conditions the country was prepared to go on producing milk in proportion to the demand. The number of dairy cows in proportion to the population has varied but little in the last six years. In 1911 the ratio was 22.3 cows per hundred people; this year the ratio is 22.1.

But the ravages of war now call for a prompt increase of dairy cattle in those countries able to raise them. The world's total number of cattle has already decreased more than 28,000,000. In England, France and Germany, the herds are being deliberately sacrificed to supply the immediate necessity for meat. The embargo is keeping fodder from Holland to a degree that will lead to a decrease in her herds.

Judging from all indications, the sacrifice of dairy animals will be even greater as the war continues. And the responsibility of supplying Europe with dairy supplies will rest with increasing gravity on dairymen of this country.

Dairyman Doing His Bit.

W. E. Gross, who operates a hundred and sixty acre dairy farm, seven miles west of Walla Walla, Wash., believes in doing his "bit" in a practical way. In addition to giving two sons to Uncle Sam's army, Mr. Gross has been operating his dairy farm on a war basis since the declaration of war. The large, modern dairy barn, amply housing 32 head of milch cows, is equipped with modern concrete floors, feeding troughs and feed and litter carriers. The milking is quietly and quickly done by a four-unit milking machine driven by a three-horsepower motor. Mr. Gross realizes the merits of corn silage as an economical feed and as a milk producer. He has recently finished the filling of two silos of 100-ton capacity each. The corn was planted with a check-row corn planter and harvested with a corn binder, both of which are labor-saving machines. Mr. Gross is a believer in the improvement of the dairy herd and in addition to possessing several purebred Holsteins he has at the head of his herd Sir Bessie Tritonia Fobes, formerly

Dairy barn and silo of W. E. Gross, Walla Walla, Wash.

owned by David Monroe of Spokane. Mr. Gross is a member of the Walla Walla Valley Cow-testing association and has kept a close tab on the performances of his cows.

Enumclaw Cow Test.

In the Enumclaw Cow Testing association all cows are divided into four groups according to their age. For the month of August, in class A, which consists of cows five years of age and over, F. Nisholas' six-year-old Jersey leads the list with a record of 1023 pounds of milk and 59.33 pounds of butterfat. In class B, consisting of cows over four and under five years of age, Arthur Bull's four-year-old Holstein comes first with 1323.7 pounds of milk and 55.59 pounds of butterfat. Class C consists of three-year-old cows. A. Houston's Holstein-Jersey ranks first in this division with 1463.2 pounds of milk and 59.99 pounds of butterfat. Under class D come cows of two years and under three. A Holstein owned by Arthur Bull made the best record in this division, producing 1134.6 pounds of milk and 45.38 pounds of butterfat. According to H. R. Noble, official tester of the association, there were 409 cows tested during August. The average production per cow was 658 pounds of milk, and 28.79 pounds of butterfat. Three dollars and thirty-eight cents was the average cost of feed per cow.

Considered From Every Angle,

PURE BRED HOLSTEINS

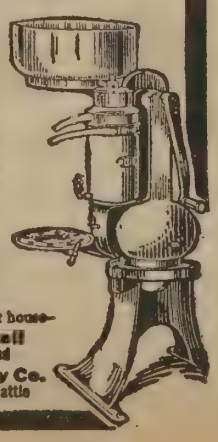
Are the Most Profitable Breed

They produce more milk and butterfat for less feed cost and less labor cost than any other breed. These facts are proven by comparison of statistics available on all purebred breeds. Write for information. It is free.

THE HOLSTEIN-FRIESIAN ASS'N OF AMERICA, Bx. 205, Brattleboro, Vt.

The LINK BLADE does it!

For years others have tried to invent something that would equal the link-blade idea. It still holds world-record for close-skimming.



THE NEW SIMPLEX LINK BLADE SEPARATOR

The link-blade is all in one piece. Cuts out many needless parts--easy to clean and keep in order.

10 Days FREE Trial—Send No Money!

To prove our confidence in this Separator we will ship you a new 1917 Simplex. Use it 10 days. No obligation or cost incurred. If you do not say it beats all other separators, return at our expense.

A Postal also brings new FREE Separator Book.

Live Stock Winners at Oregon State Fair

For the benefit of those who are following the live stock records at the principal fairs of the northwest, the awards at the Oregon state fair are given this week. They were as follows:

Fair Awards.

The following are the detailed awards in the horse and cattle departments at the Oregon State fair:

HORSES.

Percherons.

Stallions: Four years and over, first and third, A. C. Ruby, Portland; second, Charles Russell, McMinnville, Ore.; fourth, A. R. Hunter, Island City, Ore. Three years, first, Hunter; second, Ruby & Bowers, Davis, Cal; third and fourth, Ruby. Two years, first and second, Ruby; third and fourth, Ruby & Bowers. One year, first and second, Ruby; third and fifth, Hunter; fourth, Ruby & Bowers. Under one year, first Hunter; second, Steve J. Schmidt, Gervais, Ore.; third, James Middleton, Dallas, Ore.

Mares: Mare and sucking colt—First, Middleton; second, Hunter; third, Fred W. Spires, Lebanon, Ore.; four, Schmidt. Four years and over—First and fourth, Hunter; second, Ruby; third, D. F. Burge, Albany, Ore.; fifth, Middleton. Three years—First, Mrs. H. E. Evans, Rickreall, Ore.; second, Evan Evans, Rickreall, Ore.; third, G. A. Morse, Talent, Ore. Two years—First and second Ruby; third, Burge; fourth, Hunter; fifth, Spires. One year—First, Burge; second, Middleton; third, Spires. Under one year—First, Spires. Get of sire—First, Hunter; second, Morse. Produce of mare—First, Ruby; second Mrs. Evans; third, Evan Evans. Display of five animals, bred by exhibitor—Ruby.

Senior champion stallion—Ruby on Sir George. Junior champion stallion—Ruby on Halton. Senior champion mare—Mrs. H. E. Evans on Uneretta. Junior champion mare—Ruby on Diana. Grand champion stallion—Halton. Grand champion mare—Diana.

Belgians.

Stallions, first and third, A. C. Ruby, Portland; second, Waldo Hillis Belgian Horse association, Macleay, Ore.; fourth, Ruby & Bowers, Davis, Cal. Three years—Ruby & Bowers. Two years—First and second, Ruby & Bowers; third, Ruby. One year—Ruby. Under 1 year—Ruby.

Mare and suckling colt—Ruby. Mares, four years and over—First, B. M. Turner, Turner, Ore.; second, Ruby & Bowes; third and fourth, Ruby. One year—First, Turner; second, Ruby. Get of sire—First, Ruby; second, Waldo Hills. Produce of mare—First, Ruby & Bowers; second, Ruby; five animals owned by exhibitors—Ruby.

Senior champion stallion—Ruby on Perce Junior. Junior champion stallion—Ruby & Bowers on Brussell. Senior champion mare—Turner on Polka. Junior champion mare—Turner on Yolanda. Grand champion stallion—Perce Junior. Grand champion mare—Yolanda.

Shires.

Stallions, four years and over—First and third, A. C. Ruby, Portland, Ore.; second, Gust Jaeger, Sherwood, Ore.; fourth, Ruby & Bowers, Davis, Cal. Three years—Ruby. Two years—First and third, Ruby; second, Jaeger; fourth, Ruby & Bowers.

Mare, three years—Ruby. Produce of mare—First, Jaeger; second, Ruby. Five animals bred by exhibitor—Ruby.

Senior champion stallion—Ruby on Newton King Oscar. Junior champion stallion—Ruby on Durand. Senior champion mare—Ruby on Gipsy. Junior champion mare—Ruby. Grand champion stallion—Newton King Oscar. Grand champion mare—Gipsy.

Clydesdales.

Stallions, four years or over—First, J. E. Reynolds, LaGrande, Ore.; second, A. T. Jones, McMinnville, Ore.; third, A. T. Moffit, Salem, Ore.; fourth, Carrie Skipton, Salem, Ore. Three years—W. L. Skipton, Salem, Ore. Two years—First, Albert Egan, Gervais, Ore.; second, J. E. Ownbey, Salem, Ore. Under one year—First and third, Ownbey; second, Egan.

Mare and suckling colt—First, Egan; second, W. L. Skipton; third, Ownbey. Four years—First and third, W. L. Skipton; second, Egan. Three years—First, Reynolds; two, Carrie E. Skipton. Two years—Reynolds. One year—Egan. Under one year—First, W. L. Skipton; second and third, L. P. Lardon, Salem, Ore. Produce of mare—Reynolds. Senior champion stallion—Reynolds on Decoration. Senior champion stallion—Egan on Bobby Baby. Senior champion mare—Reynolds on Bonnie. Junior champion mare—Reynolds on Glenellen. Grand champion stallion—Decoration. Grand champion mare—Bonnie.

Thoroughbreds.

C. E. Holtgrieve of Portland was the only exhibitor and won on the only entry—mare four years old and over.

Standard Bred.

Stallions—Four years and over—1, John A. Noblitt, Molalla, Ore.; 2, L. C. Fones, North Yakima, Wash. Three years—John Campbell, Forest Grove, Ore. One year—T. L. Davidson, Salem, Ore.

Mares—Four years and over—1, G. S. Levy, Union, Ore.; 2, Davidson. Three years—Chester Keene, Gervais, Ore. Two years—1, H. C. Stover, Salem, Ore.; 2, Davidson. Produce of mare—Davidson.

Senior champion stallion—Noblitt.

Abortion In Cattle

High Meat and Milk Prices Make Abortion Control Doubly Necessary

Authorities are alarmed at the increasing losses caused by contagious abortion. Some state it is causing more damage to live stock than tuberculosis.

Careful breeders are realizing that meat and milk products will continue to mean more and more money to them. They are accordingly taking active steps to systematically and efficiently stamp out abortion from their herds.

Research men of the U. S. Government and other institutions assert that there is no absolute abortion "cure," but all authorities agree that abortion can be controlled and the losses stopped.

No serum or vaccine has been found that gives any protection. These authorities all recommend that a thorough system of sanitation be followed on every farm, including treatment of bull, cows, calves and buildings. This is the only certain means of controlling and preventing Abortion—Sterility—Premature Birth—Retained Afterbirth in cows and White Scours in calves. These all seem to be symptoms showing the presence of Abortion germs.

In the case of abortion itself the germs inhabit and develop in the albuminous matter in the tissue lining of the uterus and vagina and here is where the fight for control must be efficiently and systematically waged. The germs produce an acid slime or discharge which eats the lining of the uterus and vagina and prevents healing of the torn, raw membranes.

To correct this condition, B-K, the powerful antiseptic, used as a douche, kills the abortion germs, dissolves the albumin, removes the slime, neutralizes the acid, cleans the tissue and thereby puts the organs in a condition for natural healing.

B-K does not irritate, but is soothing and healing to torn membranes, and does not cause straining. Other substances, such as carbolic acid, cresol, iodine, etc., are more or less irritating, do not dissolve the albumins, but tend to coagulate or thicken them, thereby preventing destruction of the germs and thorough cleansing of the infected tissues.

B-K is a powerful germ killer. Its remarkable germ-killing strength is plainly marked and guaranteed on every package. B-K contains no poison, acid nor oil—it is clear and clean as water and as easy to use. B-K may be used freely in the drinking water, helping to destroy the germs which accumulate in the tanks; may also be used effectively to disinfect the bull and wash calves at birth.

B-K is handy. You have in one jug, all ready for use by simply mixing with water, your treatment for calves, cows and bulls; also the best disinfectant you can possibly have for general use—no special mixing of various ingredients—saves trouble and mistakes—insures promptness, accuracy, convenience and successful results.

Contagious abortion is being successfully controlled in many herds by following our simple plan with B-K. One man writes: "I have been using B-K according to directions and the results have been very gratifying. My cows have every one passed the time for aborting and are calving all right in a natural way. I had lost $1500.00 on my cows and feel that B-K has cleaned up the trouble entirely."

B-K is sold by dairy and farm supply houses, druggists, general stores, etc., everywhere. If your dealer does not have it, send us his name.

Clean and Clear as Water

Write for testimony of users and reasons why B-K is used so successfully in this work. Send for these useful booklets.

VALUE OF BEAN STRAW.

Is Better Than Common Oat Straw

By E. L. POTTER.

We are receiving many inquiries concerning the feeding value of bean straw. We are unable to answer these with the degree of definiteness that we would like. The best information obtainable is that the bean straw has a feeding value about half way between clover hay and oat straw. For cattle and sheep it is probably about equal to the poorer grades of wild and meadow hays. This is providing it is well cured and reasonably free from dirt. Present indications are that it will be very dirty and often spoiled this season.

Veterinary

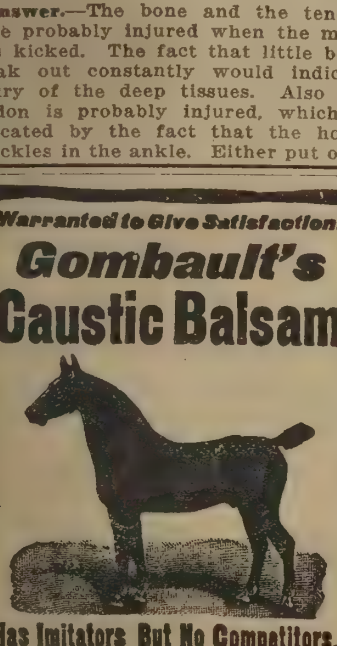
Dr. S. B. Nelson

Bone and Tendon Injured.—I have a six-year-old mare that was kicked on the hind leg just below the hock a year ago. It became swollen and broke, later it healed but the swelling was still there and then the ankle became swollen and stiff so that it would not straighten. J. E. B., Rexburg, Idaho.

Answer.—The bone and the tendon were probably injured when the mare was kicked. The fact that little boils break out constantly would indicate injury of the deep tissues. Also the tendon is probably injured, which is indicated by the fact that the horse kunckles in the ankle. Either put on a high toed shoe or have a veterinarian operate on the tendon by cutting it.

Sweeney Shoulder—I have a horse with sweeney shoulder. He has showed symptoms for the last six months.—J. H. B., Addy, Wash.

Answer.—A sweeney that has stood for six months is pretty hard to handle, I would suggest to you that the best thing for you to do is to get a veterinarian (I thing there is a graduate at Colville) to treat the sweeney for you. In the meantime, the constant pulling of the skin, rubbing it with a rough substance, or even a light blister once a week may be of advantage. A blister which would be of advantage would be a cantharides blister, one part cantharides to two parts of lard, applied with considerable friction. It could be put on Saturday evening and the horse be ready to work Monday morning.



Disease Among Calves—I lost two calves but do not know what the disease is. They ate and drank until the very last, but I saw some blood in their passage and blood running out of their nose. One of them was swollen on the hind leg and on the head and throat. Now I have another one with the same symptoms.—A. A. U., Salado, Ore.

Answer—The disease affecting your calf may be either one of two troubles. First: It may be hemorrhagic septicemia. The symptoms that you give as the blood clot and the bloody lesions of the intestines and the bleeding would rather lead me to infer that the disease is hemorrhagic septicemia. At the present time there is no medicinal treatment for this disease. There has, however, been some experimenting done with a serum. The experimenters have been working toward this for some time and are getting along with it to some extent, but up to the present time it is not yet of practical value that I know of. In a general way, however, I would advise the disinfection of the stables. This should be done most thoroughly. First, wash the stables down with one to one thousand parts of corrosive sublimate in water. This is very poisonous and must be handled carefully. After three or four days whitewash the stables and pens thoroughly. Give a whitewash with 5 per cent of any of the cold tar products, like cresole, creolin and so forth, or crude carbolic acid if it is not too expensive. However, this disease comes and then stops again without our knowledge of the why of it, whether they are in the barnyard or in the pasture.

For the second disease which it might be, I would say that an infection with the contagious abortion might be responsible and this would need entire disinfection of the stables as I mentioned above, and watch carefully when the calves are born. The treatment must be entirely prophylactic. When the calf is born then disinfect the navel, without ever touching the fingers to the part of the body, with one to one thousand parts of solution of corrosive sublimate. Put the solution in a cup and hold the cup over the navel for about 10 minutes. Then dash the navel with a dry powder of one part of acid and one part of boracic acid.

Warranted to Give Satisfaction.

Gombault's Caustic Balsam

Has Imitators But No Competitors.

A Safe, Speedy and Positive Cure for Curb, Splint, Sweeny, Capped Hock, Strained Tendons, Founder, Wind Puffs, and all lameness from Spavin, Ringbone and other bony tumors. Cures all skin diseases or Parasites, Thrush, Diphtheria. Removes all Bunches from Horses or Cattle.

As a Human Remedy for Rheumatism, Sprains, Sore Throat, etc., it is invaluable. Every bottle of Caustic Balsam sold is Warranted to give satisfaction. Price $1.50 per bottle. Sold by druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars, testimonials, etc. Address

PROTECT YOUR CATTLE WITH

Blacklegoids

NO DOSE TO MEASURE.
NO LIQUID TO SPILL.
NO STRING TO ROT.

BLACKLEGOIDS are small pills. Each pill is an accurate dose of blackleg vaccine.

BLACKLEGOIDS are easily administered—simply inject them under the skin with a vaccine injector.

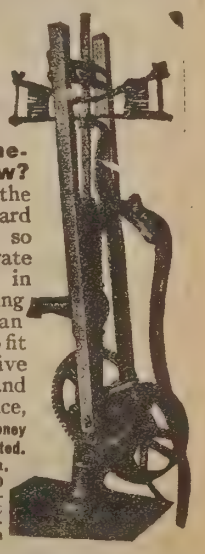
TAKE NO CHANCES.

Don't wait until your calves become infected. This means certain loss—there is no *cure* for blackleg. Vaccinate now—before the deadly disease shows itself.

THE COST IS SMALL.

BLACKLEGOIDS are economical. The expense is trifling compared with the loss you are liable to sustain if you do not use them.

ORDER THROUGH YOUR VETERINARIAN OR DRUGGIST.



Write for free booklets on Blackleg, with full information about Blacklegoids.

PARKE, DAVIS & CO.

POULTRY

Write to the Editor

JAMES DRYDEN
Editorial Contributor

Choosing Egg Layers

A great many persons probably for the first time are considering buying a few fowls, and they are studying the breeds. They are writing to the poultry departments of the experiment stations and they are asking extension lecturers and poultry breeders the question, what is the best breed? Some of them will go to the fall fairs, look over the exhibits and propound the query to the owners of the birds and they will go home with a good deal of information as to the general characteristics of the breeds on exhibit—their shape and size, color, etc. When he sums up the information the seeker after knowledge will find that one breed is white and another black and another brown. One is large and one is small and one medium in size; one has five toes and another four; one has single comb and another rose and another pea. He has definite information on those points, and that is all right. He has learned that a brown hen laid a white egg and a white hen laid a brown egg; he could swear to it because he saw the eggs laid, "but that's all I can swear to," he explained to Mirandy, "unless I swear at the exhibitors, for one said that the black one laid the most eggs in a year, one said the white one laid the most, and one the brown one was the only layer, and so on, a hundred of them. But how they could be all best layers; how those hundred exhibitors of a hundred different kinds of chickens could without batting an eye assert that each and every one of them was the best layer, I couldn't understand. I began to think that they thought I had escaped from the state medical hospital and they were making fun of me, and I sneaked away."

This may be somewhat exaggerated, but it is true that the breed question worries the beginner considerably, and some who are more than beginners are often confused at the mass of conflicting testimony.

In speaking of breeds here I do not make any technical distinction between the term breed and variety. Technically there are not so many breeds, but there are some 121 varieties, the number of breeds being 38, as recognized by the standard of perfection, and there are others not in the standard. For instance, the Plymouth Rock is a breed, but there are eight varieties of Plymouth Rocks, as follows, barred, white, buff, silver penciled, partridge and columbian. They are all the same in shape. If their feathers were all taken off they would look alike. The color makes the variety. It is the same with other breeds. There are eight varieties of Wyandottes.

The beginners, or a large proportion of them, want to begin in the producing business; they want to produce eggs, and they honestly seek the breed or variety that will produce the most eggs, and they don't care much as to color of feather.

The truth is the breed counts for little or nothing. There are good and poor layers in all breeds. It is the breeding that counts.

This needs to be iterated and reiterated. The beginner should go to the man who has been breeding for ggs and buy his stock from him. He should select his stock on the basis of trapnest records rather than show records and fancy points. There are plenty of breeders now who are trapnesting and using as breeding stock only those fowls that have high records. The purchaser should satisfy himself that the breeder he buys from has been following this system of breeding. This is the best way to begin.

Don't be continually changing the breed; change the breeding or the breeder. In other words, choose stock that has been bred to lay rather than bred for color of feather. Keep at it along this line year after year, and if it is not possible to trapnest, purchase males from trapnested high-producing stock. J. D.

All-Northwest Laying Contest.

At the end of August, one and a half months from end of contest, the pen of Leghorns belonging to J. A. Hanson of Corvallis was first. This pen has held first place almost throughout the entire period of the contest. A pen of Leghorns owned by P. W. Harries of Seattle was second and only two eggs behind Hanson's. J. R. McRae's Leghorn pen, which held first place for one month, was third. It is now almost certain that one of these pens will finish the year in first place. It is a close race. No high records, however, will be made, for the contest encountered rather rough sailing. The pens that are now leading are from stock that has been bred specially for heavy egg laying and they would be expected to be high up on the record even in the contest that had not encountered the troubles that this one has.

Another contest will be started at Pullman on November 1. Some changes, we believe, have been made in the conditions, and no doubt the director will experience fewer troubles in the way of diseases in the flocks than in the present contest. J. D.

Colds and Roup.

The cold nights will soon be here. With them will come colds and roup in the poultry flock, unless prompt measures are taken to prevent them. In about nine cases out of 10 these troubles come from a lack of fresh aid in the poultry house or coop. The chickens will not take cold just because the weather is cold. They are more likely to take it when they are too closely crowded together in a small coop with little ventilation. They become overheated at night and when the cold air strikes them in the morning they catch cold. Give them an open shed to roost in and spread the roost perches not less than 18 inches apart. With plenty of fresh air, which is only secured in an open-front house with wide-apart roosts, the flock will suffer little or none from colds and roup. The fresh-air treatment is the only sure preventive or cure. J. D.

Culling the Pullets.

Whether we can pick out the pullets that are the best layers or not is a question, but any poultryman can do a little culling that will eliminate some poor layers. There are always some pullets in every flock at this season of the year which show marked lack of vigor, and they should be mercilessly culled. It does not require an expert to do culling of this kind. Those showing decided lack of development, or the runts as they are called, should be given short shrift. Cull for vigor or apparent vigor. Don't feel high priced feed to the runts. J. D.

Buy a Few Chickens.

It is a patriotic duty to keep a few chickens. In another year there is likely to be a greater shortage of meat foods than of flour. Soldiers can not fight long on bread and potatoes; they must have some meat. The civilian populations also demand meat. Eggs take the place of meat, especially for those who have little or no hard muscular labor to perform, and they constitute the vast majority of the population. Even the muscular laborer can do heavy work with no other animal food than eggs. So it is a good thing for every one who can to keep a few chickens and help relieve the shortage of meat foods that seems inevitable in the next two or three years, war or no war. J. D.

English Pupils Gave Freely.

A statement issued by the education committee of the London county council shows that the total sum collected for the Belgian and Serbian children's clothing fund in the schools amounts to £4270 (about $21,350). The total number of kits supplied to Belgian and Serbian children is about 10,000.

Experiments in Irrigating Potatoes

Weight of the average hill and average height of vines on plats receiving different quantities of irrigation water weekly. Results for five years.

Irrigation of potatoes forms the subject of a recent bulletin by the Utah Experiment station. Some of the results obtained by these experiments are given as follows:

The highest yield of potatoes was produced where small regular irrigations were given.

One inch weekly, or a total of 12.8 inches during the season, gave a higher yield than any other treatment.

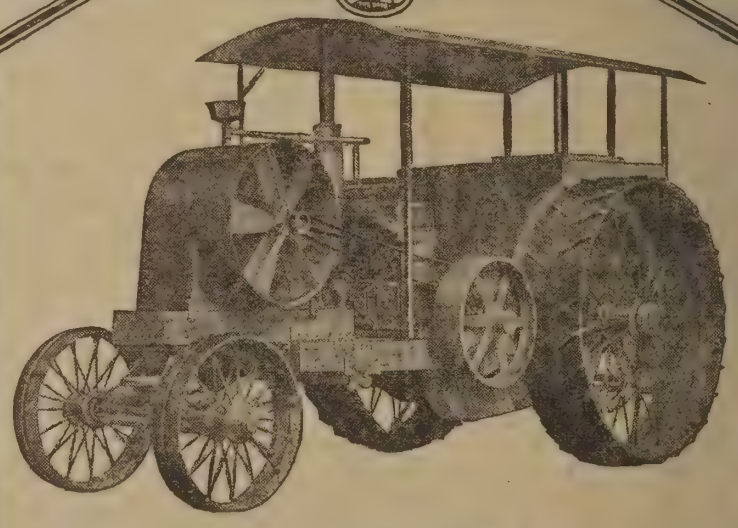
When as much as 96 inches of water were applied the yield was less than where no water was given.

Watering the land after planting the potatoes and before the plants were up, reduced the yield below that where no irrigation was given.

Where but one irrigation was applied, it gave best results if applied when the potatoes were in full bloom. The second best stage was just as the tubers began to form.

Discontinuing irrigation during the rapid growing season, after it was once begun, decreased the yield.

Excessive moisture, or that applied late in the life of the plant, increased the relative production of vines.



The relative number of tubers per hill was increased by early irrigation where the relative size of the tubers was influenced more by late water.

Height of vines was affected much less by the treatment than yield of tubers.

The experiment brings out the importance of an even supply of soil moisture during the middle portion of the life of the potato after the tubers begin to form, and before they begin to ripen.

The accompanying diagram illustrates one phase of these experiments.

Congress Adjourns

Last Hours Are Given to La Follette

Congress adjourned Saturday of last week after one of the most active sessions in the country's history. Never before has that body been faced with the necessity of so many far-reaching bits of legislation, nearly all of which were due to the exigencies of war. The recess will be only for two months, however, regular reassembling being in December. At this time there is seen no probability of a calling of congress in special session by the president prior to that time, though developments in the present world crises might necessitate such calling. The session just ended was a special session called by President Wilson for the pu pose of enacting legislation to meet the crisis brought about by the ruthlessness of Germany and the entrance of this country into the war. Among the stupendous actions taken were the declaration that a state of war existed between this country and Germany; the passage of the national draft law whereby 10,000,000 men have already been enrolled subject to call of the country for army service; the appropriation in one form or another of approximately $20,000,000,000 for the prosecution of the war (these appropriations including the two Liberty loan bond issues); the passage of the espionage act whereby whosesale suppression of foreign spies in this country was made possible; the passage of the food, feed and fuel conrtol bill whereby the government is empowered to regulate in great detail the prices and distribution of the staple necessities; the enactment of a measure providing government insurance for soldiers and sailors, and the passage of a number of acts regulating the country's trade with foreign peoples, including the act empowering the president to place stringent embargo regulations on the shipment of foods and munitions.

La Follette Inquiry Started.

Two days before adojrnment the senate acknowledged a nation-wide protest against Senator La Follette's alleged disloyal utterances by creating a subcommittee of the privileges and elections committee for the purpose of making an inquiry into the charges against the Wisconsin senator. This committee is empowered to inquire only into the actual statements made by the senator in his notorious address at St. Paul two weeks ago and report to the senate at its reconvening as to the accuracy of such statements. Among the statements alleged to have been made is one that W. J. Bryan, former secretary of state, informed President Wilson four days before the sailing of the Lusitania on her ill-fated voyage that she was carrying munitions of war to the allies. This is declared by the former secretary to have been untrue if stated. He is charged with having expressed seditious sentiments in his address, condemning the United States government for being in the war and expressing sympathy with German frightfulness. The senate set aside five hours at the close of its session for a brief hearing of the La Follette case. The senator was given three hours in which to speak, which he used in defending himself on the ground of the national right of free speech. The session adjourned when three senators had replied briefly to his address. The committee appointed to make inquiry will report immediately after congress reconvenes December 3.

English Continue Fighting.

The British armies along the northern battle front of Europe continue their unprecedented attack on the German lines. Progress has been made in nearly every battle during the last 10 days. General Haig, in charge of the campaign, is directing the most ferocious fire in the history of the war, continuing over so long a space of time. Comparatively little activity on the part of either the Germans or the Russians is reported on the eastern front.

Air Raids Increase.

Germany continues to bombard British and French cities from their fleets of airplanes, and for the first time British and French airmen are conducting a retaliatory campaign. Reprisals are under way, deliberate bomb droppings from allied airplanes into German cities being reported.

That the war will yet be won in the air is a growing conviction in many quarters, and this country is making special effort to develop a great fleet of airships and a great army of men to operate them. Included in the acts of the late congress was the appropriation of more than $600,000,000 for the financing of the movement. It is hoped that a great fleet of allied airplanes will permit the effective bombardment of German bases that can not be reached either by land or by water.

American Soldiers Mobilize.

The various units of the new national army are assembling in the many army camps by the tens of thousands, and the recruits are undergoing the most rigorous training ever practiced on a large scale in this country. For strategic reasons the government is giving out no information as to the plans for sending detachments of soldiers abroad, and for like reasons, little information concerning the activities of the soldiers already in France is given publicity. Secretary of War Baker repeatedly asserts, however, that no news concerning American soldiers is good news, since the war department has promised that no disaster or casualty will be withheld from the public.

Presents for the Soldiers.

Postmaster General Burleson has issued a warning to persons who desire to send Christmas presents to American soldiers or sailors now on foreign soil or waters. All packages must be ready for shipment by November 15 in order to be assured delivery on Christmas morning. A formal statement has been issued, reading in part as follows:

"The three essential respects in which the public can aid in securing a happy Christmas at the front are to mail early, address intelligently and pack securely. Every package must bear conspicuously the words 'Christmas mail,' the complete address of persons for whom it is intended and in the upper left-hand corner the name and address of the sender.

"Every parcel must be packed and wrapped so as to admit of easy inspection by the postmaster. No parcel will be dispatched to France which has not the postmaster general's certificate that it contains no prohibited articles.'

The rate of postage is announced at 12 cents per pound.

Cost Half as Much

(Continued from page one.)

Qarrtern (3½ pounds), 8½d.
Half quarten (1¾ pounds), 4¼d.
One pound, 2½d.
Self-raising flour, 3½d a pound.

These prices refer to sales for cash over the counter. A reasonable additional charge may be made by the retailer if he gives credit to his customer or delivers the bread or flour at the customer's house.

Fifty shillings for 280 pounds is $12, or $8.58 for 200 pounds. This flour, it should be remembered, is to be milled from British wheat on which the government has fixed a price substantially the same as that fixed on American wheat by our own government.

We come now to the prices at which the British bakers must sell their bread made from $2.20 wheat:

Four-pound loaf.....	3d	(18c)
Two-pound loaf.....	4½d	(9c)
One-pound loaf.....	2½d	(5c)

If the British baker, starting with $2.20 wheat, can sell a pound loaf for 5 cents, the American baker ought to approximate that price, even though his labor may cost him somewhat more. It is to be borne in mind, however, that labor costs have risen greatly in Great Britain since the war.

Probably the American consumers could also have a 5-cent pound loaf if our government kept its hand on the product all the way from the farmer's granary to the retailer's counter, as the British government is doing. But our government takes its hand off at the mill. It fixes the price the farmer shall make, but leaves the jobber, the retailer and the baker entirely uncontrolled.

The War Brought Home

(Continued from page three.)

elected to discharge this duty, not under autocratic decree, but without other restraint than the guidance of individual conscience.

"On the success of this unprecedented advantage in democracy will largely stake the issue of the war.

"We are asking every householder, every hotel, restaurant and dealer in foodstuff in the nation to become a member of the food administration for the conservation and to pledge themselves to follow, in so far as circumstances permit, the suggestions that will be offered from time to time as to measures of food savings.

"For us there is no threat of privation. We wish only that our people should eat plenty but wisely and without waste. Wisdom in eating is to make possible such adjustments in our food consumption, shipping and war necessities as will allow us to fulfil our duty in exports to our allies.

"I, therefore, appeal to the churches and to the schools for their assistance in this crusade to all the organizations for defense, local and national; to all the agencies commercial, social and civic, that they join the administration in this work for the fundamental safety of the nation."

The state of Washington has been thoroughly organized by Charles Hebberd, federal food administrator, who has opened offices in the Columbia building, Spokane, Wash., and has named his committees that will carry this campaign into every city and every country district of this state.

"The campaign in the state of Washington is to be directed in each county by the County Defense council," said Mr. Hebberd, in outlining his plans for the food drive in the state of Washington. "They will act, however, through the schools, both in the city and country districts.

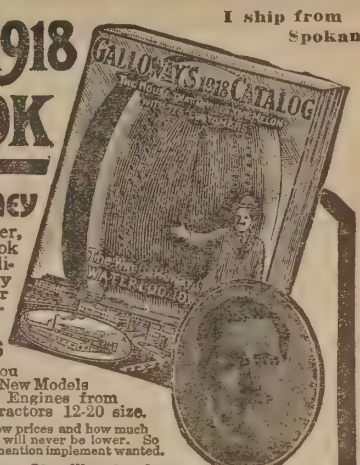
"The quota set for Washington is 230,000 pledges, that is, a pledge to live up to the Hoover food conservation program from each of the 230,000 homes in the state of Washington. This total is now being apportioned among the counties according to the number of families in each county.

"The plan in each county is to distribute, in the various schools, according to the number of families represented there, a pledge card, a house card of instructions and a home card

(Continued on page twenty-two.)

Destroy Smuts

Cleanse all seed grains with Formaldehyde solution before planting as it positively destroys smuts, of wheat, oats, barley, rye, etc. It prevents scab and black-leg diseases of potatoes, also cucumber and onion rot and cabbage diseases, etc.



FORMALDEHYDE
The Farmer's Friend

Every farmer who is in business for big profits should use Formaldehyde, as it has the approval of the U. S. Dept. of Agriculture. Formaldehyde at your dealer, one pint 35 cents treats 40 bushels of seed. Our new Hand Book is free—write to-day.

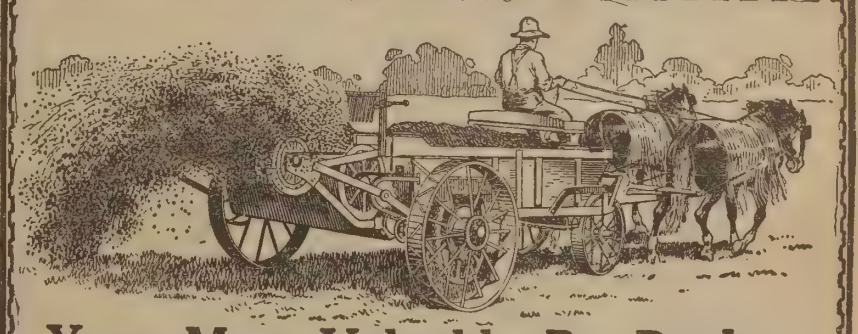
READY My 1918 BOOK

Send for It—Buy Direct—Save Money



Stop where you are if you are about to buy a Spreader, Engine, Separator, Tractor. Send for my new 1918 Book and get my proposition. Let me explain how buying direct—getting your implement straight from the factory to your farm—saves you from 25 to 40%. I am the actual maker and sell you at lowest manufacturers' price based on gigantic volume. I cut out all waste between you and my factory.

Spreaders, Separators, Engines, Tractors

and the many other implements I sell in this way, and let you keep the saving at home and in your own pocket. My 1918 New Models are ready. Spreaders with 11 exclusive improvements; Engines from 1¾ to 16 H. P.; Separators in four splendid sizes; Tractors 12-20 size.

WRITE TODAY Send for my 1918 Book now. Find out my low prices and how much you can save. Don't put it off. My prices will never be lower. So write tonight—a postal will do. Just say, "Send me your 1918 Book" and mention implement wanted.

WM. GALLOWAY, Pres. WM. GALLOWAY CO., 2447 Galloway Sta., Waterloo, Iowa

Your Most Valuable By-Product

This year of all years you can't afford to waste manure—your crop needs it. Save every bit. By spreading it evenly in a wide sheet and making one ton produce better results than two tons spread by hand; doing the work in one-fourth the time and without back straining labor—you can soon pay for

The Flying Dutchman Wide-Spread Spreader

Striking advantages are built into this spreader which commend it to farmers above all other spreaders.

Double Beater pulverizes manure thoroughly. Second beater running at high speed makes a wide, even spread—covers the field in less time—makes the load go farther and produces better crop results.

Separate Direct Axle Drive for beater and apron eliminates overstrain on beater mechanism—prevents breakage.

Low down—only 42 inches from ground to top of box at rear—makes it easy to load.

Wide range of adjustment permits spreading thin coat or heavy layer. Reserve speed moves apron at rate of 40 loads to the acre, for clearing out the bed. One lever controls operation.

Exceptionally light draft under heavy load—easily carries 4500 pounds.

Built almost entirely of steel—nothing to warp, sag or rot.

The Flying Dutchman pays for itself in one season's work. Ask your Moline Dealer about it, or write us for Illustrated Literature.

For Over 50 Years The Mark of Good Implements

Waste Avoided by Cutting Roughage

Mixing Feeds Also Reduces Loss and Enables Feeding Some Classes That Might Be Wasted if Fed Alone; Soaking Fodder Helps.

KENNEWICK, Benton County, Wash., Sept. 28.—The prospects for winter feed are favorable. Although feed is very high, nearly every one has made preparations for carrying stock though in good shape. The silos are the largest facors in taking care of the feed problem. The number of silos has increased very materially the last year as in each of the last three years. A number of farmers in the irrigated sections are planning on securing straw from the wheat sections to supplement alfalfa and silage. We are recommending throughout the county that straw be used on every farm possible. Of course straw should not be depended upon for any considerable part of the ration, but if it is put in a rack where stock can run to it, horses and stock cattle and even dairy cows will eat sufficient amount of it that they will do better on less hay and silage than they will without the straw. We are also recommending where farmers have corn fodder, and it is impossible for them to construct a silo this fall, that they chop and soak the corn fodder, as they feed it. A great deal of waste can be made use of in this way. The potato acreage is very large, compared with last year, but the crop is very light. The top growth has been good, but as digging time approaches, we find that the yield of tubers is very light. It is estimated that the increase of acreage will not make up for the decrease in the yield.

There is considerable preparation for increasing the wheat acreage next year. Some more hay land will also be seeded. The yield of hay will be increased to some extent by a method we are recommending, of seeding fall grain into the alfalfa fields. We have found during the last two years that seeding 30 to 50 pounds of fall wheat into the alfalfa fields has increased the yeld as much as a ton of hay to the acre, in many places, and in addition has kept the cheat and other noxious weeds from spreading in the alfalfa fields. There will also be considerable increase of the production of silage, by growing two crops of silage on the same ground. Some of the farmers in Benton county have demonstrated that ground can be sown to fall wheat and put the wheat into the silo in June. If the ground is plowed and planted immediately to corn it will produce a crop of corn silage, with which to fill the silo in the fall. Under this plan the yield of silage can be nearly doubled without requiring any more land on which to grow it. This plan, of course, drains very heavily on the soil, but any farm which has sufficient live stock to consume two crops of silage each year will have an abundance of manure to make the land produce two crops. LEE M. LAMPSON.

Conditions Good on Coast.

SOUTH BEND, Pacific County, Wash., Oct. 2.—Weather conditions have been very favorable to fall planting. The warm, moist condition should give fall sown grain an excellent start. The upland pastures have grown again and can be used for grazing. During August many farmers had to buy hay for their stock because the pastures had dried up. Every one has made more hay this year than last year although the cutting was a little below normal. The apple crop is fine; fruits of all kinds did well this summer. Squashes and pumpkins are not as large as they should have been. A. D. Gile is exhibiting some very fine blooded cattle at the different fairs this fall. On the 18th and 19th of this month the Congregational church of South Bend, with the help of the county agriculturist, George Nelson, will hold a community fair. The business men of the city have taken a great interest in this and are donating all of the prizes. This fair will be in keeping with the times and will give prizes for the best and most economical war breads and varieties of canned products, besides premiums for vegetables and fruit, etc. It is hoped that in time this fair project will benefit the whole county by acting as a stimulus. We need more dairies, more fruit and truck farms as there is land here to be developed.

MRS. WINNIFRED BUCKINGHAM.

Satisfeid and Optimistic.

CHEHALIS, Lewis County, Wash., Oct. 2.—The weather conditions of early fall have been most favorable to the maturing and harvesting of the crops in this locality. Only a few of the farmers failed to get their grain threshed before the fall rains. The rains softened up the land sufficiently so as to make fall plowing easy. Farmers are generally satisfied with this year's result with the probable exception of the potato crop, which is low, due to the drouth. They are very optimistic for next year. Fairly good seed is available for fall sowing.

A. B. NYSTROM.

Good Outlook.

PORT ANGELES, Clallam County, Wash., Sept. 28.—In a general way the crop outlook for the Olympic peninsula for the coming year seems very propitious in so far as we can judge from present conditions of soil and weather. We have recently had a nice rain with beneficial effects on the ground. The farmers generally appear well satisfied with the bulk of the present year's crop in hay and fodder. Potatoes have done exceedingly well and virgin lands will give good returns and will give an impetus for more clearing if prices for dairy products and tubers remain firm.

J. P. CHRISTENSEN.

Heavy Yield of Barley.

PORT ANGELES, Clallam County, Wash., Oct. 1.—The recent rains have hindered the harvesting of field peas and oats in a few cases. Threshing of the grain crops has been slow because of the rains. Grain crops in this section have been in the main satisfactory, and high yields have been reported from part of the county. Melton Horn of Dungeness reports 1038 bushels of barley from 11 acres. More wheat will be planted in the eastern part of Clallam county next year than was seeded in 1916. There has been no report indicating a scarcity of seed in this section.

Farmers report that they have paid $90 for Canadian field peas and $130 per ton for Marrowfats. Farmers report a poor sale for beef animals, locally.

O. T. McWHORTER.

Optimistic in Skamania.

STEVENSON, Skamania County, Wash., Sept. 28.—The weather is beautiful and we have had copious showers, but not enough for plowing. It is still a little too dry for good work. Feed is scarce. Those who had land to produce grass put up hay sufficient for their need, but a majority in this section are obliged to buy the major portion of their forage and are experiencing hardship to secure any. Some cows are being disposed of in consequence. Some are buying straw in place of hay and are glad to get it. Oat hay brings $25 per ton and oat straw $11.50, alfalfa $27.50 and wheat hay $25 per ton, all baled. A small quantity was sold in July and August at $12 and $14 in the field, loose, but there was only a limited amount. The potato crop will average about one-half normal and very small and inferior. While there is no great enthusiasm for a large crop next year, it is my opinion the trend is toward a larger crop, especially of clover and other grasses. In summing up the season's yield of crops I am inclined to believe the crops are pretty generally satisfactory, with the exception of potatoes. Apples are a heavy crop, but a large percentage are damaged on account of too much rainy weather during the spraying season. I believe there is a general feeling of optimism for next year and with a favorable season will greatly discount this year's efforts. There is a firm of promoters organizing an irrigation system for the "Carson" or Wind River valley which, if successful, will be a valuable addition to the resources and productivity of this county. W. T. JACKSON.

Blessing in Disguise.

MONTESANO, Grays Harbor County, Wash., Sept. 29.—All our crops being at least two weeks later than usual, it is not surprising that some of the grain was somewhat damaged by early rains. I will say that at least half the grain has been discolored by rain and some of it started to grow in the shocks. This is another condition that shows the desirability of a silo to take care of crops that would otherwise be damaged seriously. A few scattering fields of grain are not being threshed but the great majority is now either threshed or under shelter. Practically all our crops are yielding a little less than normal owing to the dry summer, unless it would be root crops which are now starting up and making a very good growth. The prices now obtained for practically all farm products are quite encouraging to the farmers of this section. Prices for dairy products are very good where the dairyman can produce the bulk of his feed, he should be able to make some money this year. High price of hay will especially tend to send some cows to the shambles, but if the right ones are chosen this will be a blessing in disguise. C. F. MONROE.

Forecasts Big Wheat Crop.

NEPPEL, Grant County, Wash., Sept. 13.—The winter feed outlook is not as serious as an early view indicated. The sheepmen that usually buy all available feed in this territory have purchased but little, owing to the high-priced alfalfa, of which about 400 tons have been baled for export market from local territory. Everyone is carefully reserving all straw and none will be baled and possibly all will be fed. The average price per ton is about $2 loose at present. There are also numerous stacks of unthreshed headed wheat that were out of the usual route of a thresher. The potato crop is medium to fair in some fields, where growers have been careful, though the acreage is smaller here this year on account of scarce and high-priced seed. The outlook for a low price on potatoes at digging time on account of the large acreage planted in general all over the United States and present price of $2.50 per hundredweight is holding good for local sales, with a prospect of an advance after November first. The preparation for fall seeding has started and considerable acreage will be planted to fall wheat. Early Baart wheat, which is an imported seed, will be planted. The last two years have shown that it is a mortgage lifter. Indications are that next year's wheat crop will be greater than any ever harvested in the Big Bend.

MARTIN PENHALLICK.

Issaquah C. T. A. Organized.

The organization of the Issaquah Cow Testing association was perfected on August 11, 1917, reports F. W. Rader, county agent of King county. W. G. Jones was elected president; Mr. Bush, vice president; W. W. Pickering, secretary-treasurer. The association has 30 members, with 600 cows signed for. This makes the fifth association in King county and, so far as known, breaks the record for number of cow testing associations in any county in the United States.

Marketing Fruit

By HORACE ADDIS.

J. A. McGee, sales manager for the Oregon Nursery company, expresses the opinion that it would be practical for the fruitgrowers to use the same plans in disposing of their fruit that the nurseries do in disposing of their trees, that is, sell them before the fruit is harvested. He believes sales agencies or paid representatives of the growers should go where the best and nearest markets are and contract the fruit before picking time. Merchants could no doubt be induced to order in advance and they in turn could secure orders from individuals for a supply of several boxes at least of winter apples. In some cases it might even pay to have an agent canvass a town for orders from families. By this means even small towns could often order by the carload, each consignor taking the apples allotted to him and reselling in a uniform price.

There is a market, says Mr. McGee, west of the Rockies, in our cities and those regions that can not grow fruit, for most of the apples raised out here and our best apples should be used to supply that market, instead of sending them on the long haul to the eastern states or across the ocean.

Codling Moth

More Wormy Fruit Than Usual

Some time since we began to discover that we had in our orchard more than the usual percentage of wormy apples. It was a mystery, for we had sprayed the usual number of times, sprayed at the time recommended by the horticultural inspector, sprayed thoroughly; in fact, in order to be sure that we had gotten every branch on every tree we, at two different times, went over the orchard the second time and counted the two sprayings as one, because they were applied at the same spray period. Then to have on our home orchard a percentage of codling moth more than we have ever had, caused us to take notice.

We first discovered that we had at least 40 per cent of wormy apples on certain of our trees. On those same trees in years past, without having sprayed more carefully, we have had less than 5 per cent.

Second, we discovered by investigation that many of our neighbors were in the same fix. One orchard adjoining ours will probably have 90 per cent worms. The orchards in general in our immediate neighborhood will run from 25 to 90 per cent wormy apples.

Third, we found this condition to be largely a local matter, for on two other orchards that we own, and three that we have rented, we have not over 5 per cent worms, and in one case not more than 3 per cent.

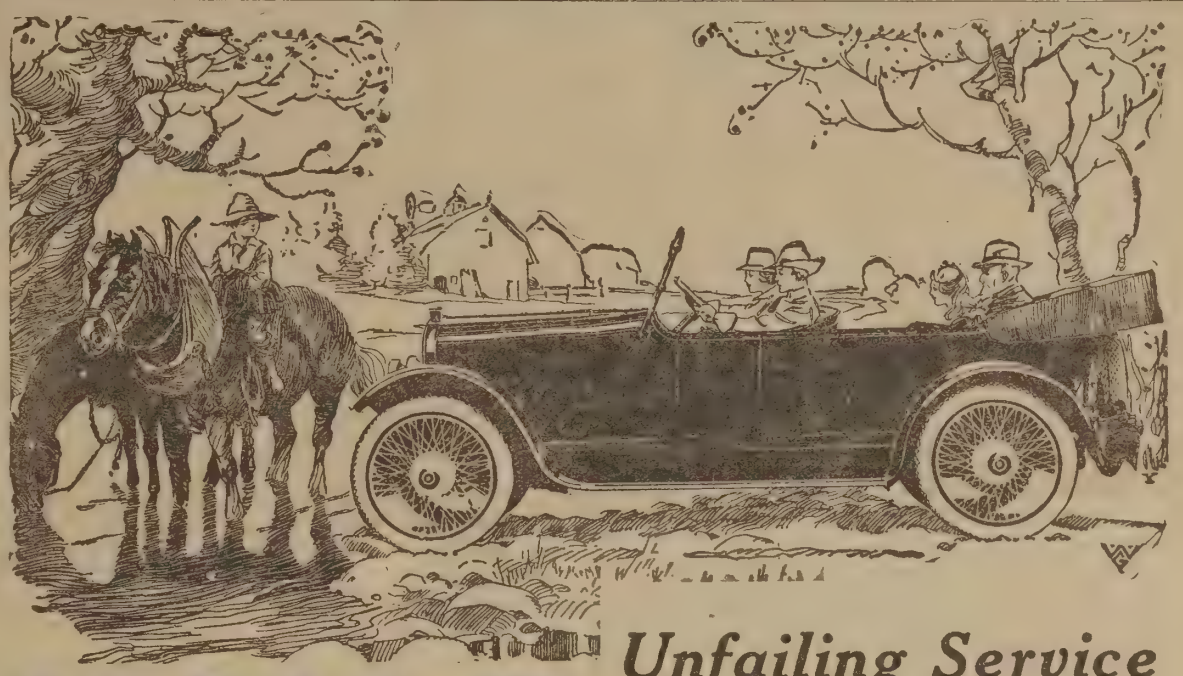
I am writing this to call attention to a fact, and to get at the causes in order, if possible, to prevent it occurring again.

It is a favorable indication that inquiries from different sections are coming in as to the causes. I have a suspicion, but not sufficient evidence for belief, that the spray manufacturers of certain brands of spray material put out an article that had not sufficient strength to kill. I will not mention the name or names of the firms at this writing. I would not injure without good evidence the business reputation of a firm, nor would I do damage to the honor of a man. But these spray manufacturers must remember how much damage they do the growers if they put out a lot of cheap stuff, too weak to kill, yet which the growers buy at considerable expense, put on at an additional expense, and after all is done, and all expenses paid, lose their crops of fruit.

If I find after investigation that this is what they have done, some spray manufacturers will get some free advertising. G. L.

The Ross Morris Apple.

This apple, which we call the Ross Morris, because the first specimen we have ever seen came from the orchard of Mr. Ross Morris of Grandview, Wash., seems to be a variation from the Jonathan. It was bought in 1898 with Jonathan stock, from a nursery in Walla Walla, Wash. The tree is inclined to dwarf, being only a little more than half as large as the Spitzenburg, and Jonathans of the same age. The top and limbs are very like those of the Jonathan, but a little more slender. Bark yellowish, leaves much like those of the Jonathan, but not quite so broad; bears at about the age of eight years, or two years later than the Jonathan; but when its bearing period begins, it bears heavily, and requires thinning.



Fruit, medium size, round oblate, red with specks of yellow, and an occasional light colored spot, as if shaded by a leaf. Skin rather tough, flesh tender, juicy, sweet or a very mild sub-acid. It keeps well in common storage, and has been kept out of cold storage in an ordinary cellar, until May or June. Is a good shipper, good for baking, and good for dessert, for persons who like sweet varieties. G. L.

Scientific Fruit Growing.

The era of scientific growing has just begun. In some portions of the country, especially in the middle states, it has not begun. The old methods of luck, neglect, putting any kind of fruit in any kind of soil, pasturing the orchards, letting the stock prune the trees and the worms take the fruit have proved so unprofitable that those who will not adopt better methods will go out of the business. In fact, most of them have gone already by virtue of an economic necessity. They could not compete successfully with those who practiced better methods, and they either have entered or they are entering other fields of industry requiring less education

There is probably no industry requiring more well directed energy than fruit growing, and none that will pay better returns when the scientific conditions are met. Not half of those going into the business will realize their expectations, because not half will pay the price nature puts upon success. Some of us have a little too much of that quality of matter called inertia to pursue any business energetically.

Some have both energy and wisdom and will succeed. The stress of competition will weed out the rest, just as millions of seeds perish because they fall where they are not adapted; or as the strong trees of the forest overshadow the weaklings, absorbing the sunshine and soil substances.

KING EIGHT CYLINDER

Unfailing Service on the Farm, in the City or Battlefield

For luxurious body models mounted on the famous King chassis used for light armored cars by the U. S. Army and U. S. Marine Corps

FOURSOME— $1700 —(Shown above) —Designed for those who desire the sport type of car, with long, low, rakish lines yet in perfect taste. Narrow and "racy," this car seats four in comfort, has lengthy leg-room and is provided with four doors. A locked compartment just behind the rear seat gives generous and convenient storage space. The two front seats are of the "bucket" type. At their back is a combination tonneau and handy lamp which may be removed from its socket and carried about the car. Color: deep maroon.

TOURING—$1650 —With all the advantages of a 120-inch wheel-base, this car has the roominess of a Six of 126 to 128 inches due to compactness of King V-type motor. Has many novel conveniences, and upholstery and finish are of the highest grade. The ideal large-family car. Seats seven. Color: dark green.

SEDAN— $2300—A year 'round car of the most luxurious type, upholstered in highest grade cloth and equipped with divided front seats. Sides completely removable in a few minutes without leaving car, and as easily replaced. A special compartment behind rear seat is provided for storage of side sections. With sides in place this seven-passenger model becomes a perfect closed car, all sections fitting without possibility of rattle and with no appearance of being improvised. Three colors: beaver brown, deep maroon or suburban blue.

ROADSTER—$1585—A very popular model with farmers, physicians and salesmen, because of large storage space. Has two roomy compartments; one behind front seat and the other under rear deck. Comfortable for three. Color: French gray.

All prices quoted may be advanced at any time

Wire Wheels $125 extra—all models. Prices F. O. B. Detroit.

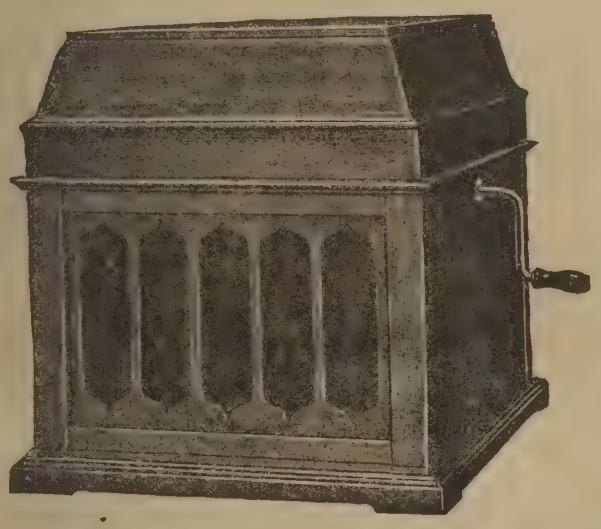
EDISON'S VERY LATEST AMBEROLA!

President of Thomas A. Edison, Inc.

NOT A PENNY DOWN!



The Wonderful New Phonograph with the Permanent Diamond Point

This is the famous Diamond Amberola, which, in numerous competitive comparisons, has won unanimous verdicts of superiority over well-known talking machines that sell at three and four times the price of the Amberola. These verdicts were rendered by thousands of phonograph experts and were absolutely unprejudiced. The instruments were played behind a curtain and the curtain was not raised until after ballots had been taken. No one knew the names of the instruments. They only voted as to which tone was better, No. 1 or No. 2.

Your Home Needs Good Music

There cannot be too much good music in your home. Every home should have music, and the best music. You would not be without an Edison Diamond Amberola after you heard its wonderful reproduction of the beautiful heart songs, stirring band pieces, war songs, seductive orchestra selections, lively Broadway hits, comic recitations, grand opera arias, and majestic hymns—music which responds to every musical desire. With the Amberola you can make your evenings at home a delight, keep your children contented, entertain your friends and be right up to the minute in musical knowledge. You want the best phonograph you can get for the least amount of money, don't you? Then read our offer below.

SPECIAL FREE TRIAL!

The New Edison Amberola, Model 50.

NOT A PENNY DOWN

We are so sure that you will want to keep this wonderful Diamond Amberola in your home after you have heard it, that we have made special arrangements with a certain number of dealers whereby any one of them will send to any reputable person, on an absolutely free trial, one of these wonderful Edison Diamond Amberola instruments.

These merchants have set aside a number of Edison Diamond Amberolas selling at $30, $50 and $75. These instruments will be sent out on free trials. With them will be sent a program of beautiful music, such music as you have never heard before on any phonograph. Don't wait until this free trial offer has expired.

HOW TO GET THE FREE TRIAL

Look over the list of dealers below and send the coupon to the dealer who is located closest to you. *If there is no Dealer near you, send the coupon to us and we will endeavor to arrange a free trial for you.*

Enjoy this wonderful music for 3 days. Then if you decide to keep the Diamond Amberola you can arrange with the dealer to pay for it on convenient terms, if you do not care to pay cash. That is all. No strings, no cost to you!

SEND FOR OUR BEAUTIFUL AMBEROLA BOOK—IT'S ABSOLUTELY FREE!

BIG CUT IN PRICE

PLAN TO SAVE OUR FRIE
RELEASE MEN FOR PRO

The government has strongly urged every employer to release as many men as possibl labor in the fields, forests, mines and factories.

We feel that it is the clear duty of every one to assist in this national program as fully

Certainly no one realizes the pinch of the labor shortage more keenly than does the farm dairyman and stock raiser of this state.

The only question which arises is not **"shall I help,"** but **how** can I help?

If conditions were normal **THE WASHINGTON FARMER** would employ a big force o and winter in securing new subscriptions and renewing old ones. And just consider wh men is required to visit the farms, ranches and remote homesteads throughout the lengt **Washington.**

Now, suppose that every reader would send in his or her renewal without urging, and al duce **THE WASHINGTON FARMER** to a few neighbors and friends. What would it that we could release practically every one of our agents for work in producing the ne Hardly any one will question that this should be done.

We think we know our readers; and feel sure that as soon as the situation is fully u each and every one will respond to a request to send in their subscription direct to this p stead of waiting for an agent to call for it.

It seems a small thing for each individual to do, but in the aggregate it will mean a h saving in agents' salaries, automobiles, gasoline, rigs, hotel bills, railroad fares and misce laneous expenses.

In order to try out this plan, we have adopted a schedule of rates aimed to give our readers the full benefit of every dollar saved by eliminating the middleman.

One full year's subscription will be 25 cents; three years will be 50 cents; five years will be $1.

We believe you will recognize the common sense of this offer. You will certainly realize also that it must be withdrawn unless our readers act upon it and act quickly.

Please don't put us to the expense of clerical hire, printing and postage for sending you notifications regarding your subscription. Mail your order today if possible, together with stamps, money order, personal check or cash; and be sure and tell your neighbors about **THE WASHINGTON FARMER plan!**

New Schedule of Subscription Rates to Farmers

The Washington Farmer for one full year 25c

The Washington Farmer for three full years 50c

The Washington Farmer for five full years $1

In Canada—add 50 cents a year for extra postage.

The Success of This
From Ever
and Use

O FARMERS

MONEY AND TIVE LABOR

The Cost of Middlemen Eliminated

We Lower the Price, but We Will Not Lower the Quality

THE WASHINGTON FARMER is the only farm paper which is devoted exclusively to the interests of the farmers, stock raisers, fruitgrowers and dairymen of the state of Washington. We believe that every farm home in the state should be in touch with the great work which THE WASHINGTON FARMER is doing.

At a dollar per year readers have considered that THE WASHINGTON FARMER has given them a big return for their money in the exchange of ideas among practical farmers, helpful articles, wholesome stories, interesting departments and other splendid features.

The new price will not mean a lowering of quality or a lessening in size. THE WASHINGTON FARMER will continue to be published every week, 52 issues per year, and there will be many new and improved features adopted from time to time with a view to strengthening your state farm paper in every way possible.

Remember, the reduction of price for THE WASHINGTON FARMER comes at a time when nearly everything else is soaring in cost.

ın Depends Upon Quick Action eader---Do Your Part Coupon Today

If Readers Do Not Act, This Offer May Be Withdrawn

The Washington Farmer,
Review Bldg.,

Our "Want" Ads Are Doubly Profitable

It Pays to Read Them as Well as to Use Them

READ WHAT SOME SAY WHO HAVE USED OUR "WANT" ADS

RESULTS FROM POULTRY AD.

"As to my ad in The Farm Trio, I had splendid results; in fact, more than I could supply."—A. O. Laabs, Coeur d'Alene, Idaho.

17 POLAND CHINAS SOLD IN WEEK.

"It pays to advertise. Sold 17 last week, all registered stock, for breeding purposes. Nothing cheap about my stuff except the price."—F. P. Farrington.

AD SELLS $1000 WORTH OF LIVE STOCK.

"We feel more than pleased with the results secured so far through our advertising in your papers. We have sold to buyers in these states to the amount of $1000 in the last four months, every one having mentioned one or another of your papers."—Pomeroy & Son, Scappoose, Ore.

SELLS HIS SEED CORN.

"I have a great deal of confidence in the Trio as an advertising medium, as I have just had some success in selling some seed corn through the three papers. Enclosed you will find my check for $7.42, covering the ad for January. Please run this ad as per my letter of January 25, through February."—L. F. Pourtales, Oroville, Wash.

BEST FOR SELLING TURKEYS.

"Results from my turkey ad in The Farm Trio: Aside from one local order all shipments have been one, two or three birds in a shipment, going to all parts of Washington, Oregon and Idaho, and some to Montana. We have been carrying ads in six or seven weeklies, and can safely say that 85 per cent of our inquiries come from The Farm Trio."—Mrs. H. J. Cortner, Payette, Idaho.

SELLS FARM AND RAW LANDS.

"No doubt it will please you to know that the classified 'want' ad service of your three state papers has been productive of very good results for us. Your papers are bringing us a constant stream of good, live inquiries from all three states, which shows plainly that a good proportion of your subscribers in all sections of Washington, Oregon and Idaho are always on the lookout for promising real estate investments and that they must watch your 'want' ad pages pretty closely for legitimate snaps in farms, raw lands and city property."—J. Melvin Thomas & Co., Spokane, Wash.

Examples showing cost of different sized "WANT" ads inserted in The Washington Farmer, The Oregon Farmer and The Idaho Farmer.

Live Stock Winners

(Continued from page fourteen.)

years; 1 year and under 18 months and under 1 year; under 6 months; aged herd and young herd; get of sire, produce of sow and all champions and grand chmapions.

Senior and grand champion boar—Riverino Tashean 5th. Junior champion boar—Lonesome Fir King. Senior and grand champion sow—Bessie of Cold Stream. Junior champion sow—Lonesome Fir King.

He also won on fat barrow and pen of same.

Hampshires.

J. M. Fruitts of Joseph, Ore., the man who has popularized the Hampshire hog breed by the samples he has shown at the fairs, was the only exhibitor. But, as usual, he put up a great show and his barrow won second in the open barrow contest. His awards were:

First on boars 2 years old and over: senior yearling; junior yearling, senior and junior boar pigs. Sow, 2 years and over; senior yearling, junior yearling, senior and junior sow pigs. First on both aged and young herd bred by exhibitor, get of sire, produce of sow, fat barrow and pen of fat barrows.

His grand champion boar was Lead Me To It and grand champion sow Rancho's Rosie.

Berkshires.

The Western Berkshire congress show brought a grand lot of Berkshires to the Oregon State fair. Not only were Oregon's best breeders present, but the Rincon farm herd, in charge of C. E. Barrows, a herd that made the principal winnings at the California State fair, was on exhibition. It showed the effect of good fitting as well as the best blood of the breed. And yet, while this herd won all championships, it lost a large share of the blues to Oregon herds. The winning of first by Jack Stump, one of the boys' pig club boys, was a popular decision. The awards were made by Mr. Barker, a noted eastern breeder and judge, who declared our show even better than the California fair.

Boars: 18 months and under 2 years—1, C. E. Barrows; 2, Oregon Agricultural college. 1 year, under 18 months—1 and 4, D. C. Bunn; 2, C. E. Barrows; 3, F. R. Steel, Grants Pass; 5, D. D. Warnock, Dayton, Ore.. 6 months, under 1 year—1 and 5, Barrows; 2, Johnny Stump, Jr., Monmouth, Ore.; 3, G. E. Metcalf; 4, F. R. Steel. Under 6 months—1, Johnny Stump; 2, Steel; 3 and 4, Bunn.

Sows: 2 years or over—1 and 2, Barrows; 3 and 4, O. A. C. 18 months, under 2 years—1 and 2, Barrows; 3, Steel. 1 year, under 18 months—1 and 4, Steel; 2 and 5, Barrows; 3, Warnock. 6 months, under 1 year—1, Bunn; 2, Stump; 3 and 4, Warnock; 5, Metcalf. Under 6 months—1, Barrows; 2 and 3, Bunn; 4, Stump; 5, Metcalf.

Aged herd—1, Steel; 2, Warnock; 3, O. A. C. Young herd—1, Stump; 2, Bunn; 3, Metcalf. Get of sire—1, Stump; 2, Steel; 3, Bunn; 4, Metcalf; 5, Warnock. Produce of dam—1, Stump; 2, Metcalf; 3, Steel; 4, Bunn; 5, Warnock.

All championships went to C. E. Barrows, as follows: Senior champion boar—Mayfield's Champion: Junior and Grand Champion boar—Rincon's Rival; Senior and Grand Champion sow—Rockwood's Lady 100th Junior Champion sow—Mayfield's Laurel XV.

Fat barrows, under 1 year—1 and 2, Barrows; 3, Metcalf. Pen—1 and 2, Barrows.

DUROC JERSEYS.

Discovers Cave and Digs for Treasure

The Ups and Downs of a Bunch Grass Boy---Number 29

Part II.

By JOE L. ASHLOCK

Copyright 1917, Joe L. Ashlock.

Arriving at the cave, I made another examination to detect the possible presence of rattlers or animals—and got negative results. So I boldly jumped down in the hole, drew my spade after me, and commenced to dig, confident that my first spadeful would bring up some old coins, or jewelry, or pieces of chains with which prisoners had been bound and cast into the hole.

However, my spade turned up nothing but gravel and stones, which became larger and more difficult to move as I proceeded further into the ground.

My spade presently struck something which was a brownish white, and crumbled. I examined a fragment, and saw that it was not stone of any kind—and judged that I was about to strike oil. Undoubtedly the treasure would be next.

Very carefully I dug now, and presently saw that I was uncovering a dirty white, roundish thing which was caked over with clayey earth so as to be partly concealed from identification. Getting the round thing loose from its moorings, I picked it up with my hands and set it on the rocky edge of the hole which now was about a foot above my head; and drew myself out of the cave to examine my first find.

Very carefully I broke the caked clay away from the thing. Bone began to show up in spots as I did so; and presently I had before me a skull of some kind. It was not a coyote skull; nor a colt, nor a calf, nor a cow. With all these skulls I was familiar; but I never before had seen such a one as this.

The inside of the thing was filled with the same clayey stuff that had surrounded it; so I took a stick and gouged some of the material from the interior by jabbing in through the eye holes. Then I looked at it and pondered—and was conscious of having seen the thing before, somewhere; but I could not tell where for a long time. Then in a flash I had it. In my school hygiene I had seen a picture of this very thing. I recalled very clearly, all at once, the drawing of the human skeleton in this book I had studied; and here before me was a skull, just such as was pictured in this drawing. So the thing I had unearthed was a human skull!

For a second I felt a numb, cold, prickly feeling stealing over me, which feeling was succeeded by a series of hot waves. I gulped two or three times; and then struggled against an overpowering desire to push the skull back into the hole, mount my cayuse and flee like the wind.

I reflected that there was nothing unusual in finding human bones and treasures piled together in one cave. In fact, I had read of just such things, and might have expected this. Anyhow, I must get the treasure. Mother had told me that ghost stories were all bosh—there were no such things as ghosts, though the Mires children said that a ghost sat on the ridge pole of their house and gibbered and chattered the night their aunt died in Missouri. Also, the same night, a pig had squealed in the yard, and they had no pigs. These things they called "hants." Here was a "hant" with a vengeance; but clinging to my mother's assurance that these ghost things and hant-things were only imagined, I revived my courage sufficiently to proceed with the digging; and in the course of the afternoon, I brought the whole skeleton, along with a lot of arrow heads and some larger heads of the same kind, probably spear-heads, to light. By this time I knew what I had found; it was an old Indian grave. The bones crumbled at the touch, and I supposed that they had been there for two or three thousand years. The remoteness of the lifetime of this Indian chief—and I did not imagine that he had been anything less than a chief—made my interference with his bones seem less objectionable. By the time I was through, I feared neither his bones nor his ghost, and was chiefly concerned because the expected treasures had not materialized. Instead, I had some arrow and spear-heads, and some crumbling, yellow bones.

I poked about in the hole some more, but found no treasures, and no more bones. It was getting late, I was tired and aching in every joint, and disappointed. Thoroughly disgusted, I put the arrow-heads and spear-heads in my pockets, and shoveled the bones back into the hole, covering them lightly with gravel and earth. I was late for supper, and when asked for an explanation, said I had been out hunting for bones for my chickens—and with that explanation, offered to conceal my real doings of the afternoon, I felt an electric shock strike me! Surely I had been hunting for bones! And surely I had found some!

But I controlled my sudden excitement. To the folks I explained with indifference that nearly aroused suspicion, that I had found a few old bones "over there"; that in a day or two I might go and get them. Luckily I escaped a cross-examination.

Followed a day or two of serious, mental debating. Was it proper to feed the bones of the Indian chief who had been buried two or three thousand years to my hens? That was the question I was trying to answer.

At the outset, it seemed to smack of cannibalism. My hens would eat the bones. Then they would lay eggs; and we would eat the eggs!

However, this line of reasoning had a law in it. The hens ate bone to make egg-shell, and we did not eat the shells. I could feed the shells to the hens over and over again—in fact, mother always did that. The bones of this Indian chief could be used over and over again.

Even at that, I still hesitated, and scoured the country again for bones. But none could I find. My hens continued to lay soft-shelled eggs, and presently began to droop and die. I doubt if it was the lack of bone that was wholly responsible for their dying; but I thought it was, and in dire straits I wrestled daily and nightly with the great problem. Eventually, I arrived at a decision—and having decided, moved swiftly.

One day I went after the bones, finding them crumbled away almost to dust. Old they were, undoubtedly, how many hundreds of years one can only guess. The climate in our country was dry, the soil seldom being wet down the depth at which the bones were buried. In this dry soil, the bones could easily have lain, I fancy, hundreds of years; and I am sure now that they had been there that long. Then, of course, I supposed that they had been buried thousands of years.

I kindled a fire of sagebrush in the henyard; but it was not necessary, for the bones had crumbled to dust before they reached the fire. One of our neighbors in digging a well, unearthed twenty feet underground, the bones of a large animal, possibly a mammoth, or a mastodon. As nearly as I can recall, the bones I found in the hole and the bones of the prehistoric mammoth were about the same condition.

The hens knew what I was about I think; for they were scratching and rolling and picking in the aches, rich with lime, almost before the ashes were cool. Right away they began to lay eggs so hard that when you cracked two eggs together, they gave off a slightly metallic ring instead of breaking.

I had saved the hens and the eggs; but for days thereafter I brooded silently over this thing. My folks noticed my depressed air, and asked for explanations. I put them off with various subterfuges. Then one day the big crash came.

I read in a paper about some wicked people who had dug into a grave for some purposes or other, and had been jailed. The "law" stood in my eyes as a grim and terrible thing; and now I was, in the eyes of the law, guilty of misdemeanor punishable by fine or imprisonment.

For a long time after that I kept out of sight when I saw strangers coming, fearing that "the law" was sending for me. Also, when I saw a band of Indians coming I hid out in a hurry, for I knew now that the law was on their side. Worrying and fearing so much I began to lose my appetite and was tortured by dreams of a most hideous kind. The leading character of these dreams was a gigantic, frightfully painted and scowling Indian who would chase me with his tomahawk, demanding the return of his bones. It was a long time before I would ride over in the big hollow where the cave was; in fact it was a year or more before I had wholly recovered my equilibrium. I heard mother telling somebody, one day, that I kept out of sight when strangers or other children were around, because I had always had to play alone and did not know how to behave when strangers or other children were on the place; but I knew better.
